"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 3RD, 1886.

### DEATH.

At the General Hospital, at 9 p.m. on 2nd July, JAMES GEKKIE.

### SUMMARY OF NEWS.

THE authorities intend to establish post offices in all railway stations.

It has been stated that females will be permitted to enter the University.

GENERAL VISCOUNT TANI and party arrived at Vienna on the 25th instant.

At the Osaka Arsenal considerable activity prevails in the turning out of heavy ordnance.

THE Hon. Mr. Hubbard, U.S. Minister in Tôkyô, will go to the Ikao hot springs about the 7th July.

TWELVE cases of cholera occurred in Yokohama on Wednesday night, and six on Thursday and Friday.

COUNTRESS ITO has distributed a number of pictorial fans to the patients of the Union Hospital at Atago, Tôkyô.

THERE has been an increase of about 50 per cent. in the number of cholera cases at Osaka during the week.

THE Minister of State for the Interior has issued an order directing the Korean refugee Kim-yo-kun to leave Japan.

IN order to complete the railway between Naoetsu and Nagano before the next snowfall, a force of 50,000 men is said to be now engaged.

Several deep cuttings and a bridge with stone piers to cross a valley several hundred feet in width, are among the difficulties to be negotiated.

THE output from various mines in Saga prefecture during 1885 was 377,923,485 pounds of coal, worth yen 451,315.85.

THE preliminary arrangements for the starting of a company, which will engage in the export of silk from Kobe, have been made.

ON the 27th ultimo the Minister of State for the Navy paid a visit to the *Naniwa Fan*, which arrived at Shinagawa the previous day.

PRINCE LOUIS NAPOLEON who returned to the capital on the 26th ult. from Nikko, will proceed to Hakone after a visit to Yokosuka.

THE Director of the East Honganji has instructed the priests to explain to the people methods for the prevention of the spread of cholera.

HIS IMPERIAL MAJESTY THE EMPEROR paid a visit to the military college on the 28th ult., returning by half-past two in the afternoon.

THE Iron Works at Tsukiji, Tôkyô, recently under the control of the Navy Department, have been handed over to the Eastern Admiralty.

MR. KIYOURA, of the Police Bureau, who was on leave at Ikao, Joshi, was recalled on official business and attended his office on the 27th inst.

FROM present indications, the orange crop in Kii and Izumi is expected to be very good, and favourable reports are received from other quarters.

AN office is to be established at Honcho Roku-chome, Yokohama, for the inspection of silk by the authorities of the Central Silk Industry Association.

THE seventh conference for Treaty Revision was held at the Foreign Office on the 27 ultimo. The eighth conference was fixed for the 5th October next.

HIS EXCELLENCY COUNT OYAMA, Minister of State for War, paid a visit on the 28th instant, to the military jail at Akasaka and inspected the establishment.

SEVEN hundred and ninety-nine graduates of the Kyodotan School have received appointments, and were attached to various garrisons on the 28th ultimo.

MR. IWAMURA, chief of the Hokkaido Administration, has memorialized the Cabinet to enlarge the scope of the curriculum in the Agricultural College at Sapporo.

ALL the police force of Kyôto have been photographed. The chief of it is that when an officer has satisfied only himself he will be "hung" at the Central Station.

VISCOUNT TANI, on his way to Europe, touched at Ceylon, where he called upon Aali Pasha, and had a conversation with the exile on the condition of Eastern countries. VISCOUNT TANI

visited the Pyramids on his way through Egypt, and had an audience of the President of the French Republic on his arrival in Paris.

ON the 28th ultimo, steam launches for the service of the *Naniwa Kan* and *Takachiho Kan* were launched at Takasaki Dockyard, in Kanasugi, Tôkyô.

A POST OFFICE coolie, who was despatched from Hiroshima Prefecture, was killed by robbers on the night of the 22nd ult., and the goods he carried were stolen.

ONE hundred and eight graduates of the Military College, who received diplomas on the 28th ultimo, have been appointed to the various departments of the army.

THE presidents of the Japan Railway Company and the Japan Mail Navigation Company were summoned to the Agricultural and Commercial Department on the 26th ultimo.

TWO large temples in a fine airy and elevated situation in Kyôto have been appropriated for the purposes of a convalescent hospital for persons recovering from epidemic diseases.

BOYS attending the Yokohama Gakko are now all dressed in foreign style, and the Yokohama Gymnastic Association, composed of the teachers and pupils of the school, is working satisfactorily.

THOSE of the Osaka Police who are unable to swim have commenced to receive instruction, and the swimming drill will be continued as during last year while the warm weather lasts.

IT is said that the Railway Department will undertake the construction of a railway between Kumamoto *ken* and Oita *ken*, a petition having been presented which shows that the line would pay.

IT has been discovered by observation at the cholera hospitals that by far the greater number of recoveries are amongst those who have reported the attack early instead of waiting for developments.

MUSTARD baths having been found effective in cholera cases, the hospitals have been supplied with a number of baths on wheels so that a patient in any ward can be given a bath at a moment's notice.

THE summer vacation will be observed in all government offices from the 1st instant to the 10th September next, and no business will be transacted in the Cabinet office except on extraordinary occasions.

THE castle of the town of Shuri, Okinawa Prefecture, which measures 18,831 *tsubo* (one *tsubo* is equal to six square feet) is to be repaired by the military authorities at an estimated expense of yen 48,535.

THE Minister of State for Home Affairs has obtained the sanction of the Cabinet to organize a complete system of registration in order to prevent the inconveniences arising out of the

present arrangements, and has entrusted Messrs. Shirane and Sawa with the compilation of the new regulations.

IN future only iron vessels are to be built at the Yokosuka Dockyard. A quantity of iron plates required for the construction of the new gunboats *Akagi* and *Atago* have recently arrived from England.

THE people in the village of Imatsu, Hyōgo Prefecture, have sent a memorial to the Department of Communications praying for the construction of a light-house and offering to maintain a fixed white light in the same.

A SPECIAL meeting of the magistrates of urban and rural divisions of the capital was held on the morning of the 28th ult. at the hall of the City Assembly in Tōkyō, to discuss the subject of the sanitation of the City.

THE young salmon at the Nishikawa Fish-breeding Establishment, from ova hatched in January last, have far surpassed in growth those of any previous season, some of the fish being nearly a pound in weight.

THE Minister of State for the Navy having decided to start shortly for Europe, Mr. Sato, of the Eastern Admiralty at Yokosuka, will invite His Excellency and party to an entertainment at Tōkyō, on the 7th July.

THE departure of General Count Saigo to Europe on a tour of inspection has been fixed for the middle of this month. He will be accompanied by three naval officers, one accountant, and two private secretaries.

THE value of the ground at Fukagawa, Tōkyō, and the neighbourhood, has been lately much increased as there is an idea abroad that the foreign settlement of Tōkyō will be laid out there after the revision of the treaties.

MR. HARAI, who went to China to investigate the tea trade, having completed his enquiries at Hankow, Formosa, and other places, is now on his way to India, where he will gather further information for the completion of his report.

ON the 1st July, fifty-five students were admitted to the Naval College. It is said that the students from the Preparatory School of the university, who were well up in the examination, will be largely represented amongst the new entries.

A MARKED change has recently occurred in the proprietary of the shareholders of the Tōkyō Rice Exchange, lawyers and other professional men having taken the place of merchants who are directly connected with the business in rice.

A GOLD cup has been presented to the relatives of the late Mr. Tanaka Heihachi by the authorities, in recognition of public services rendered in repairing the road through Odawara and neighbourhood, at a cost of six thousand *yen*.

AS the hot season is approaching, the closing meeting of the *Buto-kai* (dancing in European fashion) was held by the Committee at the Detached Palace in Shiba, Tōkyō, on the afternoon of the 28th instant, when over a hundred members attended.

AFTER a long spell of dry weather for the time of year, the barley and other crops have been garnered in capital condition, and above the average weight. The young rice flourished well in the beds

and has now been nearly all planted out, though, at the time of transplanting, water in many places was much needed. Rain however came a few days ago, the paddy fields were sufficiently flooded, and the farmer is happy.

A MODEL of a ship's light and its accessories, invented by a Russian officer, having been recently sent to the Naval Department through the Japanese Minister in St. Petersburg, the naval authorities have transmitted a letter of cordial thanks to the inventor.

HIS EXCELLENCY MR. MORI, Minister of State for Education, accompanied by his private secretary, left the capital on the 30th ult. to visit Ishikawa, Yamaguchi, Ehime, Kagoshima, and Hiroshima prefectures, in reference to the establishment of high and middle schools.

AT Tayamura, Niigata Ken, an inflammable gas has issued from a fissure in the ground from time immemorial, and has till now been used by the inhabitants only for cooking and illuminating purposes. It will henceforth be "laid on" for purposes of tea-firing.

HIS EXCELLENCY the Minister of State for Home Affairs has sent a circular to all governors of jails warning them to take every precaution against the outbreak of cholera in the establishments under their charge. To the circular are attached full instructions with regard to food, water, and cleanliness.

THE second engineer of the *Hidesato Maru* and a sailor of the *Satsuma Maru* have received certificates for meritorious conduct from the Tōkyō City Government, for having rescued two sailors from a wrecked vessel near Chichijima in the Ogasawara group.

DR. SANO, of the Kobe Cholera Hospital, has reported that the recoveries are 10 per cent. of cases, and says the percentage will be increased if people can be persuaded to report cases at once. Dr. Sano permits patients to be attended by their own medical men if they so desire, and has done much to restore confidence.

THE daughter of Mr. Goto Shojiro, late Privy Councillor, was baptized according to Christian rites a few days ago. Mr. and Mrs. Bertin officiated as god-father and god-mother. While in France Mr. Bertin acted as teacher of a Japanese naval officer, to whom the young lady is betrothed.

AT a recent meeting of representatives of the rice exchanges of the country, upon the subject, "whether a joint stock concern is an appropriate form for rice exchanges or not?" opinion was divided, some maintaining that they should be organized in the same way as bourses in Europe and America, while others insisted that the present coöperative form should be preserved by effecting all possible improvements.

THE medical inspectors at Kyōto, whilst recently examining the passengers of a train from Osaka, were struck by the pallor of two young men amongst the travellers. On their removal on suspicion of being ill, they were found to be suffering, not from cholera, but from a plethora of silver, a large quantity of which, in the form of *yen*, was found upon them, and this turned out to be the proceeds of a robbery committed upon their employers.

REPORT says that the authorities intend to open

Ishinomaki in Miyagi Prefecture for foreign trade, and the work of forming a harbour there will be commenced before the conclusion of Treaty Revision. The proposed step is stated to have been conceived from the opinion that the opening of the port is essential in accomplishing the construction of railways in the northern provinces and the establishment of all kinds of manufactories.

A CORRESPONDENT in Korea of a Tōkyō vernacular journal reports that the Korean Government recently requested the Japanese *Chargé d'Affaires* to terminate the lease of Deer Island, which the Japanese Government rented only a few months ago at *yen* 200 per annum with the view of erecting there a coal depot. It is generally believed that the Korean Government have been prompted to this action by a desire to remove all possibility of other countries, and especially of Russia, proposing to rent small islands belonging to the little Kingdom.

IN Imports there is small change to note. The excitement of last week in Yarns has continued, and about 3,500 bales have been sold, prices having ruled both steady and firm. In Cotton Piece-goods there has been but little change, generally, though a large business (45,000 pieces) has been done in glb. Shirtings. Woolens and Fancies have been in very moderate request, at about recent rates. In Metals, Stocks are piling up, and prices are weak with small sales. Kerosene has been bought to supply consumption only, though deliveries have been fair. There has been only a retail demand for Sugar. Of Exports, Silk has only been put on the market in small lots so far, and as but little Waste has arrived the business has been feeble; both however, will be in large supply immediately, when a turn in the trade may be expected. Tea continues to be largely bought, over 50,000 piculs more having been purchased here and at Kobe than at same time last year, but the market is easy for most kinds of leaf on offer, and a quieter tone appears to be close at hand. Exchange on francs and U.S. gold has slightly weakened, but sterling is without alteration.

#### NOTES.

PROCEEDING at its present rate, the Government will leave little to be legislated upon by the Parliament of 1890. Since its reconstruction six months ago, the Cabinet has displayed admirable industry. Series after series of Ordinances have been published, all marked by statesmanlike thoroughness. The latest refers to Municipal Government. We publish a translation to-day, and commend it to the attention of our fellow residents as the basis of a system which will, we trust, be fully extended to all the foreign settlements. Among the various items we notice with special pleasure that the rule of the road—as observed in England—has at last received official recognition. In old times, when the only wheeled vehicles used in Japan were ox-waggons and hand carts, there was no special occasion to determine by law on which side such conveyances should pass one another. But now that the streets of Tōkyō are crowded with private and hackney carriages and *jinrikisha*, perpetual inconvenience and danger are caused by the indifference or ignorance which prevails with regard to the rule of the road. By what principle the police magistrates have hitherto been guided

when adjudicating in collision cases, we cannot tell. Henceforth it will be a great comfort to know that this question is reduced to fixed rules, and that we may be safely guided by the old distich:—

"The Rule of the Road is a paradox quite:  
"In driving your carriage along,  
"If you go to the left, you're sure to go right;  
"If you go to the right, you go wrong."

It will be observed that the rule is reversed in the case of meeting military detachments. There are kept on the right, the object being, as in western countries, to pass by the pivot flank.

A regulation, probably no longer avoidable, but likely, we fear, to cause much inconvenience to the lower classes, forbids the flying of kites or the playing of battledore and shuttlecock in the streets. These pastimes have often been the occasion of complaints by equestrians and drivers. Their pursuit is not compatible with the increase of wheeled traffic. Yet we cannot contemplate their enforced discontinuance without regret, remembering that no longer at New Year's time will the cities of Japan present the charming aspect of light-hearted gaiety which used to be imparted to them by the presence of brightly dressed lasses and lads engrossed in the merry game of *oyobane*. Trivial as these pursuits may seem, there can be no doubt that they have contributed materially to educate the debonnaire disposition of the Japanese people, and that their cessation will exercise an opposite influence. The great majority of the citizens of Tōkyō have no other place than the streets to carry on their traditional sports, and the new regulations will inevitably deprive them altogether of these pleasures. Such is one of the results of the imported civilization. It may be regretted, though it cannot be avoided.

Unqualified satisfaction will be imparted by the regulations referring to the periodical inspection of hackney coaches and the horses that draw them. Many of the vehicles at present plying in Tōkyō are in a scandalous condition, and the horses yoked to them are a disgrace to humanity. We have so often written on this subject that it is needless to add anything further. We sincerely trust that the police will exercise the supervision now provided for with the utmost strictness. There is, we admit, an easily recognised difficulty in dealing with these hackney coaches. To be serviceable to the bulk of the citizens they must ply for fares quite incompatible with neat appointments and well fed horses. If any harsh attempt is made to improve their condition radically, they will be driven off the road, and their place will be taken by an added number of *jinrikisha*—a result certainly to be deprecated. At present, however, they are nothing better than skeletons of timber and rags dragged by animals that are only kept from the knackers for this purpose. A happier mean might be struck between the miserable and the magnificent.

Like the Marquis Tseng, M. Delyannis, the Greek Premier, seems to have been guided by an inspiration, but, unlike the Marquis Tseng, he proved a very false prophet. The idea at Athens evidently was that any concerted action on the part of the Great Powers was impossible, and that Greece might reap what advantage she pleased of this want of unanimity. And indeed it appeared for a time that this estimate was not altogether erroneous. France showed herself

disposed to take, and actually did take, separate action. What her real purpose may have been in thus dissociating herself from the union, the public has not yet made up its mind, despite Lord Rosebery's statement that her action was doubtless prompted by "the same desire for a peaceful settlement which was entertained by all the other Powers." But with Austria, Italy, Germany, Russia and England acting in concert, poor little Greece had not much room for choice. With regard to two points there seems to have been considerable misapprehension. First, it was supposed that Russia was holding aloof because her Minister did not leave Athens simultaneously with his colleagues. But the fact is that he did not leave because he was not there at the time. Secondly, it was thought, and is still thought, that the Powers showed considerable vacillation. The opposite is the truth. The first collective note was presented to the Government at Athens, April 26th. It demanded that the Greek army should be placed on a peace footing as quickly as possible, and that, within a week, assurances should be given that orders to that effect had been issued. The week expired May 3rd. It happened that May 5th was the King's fête day, and to avoid any appearance of unfriendly haste, the Powers resolved to extend the days of grace to Thursday morning. On that day they addressed another note to M. Delyannis, declaring that the answer given by him to their previous communication was wholly unsatisfactory unless supplemented by further declaration. M. Delyannis replied that he had nothing to add. The following day (Friday) the Representatives of Germany, Italy, and Great Britain were withdrawn. On Saturday, notice was given that all the Greek ports would be blockaded, and on the following Tuesday the blockade was actually in force. From that moment Greece's submission was assured. M. Delyannis, whose false estimate had plunged his country in such difficulties, resigned, and Lord Rosebery won his first substantial bunch of diplomatic laurels.

A few days before the division on the second reading of the Home Rule Bill, an interesting illustration was furnished of the extremely suspicious and uncharitable attitude maintained by the Conservatives towards the Gladstone Cabinet. On Tuesday, May 11th, after the opium debate had come to an end, there remained only one or two notices to be disposed of, and the Government might subsequently have obtained four or five hours for the passing of the estimates. But no attempt was made to keep the House together, and the consequence was that, a count being moved, only 39 members were found to be present and the House was adjourned. A gentleman who was present at the time thereupon wrote indignantly to the *St. James's Budget*, describing the affair as "an incident unparalleled in the recollection of the oldest member of Parliament—the deliberate count-out of the House of Commons, by the direct, undisguised agency of the Government officials." And why, it will be asked, did the Government take this extraordinary course? "The reason was," we quote from the correspondent's letter "that Government, knowing that they will be beaten next week, did not care to provide the new Ministry with funds to carry on the public service, but intrigued to place them in the difficulty—after the delays caused by the long debates on the disruption measures

and the change of Government—of having a great deal of the Estimates to get passed and so being hampered in the measures to secure law and order which will probably be required. This is shortly and tersely described as 'putting Hartington in a hole.' The shocked eyewitness goes on to say: "We have seen many manoeuvres since the general election, and many sharp devices by the 'old parliamentary hand.' This is one of the most transparent and indecent. I hope it will be understood and appreciated." It is now fully appreciated, for since the Gladstone Cabinet, if defeated on the second reading, had no intention of resigning, but purposed appealing to the country, it is evident that their disgraceful scheme to "put Hartington in a hole" was in reality intended to put themselves in a hole.

CHOLERA paid Yokohama a sudden and rather violent visit on Wednesday night. No less than twelve persons, all living in the same place, near the Gas-works, were attacked, and four of them speedily succumbed. The remainder were removed to the Hospital for Contagious Diseases, and a number of the inhabitants of the immediate vicinity were isolated and placed under observation. It is not unreasonable to hope that these vigorous measures may check the spread of the epidemic, but an outbreak so sharp and of such dimensions suggests uncomfortable possibilities.

It is the fashion with the rank and file of Conservatism, now-a-days, to assail Mr. Gladstone's personal character with the greatest bitterness; to call him dishonest, a traitor, a schemer, and even a rebel. Society fosters this tendency. To be a Conservative is to be on the aristocratic side, and for the sake of this vicarious distinction small men vie with one another to abuse one of the greatest men in the world. Arguments are generally wanting, but violence is always ready to take their place. At this particular time, then, it is interesting to read what Professor Dacey writes of Mr. Gladstone, and of the British public's estimate of the Premier's character:—

No foreign observer can fully appreciate the immense influence exerted by Mr. Gladstone's personality. He represents in his person in a very singular way the best and the worst features of the sentiment of the day. He is also one of the few modern politicians who possess the energy which characterized the statesmen of the last generation. When you add to this that he is, to use his own language, an "old Parliamentary hand"—that is to say, a thoroughly trained and very skilful party manager—you understand part, at least, of the sources of his influence; but there is a good deal more in this influence than it is easy to sum up in a few words. High personal character has at all times told very strongly on the imagination of Englishmen. It was admittedly quite as much the superior morality as the genius of Chatham and his son which made the two Pitts the heroes of England. George the Third, with all his dullness and his cunning, was a popular idol because he was the "Good old King"; and Mr. Gladstone is to the electors the "good man" of English politics. In part by his merits and great powers, in part also, in my judgment, by his genuine sympathy with some of the weaker sides of English sentiment, Mr. Gladstone has obtained a hold on popular feeling which he can hardly lose. Fickleness, as Macaulay pointed out long ago, is not really the voice of the people. The masses cling to their idols; it is more doubtful whether they choose the objects of their admiration with perfect discretion. But the influence of the Premier is, it is fair to remember, due to a great extent to a circumstance independent of either the merits or the defects of his character. Modern democracies, in Europe at least, show a marked tendency, which is not in all respects a bad one, to place more store by persons than by principles. The people (they feel) can judge of a man's character; they cannot judge of his policy. The result is, that the one predominant idea which sways the conduct of thousands of electors is that Mr. Gladstone's policy must be supported simply because it is Mr. Gladstone's. No sensible person doubts that his present policy would not have had a hearing if proposed by any other politician. Few cool observers can, I suspect, doubt that if Mr. Gladstone were to vanish

from the political arena, two-thirds of his followers would hasten to explain that they had never meant to favor Home Rule. "I can easily believe that the Prime Minister himself would admit the difficulties besetting his policy far more readily than would his followers. It is quite possible that Mr. Gladstone is not a Gladstonian."

We must surely be on the eve of some great and radical change in the method of propelling ships at sea. The capabilities of steam have become too small to satisfy the impatience of civilization. So long as men were content to travel at the rate of ten or twelve miles an hour, steam served their purpose well enough. But the demand is always for increased speed, and to obtain this there is required an expenditure of animate and inanimate material too great to be for a moment consistent with the idea that some far simpler, more powerful, and more economical agent of propulsion is not soon to be discovered. The records of the contest for the Blue Riband of the Atlantic irresistibly suggest this reflection. Travellers by those marvels of ocean steamers, the *Arizona*, the *Alaska*, and the *Oregon*, with their splendid saloons and perfect appointments, probably give little thought to the conditions under which the voyage is effected, and feel no concern for the army of wretched stokers and engineers whose bodies, like the fuel they employ, are wasted in the struggle to get an extra knot out of the big ship. Yet these things will ere long force themselves prominently into notice. The expenditure of material must surely have approached its limits in the case of the *Umbria* and *Etruria*. These steamers, the fastest and finest ocean racers now afloat, consume 300 tons of coal each per day; that is to say, 12½ tons per hour. Conceive the labour of shovelling 12½ tons per hour. One hundred and eleven men are required for the operation, and the quantity of fuel which, in the space of 24 hours, they feed to the seventy-two boiler furnaces of one ship would be an ample load for two full-sized mineral trains. Surely there is something exceedingly rough and unscientific in this enormous destruction of matter and employment of labour. Chemistry will soon come to the ship-builder's aid, and supply him with a heat-evolving agent which will relieve him from the necessity of appropriating one half of his vessel to the carriage of materials for her propulsion. Perhaps, indeed, chemistry may go a step farther, and provide something which will revolutionise our modes of progression as much as steam revolutionized them in its time.

SIR CHARLES DILKE still enjoys the unbounded confidence of his constituents. He addressed, May 3rd, a mass meeting of the Liberal electors of Chelsea. His wife was by his side; and the following epitome of his speech shows the line he has taken, and the reception accorded to him:—

He commenced by referring to the blow that had fallen upon him in July last year, when the accusations were first made, which had caused him suffering almost beyond the limits of human endurance, aggravated tenfold by his position in the political world. Life became unbearable to him, and he would gladly have relinquished his existence could he have left a name unsullied by slander. He was, however, sustained by the affection of many friends, and especially by the trust of her who was sitting by his side. (Great cheering.) He would willingly have retired from Parliament if his supporters in Chelsea had consented to his doing so, and he had offered to pay the whole cost of the election if they would accept his resignation. His wishes were, however, overruled. When he first heard of the Crawford case he suggested that a private inquiry should be held, the result of which, if not satisfactory to both parties, should be no bar to further legal action, and volunteered every assistance in promoting the strictest investigation. This was refused; but it was surely unjust after that to charge him with shrinking from investigation. Before the case came

on for hearing he was advised by some of his friends to let it proceed in the ordinary way, and not to volunteer his evidence. Others took the contrary view, and as they disagreed he determined to use his own judgment, and went to the Court prepared to give a public denial to the charge. Eventually his friends all agreed that he ought not to interfere, and he yielded to their wishes. They expressed the opinion that the case against him had utterly collapsed, a view that was supported by the statement of the petitioner's counsel, and also by the learned judge, who not only struck out his (Sir C. Dilke's) name from the case, but gave him his costs. The latter fact was important, because it tended to imply that he had been shown to have committed no act in connection with the case of a doubtful or suspicious character. A portion of the public, however, did not accept this view of the result, and said he ought, nevertheless, to have insisted on answering the charge, while others said he had allowed an innocent woman to be found guilty. This was the most cruel of all, and yet it was absurd, because Mrs. Crawford could at any moment have cleared herself by simply confessing that her statement was untrue. The termination of the suit, instead of bringing him relief, as he had hoped, was the beginning of a relentless persecution, especially on the part of a section of the press, not as he believed from improper motives, but in the defence of public morals. Both he and his wife suffered deeply, but he pledged his honour to them that night that the charge against him was untrue. (Cheers and waving of hats.) Although it might be long before the truth prevailed, and although his life might be worn out in the attempt, he felt that it would be a cowardly preference of present ease of duty if he flinched from the endeavour to prove it. (Here Sir Charles Dilke was unable to proceed for a few moments from emotion.) His duty to his wife and to his constituents, as well as to himself, was to fight the battle. Having referred to the attacks that had been made on the association as not representative of Liberal feeling, Sir Charles Dilke proceeded to state he had urged the Queen's Proctor to intervene, and had offered the fullest and amplest assistance he could render to prevent the divorce being granted; stating, also, that he was prepared to deny on oath the charges that had been made against him, and also to bear the whole of the costs. Eventually, on April 20, the Queen's Proctor informed him that he had entered an appearance in the suit. He therefore now looked forward confidently to the opportunity of stating on oath his assertion that he was entirely innocent of those disgraceful charges, and the day would come when everyone would know that he was free from that matter.

The following resolution was carried unanimously:—"That this mass meeting of Liberal electors of Chelsea, having heard Sir Charles Dilke's statement, heartily accepts his denial of the charges with which he has been assailed, and assures him of their continued confidence." Sir Charles Dilke, in acknowledgment, said the unanimous expression of their approval "exceeded his wildest dreams."

TENNYSON'S ODE, written for the opening of the Colonial and Indian Exhibition, and sung by Madame Albani on that occasion, is as follows:—

I.  
Welcome, welcome with one voice!  
In your welfare we rejoice,  
Sons and brothers, that have sent,  
From isle and cape and continent,  
Produce of your field and flood,  
Mount and mine, and primal wood,  
Works of subtle brain and hand,  
And splendours of the Morning Land,  
Gifts from every British zone!

Britons, hold your own!

II.  
May we find, as ages run,  
The mother featured in the son,  
And may yours for ever be  
That old strength and constancy,  
Which has made your Fathers great  
In our ancient island-state!  
And,—where'er her flag may fly  
Glorious between sea and sky—  
Makes the might of Britain known!

Britons, hold your own!

III.  
Britain fought her sons of yore,  
Britain fail'd; and never more,  
Careless of our growing kin,  
Shall we sin our fathers' sin,  
Men that in a narrower day—  
Unprophetic rulers they—  
Drove from out the Mother's nest  
That young eagle of the West,  
To forage for herself alone!

Britons, hold your own!

IV.  
Shapers of our glorious past,  
Brothers, must we part at last?  
Shall not we thro' good and ill  
Cleave to one another still?  
Britain's myrad voices call  
"Sons, be welded, each and all  
Into one Imperial whole,  
One with Britain heart and soul!  
One life, one flag, one fleet, one Throne!"  
Britons, hold your own!  
And God guard all!

The *Nichi Nichi Shimbun* has the following:—

The anti-Chinese movement on the Pacific coast of the United States of America dates from no recent period, but the anti-Chinese feeling has never burned so fiercely in the bosoms of Americans as at present. Our Consul at San Francisco, apprehending that the movement may produce important effects upon Eastern trade, has made a careful report upon the nature and aims of the Anti-Chinese Association newly started in California. As the report has been published in the *Official Gazette*, our readers must have informed themselves of the principal features of that association. The primary cause which has led to the present extremely unfortunate situation for the Chinese, is undoubtedly their superiority over the whites in the labour market. But in addition to this cardinal point, there are many other circumstances which have more or less contributed to arouse such a deadly feeling of hatred in the hearts of the Anti-Chinese Association. Among those circumstances there is one which deserves our particular notice, and which constitutes one of the complaints raised by the association just named, and that is this, that the Chinese do not immigrate but invade. It is customary to adopt the laws and customs of those peoples among whom one may find oneself. In the intercourse between the East and the West, however, it is practically admitted that the nations of Europe and America may bring with them their own laws and customs, although theoretically it is sometimes asserted that that is a very unjust course on the part of the aliens. What, however, we have to consider just now is the fact that the Chinese are doing the same thing wherever they go. In Hongkong, Annam, Siam, Singapore, Calcutta, and in all other places where a number of Chinamen are gathered, we invariably find a Chinese colony in every way distinct from the rest of the community. In matters of dress, language, manners, education, religion, and even in social intercourse, the Chinaman doggedly adheres to his own ways, and accordingly no sympathy can grow between him and the rest of the population among whom he establishes himself. The presence of a Chinese colony, with all the dirty aspects of an original Chinese community, is especially undesirable in any of the Western cities; it spoils the appearance of the place, while the refinement of the city suffers in no small degree. The establishment of such a colony in a city like San Francisco is as inappropriate as a beggars' quarter could be in the middle of Ginza in Tokyo. It is not surprising that Americans have been roused to the necessity of expelling Chinamen. Had the latter abandoned their national customs and assimilated those of civilized nations, the American people would not have suffered the anti-Chinese tendency of the labouring classes to attain such a degree of violence. Not only in America but in Japan are Chinamen establishing their colonies. In Yokohama, they have what is commonly called the Nankin-machi, and in Nagasaki their quarter is gradually becoming more and extensive. The settlements of Europeans and Americans will be broken up as our customs and manners become Europeanized; but the Chinese settlements, we fear, will continue to exist in their present condition for ever. Observing how we view this matter in our own case, we are persuaded that the American people are not altogether unreasonable in forming such an association as the one we have alluded to.

THE *Nichi Nichi Shinbun* publishes two circulars addressed by Mr. Watanabe, President of the Imperial University, to Government Departments and chief commercial bodies concerning the education of students in the University. In the first circular, which relates to the training of students in the University Hall, Mr. Watanabe briefly states the object of that institution, classifies its students into two classes, Government and self-supporting, laments the poverty of eight to nine out of every ten students, and proposes that State Departments and private companies should employ graduates of the Colleges, and permit them to study in the Hall, by allowing them one-half of their usual office time at a reduced—say half the usual—rate of wages, which amount would be sufficient for the purpose. Promising youths of small means, the President urges, will in this way be able to procure the benefit not simply of prosecuting their favourite branches of knowledge, but also of testing their theoretical investigations by practical application. In the last place he proposes to give to the graduates of the University Hall the privilege of being directly appointed to the position of Assessors in Departments, or to other official posts of *sonin* rank, and requests that private companies in employing such students should give them a similar status. This public recognition of the value of education, he concludes, is an indispensable means of advancing learning and of nourishing the strength of the country.

\* \* \*

In the second circular, which relates to the education of students in the Colleges, President Watanabe states that the poverty of students has led to the necessity of giving them State aid, but as it is impossible to help all needy students, the State aid has been limited to those who are engaged in purely scientific study. But, he goes on to say, such sciences as law, administration, economy, medicine, sanitation, geology, engineering, etc., are of great importance to the country, and the Government Departments and private companies would therefore do well either to let promising students study at their (Departments' or Companies') expense such branches of knowledge as will be of use in their business, or to give help to students who are already studying the required subjects in the Colleges. Should they consent to adopt this proposal, the Imperial University will take the trouble of pointing out students for their selection, and of watching their studies so that they may become able to discharge the duty that will be required of them. The amount of money needed is from ten to twelve *yen* per month for each student, but the President suggests that if the aid cannot be given in whole, there will be means by which even partial aid will enable students to pursue their studies. He concludes with the hope that both the authorities and private companies will wisely aid in the creation of useful citizens and thus comply with the primary wishes of His Imperial Majesty in establishing the Imperial University.

PICKPOCKETS who frequent railway carriages in Japan evidently have a lively time with the police. We described how one of these curiously quick-fingered gentlemen relieved a traveller of his watch, a few days ago, at the Yokohama ticket-stile, the operation being performed so neatly that the chain was neither twisted nor broken, but the watch gently detached from the swivel.

Information was at once lodged with the police, who soon discovered that three suspicious characters had travelled by that particular train. Steps were accordingly taken to observe these men, and so perfectly were they shadowed that they appear to have finally despaired of turning the stolen property into cash. We stated recently that pickpockets in Japan had not yet risen to the level of breaking up watches and disposing of them with the aid of the melting pot. The story of this case proves that we were wrong. The covers of the watch were removed and converted into a nugget, the works and other portions being preserved intact. But neither for the nugget nor the works could the thieves venture to seek a purchaser, so accurately were all their movements observed. Convinced, at last, that the watch was much more likely to be dangerous than profitable to them, they enclosed the whole affair—not even omitting the glass and a detached fragment of the machinery—in a box, which they addressed to the Postmaster General in Tōkyō, and dropped it into the post at Shinagawa, accompanied by a letter requesting that the property should be handed over to the police. Thus, exactly a week from the time of its loss, the watch was restored to its owner, who has at least the satisfaction of preserving the fragments of his property for his own uses.

THE 6th annual general meeting of the Standard Life Assurance Company was held at Edinburgh on Tuesday, the 11th of May, 1886, to declare the results of the business for the past year, and to receive the report on the investigation of the company's affairs and division of profits, the five years ended 16th November 1885. The following results for the year ended 15th November, 1885, were reported:—2,732 new proposals for life assurance were received during the year for £1,510,245; 2,403 proposals were accepted, assuring £1,260,137; the total existing assurances in force at 15th November, 1885, amounted to £20,549,466; of which £1,520,493 was re-assured with other offices, the claims during the year amounted, including bonus additions, to £545,197; the annual revenue amounted at 15th November, 1885, to £897,870; the accumulated funds at same date amounted to £6,592,972, being an increase during the year of £126,446; amount of assurances accepted, 1880-85, 11,925 policies for £6,714,260; 1875-80, 9,409 policies for £6,193,186; increase during present quinquennium, 2,516 policies, £521,074. After setting aside a guarantee fund of £40,000 from the profits of the previous five years, a bonus was declared—to policies on the colonial scheme at the rate of 28s. per cent. per annum, being an increase of 4s. per cent. per annum above the rate declared at last investigation; with an intermediate bonus at the rate of 20s. per cent. per annum for policies of ten years' standing becoming claims between 15th November, 1886, and 15th November, 1890.

THE *Fiji Shimpō* has the following:—Not only in the interest of Japan but also for the sake of the Western Powers, is it of paramount importance that they should bring a liberal and impartial mind to the task of revising the treaties, which is now in progress. In their eyes the most promising of the Eastern markets is the Chinese Empire, the immense resources of which offer limitless profits in future. But its people are extremely conservative in their ideas, and still re-

fuse to come entirely under the influence of Occidental civilization. Near this conservative empire, however, is the enterprising nation of Japan, which, in the short interval of not more than twenty years, has made wonderful progress in civilization, and is now fairly on the path of harmonious advancement. By the rise of the Japanese Empire under entirely new aspects of promise and strength, the Chinese, conservative as they are, have been surprised; and they are now beginning to open their eyes to the necessity of introducing Western civilization into their country. The desire of the Western Powers to open up the hidden resources of the Middle Kingdom seems, therefore, on the eve of realization. And they have been wise thus to place an encouraging example before the sleepy eyes of the Chinese people, in the form of Japan. If they intend to arrive at the actual realization of their primary object in opening China, they have to continue their normal policy of helping Japan on the path of progress, for without the example of this country the Celestials are liable to fall back into their former mood of inaction. Just at this moment the Western Powers have a rare opportunity of proving their intention to keep up this wise policy; that opportunity is the revision of the treaties. Imagine, for instance, that their liberality and magnanimity are large enough to restore to us our judicial and tariff autonomies and that foreigners and Japanese all live in mutual love as if they were citizens of the same country. What impression would this happy state give to China? Railway lines would be started at various places in that country, Western implements and machinery would be introduced, and with the opening of the whole interior, the Western nations would only regret that their purses are not larger. Now reverse the picture; suppose that, instead of acting wisely as we have just depicted, the Treaty Powers take the disastrous course of denying the aspirations of the Japanese nation, and try to create obstacles in our path of advancement. It is hardly necessary to indicate the consequent effects on the Chinese mind. The Celestials would no longer dread the progress of their eastern neighbours; while their innate hatred of the Western people would be deepened by the latter's unjust treatment of the claims of the Japanese nation. Thus for their own interest, if for no other reason, Occidentals will do well to take care not to commit themselves to any action injurious to the cause of civilization in Japan.

THE repeated reports of rich gold mines discovered along the upper Yukon and in the Stewart River region have again called the attention of the United States to the necessity of properly delimiting the boundary line which is to separate Alaska from British Columbia. American miners even now prefer the route of the Chilcat Valley and Lake LeBarge to the Lewis and Yukon rivers, on account of its greater practicability as compared with any other, though that route is almost exclusively in British territory; and when it is borne in mind that the gold fields are largely situated in disputed and debatable regions, the proposition of a joint frontier survey and a treaty regulating the boundary question comes none too soon. President Cleveland transmitted to Congress last month a detailed report of the Secretary of State, Mr. Bayard, in which it is stated that the British Government is ready and prepared to take part in the

preliminary investigation of the pending question, and that no other obstacle delays action but the want of an appropriation by Congress to defray the expenses of the joint survey. "Important and grave international questions of jurisdiction may at any time arise, owing to the circumstance that great mineral wealth exists in the territory which is traversed by the boundary line. The Secretary of State has the honour to recommend that Congress be requested to enact a law to authorize a survey and to appropriate the sum of \$100,000, or so much thereof as may be necessary, to defray the expenses of a preliminary survey." The President, in his letter of transmittal, warmly recommends the propositions of Secretary Bayard, and points out the necessity of procuring all the information needed in order to establish by treaty a definite boundary line between Alaska and the British Possessions in North America.

Nothing could be more striking than the contrast between the highly civilized life in the model settlement of Shanghai and the savage episodes that occur in the adjoining Chinese town. One of these is related in our last exchanges. A Chinese constable employed at the French Police Station fractured the skull of a prisoner with a hammer. The prisoner had been among the ringleaders in a concerted attempt to break jail, and had freely used the same hammer on the constable's person. It was also urged on behalf of the constable that he had not intended to batter the Chinaman's head, but only to strike him on the shoulders. Still, as he was not acting in self-defence—the disturbance having been previously quelled—his crime was of such a nature that the French authorities were constrained to hand him over to the Chinese. The man was accordingly lodged in the city prison, and there—we quote from the *North China Herald*—"he is said at present to be suffering from one of the most cruel tortures that human ingenuity could devise. His family cannot go to see him or take him food without heavy bribes to the prison-keepers. He is fastened to an iron frame or rack, with his hands and feet bound tightly, standing erect, his neck extended so that he can neither rest nor take food without the greatest difficulty, day and night. From two to three hundred dollars are demanded as the sum for which he can be released from torture, and allowed to lie unmolested in his cell. The family are too poor to collect so much money, and thus the case goes on." This is justice of the rough and ready type. From one of the embarrassments of civilization, at any rate, the Chinese are safe. They have no criminals who go to prison for the sake of its shelter and comforts.

One of the chief charms of a Japanese city ten years ago was the delightfully pellucid atmosphere that brooded over it. There were no architectural grandeurs. The sombre stretches of lowly wooden buildings were only relieved at intervals by graceful curves of massive temple roofs, or by verdure of *yashiki* gardens. But the air in which these humble clusters of habitations slept was of a crystalline softness such as Attica itself might have envied. The very aspect of the place inspired a sensation of brisk, cleanly happiness combined with restful quiet. This is one of the features that are rapidly disappearing before the advance of Western civilization. Looking out now upon

Tōkyō, whether to north, to south, to east or to west, one counts ten or twelve grimy chimneys weaving a pall of smoke which the summer winds spread out everywhere. Tōkyō will soon have its fogs and its blacks after the fashion of the most prosperous European centres. The passage from the old to the new is not entirely without evils.

The *Liverpool Journal of Commerce* of April 20, referring to the twenty-fourth annual meeting of the London and Lancashire Fire Insurance Company, held on the previous day, says:—

The past year has proved a brilliant one for the Company, far more successful indeed in its yield of profit than the directors have had the good fortune to submit to the proprietors on any previous occasion. The proportion of the fire loss to the premium income was under 54 per cent., which is a very moderate rate at any time, and must be regarded as eminently satisfactory when the severe experience which fire business has had to contend with in recent years is taken into account. The resulting profit on the year's operations is £65,490, and interest on investment, &c., £17,423. These sums, added to credit balance from 1885, presented the large total of £130,217 that had to be dealt with. Out of this the sum of £18,520 was appropriated to the payment of a dividend of 10 per cent. on the share capital. It is a favourable feature with this company that the dividend is nearly defrayed by the interest, as it enables the directors to virtually apply the whole of the earnings on the business to strengthening the reserves, and on the present occasion the large sum of £61,303 was disposed of in this manner. The wisdom of building up strong reserves is daily becoming more and more manifest with the best managed fire offices, as by this means provision is made against the contingencies and fluctuations to which the business of fire insurance is peculiarly liable, and the stability and permanent prosperity of the company is placed on a sure basis. It is gratifying, therefore, to observe that great attention has been devoted to the accumulation of the reserve funds by this company, as will be clearly seen by its present financial position as follows:—

Capital fully subscribed	£1,852,000
Of which there is paid up	185,200
Reserve and Re-insurance Fund	210,000
Balance carried forward	71,017

From the foregoing it will be seen that the London and Lancashire is without question a very strong office, and that it is entitled to rank among the leading large fire insurance institutions of the kingdom. In further illustration of the careful way in which the funds of this company have been husbanded, we quote the premium income and the accumulated funds (excluding capital) for the two periods of 1875 and 1885:—

	PREMIUM INCOME	RESERVE FUNDS	PER CENTAGE OF PROFIT TO PREMIUM INCOME
1875	£251,516	£28,285	11½
1885	400,012	251,697	71½

Thus the funds have increased to the extent of 60 per cent. upon the premium income during the period embraced; and to further exemplify the increase of this company in the confidence and estimation of the public, it is sufficient to state that while the value of the shares at the former date was 34, they now stand at 72. The results thus achieved must be of the most gratifying character to the shareholders and all interested in the welfare of the company for the manner in which its affairs have been handled during a most difficult period for fire insurance business.

The mutilated telegram which Reuter sent us on Monday, should obviously read thus:—"The Commander of the Australian Squadron reports the formal French occupation of the New Hebrides, and confirms the report of outrages on French subjects." *Appropos* of this occupation, the following extract from the *St. James's Budget* of May 15th shows what had taken place between London and Victoria on the subject:—"The relations between the Government of Victoria and the Colonial Office are becoming uneasy again, in consequence of the attitude assumed by Lord Granville and Lord Rosebery with reference to the proposed annexation of the New Hebrides by France. On the 24th of March the following strong telegram was forwarded by Mr. Gillies, the Premier of Victoria, to Mr. Murray Smith, who at that time was the Agent-General for that colony:—"To-day's *Age* states English politicians favour cession New Hebrides France, condition no transportation, and that Agents-General have

no hope of successfully opposing this proposal, and are privately convinced France will win. Can this impression prevail? Colonies cannot protest more than they have done. Surely their interests and wishes must be more to England than French aggrandizement. The feeling in colonies is that if Germany or France had Australia peopled by their own, neither would tolerate foreign Powers seizing any of islands—New Hebrides least of all—under the circumstances. What would be the use of speaking of imperial federation in face of an act which would proclaim stronger than any language contemptuous indifference for our wishes and future prospects? Should English Government give way or allow to be taken New Hebrides to-day, Australia will assuredly take them back when able." Mr. Murray Smith remonstrated against being obliged to forward such a message *verbatim et literatim*, but was bluntly directed to do as he had been told; and further, was instructed to "get explicit answer what is real reason why France should have New Hebrides in preference to these colonies." It is not probable that Mr. Murray Smith was successful in obtaining this explicit answer. At any rate no mention of any such reply is given in the published correspondence. A few days ago Sir Andrew Clarke, who is at the present moment acting as Agent-General for Victoria, returned to the charge, and forwarded a despatch to the Colonial Office couched in terms which that Department is not very frequently in the habit of receiving. It is only fair to state that some of the Australian colonies, and notably New South Wales, do not feel inclined to interfere in the quarrel, and consider that the undertaking of France to send no more convicts to any part of the Western Pacific, if only she is allowed to annex the New Hebrides, a very fair settlement of a very difficult question."

No explanation is as yet forthcoming with regard to the bursting of a 43-ton gun on board the *Collingwood*. The gun burst about 8 feet from the muzzle when being fired with a charge of only three-fourths of the service allowance. In a discussion to which the incident gave rise in the House of Lords, the Earl of Ravensworth, quoting Lord Charles Beresford as his authority, said that it was better to lose three ships than to burst one gun, because if men distrust the weapon with which they have to work, it inevitably has a demoralizing effect upon them. It appears that of this particular pattern of 43-ton gun there are eleven in the service, and that, owing to their comparatively light construction, a special opinion about them was asked of the Ordnance Committee last year. The Committee pronounced the guns safe, but recommended that the full charge of 295 lbs. of cocoa powder should not be exceeded with them. All the other 43-ton guns in the service, as well as those now in process of construction, are of considerably stronger make. The Admiralty, without waiting to ascertain the exact cause of the accident on board the *Collingwood*, have ordered that the remaining ten guns of this special pattern shall be strengthened with hoops at the muzzle.

The story of the old woman who recently made such a wonderful journey in a fishing smack has been capped by that of a young lady of Jersey. The Sunday School books will doubtless deduce a valuable moral from this young lady's

experiences, for she fell into trouble by going out boating on Sunday evening. She was accompanied by a cousin, Jules Farne, who sculled their little boat about a mile from the pier at St. Helier, and then, in attempting to return, lost both the oars. Farne, being a good swimmer, jumped into the sea and tried to recover the oars, but before he succeeded the boat had drifted out of sight and he was fain to struggle to the shore, which he reached with great difficulty, only to be arrested and thrown into prison on suspicion of having murdered his cousin. His reputation for veracity must have been rather shady, for people were more ready to conclude that he had killed the girl than to believe that she was drifting about in an open boat within easy reach of succour. Before daylight the boat had been carried miles away, Miss Journeaux exhausting herself by screaming for aid. She had neither food nor drink and was obliged to vary her occupation of screaming by baling out the boat and trying to shelter herself from the heavy rain. Not till Tuesday forenoon was she picked up by a fishing schooner, which carried her to the shores of Newfoundland, so that the end of that Sunday trip was 36 hours of terror and suffering for her, followed by an involuntary voyage across the Atlantic, and for her rash swain, thirty days in prison.

THE *Saturday Review*, writing about India's sufferings in connection with the demonetization of silver, says:—

It is unquestionably true, of course, that an unstable currency is an evil; but the instability of the Indian currency at present is confined entirely, to the foreign trade and the British relations of the Indian Government. In India itself the rupee seems to have retained almost its full purchasing power. And other considerations go to strengthen the plea for caution. For example, it is understood that the Japanese Government is about to adopt a silver currency. If it does so, there will be a considerable rise in the price of silver without any action on our part. And if China, which is contemplating railway construction on a large scale, should also so far conform to European notions as to introduce a regular silver currency, we might see the value of silver restored to what it was before its demonetization by Germany.

It is hard to say which is the more striking, the ignorance or the shallowness of this writing. The article from which we quote appeared last month, yet the *Saturday Review* was then speculating about the chances of Japan and China adopting a silver currency! That is bad enough, but what is even worse is the superficial suggestion with regard to the increased use of silver by China and Japan. Such an increase might certainly improve the gold-value of silver by creating a temporary demand for the latter. But how would it remove the incomparably more momentous financial dilemma into which Europe and America have plunged themselves by throwing all the duties of exchange upon a metal the annual supply of which, already forty per cent. too small, is steadily diminishing?

SIR THOMAS WADE has addressed the following letter to the *Pall Mall Budget*:—"In an article entitled 'A Brother's Tribute,' being a review of Sir Henry Gordon's memoir of events in the life of his distinguished brother Charles, you have the following passage:—Of the care and scrupulous accuracy with which Sir Henry Gordon has performed his task we need not speak; but one illustration will suffice. Sir Thomas Wade, who is somewhat severely reflected on as having favoured the idea that Li Hung-chang should march on Peking and execute a kind of *coup d'état*, raised the question of the accuracy of this assertion. A reference

to the MSS., however, shows that General Gordon had written the passages complained of with his own hand, and that Sir Henry had softened rather than heightened the gravity of of the charge. It is undeniable that General Gordon's papers did justify my good friend his brother in his belief that I had looked with favour on the policy referred to, and that in the memoir just published the charge that I did so has been lightened rather than aggravated. Sir Henry Gordon has had the kindness to communicate all the papers in question to me. I none the less repeat what I have already written to *The Times*, that I never for a moment entertained the idea attributed to me. If you and your contemporaries will do me the favour to wait a little, I shall be enabled, I do not doubt, to show why I never could have entertained it, and at the same time to correct some other impressions regarding the crisis of 1880, the present fashion of discussing which is calculated to injure others rather than myself. To me, indeed, accusations of the kind can now do little injury.

As shown in the following table, the total number of cattle killed for food during last year in Tôkyô and fourteen other localities, was 60,786 head, which exceeds the total number for the preceding year by 7,167 head. The increase was especially remarkable in Hiroshima Prefecture, the rate of increase being in that locality as much as 45 per cent. Next to Hiroshima comes Tôkyô, where there is an increase of 23 per cent. The weight per head was on an average 450 pounds:—

Locality.	NUMBER OF CATTLE KILLED.	WEIGHT OF FRESH MEAT.	PER HEAD OF POPULATION.
	Head.	Pounds.	Kin. Momme.
Tôkyô	18,417	8,348,120	6 70
Osaka	12,873	5,741,250	4 23
Chiba Prefecture	512	210,450	0 24
Mie Prefecture	718	327,250	0 45
Iga Prefecture	529	209,700	0 32
Hiroshima Prefecture.	624	282,500	0 39
Yamaguchi Prefecture.	931	419,810	0 71
Akita Prefecture	495	222,750	0 42
Okayama Prefecture	4,470	2,010,000	1 111
Hiroshima Prefecture	10,120	4,600,500	3 47
Wakayama Prefecture.	2,488	1,074,000	1 87
Kanagawa Prefecture	1,414	636,000	1 19
Oita Prefecture	2,308	1,207,000	1 85
Yamaguchi Prefecture.	2,511	1,120,050	1 15
Miyazaki Prefecture	2,208	1,034,100	2 84
Total	60,786	27,353,700	

—Official Gazette.

—*Official Gazette.*

We take this from *Nature*:—"Some interesting statistics of the Japanese press have lately been published in the *Oesterreichische Monatschrift für den Orient*, in which the newspapers and periodicals of Japan are arranged according to the subjects with which they deal. It appears that 37 publications are devoted to matters connected with education, and that these have a total circulation of 42,649 per month. There are 7 medical papers, with a monthly circulation of 13,514; 9 relating to sanitary matters, with a circulation of 8,195; 2 on forestry; and 2 on pharmacy. There are 7 devoted to various branches of science, with a circulation of 2,528; but to these must be added 29 engaged in popularising science, with a total circulation of 70,666."

The Conference on Treaty Revision met once more last Tuesday, and agreed to discontinue further sessions until the weather becomes cool again; that is to say, until the beginning of October. The weather is an eighteenth Power in this weary business, and though proverbially capricious, it is perhaps as trustworthy as any of its colleagues. Still we keep hoping against hope. The spring is the time for projects. Let us trust that the seed sown—if indeed any has

been sown—during the spring labours of the Conference, may ripen during the summer and be found to have reached maturity in the autumn.

In Osaka and the twelve Prefectures of Mie, Fukushima, Akita, Hiroshima, Oita, Miyazaki, Chiba, Gifu, Miyagi, Okayama, Wakayama, and Kumamoto, the total amount of rice produced in 1885 was *koku* 11,749,063, and the area under cultivation *cho* 888,881. Compared with the preceding year, 1884, there was an increase of *koku* 2,550,647 or 27.7 per cent. in the amount of rice produced, while in area of cultivation there was a decrease of *cho* 12,462; and a comparison with 1883 shows a decrease of *cho* 2,937 in the area of cultivation and an increase of *koku* 1,988,380, or over 20 per cent., in the amount of production.—*Official Gazette.*

THE committee for the construction of the proposed Nikko railway have at last been enabled to report to the authorities that the required capital of *yen* 125,000 has been fully subscribed, and to apply for the necessary permission to commence the work. The railway will extend between Utsunomiya and Imaishi, a distance of about 17 miles, and a branch line will be constructed between an intermediate station and Kanumajiku.—*Nichi Nichi Shinbun.*

We note the arrival, by the *Thibet* on Sunday from Hongkong, of Her Majesty's Minister at Bangkok, Mr. E. M. Satow, C.M.G. Mr. Satow arrived in Tôkyô on Monday, and is staying at H.B.M. Legation. He is suffering from an attack of malarial fever, but it is hoped that the change to Japan will speedily restore his health.

We learn that an authentic telegram arrived in town on Saturday evening from Milan stating that the result of the European silk crop will be rather good than otherwise, in fact a fair average—and that there will be no scarcity of Raw Material. At the same time the prospects of the trade are reported to be good with a fairly buoyant market.

We have received from Messrs. H. Ahrens & Co. the table of sailings, outwards and homewards, of the Postdampfer-Linie des Norddeutschen Lloyd, as approved by the German Chancellor. The first steamer of the main line was to leave Bremen on Wednesday, the local steamer which is to run between Hongkong and Japan having left in advance about a fortnight since.

HEAVY rain fell on Tuesday and was specially welcomed by the farmers on account of the young rice crop, the planting out of which is now all but finished. Already the want of rain had been felt, and it only required a continuance of the late dry weather to seriously injure the crops.

THE wreck of the *Sukune Maru*, submitted to auction recently by Messrs. Bourne & Co., was knocked down to Mr. Mikawaya, a Japanese broker, for the sum of six hundred and thirty dollars.

THE British ships *Endora* and *Carrie Delap*, both for Kobe, from Philadelphia with kerosene, passed New Anger on the 5th June; the *Honauwar*, for Yokohama, passed on the 7th June.

TELEGRAPHIC communication with Europe and America, *via* Siberia, is interrupted this morning. The Hongkong route is, however, in good working order.

## FINANCIAL PROBLEMS.

AFTER an interval of two years and a half, we find ourselves confronted by a problem which, in a slightly different form, excited some little controversy in these columns at the commencement of 1884. The Minister of Finance had then notified an issue of railway bonds to the amount of five million *yen*, and these were in eager demand by capitalists, especially, it was said, by the national banks. The operation inspired considerable uneasiness. The country was passing through the most acute stage of suffering from currency contraction, and capital, as is invariably the case at such crises, diverted from the ordinary channels of industrial and commercial enterprise, was attracted towards Government securities. It seemed, therefore, injudicious to provide fresh facilities and inducements for the fixing of capital, thus rendering it unavailable for the demand which would certainly spring up when, prices having adjusted themselves to the altered value of the medium of exchange, a revival of trade and industry should take place. Of course there was no doubt in anyone's mind as to the advisability of railway construction. Railways had long been recognised as the great desideratum in Japan. That they ought to be built with all possible speed was universally agreed. The question lay entirely between domestic and foreign capital. Japan is a country where capital accumulates slowly, and rates of interest are—or were two years ago—very high. In such a country to draw capital at any time from the wages fund, even for purposes of ultimately productive expenditure, might seriously curtail the subsistence of the people and the employment of labour, and diminish, in a corresponding degree, the gross annual produce of the nation. But to fix floating capital which had been deprived of its functions by the temporary paralysis of industrial and commercial enterprise, was, in effect, a method of prolonging that paralysis. All this was discussed by us at some length at the time, and since the recorded opinions of great economists—with which Japanese financiers must be quite familiar—are almost unanimous in condemning the excessive construction of fixed capital under circumstances such as those which existed here, it was felt that the action of the Government had been influenced by considerations not wholly financial. Since that time four issues of railway bonds have taken place, and the whole having been readily purchased by the people, a total sum of twenty millions has thus been drawn from the floating capital of the nation. This fact is sufficiently formidable in itself, but when we supplement it by saying that, whereas the amount of paper money in circulation in 1884 was 93 millions, it is at present only 76, it will be seen that the funds at the public disposal have been

reduced, owing to these two causes, by 37 millions approximately. In proportion as this reduction proceeded, the tendency to invest in government securities increased, and, as will be gathered from the following table, a marked contrast now exists between the prices which these securities commanded in 1884 and those which they command to-day:—

MARKET PRICES OF GOVERNMENT SECURITIES.		
	MAY, 1884.	MAY, 1886.
Eight per Cent. Bonds for Shrines and Temples	90.00	103.00
Bonds Exchangeable for <i>Nippon Giken</i>	90.00	103.00
Seven per Cent. Pension Bonds	93.00	111.00
Six per Cent. Pension Bonds	85.00	104.30
Industrial Bonds	89.80	110.70
Industrial Name-Bearing Bonds	88.80	100.00
New Public Loan Bonds	76.00	99.50
Old Public Loan Bonds	71.50	95.50
Nakasendo Railway Bonds	92.00	119.20

It will be observed that while a considerable appreciation has taken place in the price of all these Bonds, they have not by any means been uniformly affected; for while some—as the Nakasendo and Six per Cent. Pension Bonds—show an appreciation of about 29 per cent., others—as the Eight per Cent. Bonds for Shrines and Temples—are only 4 per cent. dearer than they were. It is foreign to our present purpose to examine the cause of the differences, but we may say that chief among them are the quantities of such securities in the market and their transferability. What we have principally to note is the fall in the rate of interest. Taking the Nakasendo Bonds as a criterion, it appears that, while people were not willing to lend their money to the Government at less than 7½ per cent. in 1884, they are now willing to lend it at 5½; and, on the other hand, looking at the Bank of Japan's record, we see that, whereas private borrowers had to pay 8 per cent. for accommodation two years ago, they are only required to pay 5½ per cent. at present. In general, the price of Government securities is largely influenced by the state of the national credit. But in Japan's case, so far as the points immediately under consideration are concerned, this factor may be ruled out, and we shall not err if, broadly speaking, we refer the rise in the price of public securities and the fall in the rate of Bank interest to the operation of the same prime cause. At first sight, indeed, the two things may appear synonymous. But such is not the case. For, as we stated at the outset, tradal depression, by closing the ordinary channels of profitable investment, may largely increase the demand for Government securities and therefore correspondingly enhance their market price; whereas the same tradal depression may, by its deterrent influence upon capitalists and the feeling of insecurity it creates, render money dear for purposes of industrial or commercial enterprise. Why, then, should money have become cheap in Japan contemporaneously with a general rise in the

price of Government securities and during a period of tradal depression? The explanation is to be found, we believe, in the financial policy of the Government. The Pension Bonds constitute a most important, if not a controlling, element in Japanese finance. There are 165 millions of these securities, and it is evident that, under ordinary circumstances, the rate of interest ruling in such a large channel of investment, must be virtually an index of the price of money in the open market. That rate, three years ago, averaged fully 8 per cent., and the Minister of Finance apparently then conceived the project of concentrating the attention of capitalists upon government securities. Tradal depression had already paved the way for such a scheme. The issue of the Nakasendo Railway Bonds—which were purchasable by foreigners and therefore specially secured, easily transferable, and procurable in large quantities—completed the work. Little by little these securities went up in price, and their example was followed, more slowly and at an interval, by the whole mass of Pension Bonds, until, from 8 per cent., the return upon these investments has fallen to the neighbourhood of 5. Simultaneously the Bank of Japan reduced its rate of interest so that we are now confronted by a state of affairs which never before existed in this Empire; namely, capitalists eagerly investing in Government securities, and money procurable at 5½ per cent. interest. It would, perhaps, be going a little too far to infer that, when the Minister of Finance issued such a peculiarly inviting form of security as the Nakasendo Bonds, his deliberate purpose was to turn speculation in that direction, and ultimately to bring the whole body of government securities into vicarious favour. But it is certain that his action had that effect, and that he has managed, with singular adroitness, to derive general benefit from an otherwise questionable operation. The consequence chiefly to be apprehended in connection with the issue of the Bonds was a drastic diversion of capital from the ordinary channels of tradal enterprise, and though this has undoubtedly occurred—witness the keen demand for these securities—it has been accompanied by a strongly mitigating circumstance, the general cheapening of money—for the Bank of Japan's rate of discount virtually fixes that of all the Banks throughout the Empire. How far this cheapening process is to be carried, it is difficult to foresee. The Five per Cent. Navy Bonds, now offered to the public, are already quoted at 103, and this rate will doubtless be approached by the whole body of Government securities. Were it not that the period of their redemption at par is getting less remote, we should not be surprised to see Nakasendo Railway Bonds quoted at 145 next year, and the Bank of Japan discounting bills at 4½ or 4 per cent. Such financial operations certainly betray no timidity. They would

be regarded with grave uneasiness in a country where less fitful conditions existed. But there is a sort of domestic thoroughness and facility about the management of the national finances in Japan. Operations which elsewhere would be counted highly hazardous, here seem to be simple, and—judging by results—even sound. If public securities cease to offer a return of more than 4 or 4½ per cent., it is as certain as anything human can be certain that they will also cease to attract investors, and that capitalists will be fain to turn to the more promising prospects of commercial and industrial enterprise. In the meanwhile, whatever sparks of vitality such enterprise retains, ought to be fanned into something like flame by the unparalleled cheapness of money at present.

### POPULAR POLITICS IN JAPAN.

A REMARKABLE controversy was recently carried on by the vernacular press of Japan, the question at issue being nothing less than the relative adaptability of the monarchical and democratic forms of Government to this country. What imparted special interest to the dispute was that the controversialists were not dealing with a mere abstract problem, but were virtually forecasting the struggle in which the nation must very shortly engage. In four years more Japan is to have a Parliament, and it will be necessary for her then to determine exactly in what proportions the political power is to be divided between the Sovereign and the People. Naturally her politicians and literati are not disposed to remain silent on the eve of this vital decision. We may be sure that, as the months go by, men are devoting themselves more and more earnestly to its discussion, and that the controversy which has just been carried on so vehemently is a fair evidence of the mood at present prevailing in educated circles. The special point round which the struggle raged was the source of Ministerial authority—ought the principal executive officials of the Empire to be responsible to Parliament or to the Crown; hold office at the will of the Sovereign, or at that of the representative assembly of the nation? With one important exception—the *Fiji Shimpō*—all the leading journals of the capital joined in the controversy, and with one important exception—the *Nichi Nichi Shimbun*—all stoutly advocated the derivation of executive power from Parliament, not the Throne.

Of course when we say that the question lay between the monarchical and the democratic forms of Government, it will be understood that we refer to the issue ultimately involved. England is nominally a democracy, though her Ministers are responsible to Parliament alone and cannot be removed by the will of the Sovereign. But it is plain that when a nation which

only a few years ago emerged from feudalism, begins to discuss whether its Ministers shall be responsible to an elective assembly or to the Crown, it is virtually choosing between DEMOS and BASILEUS. And indeed this was evidently recognised by the parties to the controversy. For while one side laid constant stress on the sacred inviolability of the sovereign authority in Japan, the other pointed with equal emphasis to the democratic tendency of all modern politics. Both, however, wisely refrained from entering into any lengthy exposition of the general merits of the systems they advocated, and confined themselves rather to discussing their relative adaptability to Japan. And here, it must be confessed, the arguments of the democrats were singularly unsatisfactory. The *Nichi Nichi Shimbun*, proceeding upon the universally recognised axiom that political systems must be the children not the sires of the conditions among which they exist, dwelt much upon the form of government hitherto prevailing in Japan, and strongly questioned the prudence, nay even the feasibility, of passing precipitately to a polity which many Western countries are still far from assimilating fully. The *Hochi Shimbun*—of which we speak specially as the most prominent controversialist on the other side—actually seemed to find this argument so trivial that it replied by something like a series of jests. It enquired whether the same principle ought not to have prevented the abolition of feudalism, and whether it ought not now to retard the development of railways and telegraphs, as well as the construction of brick houses, the use of foreign clothes and foreign medicines. It would have been difficult to furnish a more signal illustration of the *Nichi Nichi Shimbun's* proposition. For assuredly if the *Hochi Shimbun's* reply may be counted representative of popular opinion in Japan, nothing further is needed to show that political problems are as yet a *terra incognita* to the bulk of the nation, and that to enfranchise the people would be merely to furnish them with the power to vote away their liberties. Indeed, the whole line of reasoning adopted by the *Hochi Shimbun* and its fellow-thinkers is eminently unsatisfactory. Their tendency is always to rush into extremes. By way of answer to the *Nichi Nichi Shimbun's* contention that the most efficient machine of government for purposes of foreign policy is a monarchy, they ask whether this or that despot of ancient times is to be taken as an admirable type of ruler. Equally relevant would it be to infer the failure of all parliaments from the condition of the Roman Assembly when it became a mob incapable of debate. Then again, when the *Nichi Nichi Shimbun* states generally that in every country there exist a morbid and a healthy stream of political activity, the *Hochi Shimbun* charges it with placing all the good to the credit of those in office and laying all the

evil at the door of those who are not in office, and forthwith proceeds to adduce from Chinese history instances of men who misbehaved themselves sadly when in office. It is impossible to regard such methods of discussion as serious. The perusal of the *Hochi Shimbun's* long series of articles leaves us just as far as ever from a reply to the one question of real importance—what is there in the past history or in the present condition of Japan to warrant the belief that she is fit to leap at one bound to the practice of popular Government? The *Hochi Shimbun* does not seem to have even grasped the significance of the question, for it gravely argues that because a parliamentary system of Government resembling that of England exists in France, Spain, Austria, Italy, and Greece, where customs very different from those of England prevail, therefore the political institutions of the West may be borrowed at once by Japan without inconvenience. Such superficiality fills us with misgivings. It is not to be denied that when, as in Japan's case, a nation comes in contact with a state of civilization out of all comparison with its own, it may reasonably be disposed to transplant to its soil full-grown systems which elsewhere developed hardly and through the lapse of centuries. But there must be some receptive fitness in the soil. A crowd of constitutions, European and American, followed the English parliamentary model more or less closely, but in every case there had been created, or there existed, conditions which rendered such imitation comparatively safe and easy. Can it be shown that such conditions exist in Japan? The *Hochi Shimbun* does not lead us to infer their existence by its manner of discussing European precedents. Its comments on the dissimilar customs and similar parliamentary institutions of England, Greece, Italy, Austria, and so forth, betray singular ignorance of the Science of Comparative Politics, which has taught us that the three great races of Europe, the Greek, the Roman, and the Teutonic, were all brethren of one common stock, and that in all alike existed the germs of the monarchic, the aristocratic, and the democratic principles of Government. "There is one form of Government," says FREEMAN, "which, under various modifications, is set before us in the earliest glimpses which we get of the political life of at least all the European members of the Aryan family. There is that of the single King or Chief, first ruler in peace, first captain in war, but ruling, not by his own arbitrary will, but with the advice of a council of chiefs eminent for age, or birth, or personal exploits, and further bringing all matters of special moment for the final approval of the General Assembly of the whole people." Whatever differences, therefore, might be discernible in the customs and conditions of these peoples, all alike possessed a basis on which parliamentary

government could stand firmly and fitly. Does Japan possess such a basis? If so, it is certainly not to be found in her past history, and we cannot but think with the *Nichi Nichi Shimbun* that to hastily assume its existence would not be the act of wise statesmen. Politics are dangerous playthings. It is easy to increase the powers of Parliament; scarcely possible to remedy the mischief that may be wrought by delegating to it undue powers at the outset.

We cannot dismiss this subject without noticing the extraordinary arguments employed by the *Hochi Shimbun* to minimize the historical distinction between Japan and European countries. It is not enough that the Radical journal, while professing to represent educated opinion, should parade its ignorance of the community of political traditions which constitutes an all-important link between the members of the great Aryan family. It is not enough that it should propose to transplant, full-grown, English democratic systems into monarchical Japan, as though no importance were to be attached to the fact that, however much the English constitution of to-day may differ from the traditions and customs of old times, there still is no break between them; no trace of any sweeping away of the old and substitution of the new; but that the whole shows an unbroken continuity of political being. All this negative evidence of misapprehension does not suffice. The *Hochi* must go on to adduce two positive proofs of its position, each of which is, if possible less convincing than the other. The first is that the existence of democratic tendencies in Japan is shown by the solicitude invariably displayed by benevolent Emperors for the good of their people. It would be equally logical to assert that divided authority must necessarily exist in an army where the commander takes care to have his soldiers well fed and well clothed. The gracious solicitude for his people's happiness which was an ideal, and often a practical, trait of the semi-divine ruler, consisted perfectly with the autocratic attributes of his divinity. The *Hochi's* second contention is that, even admitting the absence of democratic instincts in former times, the political tendency since the Restoration has been in the direction of popular government, and, as evidences of this, it adduces the transfer of the ownership of the soil to the people, the establishment of City and Prefectural Assemblies, and the promise of a National Assembly. The Radical journal apparently forgets that all this is the work of the politicians against whose proposed system it is inveighing. Addressing the men who have inspired and directed Japanese progress, it says in effect:—"You have laid the foundations of constitutional government, therefore there can be no more room for prudence or discretion; the building must be carried to its greatest height without delay. Under your guidance

the nation has begun to turn its eyes towards self-government, therefore there is no need of any further guidance; self-government must be inaugurated at once in its complete form."

In every political party there must be extremists, but the position taken by the *Hochi Shimbun* seems to lie beyond the limits of everything except romantic enthusiasm.

#### THE FULLERT CASE.

THE motion for a new trial in the case of the People of the United States v. P. C. FULLERT having been refused, it will be well to say a few words about this strange trial. We do not propose to discuss the grounds of the motion, or the terms in which it was dismissed, further than to pay a passing tribute to the great zeal and ability displayed by the Counsel for the defence, Mr. J. F. LOWDER. Our business is rather with the original verdict, and we have no hesitation in saying that it adds another item to the catalogue of surprises which Consular jurisdiction in Japan has furnished for public edification. FULLERT was the master and part owner of an otter-hunting schooner, the *Arctic*; the other and principal owner being a man named MINER. FULLERT was a German subject; MINER presumably an American citizen. The *Arctic* cleared, April 19th, and leaving Yokohama the 21st, repaired to Kaneda Bay, a small harbour in the neighbourhood, where she remained two days, this interval being necessary for the "sobering up" of the crew and the proper stowing of the cargo. The master, FULLERT, had been previously informed by the owner, MINER, that the *Arctic* was probably to take a passenger, but owing to some difficulty in the matter of terms, the question was still open when the schooner left Yokohama, and FULLERT informed MINER that if the passenger came to Kaneda Bay within two days' time, he would find the *Arctic* there. On the morning of the 23rd the passenger joined the ship. He was accompanied by a man named CROCKER, who was known to the master as a person more or less connected with the United States' Consulate. It is convenient to note here that neither MINER nor CROCKER appeared at the trial to give evidence. On reaching the schooner, the passenger gave the name of GORDON. He had very little baggage, and the master summed him up as a globe-trotter who desired to go north for the sport of otter-hunting. Shortly afterwards the schooner sailed, CROCKER having returned to Yokohama.

Lying in Yokohama harbour at this time was the United States man-of-war *Ossipee*. Her Paymaster, Lieutenant WATKINS, was under arrest, pending enquiry into certain charges preferred against him. During the night of the 22nd April, he escaped from the ship, and the naval authorities came to the conclusion that he

had gone off in the *Arctic*. A warrant for his arrest was accordingly issued, and entrusted to the captain of the *Ossipee* for execution. In this warrant there was left a blank in which the captain of the *Ossipee* was verbally authorized to write FULLERT'S name, on suspicion of aiding and abetting the desertion of WATKINS. Armed with this extraordinary document, the *Ossipee* proceeded northwards. At Shikotan, in the Kuriles, she found the *Arctic*. The schooner was searched, but as WATKINS, alias GORDON, had gone ashore, he was not immediately discovered. The master of the *Arctic* was, however, carried to the *Ossipee*, and being there questioned, answered that he had brought from Yokohama a passenger, whom he pointed out in a photographic group of the *Ossipee's* officers. FULLERT gave his answers frankly, and his recognition of the photograph effectually dispelled all doubt as to the identity of his passenger with the deserter WATKINS. The following morning WATKINS was arrested on shore, and both he and FULLERT were carried to Yokohama in the *Ossipee*. FULLERT was not informed of the charge against him, or shown any warrant. His arrest and the document under which it was effected, bore a close resemblance to proceedings in connection with an old-time *lettre de cachet*.

Arrived in Yokohama, FULLERT was arraigned before the United States Consular Court on a charge of aiding and assisting the desertion of WATKINS. To establish this charge, it was absolutely essential to show that FULLERT sinned wittingly—that he knew his passenger GORDON to be the deserter WATKINS. The prosecution relied upon four points to prove this vital fact. First, it was shown that FULLERT was engaged to be married, and that by remaining two days longer in Yokohama he could have completed the preliminaries for the ceremony. Unusual haste was inferred from his apparently abrupt departure. Secondly, it was argued that if the *Arctic* was in such a hurry to get away from Yokohama, there was no reason why she should have remained two days in Kaneda Bay. The inference sought to be drawn was that her movements were specially regulated with the view of facilitating WATKINS' escape. Thirdly, it was asserted that the master of a ship should know everything about his passengers, and that FULLERT'S alleged want of knowledge implied guilty connivance. Fourthly, the circumstances under which WATKINS joined the ship and his peculiarly scanty baggage were indicated as too suspicious to consist with any theory of complete ingenuousness on the master's part. Taken together, and assuming them to be well established, these points certainly went to fix upon the master a suspicion of guilty knowledge. But with scarcely an exception they were all satisfactorily explained. The marriage which ought to have detained

FULLERT was to have been between him and a Japanese woman with whom he had lived ten years. It was a matter of no practical moment whether the ceremony took place before or after the *Arctic's* trip, whereas the otter schooners were all on the move at the time, and their chances of profit depended greatly upon their individual expedition. With regard to the delay in Kaneda Bay and the going there at all, it was fully established by independent testimony that such a course was usual, and that the circumstances which necessitated it were of common occurrence in the case of otter schooners. FULLERT's indifference about the history of his passenger, and the latter's scanty kit—certainly not such an equipment as any one proceeding on an otter-hunting expedition for pleasure might be expected to carry—were curious circumstances. But they could not possibly suffice to prove guilty connivance on the master's part. Being uncertain, up to the very last moment, whether he should have a passenger at all, he may well have neglected to make enquiries about the man's antecedents; and moreover, the presence of CROCKER, whom he knew, may have seemed more important than the number of the passenger's parcels. It is, therefore, not too much to say that there was nothing against FULLERT except a vague suspicion. Yet the Court found him guilty—that is to say, guilty of aiding and assisting the desertion of WATKINS, knowing him to be a deserter—and sentenced him to six months' imprisonment with a fine of two thousand dollars. A more inexplicable verdict has seldom been pronounced. Three years ago we noted an instance of the United States' Consul-General in Yokohama denouncing, in the strongest terms, a Chinese who was presently to appear as complainant in the United States' Consular Court. It would almost seem as though in the case of FULLERT also the Consul-General allowed his judicial acumen to be obscured by his executive functions. He had issued a blank warrant for FULLERT's arrest. He had been instrumental in causing the man to be taken from his ship and carried as a prisoner to Yokohama. He had signed the charge against him, appending—as was legally prescribed—a declaration of his own belief in the guilt of the accused. Having done all this, he was apparently unable, when sitting as Judge, to disencumber his mind of the impressions it had received in his previous capacity as permanent Counsel for the prosecution. We have not the least idea of suggesting that FULLERT was the victim of intentional wrong. The present Consul-General of the United States at Kanagawa is a gentleman of whose conscientious desire to be just no doubt can be entertained. His legal competence, however, is another question, and it is easy to conceive that, in the absence of judicial training, an official required to perform the dual function of counsel and judge may experience

considerable difficulty in dissociating the two rôles. A system which exposes its representatives to such strains is radically defective. Little wonder that under it the vagaries of Consular jurisdiction are occasionally exposed. To the unfortunate FULLERT, however, these abstract reflections cannot bring much comfort.

#### KIM-YO-KUN.

IT is to be hoped that the step which the Japanese Government has now taken as regards the Korean refugee KIM-YO-KUN will be the closing episode of the *Soul émeute* of 1884. KIM was among those who escaped to this country after the failure of the plot instigated and directed by himself. International law does not pretend to determine how far bloodshed with violence is a legitimate accompaniment of political agitation. KIM's hands were still warm from the assassination of six or seven high officials when he fled to Nagasaki, and this fact, supplemented by the element of grave disturbance which his proceedings introduced into the relations of two empires and a tributary kingdom, roused against him the bitter resentment of both the Chinese and the Korean Cabinets. His extradition became the repeated subject of diplomatic solicitations from Peking and *Soul*, and Japan's refusal to comply seemed at one time likely to cost her the goodwill of her neighbours. The Government in *Tôkyô*, indeed, had little cause to be tender of the fugitive's safety. For to Japan also his conduct had been a source of serious trouble, and her willingness to grant him asylum exposed her motives to injurious misconstruction. Neither in China nor in Korea do the refinements of international morality rank higher than the suggestions of political expediency, and the statesmen of these two countries might easily have interpreted Japan's attitude towards KIM as the outcome of some obligation secretly contracted in the past. We suspect that the MIKADO's Ministers, inspired, on the one side, by a desire to remove Chinese suspicions, and urged, on the other, by the responsibility which KIM's presence involved, must have been a little tempted to abandon him to his fate. But they never suffered any evidence of such a disposition to appear. The requisitions of China and Korea were met by a firm refusal, to which was added a courteous reminder that Oriental States, if they desire to claim the benefit of international rights at the hands of Western Powers, must begin by respecting those rights in their dealings with one another. KIM, therefore, remained safely in *Tôkyô*, quiet probably through lack of opportunity rather than of will. He had almost ceased to be an object of public attention when the conspiracy of last summer brought him again into notice. Whether or no he was directly concerned in that conspiracy, we cannot tell. No conclusive evidence

was forthcoming. But it was abundantly plain that his presence in Japan had become an incentive to feather-brained Japanese agitators, who, having a fancy for violent enterprises, imagined that Korea offered an inviting field. This conspiracy, stifled at the outset by the vigilance of the Japanese police, was so foolishly magnified in *Soul* as to occasion a temporary panic, and perhaps to rekindle the flame of hostility to KIM. Being here, however, on conjectural ground, we pass at once to the last act of the scene, which may be said to have commenced about six weeks ago with the arrival in Japan of a Korean named CHU-UN YEI. The new-comer's purpose, as subsequently reported, was curiously inconsistent with his proceedings. He entered at once into relations of close intimacy with three friends and fellow-refugees of KIM. One theory says that he did this of his own motion, being desirous of gaining KIM's friends to his own side; another, that the suspicions of KIM's friends prompted them to win the stranger's confidence. At all events, an issue of the intimacy is said to have been the discovery that the lately arrived Korean carried his Sovereign's commission to take KIM's life wherever that fugitive might be found. KIM's friends claimed that they actually obtained possession of this document, but we may say at once here that two copies of it subsequently exhibited and certified by KIM, showed discrepancies sufficiently important to suggest doubts of the original's existence. Moreover, the good-fellowship previously observable between KIM's friends and the licensed assassin was not interrupted, as it might naturally have been had the latter's credentials been appropriated, or his designs unmasked, by the former. KIM, however, attempted privately to enlist the sympathy of Ministers in *Tôkyô* by representing himself as the object of murderous designs, which, if consummated on Japanese territory, might easily have induced political complications and excited popular prejudice. Steps were accordingly taken to obtain official information with regard to the purpose of YEI's presence in Japan. These elicited a denial, on the part of the Korean Government, that he carried any such commission as that alleged to have been found in his possession. At the same time, peremptory orders for his return were issued from *Soul*. The Japanese Government now arrived at the conclusion that KIM's continued presence in this Empire, or at least in easily accessible parts of it, constituted a source of danger to the internal peace of the country, as well as to its external relations. A decision to effect his removal was therefore taken, and the following notice was promulgated:—

Department for Home Affairs,  
*Tôkyô*, 12th June, 1886.

TO THE CHIEF OF THE METROPOLITAN POLICE,  
*TÔKYÔ*, CHIEF OF ALL AND SEVERAL FU, AND  
THE KENREI OF ALL AND SEVERAL KEN.  
WHEREAS, one Kim-Yo-Kun, a Korean subject

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

and a political refugee from that country, is at present residing within this Empire;

And whereas His Imperial Japanese Majesty's Government have good reason to believe that the presence of the said Kim-Yo-Kun within His Imperial Japanese Majesty's dominions is prejudicial to the existing Government of Korea, with which His Imperial Japanese Majesty's Government are on terms of friendship and good relations; and tends to endanger the peace, tranquillity, and external safety of the Empire;

Now therefore, I, by virtue of the power delegated to me, do hereby order and command the said Kim-Yo-Kun, to depart from the Dominions of His Imperial Japanese Majesty within fifteen days from the date this notice is served on him, and to remain without the said Dominions until this order is revoked; and I hereby authorize and empower you, the above-named officers, or any of you, to serve this order upon the said Kim-Yo-Kun, by delivering to him a certified copy thereof; and I further authorize and empower you, or any of you, at the expiration of the aforesaid fifteen days, if the said Kim-Yo-Kun, shall not then have departed from this Empire, to arrest and detain him, the said Kim-Yo-Kun, and as soon thereafter as possible, to expel him, the said Kim-Yo-Kun, from His Imperial Japanese Majesty's Dominions, using, to accomplish the required end, all necessary force. For all which this order shall be your authority.

(Signed)

COUNT YAMAGATA,  
H.I.J.M. Minister of State for  
Home Affairs.

It is scarcely necessary to say that in issuing this notice the Japanese Government were strictly within the rights recognised by international law, and exercised in the past, from time to time, by nearly all the Great Powers of the West. Nevertheless, there was plainly a wish to avoid everything unnecessarily harsh. If KIM, within the period contemplated by the notice, made arrangements to travel to America or Europe, all the desired ends would be attained. He had, indeed, an opportunity to visit and reside in San Francisco. But if, as was more than probable, he preferred to remain in Japan within easy reach of whatever chances the chapter of accidents might present, then the duty of deporting him would devolve upon the Japanese Government. The question of destination would, in the latter event, become an embarrassment. To send him to any of the places of call of Japanese steamers was objectionable; since if landed at Shanghai or in Korea, his own fate would be assured; while if he were carried to Vladivostock, Chinese apprehensions would surely be excited. Under these circumstances the Japanese authorities adopted a humane and prudent resolution. The fifteen days of grace expired on the 27th June. KIM would then have been placed under detention had he not presented a petition praying that the period should be extended to the 13th of July. Should he be found in Japan at that date, it is understood that he will be arrested, and temporarily lodged in a house which has been prepared for his reception. His wishes will be consulted with regard to his future destination, but the resolve to remove him out of the sphere of mischief is, we believe, final. The obvious duty of the Government is to protect him against any lawless violence, however inspired, so long as he is permitted to remain within Japanese territory. This duty they performed. Their not less obvious duty

is to remove him from a position in which he invites awkward attempts, and creates, or threatens to create, international complications. We are glad to think that they have seen their way to discharge this duty also, without prejudice to the privilege of asylum which independent States are wont to grant within the limits prescribed by peace at home and amity abroad.

#### THE ROUTE OF CAPITAL.

IN this remote part of the world we are witnesses of a phenomenon which, owing to the operation of similar but less easily discernible causes, is in progress everywhere. For several years the price of public securities has been steadily appreciating in Europe and America. Nearly everyone of the States on these two continents is heavily burdened with debts, yet their funds tend constantly upwards. England's condition in this respect is too well known to need comment. In Belgium, despite disastrous strikes, the Four per Cents. are quoted at 106, against 103 in 1883. The Italian Five per Cents., which were as low as 85.60 in 1883, are now at 98. The Austrian Four per Cents. varied between 81 and 87 three years ago; they are now over 91. The Hungarian Four per Cents. have risen from between 70 and 78 to 84. The Russian Five per Cents., which were worth from 88 to 96 in 1883, now sell for 103. And so on all round the circle of countries having public debts. In a word, the interest upon money, that is to say its price, has fallen and is still falling everywhere. This remarkable fact has not failed to attract the attention of economists in Europe. They all recognise in it a symptom, not of the development of prosperity, but of the growth of distress. Money is cheap, not because it is plenty, but because the returns obtained by investing it in commerce and industry are small. In all ages the price of capital has borne a certain ratio to the profit obtainable by employing it. Merchants, agriculturists, and industrialists gain so little now-a-days that they are fain to withdraw their money from the routes of business, where with great labour and at no small risk, it yields but a paltry return, and to invest it in public securities, where, with scarcely any risk and without trouble, it brings them a certain, though small, revenue. Other causes doubtless operate to enhance the value of these securities; that is to say, to lower the rate of interest. The spread of civilization and the growth of intelligence are among such causes. Men no longer hoard: they invest. As the law makes itself more and more responsible for the safety of life and property, the secretive instinct is supplanted by a tendency to find profitable investments. Stores of gold and silver, which used formerly to lie hidden, are thus brought into the market. But these are secondary influences. The

great, the main, cause is undoubtedly to be sought in the closing of the routes of commerce and industry. These are the natural channels for the employment of capital. It is impossible to believe that private industry and intelligence have lost their value, and that capital can be utilized more profitably by governments than by individuals. Yet that is the paradox to which the world is committing itself by its behaviour. The people of Europe and America have already entrusted five thousand millions sterling to their rulers, and they daily exhibit a growing eagerness to continue the process; to abandon private enterprise in favour of official management; to accept the price which governments can afford to pay for the use of capital in preference to the profits which individuals can derive from its employment. What is the reason of this strange fact? "It appears," says a section of public opinion, "that we are emerging from a period of great and unusual industrial activity. The interval between 1820 and 1880 was one of the exceptional epochs of humanity's progress. We are now relapsing into a more normal state of affairs; a state corresponding with slower progress, and consequently offering fewer opportunities for the absorption of capital. Steam is not invented every century. The transformation which industry has undergone through this colossal agency may not yet be complete all over the world, but it is nearly accomplished, so far as Western Europe is concerned. Since the discovery of steam the nations of Europe and America have sunk over four thousand millions sterling in the construction of railroads alone. If this great gulf has ceased, or nearly ceased, to swallow capital, the growing cheapness of the latter may be partly accounted for." Such, in effect, is what those persons tell us who shut their eyes to the terrible effects of gold monometallism. Yet if there be one economical creed more universal and better established than another, it is that railways are the means of expanding commerce and industry, of opening up new districts and bringing wider areas of consumption within reach of the producer. Are we to believe that having built our railways, we are not to reap the fruits of possessing them; that only the act of constructing them could give a fillip to prosperity? Surely not. Here in Japan we have seen effects follow so rapidly in the footsteps of causes that the connection between the two is not to be mistaken. We have seen currency contraction precede trade depression, and trade depression develop a sharp appetite for government securities. So, throughout the Western world, we have trade depression steadily deepening; we have the demand for public securities increasing; and we have constantly accentuating currency contraction, since the functions of media of exchange are thrown entirely on a metal the supply of which, already 40 per cent. too small, is yearly diminishing. Why should not similar agencies stand in the same relation to similar results everywhere?

## RAILWAYS.

VARIOUS documents published in Vienna during 1885 and in years immediately preceding contain most interesting statistics with regard to the railways of the world. The railway industry has now attained dimensions which place it in the second rank among all enterprises, its only superior being agriculture. The degree to which it is pursued in any country furnishes a trustworthy index of that country's commercial condition, and this consideration alone, apart from the special interest which Japan has in the subject, induces us to epitomise a series of valuable articles just brought to a conclusion in the *Economiste Français*.

In the first place, we have a table showing the numbers of kilometres of railway constructed throughout the world:—

COUNTRY.	NUMBER OF KILOMETRES.	COUNTRY.	NUMBER OF KILOMETRES.
Germany	35,593	Brazil	4,571
Great Britain and Ireland	30,058	Italy	9,102
France	29,449	Spain	7,120
Russia	23,195	Sweden	5,157
Austria-Hungary	20,591	Belgium	4,120
Netherlands	2,003	Switzerland	2,750
Portugal	1,494	British India	17,439
Denmark	1,494	Japan	202
Norway	1,454	Algeria and Tunis	1,635
Roumania	1,428	Egypt	1,449
Luxembourg	149	Victoria	2,413
United States of America	193,068	New South Wales	2,030
Canada	15,488	South Australia	1,584
		Queensland	1,034
		New Zealand	1,396

Although this table is the latest published, it is nearly three years old, and some corrections must be applied to bring it up to date. Thus we note that the lines of Turkey, Greece, the Argentine Republic, Chili, Peru, and other American States are omitted. Moreover, England no longer occupies the second place among European nations. She has been comparatively slow in the matter of construction since 1883, only adding about 400 kilometres annually to her lines, so that her total now amounts to some 31,000 kilometres, against 32,000 for France. Germany comes first not alone because of the greater extent of her territory, but also because she has a population of 46 millions while France has but 38.

Coming now to consider the work performed by these various systems of railway, it is necessary to premise that many circumstances combine to affect the passenger traffic. Dissimilar causes may produce similar results. Thus, great density of population may supply many travellers by rail, but the same may be the case with railways like those in America where the roads connect distant and prosperous regions. The number of towns, too, is an important factor. France, for example, is remarkable for the paucity of its cities, being in this respect much inferior to England and Germany, and even to Belgium and Italy, proportionally. The nature of the national industries, also, has its effect, a manufacturing people being much more given to movement than an agricultural. Other influences are the number of families, the degree of education, historical precedents, and wealth—

though with regard to this last factor it is to be observed that railways in Germany are more used than those in France despite the greater wealth of the latter country.

In respect of merchandise, a manufacturing people, of course, requires greater transport facilities than an agricultural. Again, the nature of a manufacture is important. Birmingham, for example, with its iron foundries requires immense supplies of coal, which are not needed by the silk-weavers of Lyons. The same is probably true of London and Paris. Again, a country rich in minerals will give much more work to its railways than a country not so favoured, though the industries carried on by the latter may require greater skill and education, and be more lucrative. Other obvious circumstances—as the competition of a coastwise marine—may produce an effect, but upon these we need not dilate.

So much premised, we may proceed to examine the next table:—

COUNTRY.	TRAFFIC.		MEAN PER HEAD OF POPULATION.	
	PASSENGERS.	MERCHANDISE TONS.	PER-SONS.	TONS.
Great Britain and Ireland	683,718,137	266,382,068	19.2	7.5
Germany	61,665,276	37,336,883	11.0	6.5
France	245,818,254	198,253,730	5.3	4.3

Egypt	2,065,149	1,090,237	0.6	0.3
	2,761,126	1,251,344	0.5	0.2

These figures speak for themselves. It is only necessary to add that, if we take the case of England alone—separate from Scotland, Wales, and Ireland—we find that there are 22.8 travellers by rail and 8.4 tons of merchandise for each unit of the population.

We have next to consider the earnings of the various railway systems.

COUNTRY.	REVENUES.			
	PASSENGER-TRAFFIC.	MERCHANDISE-TRAFFIC.	VARIOUS.	TOTAL.
Great Britain & Ireland	127,607,400	478,311,064	12,644,440	618,562,904
Germany	643,561,300	1,061,042,250	70,708,901	1,775,312,451
France	315,941,341	818,042,048	35,592,184	1,169,575,573
Russia	313,171,412	613,873,783	137,083,517	1,064,128,712
Austria-Hungary	100,735,308	967,378,072	21,535,094	889,648,474
Italy	127,607,400	478,311,064	12,644,440	618,562,904
Spain	82,854,261	110,382,440	3,806,294	197,042,995
Belgium	53,109,137	108,395,747	12,702,702	174,207,586
Netherlands	50,099,176	107,531,281	4,337,001	161,967,458
Switzerland	30,741,033	30,644,294	6,881,579	68,266,906
Norway	29,452,913	21,010,449	1,618,000	52,081,362
Sweden	17,442,469	37,373,053	1,149,205	55,964,727
Roumania	9,322,739	15,952,357	707,517	26,082,613
Portugal	9,243,034	10,744,080	602,500	20,589,614
Denmark	9,010,274	7,001,140	87,000	16,108,414
Norway	3,074,812	5,000,055	128,111	8,202,978
Finland	2,078,327	4,075,001	27,348	6,180,676
Luxembourg	250,205	2,418,514	54,930	2,723,649
Canada	58,200,917	107,008,264	7,565,010	172,774,191
United States of America	1,025,555,000	7,831,422,800	289,984,000	9,146,961,800

Next to the surprise created by the magnitude of these figures, the most noteworthy fact which they demonstrate is that, in every country except the Netherlands and Belgium, the proceeds of the goods traffic surpass those of the passenger traffic. This is especially the

case in the United States where the receipts from merchandise are nearly three times as great as those from passengers. Japan ought to derive a lesson from this. Owing to causes which should not be difficult to indicate, she has quite failed to develop her goods traffic by rail. Its proceeds represent only a fraction of the money earned by carrying passengers.

We have now to divide the gross earnings into working expenses and net profits, and to determine the proportion which the results bear to the length of the lines:—

COUNTRY.	WORKING EXPENSES.	NET PROFITS.	GROSS EARNINGS PER KILOMETRE.		NET PROFITS PER KILOMETRE.		WORKING EXPENSES PER GROSS EARNINGS.
			FRCS.	FRCS.	FRCS.	FRCS.	
Great Britain & Ireland	Fracs. 935,008,900	Fracs. 840,823,550	59,000	31,200	27,800	52.65	
Germany	545,124,800	545,124,800	34,000	18,700	15,300	54.80	
France	610,714,007	513,244,000	35,000	23,300	11,700	54.21	
Russia	574,118,100	286,533,450	37,200	24,700	12,500	56.70	
Austria-Hungary	330,497,252	288,096,538	30,300	16,800	14,500	53.42	
Italy	330,497,252	288,096,538	30,300	16,800	14,500	53.42	
Spain	99,371,286	21,450,744	14,450	7,000	7,450	67.52	
Belgium	95,049,123	97,124,935	37,500	23,000	14,500	48.61	
Switzerland	40,002,450	37,007,804	24,000	14,500	9,500	51.98	
Netherlands	32,073,003	22,530,602	27,300	16,000	11,300	58.73	
Norway	39,432,479	33,905,438	10,100	5,650	4,450	56.01	
Roumania	17,388,614	10,703,994	18,100	10,000	8,100	58.48	
Portugal	8,509,115	12,085,344	13,800	5,710	8,090	41.70	
Denmark	12,049,920	5,210,386	11,600	8,050	3,550	69.77	
Norway	6,888,313	2,714,705	6,400	4,450	1,950	70.50	
Finland	4,747,753	3,174,021	5,500	5,700	3,800	59.80	
Luxembourg	1,874,702	1,004,873	18,400	11,300	7,100	61.30	
Canada	131,005,730	49,900,735	15,240	8,600	6,640	76.00	
United States	2,680,730,000	1,516,278,000	21,000	13,800	7,200	64.00	
Brazil	56,000,000	34,050,000	21,000	13,400	7,600	58.50	

It is scarcely necessary to observe that the unfavourable ratio which the working expenses in Canada bear to the gross earnings is due to the fact that, in that country, the water routes attract a great part of the heavy carriage. In the United States the comparatively small earnings per kilometre are due, of course, to the immense distances traversed by the lines. It will be noted that, as a rule almost without exceptions, the working expenses absorb more than half of the gross earnings.

Not the least interesting figures remain to be considered; namely, the total capital sunk in railways and the cost of construction. Here is the table:—

COUNTRY.	TOTAL CAPITAL SUNK.	COST OF CONSTRUCTION PER KILOMETRE.	RETURN PER CENT. OF CAPITAL.
	FRCS.	FRCS.	FRCS.
Great Britain and Ireland	19,120,315,000	600,000	4.50
France	12,638,350,756	408,786	3.60
Germany	11,797,285,319	331,435	4.62
Austria-Hungary	7,998,908,372	395,604	3.60
Russia	6,025,524,060	253,063	5.13
Italy	2,812,311,407	297,054	2.36
Spain	1,834,510,994	234,870	5.35
Belgium	1,384,072,136	379,198	4.05
Switzerland	951,052,279	343,067	3.93
Netherlands	602,648,738	300,873	3.75
Sweden	599,426,913	110,099	3.74
Roumania	425,551,207	298,000	2.52
Portugal	227,610,339	126,874	4.33
Denmark	190,613,110	127,586	2.78
Norway	158,751,500	108,688	1.70
Finland	69,862,000	102,286	3.70
Luxembourg	44,862,000	301,080	2.36
United States	34,760,460,000	179,139	4.35
Canada	4,669,044,438	251,598	1.05
Brazil	910,000,000	199,000	4.35

The factors which influence the cost of production are, the degree of excellence of the line; the number of large stations, especially in cities; the price of land; the cost of materials and of labour. In the case of Great Britain, all these factors, the fourth excepted, are specially active, and the result is shown by the figures in our table. Further, it is probable that a correction ought to be applied to these

\* Approximately.

figures, for the outlay of English railway companies includes large items on account of docks and warehouses.

It will be observed from the above table that, on the whole, railway enterprise is far from being as remunerative as people generally suppose. There is not a single national system of railways which pays a dividend of six per cent. Spain appears to be the most favourably situated, with her return of 5.55; but exceptional circumstances formerly operated in favour of Spanish lines, and since our table was compiled (1883), much less rosy results have been recorded. In France and Austria, owing to the fact that a portion of the capital sunk in the lines was furnished by the State without interest, the shareholders receive better dividends than the figures in our table indicate. Speaking generally, however, one cannot but marvel that such immense sums have been devoted and continue to be devoted, to an enterprise which, from the point of view of mere returns on capital, offers such mediocre inducements to investors. One explanation seems to be that the success of lines laid in good districts has tempted capitalists beyond the limits of strict prudence. Moreover, among all enterprises railways have most control of their own prospects. The mere existence of a road may create business which could never have been otherwise developed. However this may be, it is certain that nearly all the lines recently constructed in countries of old civilization exist at the expense of their predecessors. The world, awakening to this fact, will probably begin to moderate its enthusiasm in the matter of railways.

#### ARRIVAL OF THE "TAKACHIHO KAN."

H.I.M.S. *Takachiho Kan*, Captain J. M. James, sailed from Newcastle-on-Tyne on May 6th, in the afternoon, and arrived in port at 11 o'clock this morning. The harbour detention *en route* was 15 days 10 hours; and the total steaming time 42 days 1 hour, making a total of 57 days 11 hours on the passage. From Plymouth, where the ship called, across the Bay of Biscay, and through the Mediterranean, fine weather was met with. In the lower part of the Red Sea and at Aden the heat was excessive, the S.W. monsoon not having fairly set in there. From Aden to Colombo the S.W. monsoon was light, but from Colombo to the Straits of Malacca a strong monsoon was blowing. From Singapore as far as the Pescadore Islands, which were passed close to, a light monsoon with pleasant weather was experienced, and from that to Satano-misaki a fresh monsoon with following sea.

The *Takachiho* has an European crew of 105 all told. With the exception of a few of the officers, who will remain until the ship has been transferred to the Dockyard at Yokosuka, the remaining portion will be paid off and return to England almost immediately. In addition to her complement of European officers, she has a staff of supernumerary Japanese officers of the Imperial Navy, including Lieutenants Kawara and Mukoyama; Engineers Yoshida, Yamamoto, and Matsumi, and 6 warrant officers who have been in Newcastle during the

time of the ship's fitting out, &c., in order to become conversant with this class of ship, pending their permanent appointment to the ship after arrival in Japan. These officers have shown most commendable zeal in attending to their respective branches whilst fitting out and during the passage to Yokohama. She also brings from England some 10 dockyard artisans who were sent there in 1884 to gain information in the construction of ships of their type.

The *Takachiho* is of the cruiser—now termed "Esmeralda"—class, and is of the latest and most improved type. She was designed by Mr. W. H. White, now Chief Constructor at the British Admiralty, and at that time Chief Constructor at Elswick for Sir W. G. Armstrong, Mitchell & Co., and built by that eminent firm at their Low Walker yard, where also the *Naniwa Kan* was built. The gun mountings and hydraulic machinery in connection therewith are by the noted ordnance branch of that great firm. The machinery is by Messrs. Hawthorn, Leslie & Co., of St. Peters, Newcastle-on-Tyne, who are celebrated for the excellence of their engines, and the perfect working of the *Takachiho's* machinery during the passage out fully exemplifies this fact.

The *Takachiho* is a splendid sea boat, and she can steam any speed up to 19 knots per hour, and slightly over that if pressed, but from 11½ to 12 knots is her most economical speed for making a passage where time and coal consumption have to be considered. With her great speed, guns of large calibre, machine and rapid firing guns, torpedoes, electric search lights, &c., &c., she is one of the most formidable war ships in the world, and properly handled would cause more destruction in a fight than a whole squadron of an inferior type. The Japanese Government is to be congratulated on having two such formidable war ships added to its Navy as the *Naniwa* and *Takachiho Kan*.

The following is a list of the officers who have brought the ship out from England:—Captain—J. M. James, Japanese Admiralty Department; 1st Officer—J. Calder, late Commander Imperial Chinese Service; Navigating Officer—Ed. Jackson, late Commander English Merchant Service; 3rd officer—J. C. V. Wilkins, late British India Service; Chief Engineer—J. Crookston, late Kyodo Unyu Kai-sha Service; Guarantee Engineer—Jas. J. Pearson, Messrs. Hawthorn, Leslie & Co.; 3rd Engineer—J. Drummond, late Kyodo Unyu Kai-sha Service; 4th Engineer—J. Neal, late Chinese Service; 5th Engineer—Ralph Heads, late Messrs. Hawthorn, Leslie & Co.; 6th Engineer—Martin Giles, late Messrs. Hawthorn, Leslie & Co.; 7th Engineer—Saml. Mavor, late Messrs. Crompton & Co. Electric Engineers, London; Gunner—E. J. Giles, late British Naval Service; Boatswain—S. Hart, late British Naval Service; Carpenter—John Rae, Sir W. G. Armstrong, Mitchell & Co.; Chief Steward and Paymaster's Assistant—R. Doidge, late British Naval Service.

#### CORRESPONDENCE.

##### ELECTRIC LIGHTING IN SHANGHAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There is a paragraph in the issue of the 1st instant of your widely-read paper, that is likely, if not contradicted, to do this company so much harm, that I must ask you in simple fairness to insert this explanation.

You say: "In Shanghai there are electric lights, but there are gas-lamps also; the former make a great show, but the latter alone are trust-worthy. When the electric light suffers an eclipse, the comparatively feeble but constant gas performs the duty of a substitute."

It is quite true that there are still gas-lamps in the principal streets of this settlement; and they are retained because they are the property of the municipality. But, as a matter of fact, during the three years that our contract to light the principal streets has been running, the gas lamps in those streets have never once been lighted.

I am, Sir, your obedient Servant,

R. W. LITTLE,  
Secretary, Shanghai Electric Co.

Shanghai, June 16th, 1886.

#### REGULATIONS FOR STREET TRAFFIC, HOTELS, &c.

ORDINANCE NO. 7 OF THE DEPARTMENT OF STATE FOR HOME AFFAIRS.

To the Hokkaido Administration Office, the Metropolitan Police Office, and to Cities and Prefectures.

It is hereby notified that, whereas it is necessary for the purpose of police administration to enact regulations for streets, carriages, hotels, and lodging-houses; and whereas, although such regulations must differ in degree of stringency according to the varying conditions of the popular intelligence and the geographical situation of different localities, some standard principles are needed to form the basis of such regulations in each locality, the accompanying document has been prepared concerning the government of streets, hackney carriages, *jinrikisha*, and hotels and lodging-houses; and further, each locality is hereby required to prepare regulations on the basis of the standard rules herewith published and to put them into operation after receiving the sanction of this Department.

COUNT YAMAGATA ARITOMO,  
Minister of State for Home Affairs.

June 14th, 1886.

#### STANDARD RULES FOR THE REGULATION OF STREETS.

##### SECTION I.—GENERAL RULES.

Art. 1.—The term "street" comprises the passageway, as well as drains at the sides, and bridges.

Art. 2.—These rules shall apply to street passages in towns only.

Art. 3.—In the case of any private individual neglecting any of the obligations laid down in these rules as necessary for him to perform at his own expense, the work shall be done by the Government and the expense charged to him.

##### SECTION II.—SAFETY AND PRESERVATION OF STREETS.

Art. 4.—Buildings, eaves, flag-posts, sign-boards, drying posts, posts, etc., should not be erected in the street, or caused to project into it.

Art. 5.—The following objects may project into the street:—

- (1.) Hanging sign-boards may project not more than 2 feet at a height of not less than 10 feet from the ground.
- (2.) Eaves may project not more than 2 feet at a height of not less than 9 feet and not more than 1.5 feet at a height of not less than 6 feet.
- (3.) Awnings without any supporting post may project not more than 3 feet at a height of not less than 7 feet.
- (4.) Hanging lanterns may project not more than 1 foot at a height not less than 6 feet.

Art. 6.—The following works must not be constructed without application for the permission of the government of the locality, together with a drawing of the place:—

- (1.) The erection of barbers' stands and stalls made of rush screens, in the street.
- (2.) The planting of trees and the erection of lamps in the street.
- (3.) The erection of railings, fences, and posts for support, and the location of *hadome-ishi* in the street.
- (4.) The erection of Buddhist monuments, tomb-stones, guide-posts, and all objects intended for public convenience in the street.
- (5.) The location of storing places for plastering materials in the street.
- (6.) The temporary location of such articles in the street as bamboos, timber, earth, stones, etc., and the erection of plank or rope enclosures, scaffoldings and other objects taking up space.
- (7.) The shifting of buildings across a street, or the conveyance through a street of articles of such dimensions as would interfere with passage in such street.
- (8.) The temporary erection in a street of dancing stages (as on the occasion of festivals), sheds (as at annual fairs and vegetable markets), and the street decoration of shops.
- (9.) The movement in a street of *mikoshi* (miniature temples), sacred cars, and dancing carts.
- (10.) The location in a street of decorations for the reception, or on the occasion of the departure of, Shinto or Buddhist idols, and the conveyance of sacrifices to the same in ox-wagons.
- (11.) The location in street of articles be-

longing to fire-brigades and other articles of public use.

(12.) The temporary stoppage of traffic in a street for the purpose of some work of construction.

(13.) The driving of horses or carriages into or out of places where their passage has been prohibited.

Art. 7.—Any person injuring a street while using it for private purposes, should restore it to its original state.

Art. 8.—Drain pipes should be placed along the edges of eaves projecting into the street, and the water thus collected should be carried down by upright pipes, which should not be made to empty into the street. In cases where rain is discharged from the eaves directly into ditches below, no such pipes need be used.

Art. 9.—In house-lots along the streets, in front of which there is a clear space of more than 9 feet depth, a wall shall, according to the nature of the case, be erected between such space and the street.

Art. 10.—When bamboos and timber are deposited on ground bordering on the street, they should be securely fastened with chains or strong rope; and when fuel, etc. is heaped up in such a place, proper steps should be taken to secure it from falling.

Art. 11.—Whenever there is any cause of apprehension as to the falling down of buildings, trees, and other objects along a street, they should be at once repaired, or removed, or transplanted, or cut down.

Art. 12.—Whenever bamboos, trees, earth, stones, etc., are placed in a street, they should be distinguished by marks or signals.

Art. 13.—When buildings or other objects of large dimensions are, in the course of conveyance, suffered to remain in a street during the night, they should be drawn to one side of the street and lamps should be placed beside them.

Art. 14.—Whenever a well in a street is regarded as dangerous to passage, such well should be ordered to be closed at the level of the ground with a strong cover.

Art. 15.—It is prohibited to either injure or obstruct roads, bridges, ditches, or drains, to cut down trees in a street, or to injure or extinguish street lamps.

Art. 16.—It is prohibited to injure or deface notification-boards, guide-posts, closets, walls, etc.; to scribble upon walls, etc., or paste bills upon closets, posts, etc.

Art. 17.—Cattle and other live stock should not be suffered to stray in streets and thus obstruct traffic.

Art. 18.—No merchandize, carriages, or other articles should be either spread out or placed in a street.

Art. 19.—It is prohibited either to engage, or permit others to engage in any street in the operations of packing, sawing timber, or in other similar kinds of work.

Art. 20.—It is prohibited to use fire-arms or to kindle fires in the street.

Art. 21.—It is prohibited to sing loudly, to quarrel, or make any loud noise, or to lie down, in the street.

Art. 22.—No street shops or stalls shall be allowed in the street, except in places set apart for that purpose by the government of the locality.

Art. 23.—The dimensions of carts used by itinerant merchants should not exceed 8 feet in length and 3 in breadth, and those of stalls should not exceed 6 feet in length and 3 in breadth.

### SECTION III.—CLEANLINESS OF STREETS.

Art. 24.—The streets should be always cleanly swept, so that no dirt or rubbish be left.

Art. 25.—Snow in the street should be removed before 8 o'clock in the morning; and from 8 o'clock till the setting of the sun, snow should be taken off as soon it ceases to fall.

Art. 26.—The snow thus removed should be thrown into a river, or into the sea, or into a ditch, or any other place where its presence is not objectionable.

Art. 27.—In hot or windy weather, the street should be sprinkled with clean water at frequent intervals; but in winter water should not be so applied even in windy weather before 9 o'clock in the morning or after 3 o'clock in the afternoon.

Art. 28.—Dirty water should not be sprinkled or emptied in the street.

Art. 29.—Ditches should be cleaned at least twice a year. The mud and filth dredged from ditches should not be spread over the street or suffered to remain on the road side.

Art. 30.—It is prohibited to commit a nuisance in the streets.

Art. 31.—It is prohibited to remove dirt from mats, carpets, grain, and other objects, in the streets.

Art. 32.—Care should be taken to prevent the

falling, breaking, or scattering of articles conveyed through the streets.

Art. 33.—Rags and other dirty or dangerous substances should not be placed on the roofs, drying-posts, or windows, looking towards the street.

### SECTION IV.—STREET TRAFFIC.

Art. 34.—Cattle, horses, and all kinds of carriages should not be driven rapidly at night without lamps.

Art. 35.—Horse carriages and ox-wagons should not be driven through a street the breadth of which is less than 6 yards, unless going to or from houses situated in such street.

Art. 36.—Except nursery carriages, no vehicles should be moved about by pushing from behind.

Art. 37.—In conveying bamboos, timber, etc., the ends of which are sharply cut, such ends should be covered up.

Art. 38.—Cattle and horse carriages should be driven along the right side of streets in which there is a carriage way, and along the middle of streets where there is no such way.

Art. 39.—Cattle and horse carriages should not be driven abreast or at full speed, to cause obstacles to the traffic.

Art. 40.—Carriages should not be driven fastened together to the number of more than two, except for the purpose of conveying large loads.

Art. 41.—Cattle or horses should not be driven fastened to each other to the number of more than two, except when being transported for sale or purchase.

Art. 42.—When carriages, horses, or foot passengers meet, they should pass each other on the left, and when meeting a company of soldiers, artillery carts, or commissariat waggons, they should pass these on the right.

Art. 43.—Empty carriages should give way to occupied ones, and, on a slope, those that are going up or are empty should give way to others.

Art. 44.—When it is desired to drive a vehicle faster than in front of another before it, the one in the rear should make a proper signal to that in front, and the former should pass on the left, the latter moving to the right.

Art. 45.—In meeting carriages or horses used for postal or fire-brigade purposes, carriages for sprinkling water, or a funeral procession, carriages, horses, and foot passengers should get out of their way.

Art. 46.—Carriages and horses should be driven at a slow pace in going through a crowded or narrow street, round a street corner, or over a bridge.

Art. 47.—In passing round a street corner, carriages and horses should make a large circuit when the corner is passed on the right and a small one when passing on the left.

Art. 48.—Cattle, horses, carriages, or other objects should not be suffered to lie in the street; nor should obstacles be placed on rails.

Art. 49.—Cattle, horses, and carriages should not be driven into a place where a conflagration is in progress or into any other crowded vicinity, against official injunctions.

Art. 50.—Cattle, horses, and carriages should not be stopped at a street corner, on a bridge, or at any other place where the traffic would be interfered with by so doing.

Art. 51.—Empty vehicles are not permitted to stand still in the street or wander about in such a manner as to impede the traffic.

Art. 52.—Dogs and other animals should not be permitted to make a noise, or to run about wildly; nor should they be in any way treated cruelly.

Art. 53.—Children below five years of age should not be allowed, without a care-taker, to either walk or play in the street.

Art. 54.—The flying of kites, playing with tops, battledores and balls (*temari*), etc., in the street are prohibited.

Art. 55.—Story-telling, jugglery, and all other performances attracting a crowd, are not allowed in the street.

Art. 56.—In places where the foot-path and carriage road are separated, neither cattle, horses nor carriages should be driven on the foot path, nor should foot passengers travel on the carriage way. Children's perambulators or cattle, horses or empty carriages, belonging to persons living within the street, may, however, be allowed to pass across the foot path, and in cases where the ground has been properly laid out after obtaining suitable permission, occupied carriages also may similarly pass across.

### STANDARD RULES FOR THE REGULATION OF HACKNEY CARRIAGES.

#### SECTION I.—GENERAL RULES.

Art. 1.—Persons desiring of keeping hackney carriages should apply for a license certificate to the Local Government under which they live.

Art. 2.—All applications and notices to be made to the Local Government concerning the trade of keeping hackney carriages require the seal of the chief of the trade guild.

Art. 3.—Hackney carriage keepers should give notice to the Local Government as to the rank, address, and name of their drivers and ostlers, and receive a certificate label for each one.

Art. 4.—When a hackney carriage keeper desires to do the work of a driver or ostler himself, the same proceedings are required as in the case of drivers and ostlers.

Art. 5.—The certificate labels of drivers and ostlers should be inspected by the Local Government once a year. Those that are not so inspected will be deemed null.

Art. 6.—Carriages and horses should be inspected by the Local Government twice a year; and whenever new vehicles are bought, or changes made in existing carriages, inspection should be made, whether it be the proper period of inspection or not.

Art. 7.—Under the following circumstances, application should be made to the Local Government for renewal of certificates:—

(1.) When a change of residence takes place, or a name is changed, or some changes have been made in the trade certificate, inspection certificate, or certificate label.

(2.) When the trade certificate, inspection certificate or certificate label has been lost or spoiled, or when the characters thereon have been obliterated.

Art. 8.—Under the following circumstances, the trade certificate, inspection certificate, or certificate labels should be returned to the Local Government:—

(1.) When the trade is discontinued, or carriages or horses are no longer used.

(2.) When carriages or horses are sold or otherwise transferred to others.

(3.) When drivers or others have been discharged, or have run away or died.

Art. 9.—The trade certificate, inspection certificate, and certificate label are not transferable.

Art. 10.—No carriage should be moved without a driver and an ostler.

Art. 11.—The number of persons to be accommodated should be determined according to the nature of the carriage and the strength of the horses, and the approval of the Local Government should be obtained thereto.

Art. 12.—At every inspection of carriages and horses, the seal of inspection should be affixed to the inspection certificate. The inspection certificates of horses should be tied to their necks by means of a ring; the inspection certificate for cars should be affixed with nails at easily discernible places in the inside.

Art. 13.—Cars and horses, for which an inspection certificate has been obtained, shall be interdicted from use when they do not answer the conditions laid down in Arts. 15 and 16, or when the car has sustained injury or has been destroyed, or when horses show signs of sickness or debility.

Art. 14.—Hackney carriage keepers should pay the fees fixed by the Local Government for inspection certificates.

### SECTION II.—TRAM CARS, HORSES, AND ACCESSORIES.

Art. 15.—Cars should be strong, and their construction and accessories should conform to the following specifications:—

(1.) Cars should have more than four wheels, and should be provided with proper brakes.

(2.) The body of each car should be lacquered, without any decoration, and the roof should be of wood.

(3.) The seats for passengers should be kept clean and properly furnished, allowing a space of not less than 1.2 feet in width for each person.

(4.) The wheels should be provided with protectors against dirt.

(5.) Each car should be provided with glass lamps on each side in front.

(6.) Moveable parts, axles, springs, leather bands, whips, and all other implements should be strong and durable.

Art. 16.—Horses should be strong and above five years of age.

Art. 17.—Horses should have a collar to which the inspector's certificate may be hung.

### SECTION III.—QUALIFICATIONS AND DRESS OF DRIVERS AND OSTLERS.

Art. 18.—Drivers should be above twenty years, and grooms above eighteen years, of age, and both should be strongly built men. Drivers should, moreover, be well skilled in their art.

Art. 19.—Even though conforming to the above qualifications, any one who is addicted to excessive drinking or acts of violence, or who has been guilty of robbery, theft, rape, homicide, or injurious assault, will not be allowed to become an ostler or driver. The same applies to other kinds of offences while the offender is under police supervision.

Art. 20.—Drivers and ostlers should wear an uni-

form common in each locality, according to the following specifications:—

- (1.) Drivers—*a* hat (or cap), *a* coat, trousers, and shoes.
- (2.) Ostlers—a hat (or cap) or Japanese *kasa*, a *happi* (such as is commonly worn by ordinary ostlers), *monohiki* (Japanese trousers) or in rainy weather *hanmomohiki* (short trousers) or rain trousers rendered water proof by the application of *tō-yu*.

#### SECTION IV.—REGULATIONS AS TO DRIVERS AND OSTLERS.

Art. 21.—Drivers and ostlers should have certificates and copies of the Rules for the Regulation of Hackney Cars, and show the same to a police official or to passengers whenever the latter request to see them.

Art. 22.—Drivers and ostlers should not cover their faces or heads with handkerchiefs, or commit any other unbecoming actions.

Art. 23.—Drivers should not leave their cars; but should they be obliged to do so, ostlers should attend to the cars in their stead.

Art. 24.—Drivers and ostlers should assist aged people, children, and females in entering or leaving the car.

Art. 25.—Cars should not be moved before the passengers have taken their seats or have descended from the car.

Art. 26.—Whenever any passenger commits acts of violence, drivers or ostlers should cause him to desist, and if he does not do so, he should be ordered to descend from the car.

Art. 27.—Passengers should not be allowed on the driver's stand, and articles should not be placed on the roof without proper accommodation for that purpose.

Art. 28.—Drivers and ostlers should neither eat nor drink nor smoke while the car is in motion.

Art. 29.—Drivers and ostlers should not drive cars into the near vicinity of a fire or any other place where people are crowding in great numbers, against the prohibition to do so.

Art. 30.—Horses should not be driven by unauthorised persons.

Art. 31.—Drivers and ostlers are forbidden to entice passengers on the road either by word or action, or to insult them either by word or action.

Art. 32.—Cars should not be driven abreast, should not be driven irregularly and rapidly, nor allowed to race.

Art. 33.—The passage of cars should be conducted according to the following specifications:—

- (1.) On carriage roads cars should be driven along the left side, and in places where there is no such road, they should be driven along the centre of the thoroughfare.
- (2.) Carriages, horses, and foot passengers should be passed on the left, but a company of soldiers, artillery, or commissariat wagons, should be passed on the right.
- (3.) Empty cars should get out of the way of loaded ones; and on a slope, those ascending or those that are empty should get out of the way.
- (4.) When the driver of a car desires to pass one going before, he should make a proper signal and pass on the left, while the other gets to the right.
- (5.) Horses and carriages used for postal and fire-brigade purposes, cars used for sprinkling water or a funeral procession, should be given way to.

Art. 34.—When more than two cars are driven in succession, those in the rear should keep a certain distance from those in front.

Art. 35.—In passing through a thronged or narrow road, or round a street corner, or over a bridge, cars should be driven slowly, making proper signals and sending an ostler in front; and in passing round a street corner to the right, a large circuit should be made, while in passing one to the left, a small circuit is to be made.

Art. 36.—Passengers should not be allowed to enter or leave the car on a bridge, at a street corner or any other place where the stoppage of the car may interfere with the traffic.

Art. 37.—Horses should not be treated cruelly.

Art. 38.—Cars should not be driven at night without lamps.

Art. 39.—Cars and horses should be kept clean.

Art. 40.—When more than one-third the fixed number of passengers has been obtained, the car should be started, unless there is some adequate reason preventing it from leaving.

Art. 41.—When passengers leave the car, drivers and ostlers should see whether there is not anything left behind. If they find anything left, they should return it to the owner, and when the owner cannot be found, it should be taken to the nearest police office, or branch police office, or police station.

#### SECTION V.—LIMITATIONS AS TO PASSENGERS.

Art. 42.—No passengers beyond the fixed num-

ber should be taken in. Children under ten years of age should be counted as two for one, and infants under three years of age should be excluded from the fixed number.

#### STANDARD RULES FOR THE REGULATION OF HACKNEY CARRIAGES.

Art. 43.—The following should not be allowed to enter these carriages:—

- (1.) Persons suffering from any of the six contagious diseases, scabies, leprosy, or from any other maladies which may be offensive to other guests.
- (2.) Lunatics, men of violent habits, drunkards, and beggars.
- (3.) Dirty articles, or articles which may smell offensively or which may stain other articles.
- (4.) Animals.

#### SECTION VI.—RATE OF CHARGES AND STATIONS.

Art. 44.—Rates of charges should be determined by each guild, and afterwards approved of by the Local Government. The rate of charges thus fixed should then be advertised prominently in the car or at the station.

Art. 45.—On no grounds should any charge be demanded beyond the fixed rate.

Art. 46.—Each station should be marked thus: *Noriai-basha Chitsaju* (Hackney Carriage Station).

Art. 47.—Carriage and Horses should not be sent to any other place than the station.

Art. 48.—The grounds at the station should be paved with stone or bricks, or laid with concrete or boards, and should be provided with pits for receiving manure.

Art. 49.—The station should be daily swept, and kept always clean.

#### SECTION VII.—HACKNEY CARRIAGE GUILDS.

Art. 50.—Persons engaging in the business of Hackney Carriages should form guilds according to the district divisions fixed by the local Government.

Art. 51.—No person who does not become a member of a guild, shall be allowed to engage in this trade.

Art. 52.—Each guild should deposit at the Local Government a certain sum of money as security, as fixed by the Local Government. This security may be deposited in the shape of public bonds, or Post Office savings books or national bank cheques.

Art. 53.—The security thus deposited at the Local Government may be used in paying for damages done by hackney-carriage keepers, drivers, or ostlers in connection with their trade.

Art. 54.—Whenever the security falls below the fixed amount, the deficiency should be supplied within 10 days. Failure to do so will deprive the members of the guild of their trade privileges.

Art. 55.—Each guild should adopt certain rules of mutual agreement, for which the approval of the Local Government is to be received.

Art. 56.—The expenses relating to the maintenance of a guild should be defrayed by the members. The amount and the mode of collecting these expenses should be settled by mutual agreement.

Art. 57.—Each guild should have a chief (*tōdori*) elected by the members from among themselves.

Art. 58.—The chief of a guild should attend to the following duties:—

- (1.) Affairs connected with the security of the guild.
- (2.) To keep the members informed as to regulations and rules relating to the trade.
- (3.) To affix his seal to documents of application for trade licence, and also to accompany such documents with a note stating his own views on them, if he deems it necessary to do so.
- (4.) To keep a list of members, and of drivers and ostlers, and to register any decrease or increase in the number.
- (5.) To collect and pay the expenses of the guild.
- (6.) To prepare an account of the expenses of the guild, and to report it to the members.
- (7.) To manage affairs connected with the election of the chief. Besides these matters he shall have to attend to all matters fixed by the rules of mutual agreement.

Art. 59.—No person who does not conform to the following qualifications can be elected as chief of a guild:—

- (1.) Persons above 25 years of age, and owning dwellings or land in the guild district.
- (2.) Persons who are able to read regulations relating to the trade, and who can write and calculate.

Art. 60.—Even if conforming to these qualifications, no person who has been guilty of robbery, theft, or larceny, can be elected as chief of a guild. The same is true of all other kinds of offences, while the offender is under police supervision.

Art. 61.—Whenever a Local Government deems that a chief is guilty of unlawful deeds, re-election shall be ordered.

#### STANDARD RULES FOR THE REGULATION OF JINRIKISHA TRADE.

##### SECTION I.—GENERAL RULES.

Art. 1.—By "*jirikisha* trade" is meant the occupation of those persons who keep a certain number of *jirikisha* coolies.

Art. 2.—Any person who desires to engage in this trade should apply for permission to the Local Government under whose jurisdiction he lives, and receive a licence.

Art. 3.—All applications and notices to the Local Government respecting the members of the trade should have the seal of the manager (*torishimari*).

Art. 4.—The *jirikisha* trader should report to the Local Government the rank, address, name, and age of his coolies, and obtain a certificate label for each of them.

Art. 5.—When a *jirikisha* trader desires to draw a *jirikisha* himself, the same process should be observed as in the case of ordinary *jirikisha* coolies.

Art. 6.—The certificate labels of *jirikisha* coolies should be inspected once a year by the Local Government. Those not inspected shall be devoid of legal value.

Art. 7.—The vehicles should be inspected by the Local Government twice each year, an inspection certificate being given each time. In case of new construction or modification, or purchase or transfer by any other method, of vehicles, inspection should be made without regard to the fixed date of inspection.

Art. 8.—In the following cases renewal or re-issue should be applied for:—

- (1.) In the case of removal or change of name or any other change necessitating a corresponding change in the trade licence, inspection certificate, or certificate label.
- (2.) In case of loss or dilapidation of the trade licence, inspection certificate, or certificate label, or in case of obliteration of the characters thereon.

Art. 9.—In the following cases the trade licence, inspection certificate or certificate label should be given back to the local Government, together with notice of the circumstances:—

- (1.) In case of discontinuance of the trade, or of disuse of a vehicle.
- (2.) In case of sale or transfer by other means.
- (3.) In case of dismissal of coolies, or their flight or death.

Art. 10.—The trade licence, inspection certificate, or certificate label should not be lent to other people.

Art. 11.—The inspection certificate should be nailed to the front board under the seat of the *jirikisha*.

Art. 12.—Even if provided with an inspection certificate, a vehicle which does not conform with any of the specifications of Art. 18, or which is deemed to be impaired or unclean shall be directed to be disused.

Art. 13.—In applying for licence, the trader should deposit as security with the Local Government a certain sum of money fixed by the Local Government. He may deposit, if he deems it convenient, public loan bonds, Post Office Savings, or national bank, pass-books.

Art. 14.—The security money shall be returned, in the case of discontinuance of trade, or prohibition of the same, or the expulsion of a trader from the membership of a guild.

Art. 15.—The security money deposited with the Local Government may be used in paying for damages done to other people by the trader or his coolies in connection with their trade.

Art. 16.—Whenever the security money falls below the fixed amount, the deficiency should be supplied within 10 days. If the trader fails to do so, his trade licence shall become null.

Art. 17.—Traders should pay fees, as fixed by the Local Government for each inspection certificate label.

##### SECTION II.—THE CONSTRUCTION OF JINRIKISHA AND QUALIFICATIONS OF COOLIES.

Art. 18.—The vehicle should be strongly built, and the following specifications should be observed with regard to its construction and accessories:—

- (1.) Vehicles for the accommodation of a single person should be less than 2 feet wide in the inside, and those for the accommodation of two persons more than 2 feet.
- (2.) The body of the car should be lacquered without any ornament; the inside should be covered with leather, velvet, or woollen stuff.
- (3.) The wheels should be provided with guards of the same colour as the vehicle.
- (4.) The name of the guild and number should be marked on the centre of the back of the car with the square characters each 1 inch high.
- (5.) The vehicle should be provided with roof and front covers smeared with gum or *tōyu*.
- (6.) The vehicle should be provided with a

cushion for the seat and an apron which should be kept clean.

(7.) Each car should be provided with a long small lantern, with the name of the guild and the number of the car on it; and candles and matches should also be provided.

Art. 19.—*Jinrikisha* coolies should conform to the following qualifications:—

(1.) They should be above 18 years of age, and strongly built.

(2.) They should have a general knowledge of the topography of the district.

Art. 20.—While conforming to these qualifications, any person who has been guilty of robbery, theft, rape, kidnapping of children, intentional or unintentional murder or injury, shall not be allowed to become a *jinrikisha* coolie. The same is true of other kinds of crimes, while the offender is still under police supervision.

Art. 21.—*Jinrikisha* coolies should wear a uniform common to each locality, according to the following specifications:—

(1.) The dress should consist of *happi* (Japanese coat, and *momohiki* (Japanese trousers); but in rainy or snowy weather *han-momohiki* may be used.

(2.) The head should be covered with a hat (or cap) or *tasa*.

(3.) The rain coat should be either gummed or smeared with *tiyu*.

Art. 22.—The *happi*, head dress, and rain coat should have the numbers of the guild and of the certificate label.

### SECTION III.—REGULATION OF COOLIES.

Art. 23.—*Jinrikisha* coolies should always keep with them the certificate label, a copy of the rules for the regulation of the *jinrikisha* trade and a table of the rate of charges; and should show them to police officials or fares when required to do so.

Art. 24.—No disreputable appearance, such as the covering of the face or head with a handkerchief, should be presented.

Art. 25.—Coolies should not wander about or stand in the road.

Art. 26.—Coolies should not remove their fares into other cars, or make stoppages, without their permission.

Art. 27.—*Jinrikisha* should not stand at other places than stations; but for the convenience of fares, they may be allowed at places where they do not interfere with the traffic on the road.

Art. 28.—The coolie should not drive his car to a hotel, or restaurant, or other place, to which the guest does not direct him to drive.

Art. 29.—The coolie should not drive his car into a place where a fire is taking place, or into any other crowded place, against prohibition.

Art. 30.—The coolie should not solicit passengers either by word or deed, nor insult them by word or deed.

Art. 31.—*Jinrikisha* should not be driven abreast, or at an excessive speed, thereby causing inconvenience to other passengers.

### STANDARD RULES FOR THE REGULATION OF JINRIKISHA.

Art. 32.—Persons plying *jinrikisha* should conform to the following specifications:—

(1.) In places where a carriage way is provided, the left side should be traversed, but where no such way exists *jinrikisha* should pass along the centre of the road.

(2.) Foot passengers, carriages, or horses should be passed on the left, but a company of soldiers, artillery cars, or commissariat waggons should be passed on the right side.

(3.) Empty vehicles should get out of the way of those that are loaded, and on a slope those that are ascending or are empty should get out of the way.

(4.) When it is desired that one *jinrikisha* should get in front of another before it, a proper verbal signal should be made, and the former should pass on the left, while the one in front should get to the right.

(5.) *Jinrikisha* should get out of the way of horses or carriages used for postal or fire-brigade purposes, or of cars used in sprinkling water, or of funeral processions.

Art. 33.—In passing through a crowded or narrow place, or round a street corner, or over a bridge, *jinrikisha* should be driven slowly. In going round a street corner to the right, a large circuit should be made, while in going round to the left, a small circuit has to be made.

Art. 34.—More than two vehicles should not be driven fastened together.

Art. 35.—At night *jinrikisha* should not be driven at a rapid rate without a light.

Art. 36.—Passengers should not be either taken in or out of *jinrikisha* at street corners, on bridges, or at places where it may cause inconvenience to the traffic.

Art. 37.—When passengers get out of *jinrikisha*

the coolie should take care that they do not leave any thing behind; and if he finds any thing so left he should at once restore it to the owner. When the owner cannot be found, the article should be at once taken to the nearest police office or police branch office, or police station.

### SECTION IV.—RATE OF CHARGES.

Art. 38.—The rate of charges should be fixed by each guild, and approved of by the Local Government.

Art. 39.—For no reason should any money beyond the fixed rate be demanded from passengers.

Art. 40.—In driving to a railroad station or any other crowded place, payment may be demanded before arriving at the destination.

Art. 41.—When passengers simply name the point of destination and do not specify the rate, payment should be calculated according to the shortest distance.

### SECTION V.—REGULATIONS OF CONVEYANCE.

Art. 42.—*Jinrikisha* for the accommodation of one person should not be used for two or more, and those for two persons should not be used for three or more. Children under the age of 10 years shall be counted at the rate of two for one grown up person, and infants under 3 years of age shall not be counted.

Art. 43.—The following should not be conveyed in *jinrikisha*:—

(1.) Persons infected with any of the six contagious diseases, or suffering from scabies, or leprosy, or beggars.

(2.) Dirty substances, or articles which may stain the vehicle or cause objectionable smells.

(3.) Articles of large dimensions, which project outside the vehicle.

### SECTION VI.—STATIONS.

Art. 44.—Stations are classified into two divisions:—

(1.) Public Stations (intended for *jinrikisha* coolies in general).

(2.) Private Stations (established by one or more private persons for his or their private use).

Art. 45.—Public stations shall be located by the Local Government and properly marked; and persons desiring to establish private stations should apply for the permission of the local Government.

Art. 46.—*Jinrikisha* which cannot be used for the accommodation of passengers, should not be sent to a station.

Art. 47.—At a public station, *jinrikisha* should be arranged in the order of their arrival, and each vehicle should be sufficiently distant from the others, so that it may be easily drawn out.

Art. 48.—*Jinrikisha* at public stations should be sent out either according to the order of arrangement, or by drawing lots, unless the fare makes a special selection.

Art. 49.—When a passenger demands a particular vehicle his request should not be refused, unless there is some proper reason for refusing it. But this rule shall not apply to demands made by violent persons or by a lunatic without a guardian.

Art. 50.—Private stations should be marked by signs having the seal of the manager of the guild.

### SECTION VII.—GUILDS.

Art. 51.—*Jinrikisha* traders should form guilds according to district divisions as fixed by the Local Government.

Art. 52.—No person, who has not become a member of a guild, should be allowed to engage in the *jinrikisha* trade.

Art. 53.—Each guild should be presided over by a manager, who is to be elected by the members from among themselves, subject to the approval of the Local Government.

Art. 54.—Rules of agreement should be settled by each guild, and submitted for the sanction of the Local Government.

Art. 55.—The manager should attend to the following matters:—

(1.) To keep *jinrikisha* traders acquainted with regulations and instructions relating to their trade.

(2.) To put his brand on the signs of private stations.

(3.) To put his seal to notices and applications to the Local Government made by the members of the guild, and when he deems it desirable, to add a note thereto stating his views upon the matter.

(4.) To keep a list of the members of the guild and to register therein any increase or decrease.

(5.) To collect and disburse the expenses of the guild.

(6.) To make calculations as to the expenses of the guild, and to report the same to the members.

(7.) To attend to affairs connected with the election of a manager.

Besides these duties, he should attend to all matters fixed by the rules of agreement.

Art. 56.—*Jinrikisha* traders should pay the expenses of the guild to which they belong. The amount and the mode of collecting these expenses should be fixed by rules of agreement.

Art. 57.—Persons not conforming to the following qualifications should not be elected as managers:—

(1.) Persons above 25 years of age, possessing a proper dwelling house or land within the district of the guild.

(2.) *Jinrikisha* traders belonging to a particular guild, and possessing more than ten *jinrikisha*.

(3.) Persons who can understand the regulations relating to the *jinrikisha* trade, and who can also make calculations.

Art. 58.—Even if conforming to these qualifications, no person who has been found guilty of robbery, theft, or larceny, can be elected a manager. The same is true of other kinds of crimes, while the offender is still under police supervision.

Art. 59.—When the local Government detects any misdemeanour on the part of a manager, re-election may be ordered at any time.

### STANDARD RULES FOR THE REGULATION OF YADAYA (HOTELS, LODGING-HOUSES, &c.)

#### SECTION I.—GENERAL RULES.

Art. 1.—*Yadaya* are divided into three classes; viz., inns, lodging-houses, and *kichin-yado*.

Art. 2.—Persons desiring to engage in the *yadaya* business should apply for the permission of the Local Government, stating the class, and appending a minute plan of the buildings and their division into separate rooms to be used for the purposes of the business, and showing the area occupied by the buildings. Whenever any change is made in the area or the partition of the buildings, such change should be reported to the Local Government with a minute plan of the change, and the approval of the Local Government obtained.

Art. 3.—Persons conforming to any of the following conditions, shall not be allowed to engage in the business:—

(1.) Persons under age who have no guardian.

(2.) Idiots and lunatics.

(3.) Persons who have been found guilty of robbery, theft, or larceny, or who are under police supervision for an offence of any kind.

(4.) Persons who are deemed capable of actions prejudicial to public morality.

Art. 4.—When either the family name (*uji*) or individual name (*na*) or both are changed, or when the business is discontinued, the circumstance shall be reported to the local Government.

Art. 5.—*Yadaya* establishments should be marked by a sign-board. At night, hotels and *kichin-yado* should be distinguished by a lamp.

Art. 6.—Hotel-runners should not be sent out to secure guests.

Art. 7.—Even when no special request is made, articles in the possession of guests should be taken care of, so that they may not be lost.

Art. 8.—Without the consent of a guest, no visitor or other person should be allowed to enter his room.

Art. 9.—When a guest falls sick, medicines, food, etc., should be served, according to his request, with special kindness and care.

Art. 10.—When a guest dies, or any of his property is lost, the circumstance should be reported at once to the police office, or its branch offices, or police stations, or to a policeman on duty.

Art. 11.—It is not permissible to detain or receive articles in the possession of a guest in lieu of the price of his lodging.

Art. 12.—It is not permissible to persuade a guest to visit immoral places, or to provide him with food or drink for which he has not made any demand, for the purpose of obtaining money beyond the fixed rate of charges.

Art. 13.—The rate of charges and other important matters relating to lodgers should be exhibited in the counting room and in rooms for the accommodation of lodgers.

#### SECTION 2.—HOTELS (RYOJIN-YADO).

Art. 14.—Only those will be allowed to keep hotels who have more than 25 *tsubo* of rooms to be used for the accommodation of guests.

Art. 15.—Rooms should be so constructed as to freely admit the sun light and facilitate ventilation.

Art. 16.—In each room there should be a closet (*oshiire*) or a shelf (*todana*), which can be securely locked.

Art. 17.—In buildings having more than 60 square yards of rooms upstairs, not less than two flights of stairs, of more than 4 feet width, should be used.

Art. 18.—Water closets should be situated sufficiently distant from rooms to prevent any bad smell reaching them. The basins should be made of stone, or concrete, or porcelain ware. This rule does not apply to cases where the special permission of the Local Government has been obtained as to the mode of construction.

Original from

Art. 19.—Water closets should be cleanly swept every day.

Art. 20.—The allowance of space for one man should not be less than 6 square yards, except for guests of the same party.

Art. 21.—The number of each room and the fixed number of guests to be accommodated therein should be written over the door of the room.

Art. 22.—Without proper reason, passengers should not be refused accommodation.

Art. 23.—Those engaged in the hotel business should keep a list of guests according to the following form, into which entries should be made on each arrival and departure of guests. Besides, the arrivals and departures of guests should be reported to the police office or branch police office, according to the forms No. 1 and No. 2.

[Here follows a form to be filled up with the number, name, age, occupation, rank, address, personal description, place of last abode, destination, date of arrival, and date of departure of the guest.]

Form No. 1.	
Arrival Report.	Name of Hotel.
Date.	Address and Rank.
Name.	
Rank.	
Address.	
Age.	
Occupation.	
Place of last abode.	
Destination.	
Date of arrival.	
Personal description and other circumstances.	

Form No. 2.	
Departure Report.	Name of Hotel.
Date.	Address and Rank.
Name.	
Date of arrival.	
Date of departure.	

### SECTION III.—LODGING-HOUSES (GESHUKUYA).

Art. 24.—Lodging houses are those establishments which take in lodgers on agreement for monthly charges for board, rooms, etc.

Art. 25.—The lodging-house business shall be permitted only to those who have more than 40 square yards of rooms for the accommodation of guests.

Art. 26.—Lodging-house keepers should present to the police office or branch police office, within 24 hours after the arrival of a guest or guests, two documents stating the rank, address, name, age, and the object of lodging. These documents should have the seals of both the guest and the lodging-house keeper; to one of the documents the inspection seal of the police office or the branch police office is to be obtained, and the document thus sealed should be kept in the possession of the lodging-house keeper.

Art. 27.—Articles 16, 17, 18, and 19 of the Standard Rules for the Regulation of *yadoya* shall also apply to lodging-houses.

Art. 28.—A notice board, with the names of guests, should be placed on the gate or at the entrance door.

Art. 29.—When a guest removes to another house, or stays away for more than 5 days, and his whereabouts are not known, the circumstance should be reported to the police office or branch police office.

### SECTION IV.—KICHIN-YADO.

Art. 30.—The *Kichin-yado* business shall be permitted only in those places which shall be fixed by the Local Government.

Art. 31.—When a lodger stays away overnight, the circumstance should be noted in writing.

Art. 32.—The mode of making reports as to lodgers should be according to the provisions of Art. 23.

### IN THE U.S. CONSULAR-GENERAL COURT.

Before WARREN GREEN, Esq., Consul-General.  
MONDAY, June 28th, 1886.

#### THE FULLERT CASE.

P. C. Fullert was again placed in the dock today, the occasion being the hearing of an application for a new trial. Mr. Lowder appeared for Fullert, and Mr. Kirkwood represented the People of the United States.

The following is the

#### STATEMENT

Of the grounds on which the application for a new trial is called for.

(1.) The evidence for the prosecution was insufficient to justify the judgment. The prisoner will refer to the whole evidence for the prosecution and to the evidence for the defence, for the purpose of showing, first that

the evidence for the prosecution was insufficient to support the onus of the proof; secondly, that it was insufficient to rebut the presumption of innocence; thirdly, it should have left so strong a doubt on the minds of the Court that the prisoner was improperly convicted; fourthly, that the damages would therefore appear to have been given under the influence of prejudice.

(2.) Error in law occurring at the trial and excepted to at the time.

The following errors will be relied upon—

(1.) That P. C. Fullert was improperly put upon his trial, he having been already "in jeopardy" for the same offence. The evidence to be relied upon in support hereof will be the judgment of the Court, dated 17th May, 1886, together with the original charge against Fullert on which trial judgment was based.

(2.) That P. C. Fullert, being a German, was not subject to the jurisdiction of this Court. The evidence to be relied on in support hereof will be that part of the decision of the Judge of the Court in motion made in Court on the 18th May for the discharge of the accused, which states:—"Had the accused taken refuge in his own Consulate, had he tried to take refuge in his own Consulate, grave questions of international law would have arisen." Also the evidence of Fullert himself, where he alleges himself to be a German, and the statement of the Judge of the Court that he had communicated with the German Consulate asking for evidence of the nationality of the accused, &c.

(3.) That a certain advertisement contained in a number of the *Japan Herald* was improperly admitted as evidence. Mr. Pinn's evidence will be relied on; also that of Mr. Weiller, and reference will be made to the arguments of Counsel and the decision of the Court thereon.

(4.) That P. C. Fullert was charged as a seaman of the United States, whereas there was not sufficient evidence in law to show that he was so at the time of committing the alleged offence. The evidence of Mr. Seidmore will be relied upon, as also exhibits Nos. 3 and 4.

(5.) That P. C. Fullert was charged with aiding and assisting Watkins "in deserting" from the U.S.S. *Ossipee* on the 23rd day of April, 1886. Reference will be made to the evidence of Commander McGlensy and of Lieutenant Sewell also to that of the boatmen and of the accused, and it will be contended that it was an error in law to convict the accused of aiding and assisting Watkins to desert on the 23rd April in view of the evidence which showed Watkins to have already deserted on the 22nd April.

(6.) That the judgment of the Court does not specifically find the facts necessary to support the charge.

F. LOWDER,  
Counsel for P. C. Fullert.

The following affidavit was also lodged in the case:—

In the matter of the trial of the action criminal No. 27 intitled "The People of the United States against P. C. Fullert," which took place on the 18th day of May last, and following days in the United States Consular General Court at Yokohama.

I, John Frederick Lowder, a British subject having my chambers at No. 28, Yokohama, barrister-at-law, make oath and say as follows:—

(1.) I acted as Counsel for P. C. Fullert at the trial aforesaid.

(2.) Warren Green, Esquire, Consul-General of the United States, presided at the said trial.

(3.) Since then and since giving notice of my intention to move for a new trial I have been informed by the said P. C. Fullert, and verily believe that prior to the said trial, and while Fullert was under arrest and detention in the United States Consular gaol on the charge on which he was tried at the said trial, the said Warren Green held a conversation with Fullert, in the course of which he, the said Warren Green, expressed a decided conviction that Fullert was guilty of the offence charged and that if he would not give up the name or names of the person or persons who were the principals in aiding Watkins to desert it would be the worse for him, the said Fullert and he would have to suffer for them.

(4.) I further declare upon oath and say that since the trial aforesaid I have discovered evidence material for the said P. C. Fullert and which he could not with reasonable diligence have discovered and produced at the trial, to wit that on the evening of the 22nd day of April last Paymaster Watkins did not come ashore and did not take a boat from the shore as alleged by the witness Kojima Toldjiro; and further that the said Paymaster Watkins is now undergoing trial by Court-martial on a charge for that he did on or about the 22nd day of April, 1886, desert from the *Ossipee* and from the United States naval service, and did remain absent as a deserter therefrom till the 5th day of May, 1886.

(5.) The trial took place without a jury.

F. LOWDER,  
Sworn at Kanagawa this 15th day of June before me  
WARREN GREEN,  
U.S. Consul-General.

The Consul-General said he wished at the outset to call attention to the last clause of the rule of procedure No. 78. After reading the clause his Honour said he had uncertainty in his mind as to whether the word Court meant the United States Consul-General or whether it meant the court which tried the previous case. He was inclined to

think that the latter meaning was the true one but before so deciding he was prepared to hear argument from either of the Counsel who might think otherwise.

Mr. Lowder thought that could hardly be the right construction of the rule because it might very well happen that when the application came to be made for a new trial it would be quite impossible for the Court as it was constituted at the time of the previous trial to hear that application. The assessors might have left the port or might in some other way be in accessible and thus the accused would be deprived of the right to apply for a new trial altogether. Moreover the provision by which the Court was to be constituted in a certain way was applicable to a case where the consul might think it necessary under certain circumstances to obtain the assistance of an assessor if the punishment he could inflict was not in his opinion sufficient for the offence before him. This was in the nature of a different proceeding altogether; it was an application for a new trial and there was nothing in the rules as to new trials showing that the Court should be formed as originally constituted. The word "Court" was used as a general term, and if the Consul had been sitting with a jury it would be impossible that a motion for a new trial should be made before a jury.

The Consul-General said in this case it had been several times decided that the assessors were not a jury; that they tried questions of law as well as of fact.

Mr. Lowder said yes—questions of law arising during the hearing of the case itself. But if the application for a new trial were to be made before the Court as originally constituted it would follow that no new trial would ever possibly be maintained, because the Court, having already decided upon the points submitted to them, would listen to a lengthy argument and then come to the same decision as before.

The Consul-General said the same remark would apply to the president as to the assessors.

Mr. Lowder said no—because the President might have mistrusted his own judgment and put it entirely on the judgment of the assessors, as was in a certain measure the case in this trial. He thought the Court would agree with him that in America an application for a new trial would not be heard before the Court that had tried the case. Owing to the system by which American law was administered in this country—he was not finding any fault with it—it followed that the application must be made before the President of the Court. If the President took the same assessors naturally the result would be the same.

The Consul-General thought that he could summon such assistance as he wanted, but that was not the point. The point was as to the meaning of the word "Court." Did Mr. Lowder consider this motion a step in the original case?

Mr. Lowder considered that the motion was quite outside of and subsequent to the original case. It was consequent upon what he contended to be a failure of justice in the original case. In a previous case, Hill against Wynn, the motion for a new trial was not heard before assessors.

Mr. Kirkwood agreed with Mr. Lowder that this was a new proceeding, and it would have to be a new case with new assessors.

The Consul-General said his bad health since the motion was filed had prevented him from going into the matter and he had not been able to look up precedents. The assessors would therefore be excused with thanks.

The Assessors (Messrs. T. Brower and F. Munn, who had sat in the trial of Fullert) then left the bench.

Mr. Lowder, describing his application, said it was applied for under the rules 76, 77, and 78, and under that rule of the Criminal Procedure which referred the Court to the rules he had named, but it was based upon the statement and affidavit that had been prepared according to the provisions of those rules. There were nine separate grounds on which a new trial was applied for. He hoped it would not be necessary to argue on all these points because if it so happened that one point out of the nine were made good then time would be saved all round. If that one point were argued first and the Court were with him then a new trial would be granted, and, as he said, time would be saved all round. In illustration of this he cited the case of a Counsel who, when required to show cause why he should not produce his client, said he had nine good valid and substantial reasons why he did not produce his client, and the first was that his client was dead. That was enough, of course, and he was not required to go into the eight other reasons. Among the reasons alleged for asking a new trial was that stated in paragraph of the 4 affidavit, which Mr. Lowder then proceeded to read.

At this point,

Mr. Kirkwood said it might save time if he

Original from

asked that the application be disallowed on a point of law. Article 78, under which it was made, provided that it should contain so much of the evidence as might be necessary to explain the particular points. It did not contain such evidence and besides it had not been submitted to him and had his approval, or if he refused to give his consent it should have been settled by the Court in the presence of both the parties.

The Consul-General said such an omission, if it were an omission, was the fault of the Court and could not be allowed to work against the prisoner.

Mr. Kirkwood could not see how it was an error of the Court. Counsel had no right to go to the Court unless he had his consent.

Mr. Lowder said Mr. Kirkwood was not in the case at the time the motion was filed. The only other party was the United States, and to whom could he apply if not to his Honour?

Mr. Kirkwood said that it should bear a certificate by his Honour that it was correct. So much of the evidence as was moved upon must be contained in these documents.

Mr. Lowder then produced a certified copy of the whole of the evidence.

The Consul-General said he could not grant the application of Mr. Kirkwood. He ruled that certification was not necessary.

Mr. Kirkwood asked his exception to be recorded. The Court admitted the affidavit.

Mr. Lowder then proceeded to read the 4th paragraph when,

Mr. Kirkwood, interrupting, pointed out that the affidavit of the witnesses whose evidence was referred to in the affidavit must be before the Court.

The Judge after some discussion over-ruled the objection, but said he thought this was the time to state what evidence was meant in the affidavit.

Mr. Lowder said, of course the evidence he proposed to bring could only be that of one person, and that was Paymaster Watkins himself. At the time this motion was filed he was only in a position to state that Paymaster Watkins was then undergoing trial by Court-martial, but he was now able to state that he had been sentenced for deserting on the 22nd April.

In reply to the Court,

Mr. Lowder said he would certainly bring Paymaster Watkins here from San Francisco.

The Court repeated that the affidavit must be admitted.

Mr. Kirkwood—Then any affidavit can be filed in this Court?

The Consul-General said so it seemed.

Mr. Lowder said he got the information from Paymaster Watkins himself, and of course when the new trial was granted he would produce the evidence no matter where from. Continuing with his argument, Mr. Lowder said certain boatmen were called before the Court, one of whom deposed that on the night of the 22nd of April two men hired a boat on shore, went to an otter schooner on board of which they stayed for a short time, returning with a bundle, that they then went to Tateyama Bay and thence to Kaneda Bay. Unless that evidence had been of importance it would never have been brought forward, and having been brought it must have influenced the Court more or less. He was not at the time in a position to cross-examine those boatmen, but it must be manifest that if he had been in possession of the evidence he now had he could have upset their testimony altogether. If he could have shown in rebuttal that those men had perjured themselves, and that they took the men from the vessel instead of from the shore, then the whole of their evidence must have been upset, the Court could not believe them, and the decision arrived at might have been different. It was sufficient for him to state now that their evidence was false, for his client to have a new trial. If this point were a good one it would be unnecessary to waste the time of the Court by arguing upon the other grounds.

Mr. Kirkwood then contended that it was known during the trial that Watkins was here, that he was in port. He was the man referred to as having been in the boat as a deserter. Why could he not have been called? He was an accessible witness, and it must have been known that his evidence was material. Further, how could it be material to the judgment whether Paymaster Watkins got into the boat from the shore or not? It was quite clear to the Court that two men arrived on board the schooner in Kaneda Bay and that except stopping at the otter schooner in the harbour the boat did not touch at any other place. They would find themselves in this position that the boatmen did take two persons from the shore, one of whom was not Paymaster Watkins, that both these men went on board the otter schooner in the harbour here, and that there one of them remained behind, while in his place came Paymaster Watkins. That would be a very ready explanation of

the matter, and what possible difference could it make supposing that were the case.

Mr. Lowder, in reply, said Watkins was here in port but was not called for two reasons. It could not have been known either to him or his client that the boatmen were to be put in the box, or the nature of the evidence they were to give after being put into the box. Further, he might state as a fact that it was his intention to call Watkins and he did not do so because he learned that it was the intention of the prosecution to call him; and further when he heard that Watkins was not to be called and when he resumed his intention of calling him it was suggested to him—he would not say whence—that it would very materially complicate matters if he were to call the Paymaster, if it were possible to go on without him. He therefore decided to go on. As to the second point made by Mr. Kirkwood, he pointed out that if these men could be mistaken in the person of the individual who got on board their boat from the shore it followed that they might be equally mistaken in other parts of the evidence they gave.

The Consul-General said had the testimony of the accused been given first, the testimony of the boatmen would not have been material at all because the point was that Watkins went to Kaneda Bay in a sampan with eight *sendos*. That he believed was the testimony of all parties. The question would then come to be what effect would the testimony of Paymaster Watkins have in the matter—whether the testimony of a criminal should outweigh that of *sendos* whose statements were corroborated by his companion after hearing his testimony. It would be in the possession of the Court, as it would be in that of any subsequent Court, that Watkins was a convicted criminal convicted of crimes which in his opinion would render his bare statement insufficient.

Mr. Lowder said that was not before the Court. His Honour could know only what was in the affidavit.

After some discussion, the Court reserved decision on the point.

Mr. Lowder then, going on to take up his next point, dwelt on the difficulties with which both he and his client had to contend in connection with this case, and pointed out the conditions under which a new trial is usually moved before a judge, who might be asked thus to say whether or not upon further reflection he had not misdirected himself on some of the points that had been argued before him. He remarked that if his Honour should be with him in thinking that upon one or two points he might have been mistaken, if a doubt were raised in his mind, then the prisoner was entitled to the benefit of that doubt and he should have a new trial which would clear up the doubt. After citing the first paragraph of his statement, he contended that the evidence for the prosecution was entirely circumstantial; in the whole of it there was no direct evidence to bring home to the prisoner a knowledge of the fact that Watkins was a deserter and unless the knowledge were brought home to him he was entitled to the benefit of the doubt, and ought to have had it. He then pointed to the evidence of the witnesses for the defence, quoting the words of Rufus Choate that the presumption of innocence is equal to a second witness. He held that the evidence of Fullert, which was not in the least shaken, should weigh with the Court equally with that of any witness brought forward by the prosecution. He could only account for the conviction on the ground that the Court did not believe his evidence, though there was a farther reason, and that was that this case had been so much talked about, and so much had been done by one of the members of the Court towards the arrest of Fullert that it was very difficult indeed for anybody sitting on the bench to believe the statement of the accused—the Court in fact approached the question with a biased mind. He suggested this in the most general terms as the explanation, the evidence for the prosecution being so strong—the mind of the Court was influenced by what had been heard outside and not by the evidence adduced. If that point were not put strongly enough he referred to the fact that the sentence was 6 months' imprisonment and a fine of \$2,000, the infliction of which sum, the heaviest within the power of the Court, considering that it would be impossible for the accused to pay it, showed that the Court was prejudiced. Mr. Lowder then went on to show from authorities that the Court had no jurisdiction to impose such a punishment, when it was decided to adjourn till 9.30 to-morrow (Tuesday) morning.

TUESDAY, June 29th, 1886.

Resuming his argument to-day in support of his application, on behalf of the prisoner, for a new trial, Mr. Lowder said the next point was that P. C. Fullert, a German, was not subject to the jurisdiction

of the Court. He thought he need only refer on that point to the evidence of the accused himself, where he stated that he was a German, and that statement had not been controverted; this argument on that point would be that being a German he was not subject to the jurisdiction of and this Court. After referring to section 2 of the Act of 1860, Mr. Lowder said there was nothing in the Act which gave the Court or the United States Consul-General power to exercise jurisdiction over anybody but a citizen of the United States. That was laid down also in volume 11, page 474, of the Attorney-General's opinions where it was said that the Court could not render a judgment against a person of foreign birth not a citizen of the United States. These references showed that the accused was not subject to the jurisdiction of this Court, and on that account he asked that, the exercise of that jurisdiction having been an error in law, his client might have a new trial in order that the error might be reargued, and that the judgment upon it might be reversed if necessary. The next point in the statement was that a certain advertisement, which had appeared in the *Japan Herald*, was improperly admitted as evidence. There could be no doubt that the advertisement was admitted in evidence after full argument, because his Honour over-ruled the objection and admitted the advertisement. The advertisement purported to emanate from the German Consul and was sent by him to the *Japan Herald*. His argument still was that it was inadmissible in evidence, because it was an act done not in the presence, or with the sanction of the accused, and was not in any way brought home to him. Therefore it was inadmissible; and he thought it probable that it might have exercised an influence on the mind of the Court, because his Honour said that he had himself perused it. The next point was that Fullert was charged as a seaman of the United States, whereas there was no evidence to show that he was such. His argument was that the accused was master of the *Arctic*; and drew a very clear distinction between the words "master" and "seaman." The vessel was not registered, and though she was allowed to fly the American flag, a person serving on board a vessel of that kind did not become a seaman of the United States. Counsel referred to a circular from the Department of State, cited in Mr. Scidmore's Digest, and said if this had been a merchant vessel of the United States his argument possibly would not hold good, but as this was not a merchant vessel of the United States, but was admittedly a vessel temporarily allowed to fly the American flag, it followed that the master of that vessel was not either a master or a seaman of a merchant vessel of the United States. He therefore submitted that it was by an error in law that accused was convicted on that point, and he was entitled accordingly to a new trial. The next point was that he was charged with aiding and assisting Watkins "in deserting" from the U.S.S. *Ossipee* on the 23rd day of April, 1886. On this point, although he had already argued at some length, he deemed it his duty to occupy the attention of the Court for some considerable time. The proposition he had formerly laid down and now repeated was that the act of desertion was complete when the man had quitted his post or ship without the intention of returning thereto. He had on the previous occasion cited, he thought, as many as seven or eight different authorities in support of that proposition. He then challenged the counsel for the prosecution to adduce a single authority which would in any way controvert that proposition, and he now repeated that challenge. In answer, counsel for the other side simply asserted that the desertion was a continuing act. Now, a point of this importance and magnitude was to be settled, not by mere assertion, but by authority, and if he had for the defence adduced overwhelming authority—as he submitted he had—in support of his point, and if it was found that the counsel for the prosecution, though challenged, had been unable to cite one single authority to controvert the point, then the judgment of the Court should necessarily have been in favour of the proposition supported in the way that this one was supported. He referred on that occasion to the case of *Veatman* and *Veatman* reported in Law Reports vol. 1, page 489, of Probate and Divorce. On the former occasion he had only cited one sentence of the passage, but he would now read the whole of it in order that the Court might fully appreciate the force of his argument, namely that the desertion was complete when one's mind was made up to quit one's post or to leave wife or children as the case might be without the intention of returning. Having read the passage, Mr. Lowder went on to say, in further illustration, that if the mother of an illegitimate child should leave that child in an open field with the object of procuring food at the nearest village she would not desert the child, because she had the intention of returning, but if she went away

with the intention of leaving the child there, then the act of desertion was complete and should the child die the guilt of murder attached to the mother from the moment of the child's death. The distinction he wished to draw between desertion and flight was very well illustrated in Dido's lament for Zénobe, where she said—

"Hadst thou, Zénobe, thy pig, but left with me  
A Venue d'Amour, who, remembering thee,  
Might in my sight have sported; I had then  
Not a holly lost, nor quite so soon been."

That illustrated the distinction between desertion and flight. The act of desertion completed, the flight commenced. His Honour yesterday, in the course of a few observations, said if he set out on a walk from Yokohama to Kanagawa so long as he was walking it was a continuous act. That doubtless was so; but with great deference he submitted the analogy was not complete. If his Honour set out for a walk, simply for the sake of pleasure, from here to Kanagawa with the intention of returning, then there was no doubt about it, the act of walking was a continuous act. But if his Honour set out, his intention being to abandon his post, then the abandonment took place when he left this consulate, and although the act of walking was a continuous act, it was a continuous act of walking, and not a continuous act of desertion. That was the distinction in his mind; if it was not put with sufficient clearness the fault was his, but he could not understand why it was not understood and appreciated on a former occasion. The distinction also became very clear when they considered the section of the Act of 1864 under which this charge was brought, in which the first penal act set down was the enticing or procuring or attempting or endeavouring to entice or procure a person to desert; the second was the aiding or in any wise assisting such person in deserting; and the third was the harbouring of a person after the act of desertion was complete. That distinction, he submitted, was very clear to the mind of the prosecuting counsel when he first framed the charges against the accused, because the Court would recollect that there were two charges in one—the first for aiding and assisting Watkins in deserting, and the second for concealing the deserter after his desertion. As to the last point it might possibly be—though that did not concern them at the present moment—that the accused harboured and concealed Watkins, knowing him to be a deserter. But the question now was whether or not he was rightly convicted of aiding Watkins in the act of deserting from the ship by taking him on board the *Arctic* on the 23rd, it having been proved by the evidence of Commander McGlensy and Lieutenant Sewell that Watkins actually deserted his ship on the 22nd April. The Court, by laying down that the two acts charged against the accused were two distinct and separate acts, bore out what he had said from the commencement, that the act of desertion was complete when Watkins left the vessel without the intention of returning to her. Had Fullert been present at the time when the paymaster was leaving the vessel; had he assisted him over the side and taken him down in his boat, then he would have been aiding him in the desertion. But the point was that, being in Kanagawa Bay, he might possibly be guilty of harbouring the paymaster, but could not properly be convicted of aiding and assisting in an act which was already completed. Supposing that Watkins, before he reached Kanagawa Bay, had gone on shore and been apprehended, he would have been apprehended as a deserter, for this reason that he had left the ship without the intention of returning. If he had been arrested either in the boat or on shore would it not have been as a deserter?—and that showed that the act was complete, and that what took place afterwards was flight or escape. He was flying from the authorities; he was endeavouring to evade pursuit; but the act of desertion was complete when he left the side of the ship without the intention of returning to it. The next point was to the effect that the judgment of the Court did not specifically find the facts necessary to support the charge. He argued this point on the application that he made for a writ of *habeas corpus*; he considered that those arguments were very strong, and, without going into them in detail, he hoped that the Court would take it as if he had gone through them again, and repeated them. Having finished the statement, he would now turn to the affidavit, the fourth paragraph of which he had already argued. He took up the third paragraph in the affidavit, which contained an averment to the effect that prior to the trial the President of the Court had held a conversation with Fullert "in the course of which he, the said Warren Green, expressed a decided conviction that Fullert was guilty of the offence charged, and that if he would not give up the name or names of the person or persons who were the principals in aiding Watkins to desert it would be the worse for him, the said

Fullert, and he would have to suffer for them." That paragraph had not been met by any counter affidavit, consequently it was not contradicted in any way, and it would therefore seem that the judge who presided at this trial had made up his mind that the accused was guilty. His argument upon that would not be very long; he would simply point to the 76th rule, which said that a new trial might be granted for any of the causes enumerated, among which was "abuse of discretion by which either party was prevented from having a fair trial." He thought with great deference he might point out that if the judge who presided at this trial had made up his mind beforehand, and had expressed to the accused his conviction of the guilt of the accused, it was an act of indiscretion in that judge to preside at the trial, because he must have known, having made up his mind, that it would be difficult, if not impossible, to remove the conviction with which he started. He could, of course, say a great deal more upon that point, but he did not choose to pursue the subject because the few words he had said would, he was certain, have as much weight as if he occupied the attention of the Court for an hour. The last point on which he wished to touch was this—that the trial took place without a jury. With regard to that, he had a few remarks to make which he thought would meet with the entire acquiescence of his Honour. The mere fact of a man being charged with an offence against law, of which the punishment was fine or imprisonment or both, entitled him, according to the Constitution of the United States, to be tried by a jury. He cited the Constitution to the effect that "the trial of all crimes, except in cases of impeachment, shall be by a jury," and then, turning to the 5th amendment to the Constitution, read the clause—"nor shall any person be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law." His contention was that the prisoner Fullert had been deprived of liberty, and was about to be deprived of property, without due process of law, if he were tried without a jury. He hardly needed to say in this Court that the Constitution of the United States was the highest law known in America. It was a head and shoulders above every other law; and no law that was made by the legislature or by any one else that was contrary to the Constitution could be upheld as against the Constitution. The Constitution, as he said, was the highest law, next in authority, possibly, coming those engagements which the United States entered into with foreign countries, which were known by the name of treaties; next came the Federal law, and then the State law. But the Federal law and the State law must always be subordinate to the Constitution law; and the Federal law or the State law was valid, he submitted, only in so far—and no farther—as it was in accordance with the Constitution. If it were against the Constitution then, he submitted, it had no validity as a law. Coming now to the Act of June 22nd, 1860, which he presumed would be cited by the counsel for the prosecution as showing that this Court had power to try a crime without a jury, he would at the outset state that this Act, if it did confer such a power, being against the Constitution, was of no validity. But he thought he should be successful in showing the Court that the Act might be so construed—ought indeed to be so construed—as not to conflict with the Constitution. Section 4 (which counsel read) showed clearly, he contended, that the jurisdiction exercised by this Court, whether criminal or civil, was to be exercised and enforced in conformity with the laws of the United States, and not otherwise; therefore, although it was true that they did find further on that a consul acting judicially might take to himself associates, that, he held, was not to be construed as contradicting section 4 of the Act, which provided that the laws of the United States were extended to all citizens of the United States in Japan. Counsel here cited section 10 as to associates, and asserted that clearly it did not necessarily, and if not necessarily he contended, not even by implication, override the Constitution of the United States or section 4 of the Act that he had cited, which showed that no person should be convicted without a jury. And he thought the ruling of his Honour during the trial of this case would also support his contention; namely, that the associates were not a jury. They were in no sense a jury; they were called in to assist the Consul, acting judicially, when he considered that legal points might arise. He thought the true meaning of the section was that in many cases a Consul acting judicially might not be learned in law, and the intention was to give him liberty to call in people who were learned in law or who, at all events, were able to assist his judgment on legal questions. Now a jury, it was unnecessary to say, decided matters of

fact not of law. Clearly therefore, and he thought the Court would be with him—this section was meant not to exclude trial by jury, but simply that the Consul when acting judicially should have legal assistance if he so desired. That was certainly a very allowable construction, and it was one which would make this Act in strict conformity with the Constitution, and would make this particular section of the Act to conform with section 4. To argue the other way—to say that the intention was to defeat the Constitution, and also section 4, would be to lead to an absurdity. It was a rule in all Courts, when questions arose as to the construction of statutes, to place such a construction on the statutes as would not lead to an absurdity. The construction he had put upon this statute would not lead to an absurdity, but was the true, the accurate, and logical meaning of the Act which conferred jurisdiction upon these Courts. If it were not so, then congress in 1860 must have been taken deliberately to say that though the Constitution of the United States allowed United States citizens, accused of crime, trial by jury, yet Congress would decide that they should not be tried by jury. He could not believe for one moment that that could have been the intention of Congress; and he thought the construction he had given was the only right one of which the Act was capable. And if that were so, then it followed that the accused was convicted without due process of law, inasmuch as he had been convicted, not by a jury, but by a Court composed of a President and two associates. On all these grounds, therefore, he asked his Honour to give him the order that he had applied for, namely the order for a new trial. He could not flatter himself with the hope or expectation that he had removed every single doubt in the mind of his Honour, but at the same time he hoped that at all events what he had said would have been sufficient to make his Honour reflect and again consider as to whether the Court was perfectly right in every ruling that it gave when the case was before it. If he had succeeded in raising even a doubt in his Honour's mind upon any one of these points, then the Court would do well to give the prisoner the benefit of that doubt, and grant the rule for a new trial in order that these matters might be gone into most thoroughly again, and that his client might have the justice which Counsel thought he ought to have, and of which he had been deprived, namely the right of trial by jury.

The Consul-General—In accordance with the agreement entered into yesterday, I shall withhold any remarks on the subject until counsel for the prosecution has had the chance of reply. But there is one point upon which I wish to touch, which counsel for the prosecution could not. It is one in reference to which I would like to put myself on record, and that is the third section of the affidavit with reference to the conversation. Substantially such a conversation did occur; it was put in rather stronger terms in the actual conversation, but there is no doubt that such a conversation did occur and that, acting in my consular capacity, I did express a conviction—or rather an opinion—as to the guilt of the prisoner. The peculiar circumstances under which a Consul—an American Consul—finds himself in this country render it imperative that he should form an opinion of the guilt of the accused before the accused can be put on trial. He must certify under his own hand and seal that he believes—has reason to believe—that there is ground for the accusation. The facts which warrant him in issuing the warrant for the arrest must be strong. He cannot issue the warrant on a mere statement—on a mere suspicion; no one else has the right to issue such a warrant for the arrest, consequently the judge must have an opinion—and must have a very decided opinion—before he can take any action. It has come within my own short experience since I have been here that so strong a conviction did I have of the guilt of one of the parties brought before me that I had begun to cast about and to make enquiries as to the best method of getting the man sent home, thinking the trial would be a mere preliminary matter—a matter of detail. Yet, at the conclusion of the trial the evidence was not what I thought, and the man was dismissed. As to this particular case the tendency of the defence all the way through—of course I say this without any sort of feeling because it is the duty of counsel to use every point; every item that could be twisted on his side in a criminal case should be used, and I think he is perfectly justified in doing it—but the tendency has been to create an impression of persecution rather than prosecution. Now, why should that be? Paymaster Watkins I have never seen; P. C. Fullert I saw for the first time at this conversation as alleged. The Naval Department and the State Department are entirely separate. I have no interest in the action of Paymaster Watkins; his desertion, his arrest or his guilt—nothing. Simply

Original from

as Consul-General at this port I was the medium of communication between the Admiral in command and the Japanese authorities. All communications were made and all action was taken through me as a medium according to the official customs. Therefore why should I have such a bias? As far as I am personally concerned, on the very first day of the trial it would have saved me the hardest work I have had since I have been in the consulate, to have dismissed the case. At every stage throughout the procedure I have always had that loophole of escape from the tremendous amount of work and worry, by simply granting any one of the motions in favour of the prisoner and releasing him. It cannot, therefore, be. I am putting it in this elaborate way because in a few days I shall leave this country and shall leave the bench; and I am loath to leave behind me an impression in the public mind of having in any way lent myself, or been influenced to lend myself, to the persecution of any one man, or to have been biased in my action. I again repeat that the course of the Counsel was perfectly justifiable, and was in the strict line of his duty, but the impression upon the public mind is something that I want to remove. To-morrow at half-past nine I will listen to the reply of the opposing counsel to the points in law that have been made, and probably render decision. The Court then rose.

WEDNESDAY, June 30th.

Mr. Kirkwood was heard to-day in this case. He said the first ground upon which he understood a new trial was asked for was that evidence had been discovered since the last trial which was said to be material for the accused, and which he could not with reasonable diligence have discovered and produced at the trial. The evidence that was offered was said to be to prove that Paymaster Watkins did not go ashore, and did not take a boat from the shore as was alleged.

Mr. Lowder—Has not this already been argued, decision being reserved?

The Judge said that was so.

Mr. Kirkwood, passing over that point then, said the second ground taken yesterday was that the trial took place without a jury. He submitted that ground could not be taken because, if a ground at all, it must clearly be taken under the 6th ground specified in Rule 76,—an error in law taken at the trial and excepted to by the party making the application. This point was not raised at the trial. If it were an error then it ought to have been excepted to directly the Court was constituted, and had it been so excepted to it should be raised in the statement of the grounds and not in the affidavit. The only way in which it could be referred to in the affidavit would seem to be under the first head of Rule 76, "irregularity in the proceedings." Irregularity in proceedings, he submitted, must be irregularity after the Court was constituted, and it was not alleged that any such irregularity took place. Any argument must be based with respect to irregularity after the Court was constituted, and not as to its constitution. It could not be grounded on any order of the Court because there was no order of the Court; nor an abuse of discretion because there was none alleged. If it was intended to take exception to the constitution, then it should be raised as a ground of law and should appear in the statement, not in the affidavit. Moreover, the accused, not having raised this point at the trial, must be held to have waived it, and therefore he thought this ground could not be entertained. Apart from that, however, it had invariably been the practice of this Court to try with assessors; there was no provision by which the Court could try by jury. Such a thing was unknown here, and he thought the Court, even if the other grounds he had taken were insufficient, would come to the conclusion that the practice of this Court had been so firmly established that his Honour would not allow a new trial in such a case as this. It was open to Mr. Lowder to appeal and take the opinion of a higher Court if he choose. Coming now to the statement, the first ground was that the evidence of the prosecution was insufficient. He would not go over the whole of the evidence, but would content himself with referring to what might be considered a few of the most salient points that no doubt influenced the Court in arriving at its decision. These were, chiefly, all the suspicious circumstances under which the accused left the port; the hurried, unpremeditated way in which he left on the eve of his marriage. He went down the Bay, remained down there 48 hours in order, he alleged, to stow away his cargo and get the men sober. It was proved that there were ten men sober enough to tow him out and that the amount of cargo that he had to stow could not possibly have taken him all that time. Moreover, there was a fair wind, and he could have gone out of the Bay directly his

cargo was stowed. Instead of doing that, however, he waited; a boat came alongside, which was signalled; and, directly the paymaster went on board, the vessel set sail and left the Bay. The statement of the accused himself instead of being in his favour seemed to be very much against him. The reasons that he gave for no suspicion being created in his mind as to the passenger must have seemed very unsatisfactory to the Court. Here they had a sportman, a lunatic globe-trotter as Fullert called him, without luggage of any kind, without a hair brush, without a tooth brush, and without guns or any implements of sport. Lieutenant Sewell's evidence showed that the accused was not telling the truth, and that he must have had very strong reasons for hiding the fact that he had a passenger. Why did he not say that he had a passenger on board who had no luggage, and offer to facilitate the mission of Lieutenant Sewell? Instead of that he gave no information whatever, and the first suspicion that was aroused was because of something that was said on board the other schooner. Of course the whole of the evidence was circumstantial, but the circumstances were so strong that it seemed to him impossible for the Court to come to any other conclusion than that Fullert assisted the paymaster to desert, knowing him to be a deserter. Under the first head of the statement it was contended, fourthly, that the damages would appear to have been given under the influence of prejudice. Before his Honour could grant a new trial he must have, not a doubt, but a conviction in his mind that the evidence adduced at the trial was not sufficient to warrant the verdict. Such an application would not be entertained by any Court before which, with a jury or assessors, the case had been tried, unless it were clear that the verdict was given in opposition and contrary to the evidence. As to the fourth ground, which he had just mentioned, he thought Mr. Lowder had here urged a ground of appeal that the Court could not entertain. This point came under Rule 76—"excessive damages given under the influence of prejudice"—because the exact words of the clause were taken. If they referred to the rules for criminal proceedings, they would find in rule 12 that in applications for new trials this ground was specially excepted, and therefore an application for a new trial in a criminal case could not be made on the ground of damages appearing to be given under the influence of prejudice. The reason, no doubt, was that the only ground on which a new trial could be moved for was that the verdict was wrong. The verdict in a criminal case was, he pointed out, very different from the judgment in a civil case. The judgment in a civil case must be the amount of damages. In a criminal case the verdict was the finding of the Court, on which the prisoner was guilty or not. It was to upset that verdict that the application for a new trial was moved; it was not moved either to alter or upset the sentence of the Court. The sentence of the Court followed upon the verdict, but a new trial could not be applied for to vary the sentence of the Court in a criminal case. It could be asked for to change the verdict of the jury, and not the sentence. It was further contended that this Court had no right to inflict such a punishment upon Fullert. He held that it was evident from the Revised Statutes, and from the clause under which Fullert was tried, that the Court could inflict punishment of imprisonment and a fine. As to the ground that Fullert had already been in jeopardy for the same offence, he referred to Bishop, volume 1, sections 1,021 and 1027, to show that he never was in jeopardy. It was next contended that Fullert was a German, and not subject to the jurisdiction of the Court, and on this ground he cited the circular of the Secretary of State of 1st June, 1881. Prior to that circular the United States had not been in the habit of exercising jurisdiction over foreigners on board American merchant vessels in China and Japan. But since the circular was issued it had invariably been the practice to act on it, and he apprehended this Court would not depart from the instructions contained in it. If the instructions there were improper and incorrect, then the defence could take the matter to a higher Court. Apart from the circular, and considering the reasons that had no doubt given rise to it, he thought his Honour would see that the Court had jurisdiction in this case by international law as well as by common law. Supposing extra-territoriality did not exist in this country, and a crime was committed on board an American vessel here within the territorial waters of Japan, by a citizen German by birth, there were clearly, it seemed to him, three countries that had concurrent jurisdiction. Japan, of course, would have jurisdiction over such a crime; the Courts of the United States would also have jurisdiction, because it was committed under their flag; and the Court of Germany would have jurisdiction

because the person who committed the crime was a German subject. In such a case, of course, it was the practice that the country where the crime was committed generally tried it; but supposing that country did not choose to do so and the offender went away on the American ship, clearly when he got out the jurisdiction of this country the Courts of the United States could try him, and he was under their jurisdiction if the offence had been committed on the high seas. A case, the name of which he forgot, was decided not long ago, and carried before the highest Court in England for criminal cases, in which a crime was committed by an American—or at any rate a foreigner—on board an English vessel in the River Garonne in France. The French Courts did not exercise their jurisdiction; he was brought back to England, tried there, and it was held that the English Courts had jurisdiction. That was the condition of things where extra-territoriality did not exist. But as extra-territoriality existed in this country, and as Japan had given up her jurisdiction over foreigners—over American and German citizens—it then remained between those two countries, in a case like the present, both of which had concurrent jurisdiction; and whoever could get hold of his person first was the Court that had jurisdiction to try him. That was a proposition which he did not think the other side would dispute. If this offence had been committed on board an American vessel on the high seas the other side would hardly contend the contrary, but having been committed in the territorial waters of Japan, in which extra-territoriality existed, it was thrown back into a similar position except that if it were committed on the high seas the American Court might have claimed exclusive jurisdiction, whereas here it had concurrent jurisdiction, and the Court that got hold of him first had the right to try him. In support of his argument he quoted Bishop, volume I, section 117. The third ground was that a certain advertisement in the *Japan Herald* was improperly admitted as evidence. So far as he recollected the proceedings—for the certified copy of the evidence was not part of the statement, and had remained in the hands of Mr. Lowder all the time, not being on file at all in these proceedings—this advertisement—was not considered by the Court to be in evidence as against the accused, to prove that he put it in. It simply formed a part of the record to show what Mr. Pinn and Mr. Weiler were called to give evidence about.

The Consul-General said the advertisement was admitted as having an effect upon the case, but when the name Vollert was read instead of Fullert it was ruled out unless connection could be shown between Fullert and Vollert. It was never practically used in evidence.

Mr. Lowder pointed out that the advertisement was admitted and his exception noted.

Mr. Kirkwood said the advertisement must be put in first and the links subsequently proved.

The Consul-General said they were never proved, and therefore the advertisement was not used.

Mr. Kirkwood, continuing, said he might put in any advertisement from any paper and the Court would be bound to take it for what it was worth; but he must show them afterwards to be of use. The next ground was that P. C. Fullert had been charged as a seaman of the United States. This point was fully gone into before, and it was decided by the Court that he was a seaman of the United States. It it were contended, as he presumed it was, that this was not an American merchant vessel, then he said that to constitute him a seaman of the United States it was quite sufficient for him to be on board a vessel flying the American flag, under American protection, as this was, carrying articles issued from a proper legal authority. If he committed an offence while on board that vessel—just as he was entitled to the protection of the United States, so he must obey the laws of the United States while there; and if he infringed the laws while there he could be punished by the United States Courts in the same way as if the vessel was a properly registered American merchant vessel. Supposing this offence had been committed on the high seas instead of in the territorial limits of Japan, would the other side contend that if the accused had been taken to the United States the United States Court would not have jurisdiction and that this vessel must be held to belong to no nationality whatever. Supposing he had committed this offence on the high seas what Court would have had jurisdiction to try him? The American Court naturally, because he was on an American vessel on the high seas, and if he had gone to America would there have been any ground on which the American Government could have complied with a request for his extradition to Germany? He failed to see it. Was the crime to go unpunished because the vessel was not a registered vessel, although under Ame-

ican protection? The next ground was as to Fullert being charged with aiding and assisting in the desertion. This had been fully argued before, and it really did not seem necessary to go into the matter entirely again. The other side had always harped on the fact that desertion was something that occurred in such a short space of time that it was impossible to define the time at which it did occur. He called it an act; it must be momentary; it could not be prolonged; but Mr. Lowder did not define the moment in which it must be done. With respect to merchant seamen the statutes had defined and shown that it was not a momentary act, but a continued act. He quoted from Parsons on the Law of Shipping, page 102, to show that in reference to merchant seamen there must be a continued absence for 48 hours. Clearly, he said, in the eyes of the legislature the act of desertion was by no means a momentary act. Until the intention to desert was carried out the desertion was not completed, but when it was so completed then the desertion referred back as having commenced at the time the man left his ship. Why should not this definition be applied by analogy to officers of the Navy, and if so it quite broke down the definition of the other side. It would seem clear that supposing Watkins did not find this boat that he expected; supposing all the means of escape were cut off; he would have returned to the ship, giving some plausible excuse. How then could it be possible to prove intent to desert? The desertion was not completed until the paymaster found that all the stages he had prepared were ready and that he could avail himself of them. If the act of desertion were not a continuous act where was the line to be drawn? and what was the moment of desertion? Mr. Kirkwood then cited in illustration the assisting of a prisoner to escape from prison, and assisting at a burglary, in both of which the aid might be given from the outside. As to the last ground; that was gone into fully on the motion for the writ of *habeas corpus* and it was quite useless to argue the question over again. In fact such an application as this, an application for a new trial, was very rarely made even in a civil case, and he thought it was almost without precedent in a criminal case. Such procedure certainly was not known to English law. After citing the chief grounds on which such applications are usually made, Mr. Kirkwood pointed out that his Honour had decided this case with the assistance of assessors and he was now asked on exactly the same arguments to decide that after the points had been fully argued, and after careful consideration, he was wrong. He thought it was very improbable that the Court could come to that conclusion. If the other side had made out a strong case on account of misconduct on the part of the associates or the Court or the prosecution, and further had shown that new evidence of importance was available then it might be successful. But this had not been done, and the only new evidence was really of such a nature that it was perfectly impossible for the Court to say that it would be material even if it were opposed to the evidence of eight witnesses, whereas it was only alleged to be opposed to the evidence of one witness. Moreover it must be clear to the Court that that evidence was accessible to the defence because no matter what evidence the accused might have expected to be called against him, the evidence of the prosecution was given first, and at its close it was the duty of the defence to meet it with any evidence that was accessible. If that evidence was not correct the paymaster was accessible to rebut it. If the accused decided to rest on that evidence and not run the risk of calling the paymaster he must abide by it.

The Court was adjourned till two o'clock for decision.

On resuming,

The Consul-General said, before reading the verdict, he would take up the points one by one, his remarks upon which he had not found it necessary to write out. The first point was as to the insufficiency of the evidence for the prosecution. That, he thought, was sufficiently answered by the unanimous opinion of the Consul-General and the associates. The first error in law, was as to Fullert being placed in jeopardy at the last trial. He had already rendered his decision on that and he saw no reason for changing it. With reference to the second, that Fullert was a German subject, and more especially with respect to the remark made by the bench that "Had the accused taken refuge in his own consulate, had he tried to take refuge in his own Consulate grave question of international law would have arisen," that manifestly referred to the probability of different construction being placed on their powers by the United States and the German Consul-General. His instructions were very clear, very lucid, and it would have been somewhat embarrass-

ing to have a different construction placed on the affair by the German Consul-General. As to the question of admitting the advertisement the fact was that, although admitted before being read, as soon as the name Martin Christian Vollert was read it was ruled out unless connection could be shown as to the identity of Vollert and Fullert, and it was consequently not used in the evidence at all. Next as to Fullert being charged as a seaman; that also was fully gone into, and he thought it was a plain proposition that if the protection of the United States was extended to these arctic schooners certainly the seamen on board were United States seamen. That such protection had been extended was a matter of historical fact, notably in the case of *Diana* in 1880. She was fired upon by Russian officers and the matter was taken up in detail and formed the subject of a correspondence between the Secretary of State and the Russian Government; and the Secretary of State did at that time assume the protection of that schooner. The next point was that the judgment of the Court did not specifically find the facts necessary to support the charge. It seemed that perhaps the verdict would have been fuller had it been worded differently—it would have been better to be worded differently—but he hardly thought for that alone, the omission of two words, especially as they were mere formalities, was sufficient to warrant the trouble and expense of a new trial. As to the new evidence, which it was suggested would have such influence on the minds of the Court as to cast doubt on that of the sendoes, the questions to be taken into consideration were whether the throwing out of the evidence of the sendoes would destroy the case, and the probable effect of the introduction of Paymaster Watkins' testimony as against the eight sendoes. On that last point he did not think there would be any question as to whether the evidence of the man, who was, from the evidence in the trial, fleeing, deserting at all events, could be taken against that of men who had no reason for falsifying their statements. Even if Watkins' statement were true it would not necessarily follow that the sendoes were dishonest, instead of merely mistaking the fact that one man went on board and another man came back. As a rule a judge was not in a position to understand the working of the minds of a jury, but in a case where the judge sat with associates and discussed each point with them he was able to understand what were the exact portions of the case which affected the mind of the jury. From the discussion that took place between the associates and himself he would say that the evidence of the sendoes was very little considered. The circumstantial evidence brought out at the trial had, of course its weight, but the principal force of the decision was the testimony of the accused. So far from being frank, full, and honest, the impression caused by it was that it was the testimony of a shrewd man who weighed well what he said and who was concealing facts. His testimony was really more against him than anything else that was brought up in the case. As to the question of trying by jury, that had been decided by so much abler legal ability than his that he would not attempt to handle it. It had been decided on appeal after appeal here that in this country trials should taken place without a jury. As to the act of desertion, if it were a simultaneous act and occurred at the time that the deserter stepped from the ship or from his post on to some other place, how could there be such a crime as aiding and assisting him in desertion? How could that be if it were a simultaneous act? If the act of desertion were based solely on the time when the deserter made up his mind not to return how could he be aided, and if he could not be aided how could there be a punishment for a crime which could not be committed. It seemed to his Honour that the boatmen into whose boat he stepped aided his desertion, and that the ship to which he was carried also aided his desertion. The smallest possible punishment was 6 months' imprisonment and a nominal fine. Such a punishment would be inflicted in a case of assistance to a poor drunken sailor, who had got himself into trouble and was trying to get away. The limits of the case were extended as a bare indication that for more serious offences more serious punishment should be incurred. Fullert had not been punished to the full extent of the law by any means, because he could have been sentenced to three years' imprisonment and a fine of \$2,000. Therefore the punishment of 6 months' imprisonment and a fine of \$2,000 was not an excessive punishment when they took into consideration the fact that the desertion was something unparalleled in the naval annals of America. The desertion of an officer under charges had never occurred; it was a serious question. The limit was extended for more serious questions, and the punishment was not excessive, all things being considered. The judgment was as follows:—

IN THE COURT OF THE CONSUL-GENERAL OF THE UNITED STATES OF AMERICA AT KANAGAWA, JAPAN, JUNE 30TH, 1886.

In the matter of an application for a new trial of P. C. Fullert, convicted in this Court on the 22nd day of May, 1886, of aiding and assisting G. R. Watkins in deserting from the Naval Service of the United States.

#### JUDGMENT.

After careful consideration of the statement of the grounds of the above application and the affidavit filed therewith, and the arguments submitted by Counsel thereupon, the Court is of the opinion that no reason in law has been presented or sustained herein for granting a new trial of the said Fullert, and the application is therefore dismissed.

WARREN GREEN,  
United States Consul-General,  
Acting Judicially.

Mr. Lowder presumed he could appeal to the Minister.

The Consul-General said he could so appeal.

Mr. Lowder then gave notice, on behalf of the accused, that he would appeal.

As the Consul-General was about to leave the bench.

The Prisoner asked permission to say a word. The Consul-General granted the request.

Fullert then asked his Honour whether any steps had been taken in reference to the schooner—that was as to rescuing the men on board of her.

The Consul-General—I have not the remotest idea.

Fullert—You are going to leave the schooner? As I said when I first came down—

The Consul-General—I did not know that was what you were going to say; that is outside the Court altogether.

His Honour then left the bench.

#### IN THE YOKOHAMA KEIZAI SAIBANSHO.

Before Judge YUEN.—FRIDAY, June 25th, 1886.

#### THE RECENT SILK FRAUD.

This case was continued from Tuesday last.

Mr. Takanashi, counsel for Mr. Schoene, stated that as considerable dissatisfaction was felt by his client as to his having to depone through an interpreter, and as his French interpreter wished to resign the task, he brought Mr. Nagai Kiutaro who knew all the matters connected with the case.

The Court permitted Mr. Schoene to send a representative to future sittings in case his presence was not wanted.

The Court being desirous to ascertain the exact amount of each of the loans advanced by No. 177, aggregating \$77,750.

Mr. Schoene depone that on February 21st, 1885, he advanced \$1,500 on 49 bales of waste silk; on May 14th, \$700 on 37 bales; on May 19th, \$300 on 13 bales; on July 1st, \$1,200 on 61 bales; on July 1st, \$1,100 on 6 bales of Hanks, and also the following amounts which were advanced on the same lot:—July 9th, 10 bales, \$2,000; July 15th, 19 bales, \$1,100. Further advances were:—

BALAN. DOLLARS.		BALAN. DOLLARS.	
July 15	3,600	November 16	54 12,200
July 24	20 3,000	December 24	7 2,000
July 30	10 2,700	December 10	34 1,000
August 8	100 10,000	January 27, 1886	23 5,500
August 11	57 10,000	January 14	34 132 8,000
August 14	71 12,000	January 23	11 2,700
August 18	92 15,500	January 23	15 5,000
August 25	56 9,300	January 30	9 2,000
September 7	31 3,600	February 8	7 2,000
October 5	21 55,000	February 27	7 2,000
October 8	0 1,100	March 10	30 8,050
October 19	5 31,250		
November 4	8 1,800	Total	678 139,200

The Judge remarked that he did not always receive explicit answers to his questions from Mr. Schoene, and that the account given above was not of special importance.

Mr. Schoene stated that he found it very difficult to ascertain how many bales of each lot received by him were spurious, the existence of the fraud having been discovered only recently. He could not assert that the sum of yen 77,500 represented all that he had been defrauded of, for part of the sum might cover legitimate transactions. He could not tell the process followed on each occasion, nor the exact amount of the sum actually defrauded. As to the loans advanced by the French bank, the money was delivered on the date of the deposit of the silk in the form of bills. When sending Morita to the Shinsei-gumi to have the certificates signed by the Shinsei-gumi he told Morita that he had to procure a new loan and wanted him to have fresh certificates signed by the Shinsei-gumi. He drew cheques against the French bank. He was a creditor to the Shinsei-gumi and at the same time responsible for the payment of

the loan advanced by the French bank. He acknowledged in effect his obligation to pay the loan. He had many transactions besides those under consideration with the French bank. He and the bank were partial creditors, but in case the Shinsei-gumi failed to repay the debt he would have to clear it. He did not know how many of the 30 bales pledged to the bank were spurious at the time, but he knew for certain that some of them were bad. The 57 bales pledged to the bank on March 16 were the silk received from the Shinsei-gumi on August 18 last year, and the 77 bales pledged to the same on March 25th for \$27,500 were the lot received on August 18th or 25th last year. He could not tell what sum was defrauded on each lot, but by deducting the sum returned and the value of the good bales from the total advance he arrived at the loss that he supposed he incurred. Out of 383 bales remaining 246½ were spurious. The covers were kept by him; the contents were thrown away, the contents of two bales having been kept as samples. The remaining goods were deposited in No. 90. He found no spurious articles in bales of waste silk, but found the contents inferior. Only Hanks were treated.

The Public Prosecutor stated he found the case more and more entangled. He heard Schoene declaring that he was a guarantee in the loan contracted with the French bank, and now he said he was responsible for the payment of the loan. He wanted an explanation of these inconsistent statements.

Mr. Schoene said that he had no legal idea on the subject. He thought he could fill two capacities as a claimer and an obligator. The certificates of deposits issued by him and signed by the Shinsei-gumi were not negotiable.

In answer to Mr. Litchfield, Mr. Schoene deposed that he had no idea as to the legal character in which he acted in the transaction, and would submit the whole question to the decision of the Court.

At this stage Mr. Otsuka moved that as Mr. Schoene at first expressed a wish to be interpreted in French, as he was not a good English speaker and his French interpreter was found capable, he would ask Schoene to bring his former interpreter so as to avoid all possible misunderstanding.

Mr. Takanashi said that as it was the special desire of his client to be interpreted by a special interpreter in whom he particularly confided, the Court would be doing an act of great courtesy and leniency if Mr. Schoene were permitted to do as he wished.

Mr. Masujima thought that as the Court was under the jurisdiction of Japanese law, he saw no reason why special advantage or favour should be given to foreigners.

After some discussion, the Judge ruled that Mr. Schoene might address the Court either in English or French.

Examined by Mr. Litchfield,

Mr. Schoene said he was an endorser of the documents in question. He would be responsible for the payment of the debt if the Shinsei-gumi failed to do so. He might be an endorser, or a joint debtor, or anything else; he wished to resign the whole question to the decision of the Court.

Adjourned till afternoon.

On resuming at 1:30 p.m.,

Morita, questioned by the Court, said the documents produced he remembered having taken to the Shinsei-gumi, and he was instructed at the time by Schoene to have the seal of the firm affixed to them. The Shinsei-gumi owed a sum of money to Schoene and they were required to sign the documents in acknowledgment of their liabilities. He could not understand the contents of the documents. He did not remember which of the book-keepers, Ota or Ohashi, affixed the seal on those documents. They pressed their stamp on the documents immediately on presentation.

Takagi stated that the seal affixed on the documents was never used in monetary transactions, he always used his own seal for that purpose. He was not informed that those documents were stamped with the seal of the firm. He did not receive cheques from Morita. He did not remember to have received sums written on the three other bills produced. Morita would sometimes bring bills and request some members of the firm to endorse them previous to their presentation to banks or other establishments for payment. They simply complied with the request out of good will or courtesy, but they never received the money themselves.

Kanematsu corroborated the statement of Takagi. He did not know if the seal of the firm was affixed to any documents of the kind.

Ota Shokichi remembered having affixed the seal of the firm to certain documents. Morita did not explain to him the contents of the papers, but he stamped them without reference to his master as such a proceeding was of every-day occurrence.

Morita remembered having presented the bills to

the Shinsei-gumi to have them stamped. He did not know whether cheques were issued at the same time as the certificates of deposit were written. He was instructed to have cheques cashed, and he entrusted the Shinsei-gumi to go through the process. His impression was that his employers were pushed by a creditor to pay a loan which they had previously obtained in order to advance money on goods pledged by the Shinsei-gumi. He therefore obtained another loan, and to do so had to produce documents signed by the Shinsei-gumi.

Takagi, examined by the Judge, stated that he did not remember to have sent any spurious goods to No. 177 besides the nine lots sent between July and September 7th last year, and they were not yet repaid. He pledged good silk on other occasions. He marked at the edge of an entry running "July 24th, 20 bales, \$3,000" that a certificate of loan was given; meaning thereby that he had signed a bill for \$20,000 at the request of Morita.

Kadama stated he had been connected with the Shinsei-gumi since its establishment. He treated bad bales under the orders of Takagi. He knew spurious goods were pledged to No. 177, but he took no part in the original scheme to effect the fraud.

Ota Shokichi, in reply by the Court, said he did not take any share in the conference held to accomplish the fraud, neither had he any previous knowledge of the affair. He happened to visit the house of Takagi at Miyazakicho when Takagi and others held the conference.

The Judge said he wanted to affirm previous statements made by Schoene in order to avoid any misunderstanding on the subject, as he had failed to elicit definite answers to his questions.

Mr. Schoene acknowledged that he had stated he stood in the position of a guarantee against the French bank as well as that of a partner to a monetary obligation. He was unable to define his position from a legal point of view.

The Judge ordered him to ascertain how many bales, out of 30 on which the bank advanced money, were spurious.

Mr. Musujima desired to put his questions in English to Schoene, after first informing the Court of their nature in Japanese in order to save time, and to be satisfied that what he wanted to say was clearly and correctly understood by witness.

Mr. Takanashi objected to counsel for defendants examining the civil plaintiffs, on the ground of the provision of Articles 291 and 352 of the code of Criminal Procedure.

The Judge ruled, on the suggestion of the Public Prosecutor that Mr. Masujima should ask questions through the interpreter to the Court.

Examined by Mr. Masujima,

Mr. Schoene deposed that his business consisted in the lending of money on security of silk and dealing in silk. He inspected the whole lot of silk offered for sale when buying it, and Morita had no responsibility in the transaction, though the case was different when money was advanced on security of silk. He took all silk to the upper floor of his godowns for inspection. A Japanese merchant desiring to obtain a loan would first apply to his *banto*, he would advance the money on the recommendation of the *banto*, who was required to ascertain the quality and other particulars of the goods. One or two bales of silk were generally inspected when offered for mortgage and when found good the loan was granted. This was the general way in which business of this description was transacted in Yokohama. On one occasion the people of the Shinsei-gumi brought to him the bill of lading for a quantity of silk consigned to the Seventy-fourth National Bank, and his firm, as requested, took over the goods granting them a fresh loan. At that time he asked Morita if the goods were good and he answered that as Japanese bankers, were very careful they would not have advanced money on inferior goods. He told Morita to take in the goods, and told him also that he meant to pledge them to the French bank. This occurred in August last and referred to a big lot of Maibashi silk. This kind of transaction was special. He believed the same amount of money was advanced on the goods by him as was by the native bank. He had some transactions with Hara Zenzaburo, a silk merchant. He did not at first lay a complaint against Morita. He put great confidence in Morita and did not lay a complaint against him at the same time as he charged the Shinsei-gumi. On the morning of the day following the disclosure, he reported the fact to the French bank. He was requested by the bank to explain the matter, but not pressed to pay the loan. He lodged a complaint against Morita not because he was pressed by the bank to clear the debt. There was no Japanese present at his premises at the moment the fraud was discovered. He did not consult any Japanese merchants as to what steps should be taken with

regard to the matter. He did not always consent to lend samples. He thought Morita made some money out of the packings besides his fixed salary. He did not interfere with it, as the amount of the money involved was trifling. Of course he would interfere if he knew that Morita took interest from the Shinsei-gumi at a higher rate than he claimed. He did not think this was a custom prevalent in Yokohama, but some firms seemed to pass it. He did not know whether *banto* were publicly recognized as receiving money from other sources besides their salaries. He did not think it necessary to obtain the consent of the Shinsei-gumi when he pledged the silk originally mortgaged by the firm to another party, for the Shinsei-gumi had a loan standing against his firm. Morita would have reported the fact to the Shinsei-gumi, and the latter must have consented to the transaction, as they signed the certificate of deposit. He did not know whether the bad bales had been deposited with another firm previously. He did not think the goods on which the 74th National Bank advanced money were bad.

By Mr. Otsuka—He did not remember when he first lent money to Takagi. He thought the total loan was more than \$138,000. The interest he paid to the bank was seven per cent. per annum, and he received interest at the rate of 10 per cent. from the Shinsei-gumi, the difference being appropriated by him as he had to incur certain responsibility and to pay for the insurance of the goods. He sent to the Shinsei-gumi a monthly account of the interest due to him. He paid the interest to the bank quarterly. He had a talk with Mottu when he saw the silk in the godown.

By Mr. Otsuka—He thought he was defrauded by the ten defendants. He was informed at the police station that they were all implicated in the matter. He was desirous to raise a civil action against any of the defendants who might have money to pay.

By Mr. Masujima—He did not think the Shinsei-gumi could have secured a loan from the French bank if they applied to it on their own account. He did not require Morita's assistance when buying silk, but in lending money. He did not know whether Morita was a friend of Hara Zenzaburo. He had no record to warrant his suspicion of Morita. He would try to find out how many bales of each lot of silk on which his firm advanced money were included among the two hundred and forty-six bad bales discovered.

Takagi deposed that he thought the account standing in favour of No. 177 was about ten thousand dollars less than the sum claimed by Schoene.

Mr. Schoene thought the amount given by him was correct having been summed up from his books.

At this stage the Court was adjourned till the 29th instant.

TUESDAY, June 29th, 1886.

This case was continued from Friday last.

On resuming,

The Judge remarked that he would like to mention, before commencing the proceedings, that during previous sittings he had heard the same questions repeatedly asked both by the counsel for the plaintiffs and the defendants, and that while he would not object to fresh and important questions, he should reserve the right, in order to save time, to suspend such interrogations as he might deem unnecessary.

Morita said he had deposed during previous examinations that he had taken from the Shinsei-gumi interest on the debts contracted by the firm at the rate of 10.08 per cent. while paying at the rate of 10 per cent. to his employer. He said this as it was a custom among Japanese employes in foreign firms to make money in some such way, and without any idea as to the right or wrong of the action.

Mr. Litchfield said that he stood in a most difficult position because, besides the fact of his not understanding Japanese, the translation of the evidence obtained at the police station was not ready when the proceedings commenced. Now that the translation was nearly finished he would like to examine the defendants on the strength of that evidence.

The Public Prosecutor said he had no objection to plaintiffs' representative examining the defendants again if the questions to be asked were of sufficient importance to warrant it.

Mr. Otsuka asked whether Mr. Litchfield necessarily wanted the presence of Nagai. He was thoroughly examined during previous sittings and further examination might well be dispensed with.

Mr. Masujima said he never expected such a proposition from the plaintiffs' representative. That the translation of the necessary documents was not ready was a poor pretext. Counsel for the French bank ought to have known previously that the translation was required. He must know very well neither the British or American Courts here would entertain the same application under similar circumstances. The application was con-

itary to the ordinary routine of criminal proceedings. There was no reason to raise a civil action at the same time as the present public proceeding; there was a difference between private and public actions.

The Public Prosecutor stated that he would agree with the defendants' counsel that there was a difference between the two courses of proceeding. He also concurred in the statement that foreigners should not be entitled to special privileges because they were foreigners; but, considering that the whole affair was much confused and that no preliminary examination was held into the matter, and as it was evident from the bulkiness of the documents connected with the case that their translation might not have been finished, he would raise no objection to the plaintiffs' application.

Mr. Litchfield, asked by the Judge, stated that it was a little difficult to draw a distinct line between private and public proceedings, but what he was going to ask had some bearing upon both sides.

The Judge remarked that Nagai underwent close examination during two previous sittings by counsel for both plaintiffs and defendants, and he saw no special need to summon him again. The Court would allow Mr. Litchfield to copy the record of the Court as to his depositions.

Mr. Takanashi said he would raise an objection to the statement that there was no need of distinguishing between private and public causes, as they must go on at the same time. It was necessary that Nagai should be summoned again, for his deposition was required in confirming the circumstances of the case as regarded its civil aspect.

The Public Prosecutor thought there was no special necessity to examine the witness, although plaintiffs might have a chance to examine him again should the nature of the questions sufficiently warrant his being re-called.

Mr. Masujima maintained that the civil plaintiff had no position in the case now before the Court. If it should be insisted that they should carry out their application he must ask for a preliminary examination in the case, *de novo*.

Mr. Takanashi thought that article 110 of the Code of Criminal Procedure sufficiently justified his position and defendant sought to conform to the provisions of the article.

The Judge finally dismissed the objection raised by Mr. Takanashi.

Takagi Dainoshin, examined by Mr. Masujima, stated that in May, 1883, he first dealt with the Naruto-gumi. He mortgaged goods and borrowed money from the firm. After August last he made some money through the rise of silk. He did not engage in transactions in silver at that time. He borrowed money from banks too on the security of silk. He could not distinguish whether the money he had borrowed from No. 177 was always employed for the payment of his debts contracted with the Naruto-gumi. He did not receive receipts for the deposit of silk from the Naruto-gumi, all transactions having been entered in the books of his firm and the Naruto-gumi. He never borrowed money directly from the French bank. He could not tell which lots of the silk pledged by him to No. 177 were mortgaged again to the French bank. He paid *sen* 3 per *yen* 100 as interest on his debt without any idea as to whether he was doing a favour to Morita. Before 1884 the rate of interest was nine per cent. Kodama took charge of transactions with No. 177, and Ota with the Naruto-gumi.

Kanematsu stated that he did not take charge of the transactions of the firm with other establishments for one year after he entered the firm. He did treat bad bales while Takagi was away. The godown keepers held the key and he did not know whether as a rule all goods deposited with them were examined by the Naruto-gumi.

Kodama stated that he went generally on simple errands to No. 177, to apply for a loan. Goods were usually first sent to the foreign firm where they were inspected.

Ota Sholuchi did not remember what quantity of silk was sold during November 1885, but he could tell on reference to his books.

Morita, after describing the process usually followed in granting advances on security of goods, stated that he had not been allowed to know all the particulars of the way in which his employer procured funds to be employed for the purpose. A merchant would not disclose the fact that he was going to obtain funds from other parties to advance them on goods presented for mortgage, the deposition of Schoene notwithstanding. He presented monthly accounts of interest due from the Shinsei-gumi to that firm. He could not understand French. He was directed to go to the Shinsei-gumi to get some cheques signed. He left No. 30, when he was previously employed, in consequence of improvements effected in the organization of the firm. Mr. Schoene had no direct transactions with Takagi. No. 177 had transactions with

other firms. Its transactions with the Shinsei-gumi were not specially conducted. He did not know where the bills issued by Mr. Schoene were to be cashed. He received three letters from the Shinsei-gumi which he was desirous to produce at the final stage of the trial to show that he had been deceived by the Shinsei-gumi. He was repeatedly asked by the police as to his share in the plot, but his answer would not be accepted by them. He was always forced to answer in the affirmative the questions put by the police. He had asked the Shinsei-gumi to pay *yen* 50,000 before 3rd May last, but the firm replied that they could not procure the funds till the 5th instant. On the day following the disclosure Hara Zenzaburo, a silk merchant, was at his firm. Mottu, Hara, and he consulted about the matter. He went to the Shinsei-gumi on the 4th at five o'clock and urged the payment of the fifty thousand dollars. Hara had advised him to wait till the 5th instant for should he make a fuss about the matter they would not be able to pay the debt even though they had intended to do so. He communicated the advice of Hara Zenzaburo to Mr. Schoene when the latter returned from Tokyo on the same day. He could not tell by merely looking at bales, where they had been previously pledged. It was impossible to distinguish the amount advanced on particular bales.

Mr. Otsuka remarked that when he saw Takagi Dainoshin previously, he (Takagi) stated that he was to have obtained the required sum from Tokyo had the plot been disclosed five hours later. He had made, according to his statements, preparations to procure the money, and therefore Mr. Otsuka would ask the Judge to order Takagi to explain the matter in his defence.

Takagi said he was to have obtained the required sum before the 30th April, but it was delayed a few days. On 4th May if he had gone to Tokyo by the eleven o'clock train he could have gone to the bank, where the money was to be delivered to him before the close of business hours, but failing to do so he did not get the money on the day in question. He would not like to give the name of the gentleman who managed to procure the money on his behalf. He alone was guilty of the fraud.

Examined by Mr. Otsuka,

Takagi stated that the largest number of bales deposited in No. 177 was one hundred. When examined at the police station the police brought written documents, said to have been signed by other defendants, and said there was no denying the questions put to him. The examining police insisted that, the other defendants having declared in this or that way, he should or must have spoken or acted in the way described.

All the other defendants stated that they were subjected to a similar process of examination when detained at the police station.

Kanematsu thought about 138 bad bales were deposited in the Naruto-gumi for *yen* 230 per bale on an average.

Takagi stated there was no fixed capital of the Shinsei-gumi when it was first established in 1882. He made money by transactions in silver. In November, 1882, his own property reached *yen* 28,000. Other nominal shareholders left the firm as it began to incur losses.

Yamamoto Jiusei, examined by Mr. Otsuka, stated he was very drunk when taken to the police station, and he signed his deposition while in an intoxicated state.

Takagi stated that he and Kanematsu were principally connected with the case. The number of bales deposited in No. 177 sometimes reached four hundred bales. He never intended not to return the debts to No. 177.

Takagi and Kanematsu corroborated Kodama's statement that their original intention was to return the debts in some way or other.

Takagi, continuing his deposition, said Schoene would communicate to other firms desirous of purchasing the silk deposited in his godown, and when some goods were sold he would give him (Takagi) the difference between the selling price and the amount previously advanced on the goods sold. As to the valuation of the good bales remaining in the hands of the plaintiffs he would request the Court to arbitrate on the basis of the quotation current at the time of the disclosure.

At this stage the Court was adjourned till the afternoon.

On resuming at 1 o'clock,

The Public Prosecutor stated that he saw no necessity for calling the police officers to corroborate the written depositions of the defendants prepared at the police station. For they did not assert that they were induced to make any particular statement contrary to their inclination.

The Judge said that as it was in his power either to accept or reject those depositions, it was not of much consequence to call in the police officers who examined the defendants.

Takagi, examined by Mr. Litchfield, stated that the seal of his firm was not entrusted to any particular member of the firm, but to all of them generally. They were never allowed to affix the seal to any document presented to them. It was principally used in stamping receipts for goods or letters. The affixing of the seal did not imply an acknowledgment on their part that the goods mentioned in the documents were positively received. It was a mere house mark. He would not affix his private stamp unless the document itself was explained to him; and the proper seal of his firm was used when the document referred to the transactions of the office. It was not left in the office, but it was in the sole charge of Ota Shokichi and Obashi Jinzo. Morita, coming from outside could not affix the office stamp on documents brought by him when cheques were concerned and the endorsement of his firm simply was required as assurance of its *bona fide* quality. He did not remember how many times he underwent examination at the police station. He did not remember what statement he made at the police station as to the conversation between him and Nagai held after the disclosure. He was sometimes directed by the police to answer their questions as dictated by them. He was generally examined by Police Inspector Misaki. He was not asked by the Police Inspector what conversation he had with Morita. He never gave orders to sign documents with the seal of the office. He could tell without referring to the book that he did not receive any sum of money on March 16th either directly or through his employés. He did not attend to the delivery of bales to No. 177, but he should think no receipt was received for the deposit of silk. Neither he thought did he give a receipt to No. 177 for sums of money. He had no transaction with Mr. Schoene directly, all business having been carried on by Morita and the Shinsei-gumi and booked in two books, A and B, held by Morita and the firm respectively.

Kanematsu, examined by Mr. Litchfield, said he came to know Morita in the winter of 1883, when he began to have transactions with the firm. He had conceived no particular method of disposing of the spurious goods previous to making the confession. He did not remember whether the plan to pledge the spurious goods to another firm originated before or after the disclosure. He did not remember who held the same office as Nagai. He could not recollect how he used to designate bad bales when they were stored in the godown of the Naruto-gumi. He did not say anything about spurious goods to Nagai, except that they represented some two thousand dollars. The Japanese gesture of extending the thumb asking "is he in?" generally implied the question whether the employer of the person addressed was at home or not. He did not know what conversation passed between Takagi and Morita after the disclosure. He said at the police station something relating to this negotiations between the two from his knowledge of previous transactions. His health was in the usual state while in the police station.

Takagi—to Mr. Takanashi—stated that he employed the drayage company, the Edoya, for the transport of silk from his firm to No. 177. He thought the entries in the two books held by Morita and the Shinsei-gumi, known as A and B, would be the same. He made his previous statements as to the number of bad bales on reference to his book B. He could tell from the receipt books the number and weight of the goods received. He was not sure whether bad bales were taken from the godown at Masagocho. The hundred bales deposited in No. 177 on August 8th contained seventy bad bales. The seventy original good bales as received from the country were sold and the proceeds set apart for the payment of his debts to the Naruto-gumi. He could not tell the amount of the advance secured on those 70 bales. The *kankan*, or examination of the weight of silk, was generally conducted at the banks to which the silk was first consigned. He positively denied that when he applied to Morita to allow him a loan of *yen* 50,000 without security, he (Morita) told him to increase the number of bales to be pledged on future occasions. As to other statements said to have been made by him at the police station, he said that the police manufactured his deposition saying that otherwise they could not prepare the police records. He paid interest to Morita at the rate of *sen* 3 per *yen* 100. He knew that Morita was appropriating the extra charge. He did not tell Morita that he would increase the number of bad bales. He said he would recompense him (Morita) if he exerted his influence in his favour, without of course any reference to the fraud. When the matter was confessed to the Naruto-gumi, Nagai stated he could not direct him whether or not to carry out the fraud as it exclusively concerned the interest of the Shinsei-gumi. He said to Morita while at

the police station that he could not extenuate his crime if he was at all culpable, and advised him to find his own way out of the trouble. He did not remember the handwriting of the letters produced to him.

Kanematsu, to Mr. Takanashi, could not tell how bad bales were treated. It was after the disclosure to the Naruto-gumi that the firm pledged bad bales to No. 177. He said when he saw Morita on the 3rd May his employer had previously written to him about the debt and wanted him to wait a few days. He did not say other employes of No. 177 would not probably have known the fraud.

Mr. Takanashi continued interrogating the defendant as to whether he made statements contained in the record of the police station, which the latter denied from first to last.

Morita, by Mr. Takanashi, stated that the book produced was used from February last year to February 25th this year. Mr. Schoene returned from Tokyo on the evening of the 4th May and he communicated the fact of Mr. Hara having advised him to wait for payment of the debt by the Shinsei-gumi. On August 8th he received 100 bales, and \$16,500 was advanced on them. One or two of them were inspected and weighed in the godown of his firm. He could not tell whether he went himself to the Shinsei-gumi with the cheque drawn by Mr. Schoene on that occasion. He repeated that he received storage for waste silk with the consent of Mr. Schoene, for it was his idea that it was inconvenient that the same rate of interest should be charged on both raw and waste silk, the latter being bulky and occupying greater space than raw silk.

Takagi, by Mr. Masujima, deposed that the 70 good bales deposited in the Shinsei-gumi were out of 100 received from the country in numerous lots. He did not know that other foreign firms demanded rent for the storage of waste silk.

Takagi and Kanematsu were then examined by Mr. Takanashi at some length on their statements made at the police station.

The Court was adjourned till the 2nd proximo.

## CRICKET.

The match played on Saturday, Married v. Single, was in two respects the best played this season—the bowling of the single men and the careful defensive batting of almost all the married men having well rewarded the few who took the trouble to view the game. Strangely enough the bachelors were all disposed of for a very small score, Griffiths and Edwards being the only ones to get into double figures; and the latter had made but ten when he was given out leg-before-wicket.

Sutter won the toss and sent Trevethick and Edwards to the wickets, Wheeler and Strange opening the bowling. The match commenced badly for the younger men, Trevethick being caught at long-field by Hearne off a ball from Wheeler in his first over. Griffiths took Trevethick's place, and a stand was made, Griffiths hitting two "threes" and Edwards making one good square-leg hit for 4, before the latter was ruled out—leg-before-wicket. Score 34. Sutter then went in, Hearne at this stage relieving Wheeler at the Pavilion end. After an over or two, Sutter unfortunately was run out, the score standing at 40. Matters after this went decidedly hard for the bachelors. Melhuish and Brewer falling in one over from Hearne, and Kenny, too, being bowled in his next over. Shand joined Griffiths, who had been playing very well. With but 2 more added to the score Griffiths fell before a ball from Strange; then Till went in, and shortly afterwards Shand was caught and bowled by Strange. Pearson then appeared and made one before his partner was bowled, also by Strange,—the innings with byes, etc., closing for 48. Mollison chose Wheeler and Dodds to open the batting for the Benedicts, Sutter and Edwards bowling. The Doctor commenced well, sending one of Sutter's balls through the slips for 3, although in the first over, with the score at five, he, in running, allowed his bat to slip from his hand and strike the wicket. He was given out, but no rule being known to cover such an occurrence, the Captains of the two sides decided to let him return to the wicket. After some steady play, neither Wheeler nor Dodds being able to get the bowling away, the latter returned a ball to the bowler. Larcom, who then appeared, fell almost directly to a " Yorker " from Edwards. Strange joined Wheeler and a slight stand was made, only one run being made, however, before Wheeler's middle stump was simply uprooted. This brought Mollison and Strange together, and some more steady play ensued, before the latter poked a ball into Sutter's hands at slip. Hearne then took the bat, and made 3 before being bowled by Sutter. Kilby joined Mollison, contributed 2, and succumbed to a ball

from Edwards. Hodges was the next to go in, and batted very carefully and well. With the score at 42 a " Yorker " sent Mollison back to the Pavilion, after having been once missed, caught and bowled by the same bowler. Hellyer next appeared, the game at this stage being very exciting, but six runs being wanted to tie, whilst there were still two wickets to fall. The game was very slow, maiden over following maiden over, a "nick" for 3 being made by Hodges, however, who also cut Sutter for a "2." Hellyer made a fine hit for 4, and somewhat enlivening proceedings made another run, but was immediately afterwards bowled. Hepburn joined Hodges, but played the first ball he had on to his wicket—the innings closing for 54, fifteen of this number being for extras.

The Benedicts followed on, and made a much better display of their batting capabilities, notwithstanding that both Edwards and Griffiths retired with "0." Trevethick and Shand commenced the batting, the latter, however, being soon bowled by Hearne. Edwards, the next to go in, was caught at mid-wicket by Hodges off the second or third ball he played. Sutter joined Trevethick, made 8 and retired before a ball from Hearne. Griffiths then went in and shortly afterwards Trevethick was run out, after contributing a well-played 16. Melhuish joined Griffiths, but failed to guard his wicket against the second ball he received from Strange. Kenny then took the bat, and Griffiths soon after was bowled by Hearne. Brewer took Griffiths's place; Wheeler at this period of the game relieving Hearne in bowling. A slight stand was made here, several hard catches being given and missed, and two nice cuts for 2 being made by Brewer. It was not long though before a ball from Wheeler sent Kenny back. Till was the next to appear. Quite a long stand was made here, both Till and Brewer hitting freely, the former especially making a good hit for 4. Strange, who was not bowling so well as in the first innings, gave place to Dodds at the Settlement end, and Hellyer missed a comparatively easy catch, Brewer shortly afterwards being put out for leg-before-wicket. Pearson made but a brief stand, and the innings closed for 87, Till not out for a well-played 25.

We append the full score and bowling analysis as usual, and would remark that the latter will well repay looking into. The fielding on either side was very fair.

## REPORTS.

The American steamer *City of Sydney*, Captain D. E. Friele, left San Francisco, June 12th, 2.30 p.m., experienced westerly winds, and head seas, the entire passage. Arrived Yokohama, July 2nd, 6 a.m.

## LATEST COMMERCIAL.

## IMPORTS.

The excitement in the Yarn Market has lasted through another week, and about 3,500 bales have again been booked. In Shirtings, too, there has been a movement resulting in a large business, with higher prices for 9 lbs. goods. But as regards nearly all other descriptions of Piece Goods transactions have been on a very moderate scale, owing chiefly to the higher prices asked by sellers.  
 YARN.—Sales for the week amount to 3,000 bales English and 500 Bombay. Prices have for the most part been steady but firm, and some counts have further advanced.

COTTON PIECE GOODS.—Sales comprise 45,000 pieces 9 lbs. Shirtings, 2,000 pieces 8½ lbs., 2,000 pieces 7 lbs. T. Cloth, 4,000 pieces Turkey Reds, 2,000 pieces Victoria Lawns, 420 pieces Velvet, and a few lots miscellaneous articles.

WOOLLENS.—2,000 pieces Mousseline de Laine, 500 pieces Italian Cloth, 200 pieces Plain Orleans, 100 pieces Figured Orleans, 200 pieces Checked Orleans, 180 pieces Silk Satins, and 500 pairs Blankets have been reported as sales for the week.

## COTTON YARNS.

	PER PICUL.
Nos. 16/34, Ordinary	\$24.00 to 26.00

No. 168, Bombay	25.00 to 26.00
Nos. 10/14, Bombay	23.00 to 24.50

## METALS.

Market without change: Stocks are piling up and prices far from strong.

IRON.—Some little business in Bars but Stocks of "Manufactured" are heavy, and the trade is lifeless. Very small enquiry for Nail Rod at quotations.

WIRE NAILS.—A fair amount of sales at rather lower prices. Nothing but favorite brands of good assortment can bring anything like \$5.

TIN PLATES.—Some little demand for Tea shippers use but the ordinary; trade languishes and sales to native merchants are practically nil.

	PER PICUL.
Flat Bars, ½ inch	\$2.40 to 2.50
Flat Bars, 1 inch	2.60 to 2.70
Round and square up to 1 inch	2.40 to 2.60
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.00 to 5.00
Tin Plates, per box	4.75 to 5.00
Pig Iron, No. 3	1.15 to 1.17½

## KEROSENE.

A fair business has been done at rather higher prices, but the demand seems now pretty well supplied. The Stocks of middlemen in Tôkyô seem well replenished, and dealers give signs of holding off for the present. Stocks here are about 460,000 cases, and another cargo is reported as on its way from Kobe. Deliveries fair.

	PER CASE.
Devos	\$1.62½ to 1.65
Comet	1.57½ to 1.60
Stella	1.52½ to 1.55

## SUGAR.

Sugar has only been dealt in in a retail way, hardly sufficient to give quotations.

## EXPORTS.

## RAW SILK.

Our last issue was dated the 25th ultimo, since when we have had a quiet Market and small business. Settlements to the 30th ultimo are only 43 piculs. Actual purchases amount to 68 piculs, divided thus: *Hanks* 5 piculs, *Filatures* 63 piculs; but these figures are reduced to 43 piculs, as noted above, by the rejection of 17 piculs *Hamatsuki* and 8 piculs *Sodai*. No purchases for Direct Export before the 30th ultimo, although the *Kwaisha* have sent about 35 piculs to New York by this day's steamer, which will be included in the new season's business.

Again the small business has been chiefly done by one buyer, who has continued to pay full prices. With the exception of one or two sample lots purchased by other exporters, this buyer has had the Market all to himself; with an increasing stock and better news respecting the European crop we should have lower prices ere long. Definite news having come in about the Italian *raccolta*, it is to be hoped that the interior Markets here will quiet down. From the various telegrams received in town,

it is estimated that the Italian crop will be better than last year, some houses reporting the increase at ten per cent. It would seem from these data, that our Market has opened too high, and we shall probably have some difficulty in buying down to reasonable figures.

Reports now come in from *Oshiu* which say that the crop there will not turn out so abundant as was expected. This may be a rumour capable of considerable modification later on. The *Shinshu* crop goes well, and Silk from that province will be on offer during the present month.

Our figures are made up to the end of June, finishing the season 1885-1886. The cargo of the *Belgie*, which left this morning, is not included, and that steamer will form the first vessel of season 1886-1887.

The only shipping opportunity included in our statistics is the French mail (*Mensaleh*) of the 27th June, which took 53 bales for Europe. Total shipments for the season just closed are therefore 25,884 bales (25,339 piculs), against 25,403 bales (23,790 piculs) last season, and 29,907 bales (27,013 piculs) for season 1883-1884.

The *Belgie*, which left to-day for San Francisco, carried 85 bales as the first instalment of the new campaign, and of this quantity 35 bales were Direct Export.

**Hanks.**—A trifling business only, at \$475 for a parcel of superior *Hachaji*. Stock begins to accumulate, and middlemen anticipate lower prices.

**Filatures.**—All the business of the week has been done by one buyer, who has had the control of this class of silk. It is rumoured now that some native speculators are operating with a view to maintain rates. The trade has been exclusively in *Shinshu* filature of *Koshu* and *Joshu* extraction, on the old basis of *Rokkoshu* \$675, *Hakuzuru* \$660, *Kaimisha* \$650, *Shijushu* \$660; while a parcel genuine *Koshu*, *Yajima*, is reported at \$640.

**Re-reels.**—In good *Joshu* there have been two deliveries of *Tortoise* chop, the new short reel, which found ready buyers at quotations. Besides these parcels, a little *Usui Zagari*, at \$590, completes the list.

**Kakeda.**—No fresh purchases; but an old Settlement at \$560 has been weighed up for shipment per *Belgie*.

**Hamatsuki.**—The business done is of the reverse order, and consists of the rejection of a former purchase of 17 piculs. No new staple to hand yet.

**Sundries.**—The parcel of *Sodai* was duly weighed at \$420, about eight piculs of "rejections" being returned to the seller.

#### WASTE SILK.

A very feeble business of less than 50 piculs, divided thus: *Noshi* 34 piculs, *Kibiso* 13 piculs. New Waste is beginning to come in, and prices are firmer in sympathy with better markets in Europe.

The chief business has been in *Noshi*, one parcel *New Bushu* fine staple bringing \$128 per picul.

In *Kibiso* one transaction in Old Filature is noted at \$110.

The M. M. steamer *Mensaleh* of 27th June carried 59 bales en route for Marseilles, and the old season closes with a total export of 25,706 piculs, against 22,487 piculs last year, and 23,916 piculs for season 1883-1874.

## A WOMAN'S SUFFERINGS AND GRATITUDE.

### A VOICE FROM AUSTRIA.

Near the village of Zillingdorf, in Lower Austria, lives Maria Haas, an intelligent and industrious woman, whose story of physical suffering and final relief, as related by herself, is of interest to English women. "I was employed," she says, "in the work of a large farmhouse. Overwork brought on sick headache, followed by a deathly fainting and sickness of the stomach, until I was unable to retain either food or drink. I was compelled to take to my bed for several weeks. Getting a little better from rest and quiet, I sought to do some work, but was soon taken with a pain in my side, which in a little while seemed to spread over my whole body, and throbbled in every limb. This was followed by a cough and shortness of breath, until finally I could not sew, and I took to my bed for the second, and, as I thought, for the last time. My friends told me that my time had nearly come, and that I could not live longer than when the trees put on their green once more. Then I happened to get one of the Seigel pamphlets. I read it, and my dear mother bought me a bottle of Seigel's Syrup, which I took exactly according to directions, and I had not taken the whole of it before I felt a great change for the better. My last illness began June 3rd, 1882, and continued to August 9th, when I began to take the Syrup. Very soon I could do a little light work. The cough left me, and I was no more troubled in breathing. Now I am perfectly cured. And oh, how happy I am! I cannot express gratitude enough for Seigel's Syrup. Now I must tell you that the doctors in our district distributed handbills cautioning people against the medicine, telling them it would do them no good, and many were thereby influenced to destroy the Seigel pamphlets; but now, wherever one is to be found, it is kept like a relic. The few preserved are borrowed to read, and I have lent mine for six miles around our district. People have come eighteen miles to get me to buy the medicine for them, knowing that it cured me, and to be sure to get the right kind. I know a woman who was looking like death, and who told them there was no help for her, that she had consulted several doctors, but none could help her. I told her of Seigel's Syrup, and wrote the name down for her that she might make no mistake. She took my advice and the Syrup, and now she is in perfect health, and the people around us are amazed. The medicine has made such progress in our neighbourhood that people say they don't want the doctor any more, but they take the Syrup. Sufferers from gout who were confined to their bed and could hardly move a finger, have been cured by it. There is a girl in our district who caught a cold by going through some water, and was in bed five years with costiveness and rheumatic pains, and had to have an attendant to watch by her. There was not a doctor in the surrounding districts to whom her mother had not applied to relieve her child, but every one crossed themselves and said they could not help her. Whenever the little bell rang which is rung in our place when somebody is dead, we thought surely it was for her, but Seigel's Syrup and Pills saved her life, and now she is as healthy as anybody, goes to church, and can work even in the fields. Everybody was astonished when they saw her out, knowing how many years she had been in bed. To-day she adds her gratitude to mine for God's mercies and Seigel's Syrup."

MARIA HAAS.

The people of England speak confirming the above.

#### AFTER MANY YEARS.

"Whittle-le-Woods, near Chorley,

December 16th, 1883.

"Dear Sir,—Mother Seigel's medicine sells exceeding well with us, all that try it speak highly in its favour. We had a case of a young lady that had been troubled many years with pains after eating. She tells us that the pains were entirely taken away after a few doses of your medicine—Yours truly,

"E. Peel."

#### AFTER SEVERAL YEARS.

"Stoke Ferry, January 9th, 1884.

"Gentlemen,—I have used Seigel's Syrup for several years, and have found it a most efficacious remedy for liver complaints and general debility, and I always keep some by me, and cannot speak too highly in its praise.—I remain, yours truly,

"Harriet King."

#### AFTER SIXTEEN YEARS.

"55, Newgate Street, Worksop, Notts,

December 20th, 1883.

"Gentlemen,—It is with the greatest pleasure I record my testimony as to the efficacy of Mother Seigel's Syrup. My wife, who has suffered from acute Dyspepsia for over sixteen years, is now perfectly better through the sole help of your Syrup. I have spent pounds in medicines from doctors; in fact, I began to think she was incurable, until your marvellous medicine was tried.—I remain, yours, thank you,

"Alfred Ford."

#### SHE REFERS TO HAVE BEEN WONDERFUL.

"Rd Road Dispensary, Dukinfield,

May 3rd, 1884.

"Dear Sir,—I am happy to inform you that the sale of your Syrup and Pills increases here continually. Several of my customers speak of having derived more benefit from the use of these than from any other medicine. In some instances the effects have been wonderful. Yours very respectfully,

"Pro. Edwin Eastwood, J. B."

**THE GREATEST WONDER OF MODERN TIMES.****HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

**HOLLOWAY'S OINTMENT**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to look up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 10TH, 1886.

### SUMMARY OF NEWS.

THE rice-fields along the shores of Lake Biwa are said to be in want of water.

THE American man-of-war *Palos* is to be sold, it is said, to the Korean Government.

MR. Go, Vice-Minister of Finance, attended the trials of the pyx, at the Imperial Mint, on the 30th ultimo.

THE launch of a new man-of-war, the *Maya Kan*, from Onohama Dockyard, is fixed for the 18th proximo.

MR. HANABUSA, Minister to Russia, had a farewell audience of His Imperial Majesty the Emperor on the 10th ultimo.

A SPECIAL session of the Supreme Court of Osaka will be held to try the political prisoners now under detention.

MINISTERS of State will not observe holiday during the summer, and will attend to official business at their residences.

THE Korean Government has engaged the services of a veterinary surgeon with a view to the encouragement of cattle-breeding.

THE cholera shows signs of diminishing in Osaka, but in Yokohama it has assumed an unquestionably epidemic character.

THE *Tokio Maru*, which was recently purchased

by the naval authorities, has been set apart as a store-ship for the Admiralty Office at Hiroshima.

GENERAL CAMERON, Commanding Her Majesty's forces in Hongkong, is at present the guest of the Honorable Sir Francis Plunkett.

THE new Japanese cruiser, *Takachiho Kan*, arrived at Yokohama the 3rd instant, under the command of Captain J. M. James.

MR. TAKASAKI SHOGO has consented, at the request of Countess Ito, to assume the management of the Ladies' Charity Society.

COMMANDER FUKUSHIMA, one of the staff despatched to France to take over the *Unebi Kan*, died in that country on the 29th ultimo.

PRINCE LOUIS NAPOLEON visited the paper mills at Oji, on the 3rd instant, on the invitation of Mr. Ichikawa, president of the Printing Bureau.

THE Nippon Railway Company have resolved to receive instalments of the price of their shares due in August next, instead of postponing payment.

THE Korean refugee, Kim-yo-Kun, who is under orders to leave the country before the 13th instant, has determined, it is said, to go to America.

EXCHEQUER Bonds bearing interest at the rate of 5 per cent. per annum, and payable in six months, will be issued shortly from the Treasury Department at par.

It is reported that Mr. Iwasaki proposes to construct a tramway from Tôkyô to the province of Kai, and is arranging the matter with the Nippon Tramway Company.

AN American gentleman has obtained permission to enter the department of ancient literature in the Imperial University in order to investigate Japanese history and the Japanese language.

THE total amount of yarn, shirtings, sugar, iron, kerosene, and other goods purchased from foreign firms during last month was \$1,046,540, and foreign purchases of silk and tea amounted to \$1,221,161.

GENERAL COUNT SAIGO, Minister of State for the Navy, has received his official order to proceed to Europe and America on Government business. Five naval officers and one accountant will accompany him.

THE Governor of Osaka notified on the 4th instant that the expense of the medical treatment and interment of those who are suffering from or have died of cholera will be entirely defrayed out of the local taxes.

MESSERS. MANO, Kanai, and Yokoyama, graduates of the Engineering, Literature and Science Departments of the Imperial University, have been ordered to proceed to Europe to complete their studies. Mr. Mano will engage in the study of marine engineering in the Glasgow

University, and Mr. Kanai will visit Germany and England to investigate political economy.

THE Chinese Government is said to have forwarded an application to the authorities in Tôkyô for information as to the organization of the dockyards at Yokohama and Onohama, and the cost of their maintenance.

THE examiners of sea appear to be doing their duty thoroughly. Constant seizures have been made, since the commencement of the season, of leaf which had not been prepared according to the rules prescribed.

A LODE of copper recently discovered in Kumamoto has been worked, and 20,000 *tin* of fine copper were extracted and sold last month. The lode is six feet thick, and so wide that the walls have not yet been reached.

THE new naval bonds are selling at from *yen* 106 to *yen* 109. Subscriptions sent in from provincial districts have amounted, it is said, to about one million *yen*, but only a small sum has been applied for in Tôkyô.

THE export of Japanese fans has considerably increased this year, though the quotation shows a slight decline compared with the preceding year. During the first half of the year no less than 1,500,000 fans were shipped abroad.

RETURNS showing the relative number of deaths to cases of cholera in various places, and the constant observation of physicians, have determined that promptitude in dealing with cases as soon as discovered, is of vital importance.

THE funeral of the late Mr. Sawabe Seishu, who died recently at Atami, was conducted according to the Christian ceremonial, and was attended by over 300 persons, mostly officials, journalists, and members of the legal profession.

THE Osaka Arsenal is now lighted with fish oil gas. A German architect whose services were specially engaged in connection with the furnishing of the necessary apparatus, was entertained by the officials of the factory on the expiration of his term.

AT a meeting of the Permanent Committee of the Kanagawa Prefectural Assembly, held on the 3rd instant, additional police expenses, *yen* 3,152; sanitary and hospital expenses for the urban and rural divisions, *yen* 13,600, and for urban divisions *yen* 5,137, were voted as originally proposed.

THE ceremony of conferring diplomas upon graduates of the Imperial University took place on the 10th instant in the central hall of the Engineering College, when addresses were delivered by the President, Mr. Watanabe, the British Minister and other distinguished persons.

ICHIKAWA DANJURO and Onoue Kikugoro visited Count Ito the other day, when His Excellency expressed his opinion on the subject of the improvement of Japanese theatres. The piece

in which Takano Choei and Watanabe Kazan played attracted no less than one hundred and twenty foreigners, inclusive of Ministers.

THE discontent manifested by the female weavers of Kofu, Yamanashi Prefecture, has culminated in a preconcerted strike of about forty women employed at a large factory, where work has been temporarily suspended. The cause of the strike is a recent reduction of wages and an increase in working hours.

THE crop of cotton in the central provinces is expected to be a complete success should the weather continue favourable for the season. The quotation has not, however, shown any sign of decline, owing to the comparative scarcity of goods held from last year, and the decrease in the import of Chinese cotton.

THE convicts of a certain gaol were noticed to be frequently drunk when working in gangs outside the walls, and the warders were much puzzled to discover by what means the men managed to get liquor, under close observation as they continually were. It was ultimately found that the friends of the prisoners left, overnight, bamboos filled with saké lying about on the spot where the men were brought to work.

CHOLERA would appear to be on the decrease in Osaka, according to information elicited by a foreign consul, on application at the Fuchō. The number of cases reached the maximum on the 9th ult. when 25 persons were attacked in the city and 19 in the rural districts. Previous to and after that date the numbers averaged 25 in the city and 7 or 8 in the remainder of the *Fu*. At present the cases reported daily have fallen to about 10 in the city and 4 or 5 in the rural districts.

THE Import market may be said all round to have slightly improved, and the general aspect of affairs is certainly more cheerful than has been the case for some time past. Though the business in Yarns has been quieter than during the previous two weeks, yet a good demand continues at steady prices, slightly, if anything, in favour of sellers, and of all kinds—though most English—at least 1,500 bales have been sold. Other articles, however, have come in for a share of attention, and T.-Cloths, Turkey Reds, Shirtings, and Velvets, have moved off in increased quantities at an advance upon recent rates. Certain classes of Woollens, too, have been sought after, and the enquiry is of a nature that is usually the forerunner of business. There is little to report in the Metal trade; arrivals continue and the sales are not large, but prices are maintained. There were small operations in Kerosene during the week, but to-day a large business has been done, and prices have advanced. There is nothing worth reporting in Sugar. Of Exports, the Silk trade was quiet early in the week, but a splash later on was made by one or two large buyers for Europe, and the news at the time of writing are that indications—both from Europe and America—point to a greatly increased business next week, with a probability of concessions to holders of suitable Silk. Only a feeble business has to be recorded in Waste, and a report comes from up country to the effect that there will be comparatively little Waste this season on account of the cocoons reeling so well that they are nearly all used up into Raw Silk. Tea continues to be extensively dealt in, through the supply of leaf is not quite so large, and prices are drooping somewhat. Foreign Exchange has dropped again all round.

#### NOTES.

SHOULD it turn out that the discovery which Mr. Donnelly, of Hastings, Minnesota, claims to have made is what he asserts, we shall find ourselves face to face with the greatest literary event of the age, perhaps of all ages. Many profound students have maintained that Bacon was the author of the works which have come down to us under the name of Shakespeare. Mr. Donnelly, who is of this number, declares that he can not only furnish irrefragable proof of the fact, but that he can unfold from the Plays a cipher narrative in which "Bacon claims their authorship, giving also a detailed account of a considerable portion of his own life and of the Court history during the period of his rise and greatness." Bacon was a great lover of cipher. Many passages from his works contain allusions to it, yet there is no evidence on record in any of his biographies that he ever made any use of the art. Thinking the matter over, Mr. Donnelly concluded that, had Bacon written such masterpieces as the Plays, he could never have persuaded himself to renounce their authorship for ever, and that probably he had woven into their text some cipher which would set the question at rest. Every student of the great poet knows that the Plays were presented to the public in the Folio in a condition which seemed to betray the greatest possible editorial negligence. Inconsistent as the theory of such negligence was with the great cost of the book and the evident intention that it should be a first-rate edition of the Plays, there appeared to be no other way of accounting for its "irregular paging, arbitrary italicising, meaningless bracketing and senseless hyphenation." Mr. Donnelly conceived the idea that all these irregularities were intentional, and that in them, if anywhere, was to be found the precious cipher. He set to work upon this clue, and after labour which we shall not be able to appreciate until the publication of his complete results, he arrived at a rule "based on the mutual relations of the paging, the brackets, the italics, and the hyphens of the Folio text." Speaking of the cipher thus discovered, Mr. Donnelly says:—"It is a most marvellous piece of work. The ingenuity used in constructing it is as great a subject of wonder to me as the genius manifested in the Plays has been to the world. \* \* \* At first, as you know, I expected no more than to find written into the Plays (perhaps a word on a page) a brief statement that Francis Bacon was their author. But as I went on the Cipher grew under my hands until I found it to be a complete and elaborate narrative, perfect in all its parts, minute in detail; containing not only a statement of facts, but a description of his own feelings in the midst of the great troubles and dangers which surrounded him." The principal characters in the narrative are Shakespeare, Burleigh, Bacon, and his faithful servant Harry Percy. "Shakespeare's character, antecedents, and career are dwelt upon at some length. With the utmost detail is recorded how the Queen ordered him to be arrested, and, if necessary, racked to divulge the name of the real author, and how Bacon managed to save the disclosure. It is," writes Mr. Donnelly, "a wonderful story how Bacon sent his faithful friend-servant to find Shakespeare and to get him to fly the country when the Queen gave orders for his arrest. Percy's disguise of himself; how he stepped down and embraced Bacon for the last time, as

he was about to start on his mare (note the minute details) from the orchard at St. Albans; how he comforted him and told him that he would save him, Bacon meanwhile standing in the darkness and listening to the dull beats of the hoofs of his horse on the hard ground as he receded. His fondness for Percy's faithful and cheerful spirit, his feeling that only the errand of that one true man stood between him and the greatest disgrace and shame, &c., &c. The internal story will be found to be as thrilling and absorbing and as powerfully rendered as the Plays themselves. . . . The interview between Percy and Shakespeare takes place at Stratford, in the presence of Shakespeare's wife and daughter. It is told with the utmost detail. The whole Shakespeare family is described, his young brother Edmund, his daughter Susanna, his wife, his sister. The very supper bill of fare is given, and a very mean one it was—"dried cakes, mouldie and ancient," roast mutton far advanced in decomposition, the odour of which perfumed the room, bitter beer, and worse Bordeaux stuff. The smell of the meal took away the dandy Percy's appetite. He told Shakespeare that the Queen's officers were after him, to arrest him as the nominal author of *Richard II.*, which represented the murder and deposition of the King, and which was held to be an incentive to treason. Shakespeare, Percy said, must fly to Holland or Scotland, and there abide until the storm blew over. Thereupon Shakespeare became violently abusive of Bacon—"Master Francis" he calls him—for getting him into such a scrape. "He is," says Percy, "the foul-mouthedst rascal in England." Shakespeare declares that he will confess the truth and clear his own skirts. Thereupon came the first anti-Baconian argument. It is the parent of all later ones. Percy told Shakespeare (not, probably, as a fact, but as a threat, and to drive him from the country, so as to save Bacon's exposure) that "Master Francis" would deny the authorship, and that the world would surely believe him and not Shakespeare. For who, says Percy, "could conceive of one man putting the immortal glory of the Plays on the shoulders of another? Did not Shakespeare bear his blushing honours through all the disreputable houses of London? Did he not profit by the Plays? Was he not transformed in new silk and feathers, and looked upon in the low society in which he shone as the one who wrote the Plays? The Queen would ask, 'Why kept'st thou silence so long?'" and much more to the same purpose. So you see there is nothing new under the sun. Harry Percy anticipated all the anti-Baconian arguments by nearly two hundred and ninety years."

THIS is the age of exhibitions. Every year sees a new colossal show in London, and never a season passes without some one of the European capitals projecting or carrying out a big fair of some kind. America has not been backward in this class of enterprise, but her performances have been scarcely worthy of her. She has only had one really large show. All the rest have been insignificant or fiascoes. Now, however, she projects something which shall not only eclipse everything that went before, but shall also be "the greatest the world ever witnessed." The occasion of this effort is the hundredth anniversary of the Constitution of the United States, which falls on March 4th, 1889. The idea is to erect a huge series of buildings in the Park at Washington, and to open there

a permanent exposition of the three Americas, following it by a World's Exposition in 1892, the four hundredth anniversary of the discovery of America by Columbus. The projectors of the former scheme advance very practical reasons in its support. The annual value of American manufactures is, in round numbers, fifty-four hundred million dollars. Of this enormous total only two per cent. find foreign markets. "This," say the projectors, "is an astonishing state of affairs, a defect in the commercial relations with the outside world which must be remedied." Europe is already well supplied with its own manufactures. Therefore the industrials of the United States can only look to the markets of Spanish and Portuguese America, and the countries surrounding the Pacific, where there is a population of 45 million consumers with an area more than double that of the United States. It is true that Great Britain already monopolizes the lion's share of the import trade of these territories, but the projectors think that there is no better way to alter all this than "by bringing the several American nations together under one roof to a grand exposition of their respective resources and industries." There is no time to be lost if the scheme is to be consummated. "It will require," says the prospectus, "one year for the necessary legislation by Congress, at least another for legislation by the forty-six States and Territories and the various nations of the other Americas, leaving but one year before the centennial of the Constitution, and four years before the four hundredth anniversary of the discovery of America, for the erection of permanent buildings, the collection of exhibits, and other necessary work. It is evident, therefore, we can do but little more than inaugurate the enterprise in 1889, leaving the grand consummation for 1892."

*THE Jiji Shimpō* has the following on railway construction:—When Western learning was first introduced into this country, men devoted themselves to its acquisition, not because it was a necessary qualification for success in life, but simply because it was a novelty. But gradually the true importance of the sciences came to be recognised, and now it has become absolutely necessary to study them, as a means of livelihood. A similar course of events may be observed in the case of railways. The line connecting Tōkyō and Yokohama was constructed in 1872, principally because it was a novelty. But it soon became evident, from practical experience of the working of this line and of that subsequently built in the Kyōto-Osaka-Kobe district, that railways are necessities of business, of industrial, and agricultural life; and this recognition of the importance of railways soon led to the construction of lines in various parts of the country. The people of Echigo Province have been alarmed by the change which the connection of the Province of Shinano with Tōkyō by railway has wrought on their commercial relations with the Shinano people, and their apprehensions have finally led to the commencement of a line connecting Takata in Echigo with Ueda in Shinano. The proposal to extend the Nakasendo line from Ogaki to Handa in (Owari) has similarly aroused the people of Yokkaichi (in Ise) to the necessity of connecting that town with Ogaki so as to maintain its present position as a depôt. The inhabitants of Mito are equally alarmed. Formerly the products of this district—*kōnyaku*, paper and tobacco

—were collected there, and then conveyed through Tsuchiura to Tōkyō, but, since the opening of the Utsunomiya line, they are sent to Tōkyō through the latter place, without being sent to Mito as formerly. Fish and other marine products also, which were formerly supplied to the people of Utsunomiya and Koyama by the fishermen about Mito, are now sent by rail from Tōkyō. From these circumstances the people of Mito are seriously contemplating connection with Koyama. Thus, throughout the country, the people have been aroused to the practical importance of railways by considerations directly affecting their own welfare and prosperity, and we believe that before long the public zeal for the construction of railways will become even more intense than was the eagerness in 1883 for the opening of a National Assembly, when petition after petition was submitted to the Government. The question now is—does the Government intend to construct all railway lines under its own superintendence? If that be the case, we fear that the work will be too slowly executed to give satisfaction to the nation. We think that the Government will do well to establish regulations for private railways and let the people construct such lines as they may see fit, keeping in its own hands only those lines which ought to be under official control. As to the question whether railways ought to be in the hands of the Government or in private possession, opinions differ in Europe and America. In two or three countries it is generally held that the Government should have all railways in its own hands, but in England exactly an opposite opinion prevails. Here in Japan the Government can easily direct private companies to construct railway lines in the directions best suited to State purposes, and can make satisfactory contracts with them for the carriage of mails and for the emergencies of war. If no substantial administrative inconveniences are likely to arise, it will be wise to leave the work of railway construction to the discretion of the people. Lastly, the question has to be considered—will the people invest money in private railway enterprises? Our conviction is that, wherever there is a prospect of profit, people will come forward with their money. The Government and semi-Government lines around Tōkyō and Kyoto are paying fairly well, notwithstanding the thriftless management of official business; and as, moreover, improved modes of construction and engineering skill will considerably lessen the cost hitherto involved, it is beyond doubt that private railway lines will be sufficiently profitable to induce capitalists to invest their money. Further, if there be any backwardness on the part of native capitalists, let foreigners invest; for the Government will have no objection to such a course, as may be understood from the fact that foreigners have been allowed to possess Nakasendo Railway Bonds, and further because at no distant date mixed residence will certainly be granted.

It would, of course, be premature to draw any hard and fast deductions from the figures wired by Reuter with regard to the unopposed seats at the English elections. Yet it does seem a significant fact that of the 94 Liberal and Radical Seceders who voted against the Home Rule Bill on the 7th of June, 46, or nearly one half, should have been returned without opposition. In the last Parliament there were 332 Liberals and 247 Conservatives. Assuming that an

equal number of Conservatives and Parnellites are returned to the new House, and that of the remaining 48 Liberal Seceders one half lose their seats to Gladstonian candidates, the composition of the House with regard to Home Rule would be as follows:—

For Home Rule.....	Gladstonians .....	262	} 348
	Parnellites .....	86	
Against Home Rule	Conservatives .....	247	} 317
	Liberal Seceders .....	70	

Majority (consisting wholly of Irish members) 31  
But it has to be remembered that in the elections of 1885 the whole weight of Irish influence was thrown into the scale against the Liberals, whereas the reverse will be the case on the present occasion. To what extent this will effect the result it is difficult to foresee; but when we recollect that in 1880, without Irish aid and at a time when Liberalism was in full fashion, the Conservatives carried 237 seats, against 247 in 1885, the insignificance of the Irish vote in Great Britain becomes apparent. Without, however, going into these speculations, we may say with certainty that, unless Mr. Gladstone's followers succeed in winning a considerable part of the remaining seats occupied in the last Parliament by Unionists, Home Rule will have no chance in the new House. To make this clear let us reconsider the figures:—

#### RESULTS OF DIVISION OF 7TH JUNE.

For Home Rule.....	Gladstonians .....	226	} 311
	Parnellites .....	85	
Against Home Rule	Conservatives .....	247	} 341
	Liberal Seceders .....	94	
Did not vote .....	Parnellites .....	1	} 14
	Liberals .....	13	

366

There were, therefore, 107 Liberal votes and one Parnellite vote lost to Mr. Gladstone on this division, and Reuter tells us that of the former he has failed to recover 46. The total number of seats remaining in doubt is consequently, only 61, and among the occupants of these there are thirteen whose minds are evidently undecided on the question of Home Rule. They must, of course, declare themselves one way or the other at the elections. The probability is that they will declare for Home Rule in a modified form. In that case, if 8 of the remaining seceders are replaced by Gladstonians, the majority against Home Rule will be wiped out, and if 28 are ousted, a majority of 40 would be obtained in favour of the measure. Such a majority would scarcely seem conclusive to the Lords or the country. Even under very favourable circumstances, then, the prospects of the Gladstonians are far from bright. It has to be observed, of course, that among the Seceders there were several—as Chamberlain, Bright, James, Goschen, &c.,—whose seats were secure whatever their attitude towards Home Rule. The news that these Unionists have been returned without opposition would not suffice to suggest any certain inference with regard to their fellow-seceders.

The arithmetical result of Reuter's telegram may be differently and perhaps more clearly expressed thus:—Supposing that the strength of the Conservatives in the new House is not diminished, we have now 247 Conservatives and 46 Liberals—or a total of 293—against Home Rule. There remain, then, 373 numbers, of whom 86 are Parnellites; 226 are pledged to Gladstone; 13 are doubtful, and 48 voted against Home Rule in the last Parliament. The margin is, therefore, 79—that is to say, if all the

elections go in favour of the Home Rulers, Mr. Gladstone will have a majority of 79. If 25 of the elections go against him, he will only have a majority of 30, which would be quite inadequate for such a measure. It comes then to this—that if of those who either voted against Home Rule, or declined to vote for it, one man out of every three retains his seat and his opinions, the Bill will not become law.

At the beginning of June, that is to say, a few days before the Home Rule Bill went to its second reading the reports of the local Liberal caucuses to the Central Liberal Association, had begun to indicate an increase of dissension among the Gladstonians. The secession of the great Liberal magnates threatened to plunge the party in impecuniosity. Differences of opinion, too, were daily becoming more accentuated. For example, a memorial against Home Rule was issued by the non-conformist ministers of the Nottingham circuit, and this was followed by unmistakable indications that a majority of the Liberals in the provinces considered Mr. Gladstone's proposals unjust and unnecessary. Class feeling against the Premier was growing visibly stronger. In a comedy called the "Pickpocket," the principal actor, Hill, dressed so as to resemble Gladstone, and referred to him every night as the "Grand old Maniac." The anti-Gladstonian press began to publish stories derogatory to the old statesman's integrity and disinterestedness, relating, amongst other things, how his Conservative brother Robert had said; "William's ambition and lust of power are so great that he will sacrifice anything to gratify them;" and how his father had remarked; "My son William is a clever fellow, but a dangerous man." This is certainly the crisis of Mr. Gladstone's career. Failure now will mar much of his previous fame.

A TRADE price-list is not exactly the kind of work to which one would turn with any expectation of obtaining amusement. It is recorded that a "Webster's Unabridged" once formed the sole source from which the intellectual cravings of a large mining camp were satisfied; but we fear that the ordinary price-list of trade would be found wanting even in the quality which kept a dictionary "sloshing around" a community of people not usually credited with over-anxiety to cultivate choiceness of expression. We have before us, however, the price-list, for 1886, issued by a firm of London ironmongers, which in more than one particular displays a most refreshing originality. This, for example, strikes us as a peculiarly effective way of describing what the author terms the movements of a "comical surprise picture, with glass front and gilt frame, working about four hours with one winding":—"Man comically dressed trying to strike a mouse with a stick. He makes several fruitless attempts to strike the little animal. At last he strikes a great blow, but the mouse always runs away, and the man opens his mouth in astonishment." Here is another:—"Man fishing, catches an old boot instead of the fish, which jumps out, and into the water, apparently much amused." This little "piece" is arranged in "numerous comical movements" and works about three hours. Another:—"Zoological gardens, elephant moving its trunk, and with it taking off a gentleman's hat, man trying to regain possession of his hat, lady moving head, &c."

very comical group with numerous movements." This last we can very well believe to be a highly comical group, but we hardly think the author has quite done himself justice in the descriptive notice. The group seems to us to be incomplete. True, that may be the fault of the designer; but it seems hardly fair to conclude that of the "numerous movements" one is not appropriated to the duty of opening in astonishment the mouth of the gentleman whose hat is taken away. It would appear only reasonable, too, to suppose that a small movement might be spared to impart an "apparently much amused" aspect to the features of the elephant—a very slight action of the trunk simultaneous with and probably dependent upon the hat-snatching motion would doubtless be enough, should the elephantine countenance lend itself to an "apparently amused" type of expression. The author's code of etiquette, moreover, appears to be unnecessarily strict, if we are to understand that the man who tries to regain possession of the hat is the gentleman from whom it was taken. Must we presume that in addition to, and consequent on, the misfortune of having one's hat taken off by an elephant, one is condemned to the affliction of being counted "no gentleman"? Here is another "surprise picture" which seems to be susceptible of improvement:—"Man with flea. Man asleep; suddenly a flea alights on his nose, he wakes, tries to catch it, flea always escapes. Man moving mouth, arms, etc., 3 movements, going about 3 hours; very comical." If this tableau is truthfully and fully described, it is palpably lacking in more than one important respect. Human nature in its relations and dealings with the interesting and sagacious insect so characteristically portrayed above, is not likely to go on waking and trying to catch its persecutor for the length of time indicated without manifesting emotion of some kind. Why is not this emotion represented? Similarly, a flea, which for three mortal hours is occupied in attempts upon a man's nose—we presume it is the man's nose, though the author does not make the matter over clear—only to be foiled in each assault, and driven off under circumstances of extreme danger, could not be expected to remain entirely impassive. Why is not some appropriate sentiment expressed on the insect's lineaments? One very small "movement" ought to be sufficient to impart at one and the same time, to the man's features, say an air of "pardonable resentment," and to the flea's face one of "increasing chagrin," blended possibly with "perseverance worthy of a better cause." The whole affair, glass front, gilt frame and all, only measures 14½ by 13½ inches, so that a very small proportion of the movement would be sufficient to animate the features of the insect. Even in its somewhat expressionless state, however, the group, like the others we have described, is exceedingly interesting. There are other clockwork mechanisms, the glass shades of which are nearly all adorned by paintings of "marine landscapes." One of these is an "English fortress with one large ship moving on water, two sailors dancing, one moving sentinel on tower, rockwork, quay," &c. A rather attractive figure is a "white polar bear, on wheels, very loud natural voice, size about 22 inches by 12½ inches." Owing probably to the presence of a natural voice of the dimensions above indicated the price is much higher than those of other models of a similar nature. "Voice," by the way, seems to be a popular accessory; we have "comical figures putting out tongue, with voice, on pressure of lever;" (these figures are of "three kinds, men and women," and are assorted on a stand;) a preserved fruit bottle "on releasing the lid of which a dressed boy springs up with voice;" a "Punch, clapping with cymbals, voice, and moving eyes," &c. Finally, we select from three descriptive notices of as many "new musical mechanisms" the following:—Shepherd in rich costume playing the flute, moving the head and arms; tree, with green leaves and flowers, on which is perched a bird, which sings at intervals with very beautiful notes. The shepherd sits at the foot of the tree, and plays the flute for a short time, then ceasing, the bird sings, and so on at regular intervals. In the lower part of the landscape is a lake, with running spring of water, and 2 moving sheep, complete under glass shade with stand"; etc.

We discussed, in an article in April last, the value of the dollar as it affects British officials in the East. *Truth*, recently dealing with this question, says a gentleman connected with an Eastern Consulate asks the following pertinent question:—"The question of the Government rate of exchange for the dollar and rupee has often been discussed, as it affects public servants in the East very considerably, their salaries being nominally paid in sterling, but really in dollars, at 3s. 8d. to the dollar, that coin really being worth 3s. 4d. What we should like to know is who gets the £3 in every £30 which is, by this method, cut off the salaries of officials in the East?"

We learn with pleasure that the act of gallantry on the part of Mr. Charlesworth, recorded in these columns a few weeks ago, has not passed unnoticed by the authorities. Mr. Charlesworth has just received through H.B.M.'s Minister, the Hon. Sir Francis R. Plunkett, a communication from the Minister of State for Foreign Affairs graciously acknowledging the gallant rescue of the child from drowning. The communication was accompanied by a silver medal, small and of extremely simple design. If we mistake not, Mr. Charlesworth is the first foreigner who has received the distinction.

SHIPPING casualties have been unusually numerous in Eastern waters lately, the *Hongkong Daily Press* received by the steamer which arrived yesterday morning reporting two more as follow:—Telegraphic advices from Manila report the total loss of the British steamer *Compton*, a vessel belonging to Messrs. Milburn & Co. The vessel was on her way from Glasgow, which port she left on the 14th April, to Manila, when she ran upon a reef. She is a total loss but happily there is no loss of life, as the telegram states that the captain and crew have been saved. The *Compton* was a vessel of 1,186 tons net register, and left Hongkong last on December 6th, when she was under the command of Captain Whitburn. She is stated to have been insured.—The following telegram was received by Messrs. Melchers & Co. from Vladivostok:—"Prinz Heinrich ashore Point Dassas, near Decastries; jettisoning cargo; water in forehold." The German steamer *Prinz Heinrich* came out recently from Hamburg and has been engaged in the Northern coasting trade. She is a vessel of 1,084 tons register, Sunderland built, and is commanded by Captain Reinmann.

MR. BLAINE, the Presidential candidate, has been using strong language about Home Rule. Addressing a mass meeting in the Portland City Hall, June 1st, he is reported to have said:—

Lord Salisbury gives the remedy. He says if the Irish do not wish to be governed by the British they should leave. But the Irish have been in Ireland quite as long as Lord Salisbury's ancestors have been in England—(laughter)—and very likely, for aught I know, for I have not examined his Lordship's lineage in Burke's Peerage,—very likely his ancestors were Danish pirates or peasants in Normandy who came over with William the Conqueror centuries after the Irish people were known in Ireland.—(Applause.) Therefore, we need not be surprised—we who remember Salisbury's course in the Civil War—if some should say that Lord Salisbury be called impudent. We would not transgress courtesy if we called him insolent; we would not transgress truth if we called him brutal. We know him in this country. He was the bitterest foe that the government of the United States had in the British Parliament during the civil war, and he has transferred all the hatred which he heaped forth in the Parliament of Great Britain during our struggles.

Lord Salisbury, naturally indignant at such unjustifiable abuse, publicly uttered by a prominent American, referred to the matter severely in the House of Lords, denouncing the language used by Mr. Blaine "who is canvassing for the exalted position of the Presidency of the United States." Lord Salisbury said:—

It used to be an admitted truth that assisting people to emigrate from a country where employment is scarce and wages are low to another country where they can improve their condition was doing a beneficent act. There was nothing in my suggestion approaching an insult to the Irish people. I do not mind Mr. Blaine abusing me if that will improve his prospects, but I do hope that in the future he will quote me correctly.

Meantime Mr. Blaine addressed the following letter to the editor of the *Kennebec Journal*:—

In the associated press report of a brief speech which I delivered in Portland last evening on the Irish question, I am quoted as applying the words "impudent, insolent, brutal," to Lord Salisbury. This is incorrect. I was only referring to His Lordship's declaration that the Irish might remain as they are now situated or emigrate, and I said interrogatively—"Is not this an impudent proposition? Is it not insolent in its terms? Does it, indeed, stop short of being brutal in its cruelty?" It is parliamentary to say that a statement is not true, but altogether unparliamentary to say that its author is guilty of falsehood. The first describes the thing. The second assails the person. My characterization was aimed at the proposition, and not at Lord Salisbury personally. As I spoke without notes and did not see the stenographer's report until it appeared in the papers of this morning, I hope I shall not be held accountable for the errors that appeared. Some of these were, in Dr. Johnson's quaint phrase, "Kissable absurdities;" for example, "Kosciusko" appearing as a leader in the Hungarian revolt of 1848, in place of "Kossuth," to whom I referred. Very respectfully, JAMES G. BLAINE.

Of course the stenographer who reported Mr. Blaine's speech denies the accuracy of these corrections, and, equally of course, Mr. Blaine's enemies support the stenographer.

THERE is some difficulty in comprehending the isolated item of intelligence that Germany has officially signified her objection to Russian interference in Bulgaria. But the facts appear to be that Prince Alexander has been pushing the union of the two Bulgarias with incautious rapidity, and that Russia has been availing herself of the opportunity to sow fresh seeds of dissension between the new kingdom and Turkey. *The Times'* Correspondent at Constantinople, writing over date May 5th, said:—

"Information received from quite trustworthy private sources points to the not improbable proclamation of a kingdom by the new National Bulgarian Assembly, which is about to meet. Russian influences continue actively at work, but would seem to have somewhat lost ground—as is shown by the undiminished popularity of the Prince during his recent tour of inspection in the province. Russian agents and partisans in and out of office nevertheless openly declare the time to be very close when the Russians will again appear in the province. No date is yet named for the visit of the Prince to Constantinople, and many express a doubt

whether he will come at all. Should the kingdom be proclaimed as was done in the case of Serbia, a serious crisis in Bulgaria may be expected, with a reopening of the whole question afresh. Russian *employés* report that there are at present concentrated in the Crimea and Bessarabia about 350,000 men for the manoeuvres under the Czar's inspection." We have no accurate tidings as to the developments which the question of Bulgarian union subsequently underwent, but a telegram dated June 2nd says:—"Despatches from Constantinople this evening state that the military and naval activity of Russia are looked upon by the Porte as ominous preparations, and that Turkey is alarmed by them. It is also said that the Sultan is leaning upon Germany for support in case emergency shows it to be needed." No Power in Europe is more interested in keeping Russia out of Constantinople than Germany. If the authorities at Berlin have resolved to play this rôle, England's shoulders will be lightened of a pretty heavy burden.

LORD RANDOLPH CHURCHILL has placed himself in an ugly light before the country. During the debate on the Arms Bill his notorious utterances in Belfast were severely commented upon by Mr. Parnell, who did not hesitate to call the noble lord a "half traitor." Lord Randolph offered the following explanation:—"What I said was this—that in certain circumstances and in the event of a certain portion of the Irish people being placed under the control of another legislative assembly than this Imperial Parliament, the Loyalties of Ulster would in all probability resort to forcible resistance." "You said they ought to do it," interpolated Mr. Sexton. "I did not," Lord Randolph retorted. "What I said was that in circumstances such as they apprehended they would be right in resorting to arms. Will honourable members in any quarter of the House deny that allegiance is conditional. The allegiance of Ulster is given to this Parliament on condition that it affords to the inhabitants of Ulster protection. That is the condition, and if this Parliament transfers the lives and liberties of the inhabitants of Ulster to a body over which this Parliament will have no control, then I hold that no divine right attaches to such acts of legislation, and if such legislation should lead to civil war, it is impossible to contend that the inhabitants who took part in that civil war would be guilty of treason." This was Lord Randolph's defence, to which he subsequently added the corollary that the forcible action he referred to was "action after all constitutional means had failed." In other words, if the men of Ulster could not prevent Home Rule by fair means, they would be right in resorting to foul.

The enunciation of such a doctrine by a former member of the Ministry naturally brought Mr. Gladstone to his feet. His remarks are worth quoting:—

I believe that the use of such language by the noble lord, added to the language which has been used by several Irish members giving themselves the designation of Loyalties (hear, hear), must constitute a very singular event, most unusual in our proceedings and our history, and apparently calling for some distinct and specific notice from those who are intrusted with the government of the country. I refer to what has been distinctly taught by the noble lord, a late Secretary of State, one bound to advise the Crown and called upon so to do, a representative of law, and charged with a special responsibility with respect to everything that touches public order and the obligations of obedience. The doctrine of the noble lord, if I understand him—and I shall not use a single epithet if I can avoid

it in the little I have to say—is distinctly and unequivocally this—a portion of the people find themselves in circumstances when a law to which they entertain strong and vehement objection, considering it unjust and oppressive, is under the consideration of Parliament. We are told that in these circumstances the duty of these persons is this. First of all, they are to exhaust constitutional methods of opposition—that is, they are to make their sentiments known through their representatives, through petitions, through public meetings, and the various means that are afforded to all subjects of the Queen for unfolding in the fullest way their sentiments with regard to the intended law. But when these constitutional means have been exhausted, then this portion of the people—so we are told by the ex-Minister of the Crown, the ex-Secretary of State, the Privy Councillor of to-day—with his approval and support, are to resort to armed resistance.—(Cheers.) Ulster was the portion of the people to which the noble lord referred. But if his doctrine is true of Ulster it is equally true of Leinster, Munster, and Connaught.—(Cheers.) This reminds me, Sir, of a scene truly historic—one of the most remarkable among the many remarkable scenes which I ever witnessed in this House. It is about 35 years ago when the occasion to which I refer happened within the walls of the Commons House of Parliament, but before we had been domiciled in this great building, and when we were in what was considered a temporary House after the fire in 1834. Mr. Smith O'Brien on that occasion rose in his place; he set forth, if my memory serves me rightly, the position in which, as an Irishman, he stood. In his view all constitutional means had been exhausted. It was a short time after the termination of Mr. O'Connell's career, and what was called justice to Ireland in the language of those days had been sought, but had not, in the view of these gentlemen, been obtained. Mr. Smith O'Brien set forth to the House of Commons in the plainest language his intention of quitting the House to repair to his country and to levy war upon the Queen by the use of every means that he could put into action. The House of Commons listened in absolute silence, with very strong but perfectly restrained feelings, to this extraordinary declaration. I will not refer to what followed. Every one knows what was the sequel. But I want now to compare the position of Mr. Smith O'Brien with the position of the noble lord. I really know no other parallel with the position of the noble lord. The noble lord does not say that constitutional means have been exhausted. In that respect, he differs from Mr. Smith O'Brien. But he agrees with Mr. Smith O'Brien in that which is really material, viz., that when the means furnished by the Constitution have been exhausted by any portion of the people disapproving any particular law, they may take the law into their own hands and offer to it armed resistance. The other great and glaring difference besides the difference I have pointed out is this. Mr. O'Brien was a representative of the people, but had never been an adviser or Minister of the Crown.—(Cheers.)—though he had upon him the obligations of a loyal subject, against which in my opinion he grievously transgressed, he had not upon him the special obligation which attaches to every Privy Councillor and to every one who has had the honour of serving the Queen in a responsible position.—(Cheers.) Well, Sir, this is an extremely grave series of facts. We have the speech made in Ulster, and that speech followed by a written exposition and a written commentary, and we have to-night, as I understand, the doctrine to which I referred, and which I will not characterize to the House. I merely state that such occurrences as these are occurrences of the utmost gravity.

The expulsion of the pretenders to the vacant throne of France, now sanctioned by the Senate, is somewhat unexpected in view of the opposition to this measure displayed but a few months ago by the Freycinet Cabinet. It is, of course, questionable whether such a step will strengthen the Republic or not, but it cannot be denied that the Princes of the House of Orleans have made themselves of late obnoxious to French Radicals on account of the profuse display and the pretensions put forward on the occasion of two recent marriages contracted by members of the family with princes of legitimate dynasties abroad. Grand receptions held with undue ostentation, and quite in contrast with the usual retiring disposition for which the Princes have received credit, are urged as suggesting the advisability of some measure to prevent these loads display of pretensions subversive of every principle now recognized by the people of France. The assertion that the Orleanists from Paris have carried on a government within the government will not readily find credence. None the less the claim made that they had

already selected the men needed to fill, when vacated by some near *coup d'état*, the offices now held by Republicans may have had a great deal to do with the energy recently put forth by some members of the present official body. In a country where the unexpected is always to be expected, the danger threatening the life of the Republic is liable to be underestimated abroad. Some months ago, the German press reiterated in many variations the alarmist articles of the *Cologne Gazette*, in which an Orleanist restoration had been represented as equivalent to a war on the part of France against Germany. The fear of such a speedy restoration of the *bourgeois* Kingdom was then considered anything but groundless. Allied Power, Russia, was said to have inquired at Berlin as to the position that would probably be taken there in case of a restoration of the Orleans Dynasty; and the articles that for a week filled the press were considered a response to that inquiry. The supposed or real intrigues of the French Ambassador and his wife at Petersburg to bring about the marriage of a Russian Grand Duke, near to the throne of the Czars, with a member of the Orleans family, was another affair which, resulting in the recall of the French Representative by M. Freycinet, caused considerable alarm to many Republicans. Nothing has ever seemed so charming in the eyes of many Frenchmen as a Russian alliance, and the probability that the Comte de Paris, once enthroned, could bring about that desired event is only too much calculated to give an additional impetus to the monarchical propaganda carried on under the eyes of Louis Philippe's heirs. Of course, an exiled Prince may in some respects be more dangerous abroad than at home, but the House of Orleans has thus far shown little of the skill of Napoleon III., in whose hands his exile and persecution by Louis Philippe became a formidable weapon, alike in rousing sympathy for a cause almost hopeless, and in throwing discredit upon a Power which seemed to feel conscious of its own weakness. If the Bonapartist Princes are included in the expulsion—which does not yet seem certain—such an inclusion would probably be the result rather of a wish to accord impartially the same treatment to all the supposed enemies of the Republic, than of any apprehension with regard to the immediate designs of these Princes.

M. DE FREYCINET appears to have lost something, and M. Ferry to have gained, in connection with the expulsion of the Princes. The former, it appears, proposed to confiscate the property of the Princes after their expulsion, but his idea was met with great disfavour by the extreme Left. M. Grévy also was opposed to it, and it thus happened that the President found himself once more in the same camp with M. Ferry. Had M. Freycinet's proposition been maintained and defeated on a division, the confident expectation was that M. Grévy would call upon Ferry to form a new Ministry. But a large majority of the Commission, appointed May 29th, favoured expulsion without confiscation, and M. de Freycinet refrained from pressing his point. Prince Bonaparte had provided against contingencies of this sort by realizing all his property in France, and the Duc d'Anmale had nominally mortgaged his Chautilly estates to the Credit Foncier for a million dollars, their market value being over seven millions. There still remained, however, the

estates of the Comte de Paris at Dreux, and three others belonging to the House of Orleans, which might have been confiscated. Legalized robbery being in fashion now-a-days, the Princes will doubtless see the advisability of converting their properties into coin with as little delay as possible.

The fiftieth annual report of the Liverpool, London, and Globe Insurance Company, presented to the annual general meeting of the proprietors in London the other day, shows that the fire premium income for the year, after deducting the sums paid for re-insuring surplus risks, amounts to £1,252,385. The losses, inclusive of full provision for all claims that had arisen up to the close of the year, amount to £700,750. The account, after providing for expenses, shows, without the addition of interest, a surplus of £169,353, which has been carried to profit and loss account. During the year the company received 1,074 proposals to assure the sum of £594,027; 802 policies were issued for £440,456; 172 proposals were not completed for £96,766; 100 proposals were declined for £56,805. The premiums on new insurances during the year amounted to £15,501, the total premium income, after deducting the amount paid for re-insurances, being £227,133. One hundred and twenty-three annuity bonds were issued for a consideration of £64,377, granting annuities amounting to £6,440. The holders of one hundred and twelve annuity bonds died during the year, relieving the company of the annual payment of £4,484. The funds were increased during the year by £47,961, and now amount to £3,698,612. The profit and loss account, with the addition of the fire profits above referred to as having been carried to it, and of the interest earned on the funds other than those of the life department, after deducting the amounts paid for the Globe perpetual annuities for 1885, shows a balance of £666,331. Of this amount £350,000 has been carried to the general reserve and fire re-insurance funds, which now amount to £1,850,000. It is proposed, out of the remaining balance of £316,331, to pay on account of the fire department a dividend of 12s. per share, together with a bonus of 8s. per share, and out of the life profits declared at the end of last quinquennium a bonus of 3s. per share, making in all 23s. per share. On the 23rd November last an interim payment of 8s. was made on account, and it is proposed to issue warrants for the balance, viz., 15s. per share, payable on the 22nd instant.

A STRONG protest on behalf of miracles has just been made by the Bishop Elect of Manchester. The Bishop took as his theme the resurrection of the dead, and asked his hearers to believe that if the resurrection of Christ was established by trustworthy testimony, then the general theory of the resurrection of the dead could no longer be pronounced impossible. Rationalistic commentators explain the fact that Christ appeared to the Disciples after the crucifixion by one of three hypotheses: first, that the crucifixion did not entirely take away life, and that the supposed dead man recovered consciousness and strength after he had lain some time in the tomb; secondly, that the remains were removed by his enemies to be desecrated; and thirdly, that the Disciples, under the influence of excited feelings, were the victims of hallucination. The first hypothesis was dismissed by the Bishop as unten-

able. Our Lord, having fainted from the torture of carrying his cross, could not possibly, after hanging many hours upon that cross, have rolled away the stone from his sepulchre. The second hypothesis might explain the disappearance of the remains from the grave but cannot explain the appearance of Christ to the Disciples. The third hypothesis is inconsistent with the record, for the Apostles, instead of being under the influence of excitement, were oppressed with doubt and trouble at the time. Such were the Bishop's arguments. On the strength of them he denounced "the dogmatism of unauthorized scientists who disdain those that think any miracles possible, and deny that the mechanical regularity of nature can on any occasion be arrested." But if the evidence of a few men is to be taken as establishing such a marvel as the resurrection, what shall be said of equally incredible telepathic curiosities attested by crowds of disinterested witnesses? We prefer to found our faith on the *non omnis moriar* of Socrates—the instinct so finely described in the following passage of the Bishop's sermon:—

Professor Tyndall long ago admitted that it was impossible to pass over in imagination from molecular vibrations to a state of consciousness. When his nerves thrilled in a certain way he saw colour, when they thrilled in a certain other way he heard sound, when they thrilled in another way he felt heat. How was it that he had the power to interpret those molecular vibrations of the nerves, the last thing of which physiology could tell them, to mean divers things. Who was he? An essential factor in the formation of all sensations, the foundation stone of all thought. He had the power of holding sensations themselves in the unity of his consciousness, of comparing them, of making their sensations, of determining the loss of those sensations, and more wonderful still, when the sensation was past by an act of his will he had power to revive it, to call it back again into consciousness, and while regarding the former sensation as something other than himself, and the present sensation as something other than the former and something other than himself, he saw that he himself existed a living, sentient creature, necessary to all thought, the creator and interpreter of all appearances in consciousness. Would they tell him that such a creature as that could die when the mere body decayed?

DR. WALLACE TAYLOR of Osaka has published a valuable monograph setting forth the results of his studies in *kakke*. This disease, so prevalent and so serious in Japan, is believed to be gradually extending to regions hitherto free from its virus, so that its pathology and treatment are matters of the greatest importance. Dr. Taylor, deriving his historical information in great part from Mr. K. Bunya, says that *kakke* probably existed in China as early as the second century, though it did not receive its present name until a somewhat later period. It was believed, however, to have disappeared until, within the past two years, a number of cases were recognised by European practitioners in different places. In Japan, no mention of the disease appears to have occurred before the 9th century, nor was any serious account given of it until about 165 years ago. Since then its existence and importance have been fully recognised. Dr. Taylor's contributions to our knowledge on the subject have reference chiefly to the condition of the blood. Anæmia used to be regarded as one of the causes of the disease, or at least as an accompanying element of it. The opinion was also held that there was an increase in the number of white corpuscles of the blood. To determine these points Dr. Taylor conducted a series of observations on the blood of *kakke* patients. He arrived at the conclusion that a slight degree of anæmia accompanies the disease. The average corpuscular richness for the 134 cases examined and tabulated is 94 per cent. Generally, the doctor tells us, people

Original from

suffering from *kakke* are "well fed, well nourished, full-blooded" men. "The ill fed, poorly nourished, weak constitutions cases are the exception." In a total of 973 patients, no less than 94 per cent. were of strong constitution—a number large enough to show conclusively that "anæmia is not one of the pathological conditions of the disease." With regard to the circulation Dr. Taylor writes:—"The condition of the circulation is one of the most striking as well as the most important features of *kakke*. However profound the muscular paralysis may be, there is no occasion for alarm so long as the respiratory and circulatory systems are not involved. But in most cases of marked muscular paralysis, the respiratory muscles are somewhat weakened, and the circulatory system seriously affected. The phenomenon of *shiyoshin* (metastasis of *kakke* to the chest)—which is liable to suddenly occur at any time in any case—is chiefly due to failure of the circulation and respiration, especially the former. I have witnessed but few cases of death from *kakke* where failure of the circulation was not the chief, and in many instances the sole, cause of death. Though these paroxysms of *shiyoshin* sometimes unexpectedly and suddenly occur in mild cases, yet they are generally preceded by a gradual failure of the powers of circulation; and the judicious physician must look to the condition of the circulation for the first indication of serious consequence to his patient." In connection with this part of the subject, Dr. Taylor conducted a series of experiments by means of the Sphygmograph, an instrument which furnishes automatic tracings of the cardiac condition. These tracings are shown in photographic plates, and are full of interest for students of this curious disease. There can be no doubt that the researches of Drs. Anderson and Simmonds are valuably supplemented by this work of Dr. Taylor.

The leading vernacular journals agree in regarding the recently issued regulations for the sale of land in Hokkaido as most important. It would seem from what the *Nichi Nichi Shim-bun* writes, that a prominent purpose of these regulations is to prevent the purchase of large tracts by speculators who have no intention of engaging in agricultural pursuits, but merely contemplate holding land with the hope of a rise in its value. To obviate such speculation, the area purchasable by one person is now limited to a hundred thousand *tsubo*, or about 80 acres, and it is also provided that official inspections shall be made annually with the view of determining whether the land is being applied to the purpose announced originally by its holder. All land not thus utilized will be resumed possession of by Government. In addition to this apparently sufficient check, the land will not become the actual property of its cultivator until after the expiration of ten years. During that time he will have the use of it rent free, and should his decade of experience prove attractive, the option of purchasing the fee simple for \$1.20 per acre will then be given him. Thus the arrangement amounts to this—that anyone intending, *bona fide*, to engage in agricultural pursuits can procure the free use of 80 acres of land, with the certainty of being able to purchase it in perpetuity, at the end of ten years, for \$1.20 per acre. During those ten years he will be exempt from land or local taxes, but nothing is said about export

taxes which are the great incubus upon all industry in Hokkaido. Under the most favourable circumstances, the produce of the district can scarcely endure the cost of transportation to a market, and to impose an export tax upon it seems a suicidal policy. A great deal of trouble and a considerable sum of public money have been expended in attempts to develop Hokkaido, and though a very appreciable degree of success has been attained in some directions, the work of colonization is still in its infancy. The offer now made ought to tempt enterprising persons. Assuredly, if it were open to foreigners to engage in the business, we should soon hear of some sturdy Scotchmen applying for allotments. Perhaps the limit of 80 acres is too small to tempt many people. It is, however, an elastic limit, which could probably be stretched without difficulty in the event of a capitalist taking a number of subordinates to settle on his farm. If the country were thrown open to-morrow, we have very little doubt that the agricultural and piscicultural resources of Hokkaido would soon attract foreign attention, but whether Japanese farmers will go there in any numbers of their own motion appears very problematical.

The following officially compiled statistics with regard to the division of landed property in Japan, will be found valuable:—

CITIES AND PERSONS OWN- ING LANDS.	EXTENT OF CULTIVATED LAND AND LAND USED FOR BUILDINGS.		LAND TAX, 12 per cent. of the value of land.	NUMBER OF PER- SONS NOT OWNING LAND.
	AREAS, SQUARE MILES.	AREAS, SQUARE MILES.

Striking an average over the whole Empire, it appears that one person in every five, approximately, is a land-owner; that the extent of land held by each of these owners is 2,403 *tsubo*, or two acres; that the land tax paid by each owner is 6 *yen* 72 *sen*; and that the assessed value of the land is 11 *yen* 20 *sen* per 100 *tsubo*, or about 135 *yen* per acre.

THE elections in Servia are over, and the Government breathes again more freely. After its failures in diplomacy and on the battlefield, it had much reason to anticipate a more unfavourable verdict from the people than that now rendered, but the disunion of the opposition has more effectually aided the Government than any one of the steps taken or the measures promised by the present Cabinet. The electors returned 60 adherents of the Ministry, 39 Radicals, and 15 followers of Ristic, who favours a

Russian alliance. Of the remaining deputies, 5 claim to be independent of party ties, and in 4 districts new elections have to be held, as the first ballot did not result in the choice of a representative. Add to the above figures the 40 deputies whom the king may appoint according to his constitutional right, and it is at once apparent that the Government commands a good working majority. The finances and military reforms will no doubt first occupy the attention of the deputies, who are confronted with many other difficult tasks besides. The feeling of disappointment throughout the country is great, but the Servians are not therefore anxious to entrust themselves to the Russophile leadership of Ristic, the less so, as the latter does not command the full confidence of the Radicals. Against no other great European Power is the antipathy at present stronger than against Germany, which is credited among Servians with having brought pressure to bear on Austria to induce the latter to prevent a renewal of hostilities with Bulgaria after the termination of the armistice, thus depriving Servia of her only chance to retrieve her honour. The expulsion of the correspondents of the *Cologne Gazette* and *North German Gazette* is an index of the anti-German feeling, and Austria, too, though she stopped Prince Alexander's victorious career, has lost a great deal of her former prestige among the people, while Russia, though now probably less disliked than formerly, is yet far from having gained as much in popular estimation as others have lost.

THE *Hochi Shim-bun* says:—An incident, illustrating in a striking manner the condition to which the people have been reduced by the general trade depression, occurred this year at Osaka on the out-break of cholera. Hitherto exorbitant wages had to be paid to attendants on cholera patients, but this year not only did a large number make application, but some were even willing to work for food alone. While on the one hand congratulating the hospital authorities on the ease with which they have obtained the help they so much need, we are on the other deeply moved by the wretched condition of the lower classes. We have an exactly similar impression in connection with the raising of the new naval loan. Some time ago, the Departments of Finance and of Communications announced a lowering of the rate of interest on deposits from the 1st of September next; the new rate of interest on ordinary deposits of less than 1,000 *yen* being 4.2 per cent. per annum; on ordinary deposits above *yen* 1,000 3 per cent. per annum, and 3.6 per cent. per annum on deposits for a fixed period. Almost simultaneously with this announcement the Treasury redeemed public bonds to an amount exceeding 3 million *yen*. These measures may or may not have been undertaken with the purpose of giving an impulse to applications for the new internal loan; but practically they have an extraordinary influence in that direction. At any rate the public believe that the Minister of Finance is very enthusiastic as to the raising of the new loan in as convenient a manner as possible. And facts assure us that he will have the satisfaction of seeing all his hopes fully realized, on which circumstance we sincerely congratulate him. For we are informed that the amount of applications by banks alone has reached an enormous figure, and the rate offered by applicants is as high as 103-108 *yen*; and it is confidently

affirmed that those applications, the rate of which falls below 103 *yen*, will be rejected. So far as the Minister of Finance is concerned, he is to be congratulated on his unusual success. But from a general point of view, we cannot regard this unwonted rush of capitalists save with feelings of deep regret. In a country like England, where capital is really abundant, it is only natural that the interest on money should be low; but here in Japan, where all kinds of industry are as yet in an undeveloped state and capital is scarce, it is indeed a serious situation when interest should be at the same level as in such countries as France and the American Republic, and higher than in Italy and some others. Not only do we lament the excessive depression of business, but we fear that some violent reactionary catastrophe may befall us some day.

\* \* \*  
The *Hochi Shimshun* is somewhat of an alarmist. The inference it draws from the fact that cholera nurses are easily procurable in Osaka is scarcely justifiable, seeing that there never has been any serious difficulty in finding people to undertake this duty in Japan; and that, even had there been such a difficulty, it might reasonably be expected to disappear in proportion as experience showed that the risk incurred by nurses in a cholera hospital is trifling. Apart from this, however, we are perplexed to appreciate our contemporary's uneasiness in regard of low rates of interest. The mere fact that interest is low ought to be a matter of congratulation rather than of regret; while, under the peculiar circumstances existing here, the smaller the returns on public securities, the more quickly capital is likely to be directed from such investments to the ordinary channels of trade and industry.

MR. MARTIN TUPPER, the proverbial philosopher, who has just written his memoirs, recounts among other things, the following experience of an American millionaire, a species of gentleman whose constant intervention, after the same fashion, in the affairs of life, we should all heartily welcome:—"I had just landed in New York after a stormy fortnight in the *Asia* (it was A.D. 1851) and taken up my quarters at the Astor House, to rest before friends found me out. But my arrival had been published, and before, in private, I had taken my first refreshment, the host, a colonel of ours, came and asked if I would allow a few of my admirers to greet me. Doubtless, natural vanity was willing, and through my room, having doors right and left, forthwith came a stream of well-wishers all shaking hands and saying kind words for an hour and more; at last they departed, all but one, who had come first and boldly had taken a chair beside me: when the crowd were gone, he bluntly (or let it be frankly) said, 'I'm one of the richest men in New York, sir, and I know authors must be poor; I like your books and have told my bankers (naming them) to honour any cheques on me you may like to draw.' 'My dear sir,' I replied, 'you are most considerate, and all I can say is, if I have the misfortune to lose this packet (it was a roll of Herries's circular notes) I shall accept your offer; but just now I have more than I want—£300.' 'Well then, sir, come and stay at my house, Fifth-avenue.' 'This is very kind, but several friends here have specially invited me, so I am compelled to decline.' 'Then, sir, my yacht in the harbour is at your service.' 'Pardon me, but

I would rather forget all memories of the sea at present,—with due thanks.' 'Than, sir, my carriage has been waiting at the hotel all this time, let me have the honour of taking you to see Mrs. So-and-so, who is anxious to meet you.' Of course I could not refuse this, nor the occasional loan of his handsome turn-out whenever other friends let me go."

M. FREYCINET finds himself at present very much in the position of M. Ferry, when the latter some years ago assumed the leadership of the French Chamber of Deputies. Now, as then, the conviction among the friends of a French Republic is very decidedly expressed against any further change of government, as injuriously affecting the strength and prestige of the Republican party. It was then, and is now, owing to this very well founded fear that votes adverse to the government are deprecated as ruinous to the party, and hence, against expectation, the Freycinet Cabinet has thus far obtained tolerably numerous majorities for all its important measures. The renewed cheerfulness, and, at times, the sanguine hopes, with which a not influential circle of Frenchmen look upon the acquisition of Tonquin, and the rosy-hued reports from M. Bert as to the commercial possibilities of the Red River Delta and the regions beyond, have favourably affected the French Chamber of Deputies, and Tonquin at last does not appear to many Frenchmen as that *rudis indigestaque moles* which was weighing down the ship of State, impeding its movements and dividing its crew. Making all allowance for the fact that in Paris good news from Tonquin is doubly welcome at this juncture, and that in consequence nothing good that can be said of the Red River valley is likely to be overlooked, it still is significant that the number of ships that have entered and cleared the harbours of the new province has vastly increased as against 1884. The number of merchant vessels that entered Tonquinese harbours during 1884 was 130, with a tonnage of 71,843, while 127 vessels with a tonnage of 69,562 cleared from the ports of the country. In 1885 these figures show a decided increase, 413 merchant vessels entering and 369 clearing with a tonnage of 192,080 and 186,037 respectively—figures which may not perhaps prove the great prosperity of the specifically French trade, but which at any rate argue well for the progressing pacification of the upper Red River districts.

THE bulk of the Chinese population of Hongkong may fairly be entitled to be described as hardworking, law abiding citizens, but amongst the teeming thousands settled upon that "island spot of unreclaimed, rude earth," there is an element in the resident population—not the "rascaldom of Kwang-tung" so frequently denounced by the Hongkong papers—which is at all times a source of anxiety to the authorities and a terror to the well-disposed Chinese. It has never been properly ascertained by the Hongkong Government to what extent secret societies flourish in the Crown Colony, although it is known that they exist. Nothing could be of greater assistance to the Government than a knowledge, for instance, of the methods and movements of the leading members of the Triad Society, whose ranks include the most desperate men. But no such knowledge is possessed. Consequently, when this society is offended with an individual and its members proceed to wreck

his house and maim the inmates, the first thing learned by the authorities is that the Triads have had their fling. One would have imagined that the history of secret societies amongst the Chinese, as illustrated during the past decade in the Straits Settlements, would have been a lesson not entirely lost upon the executive of Hongkong. But such does not seem to be the case. So little is known about the secret societies in existence in Hongkong, that at this late day the Government discover that the Chinese portion of the police force contains a large number of Triad Society men, and that some of the shining lights of the secret association are in British pay as constables, being at the same time under oath to their fellows to assist in whatever lawless outrage they may be detailed to by their superiors. In a letter just received from Hongkong reference is made to one such dual-duty individual, who, being engaged in the recent disturbances, is now on his trial to answer certain grave charges. If, as appears, this canker has eaten far into the vitals of the Chinese portion of the force, there is only one thing to be done, only one remedy, and that is to sweep away the lukongs and substitute Sikhs. Even though the former were loyal, they are not to be compared in any respect with the Indians as constables, and, given a dark night and an alarm of *tah-ming-fo*, the chances are that the lukongs who happen to be Triads, called to assist to make captures in the night attack, would do all they could to aid the robbers—that is they would perform their duty as Triads first and as constables after. It is to be hoped that the disturbances recently reported from Hongkong will not develop into anything approaching the outrages perpetrated in the Straits some years ago, and yet there are all the elements in the one place that existed in the other.

TIME—Independence Day. Scene—That part of Yokohama Harbour which immediately adjoins the Grand Hotel. In the near distance is descried the *Kiushu Maru* gaily dressed with bunting; the flag of a certain European Power hanging over the taffrail. \* \* \* \* \* Despatch from the Consulate of that Power to United States Consulate General:—I am given to understand that on a vessel lying off the Grand Hotel, painted (description given), the flag of my country was displayed in a subordinate position. I am sure this is an accident; but it is an act of impoliteness which I trust you will cause to cease. Yours, &c. \* \* \* \* \* Two war vessels of the insulted flag entered the harbour next day; various ships of the United States have been telegraphed for and are expected every moment. Yokohama is on the tip-toe of expectation, and the atmosphere is sulphurous.

As an example of the methods sometimes resorted to by detectives in Europe and America, the particulars elicited at the trial in Chicago of Louis Bendit, former collector for Fairbank, are worth quoting:—"Bendit, a neatly dressed, aristocratic looking young man, sat beside his sister while detective Matt. Pinkerton told the jury how he had trapped and captured Bendit. He said it was by telegraphing to him, representing himself to be Bendit's affianced. Bendit suspected something, and got the operator at Windsor to wire to the operator in Detroit asking who was sending the telegrams. Mr. Pinkerton himself replied that it was a young and pretty lady who appeared to be down-hearted, and who was making inquiries about different

routes to Canada. Finally he (witness) resolved to represent that Miss Berrell (Bendit's betrothed), was ill, and telephoned to him to come and see her at Detroit. "Did you talk with him over the telephone before he came to Detroit?" asked Mr. Walker. "Yes." "Describe for us the nature of the conversation you had with him over the telephone." "I represented that I was his affianced's physician, and asked him if he could not come over to Detroit. He said he did not think he could. I said:—If you have any regard for the young lady you will come over here;" he again replied that he did not think it was possible for him to come across. I then told him I had sent my student over with a carriage and a note to meet him on his arrival at the ferry. He could get in with the student and be conducted privately to the rear of the hotel, and go in unseen to the place where his intended was supposed to be lying ill. He then said he would come. I then went to the ferry in company with one of my officers and told him to stand under an electric light near by and to give me a signal the moment Bendit was in the carriage. He did so, and I immediately stepped up to the door of the vehicle and arrested him." We do not suppose that the morals of Mr. Bendit are likely to be injured by the deception to which he was subjected, but it strikes one that the effect of such official methods on the general public may be questionable.

THE trials of the Kabasan insurgents, who were arrested in the autumn of 1884, have been at last concluded. This long delay is understood to have been caused by the difficulty of procuring evidence as to the real nature of the attempts in which these men were engaged. Their actual crimes were robbery and murder, but as they sought to pose as political agitators, it was wisely determined to exhaust every method of sifting the ultimate purpose of their violence. The end of the whole affair is that the Courts in Tôkyô, Yamanashi, Tochigi, and Chiba, have pronounced the malefactors guilty of offences without any political complexion, and have sentenced them to heavy penalties—death in some cases; imprisonment for life in others. There appears to be a feeling that this verdict does not expose the whole ramifications of the affair, and that political motives were more or less involved. But if such were the fact, conclusive evidence was not forthcoming, and in its absence the judges had no choice. The law, at all events, has been amply vindicated, and it is to be hoped that a salutary lesson has been taught to all Japanese fanatics, whether of the socialist or vulgar criminal type.

*L'Année Scientifique* states that M. Kleeman, of Schoeningen, has discovered a new method for purifying beetroot juice by lignite, which, it appears, possesses the property of purifying liquids. If pulverised lignite is mixed with a turbid fluid, or with one having a disagreeable taste or odour, a deposit is rapidly formed, and the liquid soon becomes clear and loses its bad smell. Cane, as well as beetroot, sugar, may be refined by lignite, and the process is very economical. The sugars produced in this way have an agreeable taste, and the syrups completely lose their taste of beetroot.

THE Marchioness of Waterford has opened a subscription list for the relief of ladies who have been reduced to a state of impecuniosity by the

operations of the Land League. The case of these ladies is particularly pitiful. Numbers of them have been obliged to apply to the work-houses for support, and it is said that several hundreds eke out a bare pittance by needlework, and even labour of a more severe description. It would be difficult to conceive any class of persons more deserving of pity than ladies who, without any fault of their own, have been suddenly plunged into want and condemned to suffer hardships to which they are altogether unaccustomed. We cannot wonder that the feeling of the Irish loyalists should be strongly roused against the authors of this unmerited misery.

PROBABLY the largest casting ever made in Yokohama was "run" on Sunday at the yard of Messrs. Kildoye, the Creek-side Engine Works. The casting is the low pressure cylinder for the *Kiushiu Maru*, and weighs about 5,000 lbs., being 45 inches by 42. The *Kiushiu Maru*, formerly the *Vesta*, is a steamer of 1,216 tons gross, and is now being fitted by the firm who own her. Her engines are being converted to the compound surface condensing type, and she will receive cylinders of 24 and 45 inches, high and low pressure respectively; her new boiler, which is nearly ready, will be 13 feet in diameter and 10 feet 6 in. in length, contain 206 34-in tubes, and be fired by three furnaces. In addition, the *Kiushiu* will be fitted with all modern appliances to make her a first-class vessel, including steam steering and anchor gear, steam winches, and other machinery.

THE first case of cholera in Yokohama *ku* was on the 3rd June. Up to the 27th there were 5 sporadic cases, notwithstanding all the precautions taken; on the 30th there was a sudden outbreak of cholera. The cases, the majority of which occurred together in Hanazakicho and the neighbourhood, presumably originated from the same well which was found to be polluted, seven cases having occurred in houses which were in close proximity to the well. The entire number of cases in Yokohama *ku*, from the 30th of June up to last evening is 160, of which 102 have terminated fatally.

On Monday morning at five o'clock the inmates of all the houses in Hanazakicho, Yokohama, declared infected, were removed in lighters to Nagaura, there to be fumigated and to undergo other disinfecting processes. During their absence, which will continue for about twenty-four hours, their houses are to be subjected to a thorough disinfection. It is stated on good authority that a few cases of cholera which have occurred in other places, and were considered sporadic, originated in the infected quarter, the patients having been those who fled from the neighbourhood to evade contagion.

YAMAKI TOKUJIKO, an employé of Messrs. Fraser Farley and Co., and residing at No. 171, was seized by cholera Saturday morning. He was immediately removed to the Cholera Hospital and the necessary processes of disinfection were carried out. The workmen at No. 218 who had used the water closets on the compound were all sent to Takashimachô for disinfection. Yamaki had been suffering from diarrhoea for five or six days previous to his seizure.

READERS of our report of the recent silk fraud case, now before the Yokohama Keizai Saiban-

sho, will remember that the spurious silk pledged to Messrs. Schoene and Mottu had been previously mortgaged in the Naruto-gumi, a money lending company. Mr. Takanashi, Counsel for Mr. Schoene, has now brought a charge of complicity in the crime against Mr. Nagai Seitaro, a superintendent and manager of the Naruto-gumi, on the basis of the depositions made by him at the police station and in Court.

THE following (from the *Official Gazette*) shows the spread of cholera during the week ending the 27th ultimo:—

	CASES.	DEATHS.	DEATH RATE PER 100 CASES.
Osaka	953	747	78.38
Kyoto	170	144	84.71
Hyogo Prefecture	343	270	86.47
Okayama Prefecture	135	33	24.47
Hiroshima Prefecture	232	143	61.64
Wakayama Prefecture	48	37	77.08
Ehime Prefecture	176	114	64.72
Total	2,063	1,494	72.43

Says the *Hongkong Daily Press*:—The Government of South Australia has apparently abandoned its intention of imposing a poll tax on Chinese entering the Northern Territory. A telegram received here, dated Adelaide, 11th May, stated that the Government proposed from that date to collect £10 per head from Chinese immigrants. The following telegram was afterwards received:—

CHIEF SECRETARY, SOUTH AUSTRALIA, TO ACTING COLONIAL SECRETARY, HONGKONG.

ADELAIDE, 28th June, 1886.

Please cancel telegram 13th (? 11th) May, imposition of poll tax.

CHIEF SECRETARY, South Australia.

THE later telegrams make it evident that Reuter is sending us the total figures up to date, and not, as had seemed probable, the figures of elections independent of the unopposed seats concerning which he originally gave us information. We arrive at this conclusion because, on the latter hypothesis, the number of Parnellites already returned would be 109, which appears scarcely possible. It is not yet in our power, therefore, to forecast the final issue. We can only say that there seems to be a Tory reaction.

AMONGST the passengers by the *Oceanic* we notice the name of Mr. A. S. Aldrich, who has returned from leave of absence. Professor Anderson, the "Wizard of the North," and Mrs. Anderson, are also in the list, and Chief Engineer Edwin Wells and Dr. Ames, of the U.S. Navy, have arrived to join the *Omaha*, which left here for Nagasaki a few days ago.

ACCORDING to the Shanghai papers by the last mail, Chiarini's Circus is positively coming to Yokohama, it having been announced that Mr. Frank G. Wilson, the agent in advance, had made all the necessary arrangements. We learn from Mr. Wilson that he has just received a telegram stating that the menagerie and circus left Shanghai on Wednesday.

IT is somewhat singular, writes Mr. P. L. Simmonds, that Holland, which has decreased in the last ten years in the number of its live stock (the cows formerly averaging about 1,000,000), should have nearly quadrupled its export of butter.

NEW YORK advices, dated May 7th, report the settlement of the *Forie Troop*, 40,000 cases at 26 and 27½ cents per case as to ports; and the *Frank Stafford* 45,000 cases at 26 cents, both for Japan from

## THE OLD COMEDY.

WHENEVER any unusual occurrence tests the practicability of the system under which we live in this settlement of Yokohama, a fresh evidence of the ineptitude of Consular jurisdiction is afforded. On the night of the 29th ultimo, cholera made its appearance in the Noge district of Kanagawa with sufficient virulence to dictate the adoption of strong sanitary measures. Three days afterwards the following notification was issued from the United States Consulate:—

UNITED STATES CONSULATE-GENERAL,  
Kanagawa, (Yokohama) Japan,  
July 2nd, 1886.

TO CITIZENS OF THE UNITED STATES OF AMERICA WITHIN THE CONSULAR DISTRICT OF KANAGAWA.

Being in receipt of Official information from the Ken Rei of Kanagawa of the sudden outbreak of Cholera of a malignant type at this port, I have to request that all Citizens of the United States of America within this Consular District will lend cheerful aid and co-operation to the Local Authorities in all sanitary measures undertaken by the latter to prevent the spread of the disease, and that such Citizens will promptly report any cases of Cholera that may come to their notice.

WARREN GREEN, Consul-General.

We entertain no doubt that the intention of the Consul-General in issuing this Notification was excellent. He wished to assist the Local Authorities in their good work of cholera prevention, and he accordingly bestirred himself to communicate his wishes to his fellow-citizens in Japan. But what a farce is this formula of request! Here we have the Consul-General declaring, in the plainest manner, that he has no power to enforce the sanitary regulations of the Local Authorities in respect of American citizens, and that the observance of such regulations is left entirely to the goodwill or good humour of individuals. The terms he employs in his notification cannot mean anything else. It is possible that under Republican institutions the harshness of official language must be sometimes tempered to suit the ear of DEMOS, but this softening process assuredly does not go the length of promulgating a law or a regulation in the guise of a courteous request. Does the United States Consul-General intend to intimate that, for the purpose of giving effect to Japanese sanitary regulations so far as concerns American citizens, he is prepared to put into motion the machinery of the Court over which he presides? If he has any such intention, why does he announce it in the shape of a polite "request" that his fellow-citizens will be so good as to comply with those regulations? If he is in a position to enforce the regulations by inflicting penalties for their infraction, then he is guilty of a grave neglect of duty in employing a formula which clearly indicates that he is not in such a position. If, on the other hand, he believes himself without authority to coöperate officially in

preserving the public health, it is exceedingly doubtful whether by keeping silence he would not serve the general interest better than by proclaiming his incompetence. Assuredly any American citizen who objects to the sanitary regulations of the Japanese Local Authorities, can confidently point to this notification as his warrant for declining to observe them, since his own Consul-General here tells him, in the most unequivocal language, that the United States Consular Court is not competent to compel obedience, and that coöperation with or opposition to, the measures of the Japanese Board of Health depends solely upon each American resident's individual volition.

It is only fair to say that Consul-General GREEN is not the originator of this farcical formula. Just three years ago, the following notification was published in Yokohama:—

TO THE FOREIGN RESIDENTS OF YOKOHAMA AND VICINITY.

I have been authorized by the Board of Foreign Consuls to ask your cordial coöperation with the Local Board of Health, in all proper efforts to arrest the spread of Cholera. The strictest attention to your own compounds, and the use of sanitary measures recommended by the Board of Health and your own medical advisers, are believed by the Consular Board to be of the utmost importance.

(Signed) T. B. VAN BUREN,  
U.S. Consul-General, and Chairman of the Board.

Yokohama, June 20th, 1883.

The Consular Board is a body which has no legalized existence. It is simply an association formed by the Consuls for the purpose of their own convenience. That its chairman should issue, in the name of himself and his colleagues, a notification couched in such terms as the above—a notification which not only refers the whole question of sanitation to individual volition, but also constitutes each foreign resident a judge of the propriety of the efforts of the Local Board of Health—was a public declaration that the Foreign Consuls had no power whatsoever to enforce, as against their own nationals, the sanitary laws of the Japanese Government. Consul-General GREEN has followed this precedent. He is responsible for a repetition of the comedy. His action recalls once more the ridiculously unjustifiable and disgraceful nature of the privileges we foreigners have usurped in Japan. By arbitrarily misinterpreting the treaties, we have rendered inoperative even those laws which are designed to avert a public calamity. The position openly taken by the U.S. Consul-General is that the American authorities have not the power, or the Japanese authorities the right, to enforce any hygienic measures other than those which may happen to accord with the fancies or prejudices of each individual in this motley community.

## KOREA'S FOREIGN TRADE.

THE Korean Customs having now passed under the direct control of the Chinese service under Sir ROBERT HART, the public may look with confidence for regular and accurate information about all the commercial affairs of the little kingdom. The Trade Reports issued annually from the various Inspectorates of Customs in China are among the most valuable compilations we possess, and it is no small satisfaction to find that they will in future include reports from the places open to foreign commerce in Korea. Everybody knows now that the Peninsula, which on the principle of *omne ignotum pro magnifico*, was once regarded as a species of Pactolian region, is in very truth an impoverished and squalid country, with resources too insignificant to attract attention, and with a population deprived of enterprise by centuries of clumsy and arbitrary legislation. We used to say as much in these columns three years ago, but it was then the fashion with certain foreign journals published in Shanghai to denounce all disparagement of Korea's capabilities, and to declare that any writer attempting to throw doubts on the potential wealth of the country was inspired by sinister motives. Time has dispelled the delusions of these lers—if, indeed, they ever were the victims of delusions. The first series of Reports prepared by the Commissioners of Customs at Jenchuan (Chemulpho), Fusan, and Yuen-san (Gensan) are now in the hands of the public, and the writers all agree in forming a very poor estimate of the country. It is true that the trade of 1885 shows a substantial increase as compared with that of 1884, its total for the former year being—at the two ports of Jenchuan and Yuen-san—\$1,723,374, against \$843,880 for the latter. But this increase was almost entirely on the side of imports. The Koreans find that by dressing themselves in Grey Shirtings of equal quality with their own home-made cloth, they can effect a saving of 35 per cent. They accordingly buy Grey Shirtings, and it seems probable that the trade in this staple will be considerably developed. But the exports, which are the only true test of a newly opened country's resources, are miserably small, and show a decided disposition to fall off. If the Koreans have nothing to sell, it is obvious that their ability to purchase must soon come to an end. The Reports before us make it quite plain that, under existing conditions, the peninsula can never be a factor worthy of note in the commerce of the Far East. The only two articles capable at present of playing an important rôle in the export trade are ginseng and gold-dust. But the export of the former by sea is altogether forbidden, while by the overland route to China only twenty thousand catties are allowed to be transported. As for gold-dust, there is evidently a consider-

able quantity procurable if the mines and washings were properly worked. The process of searching for the metal is now most primitive. "Shaft-like wells are sunk from 15 to 25 feet, and the earth thus extracted is washed at a small rivulet by women, who pick out the specks of gold found therein. When the water finds its way into these shafts and can no longer be bailed out, the shaft is abandoned and a new one sunk. These alluvial gold washings have been carried on hitherto by a Korean company of small capitalists, who employ, when they have cash, about 60 men and 300 women. The gold thus obtained has usually found its way into the settlement in payment for many articles." Sericulture is, perhaps, capable of profitable development. Mr. STRIPLING, Commissioner at Jenchuan, says that the yellow variety of Korean silk has found its way, *via* Japan, to Lyons, where a favourable verdict is passed on its quality. The fisheries, too, might be made a source of wealth. Mr. LOVATT reports, from Fusan, that "the Korean coast abounds in a vast variety of excellent fish, which might be turned to most profitable account in the markets of China," but adds that "the coast fishermen cannot keep the sea in anything but calm weather owing to the unseaworthiness of their crazy boats," and that they are ignorant of the proper methods of curing fish. Another staple of fine quality is cotton. This is known to be produced in quantities that exceed the demand for home consumption, and as the homespun cloth manufactured from it is replaced by foreign shirtings, it ought to become largely available for export. At present, if it finds its way out of the Kingdom, the Customs have no record of the fact.

We need scarcely say that in Korea, as in all semi-civilized countries, the obstacles to trade are defective transport, unsound currency, and official interference. With regard to the two former Mr. STRIPLING says:—"The high cost of and the difficulty attending transport—which is at present carried on by bulls and pack-ponies—have a very deterrent influence on an expansion of trade. The mode of transit is not only slow and extremely uncertain, but is so expensive that it limits the consumption of the Imports of this port to the comparatively small radius of 40 English miles, and prevents districts more remote from sending their surplus stock of hides, silk, beans, cotton, millet, rice, etc., hither for export. The transport of goods from this port to Söul by the cheapest means costs at least \$3.50 per ton. The consequence is that an artificial boundary is created, beyond the limits of which but very small parcels of commodities find their way, so that the rich north-western province cannot be supplied with foreign goods through legitimate trade, and its resources find an outlet by illicit channels, without the people or Government deriving

those benefits which would accrue from a port being thrown open to commerce, with its healthy competition. Another serious evil is constituted by the unceasing and often violent fluctuation in rates of exchange for cash. The exchange will not infrequently show a variation in a few days of from  $6\frac{1}{2}$  to  $33\frac{1}{2}$  per cent. The constantly varying value of this currency has a very detrimental influence on trade. The rates of exchange are manipulated by the merchants, and, as a consequence, the Koreans have to bear the evils produced by a rapidly fluctuating currency, which necessarily causes great irregularities in the prices demanded from buyers, and serious inconvenience to them, although the market value of the goods in silver is unchanged. The financial trouble thus produced limits the purchasing power of the community and cripples trade. The number of spurious Mexican dollars in circulation is great. The counterfeit dollar is in many cases difficult to detect, owing to the rude workmanship of the original and the skill of the forgers. The Japanese *yen* is, however, seldom counterfeited, apparently on account of its careful and beautifully finished execution. The new mint, when once established and issuing the new coinage, based on and similar to the Japanese coinage, should prove a great boon to Korean trade and eradicate the above evils." Referring to official interference with trade, Mr. MERRILL, the Chief Commissioner of Customs, writes:—"A common way of taxing an industry is by granting monopolies to individuals or companies, to whom the whole of certain goods named must be sold at a fixed price. For example, hides in many districts can be sold only through the hide monopolists, who deprive the producers of the profit which a free market would afford them. The Government officials levy a heavy tax in one shape or another on several branches of industry that seem to possess elements which, if encouraged or left alone, would develop a degree of prosperity and success, and help to enrich the country and increase its trade. But incentive to enterprise is wanting under this system, which permits others to appropriate nearly all the profit over the bare living expenses of the producer." As an example of the working of this system at Fusan, we may quote Mr. LOVATT:—"During the first half of the year a good many hides were brought in, but later it was found that the War Department had issued instructions, levying on each city, according to its rank and population, a tax of hides varying from 3 to 15, payable monthly to the local officials, which, however, did not much interfere with the number for sale until towards the close of the year, when the special officials appointed to collect them found that only the smallest and poorest hides were brought to them in payment of the tax; consequently these officers placed guards on the principal roads, and boats at several

points in the harbour, to stop the hides coming to market unless certain taxes are paid. The result is that few, if any, are now brought in and put upon the market."

Despite all these drawbacks, the effects of foreign trade upon Chemulpho are sufficiently remarkable. When that port was opened, in June 1883, "there was nothing to be seen," says Mr. STRIPLING, "but a few thatched hovels, less than a dozen in number, the dwellings of a handful of poor fisherfolk." Now, the place can boast 146 houses, including 3 hotels, 3 consulates, two banks, and a telegraph station. It has a population of 725 inhabitants, of whom 573 are Japanese, 180 Chinese, and 22 Europeans. On its outskirts there has sprung up a native settlement with 150 houses and 700 inhabitants.

Nothing in the present history of Korea seems to us more interesting than the position taken by Japanese merchants. At Fusan, where they have virtually a colony, one would naturally expect to find them doing the major part of the foreign trade. But at Chemulpho they are brought into direct competition with the Chinese on terms favourable to the latter, and yet seventy-five per cent. of the commerce of the port is in their hands. Mr. STRIPLING, speaking of the large expansion which the trade of the place showed in 1885, says:—"This satisfactory result is attributable in a large degree to the keen business instincts of the Japanese, which led them, when they found little or no demand except for small parcels of piece-goods, to try and force a market for Foreign commodities by persistently bringing small shipments of various articles, in the hope of creating a demand, in which they have been very successful." It has hitherto been the custom to credit the Chinese with business capacities decidedly superior to those of the Japanese. This theory becomes difficult to sustain in face of the fact that in the only instance where the merchants of the two countries have come into direct competition, the advantage palpably remains with the Japanese.

#### "OH THAT MINE ENEMY WOULD WRITE A BOOK!"

READING the panegyrics on America and the Americans so frequently published by vernacular newspapers, it has often occurred to us that nothing helps to preserve American popularity in Japan more than the fact that the local press does not include an American journal of the type to which the people of this country have become accustomed. The Japanese, as we now know well, are an exceedingly quiet, law-abiding race. The days are long past when their patriotism found expression in stabbings and slayings. They thought then that they could frighten away from their shores the intruders whom they had been taught by household tradition to

regard as propagandists of a degrading creed and intriguers against the integrity and freedom of their country. But this national belief years ago entered an entirely different phase. To-day they are not less firmly convinced of the benefits of foreign intercourse, and while they seek for their own sakes to promote friendly relations with Western visitors, their conciliatory mood is visibly augmented by the memory of their former errors of violence. Thus their principal officials at the Open Ports have instructions to adopt every possible expedient that can help to prevent polemics, and they pursue this programme so carefully that their complaisance has not infrequently been mistaken for timidity. People often say that were they less yielding and self-controlled, it would be better in every way for their own reputation. And indeed the remark used to find some justification in the attitude of the foreign local press. Of four newspapers formerly published in Yokohama, three were wont to devote themselves chiefly to hostile criticism of the Japanese Government and the Japanese people. Day after day the same uncompromising detraction filled the columns of these journals. There was no variety; no cessation of hostilities, however momentary. The stream of invective flowed from two sources. One was an avowed desire to minimize Japanese progress and demonstrate the impossibility of restoring to Japan the rights of jurisdiction taken from her by the treaties. The other, with exquisite irony, professed to be friendship—a stern unflinching spirit of amity, which compelled those it animated to use the flail perpetually. The representatives of the former stopped at nothing. According to them every Japanese statesman was dishonest; every Japanese judge corrupt; the whole Japanese nation immoral and depraved, and everybody, whatever his position and antecedents, who ventured to say a kind word of the Japanese, a renegade and a hireling. These critics were brutal, but they struck openly. They made no pretence of anything but a desire to promote what they pretended to believe the interests of their own countrymen. Such persons are to be found in all communities of foreign settlers; men who imagine that the way to render Occidental civilization attractive is to make Occidentals play the rôle of hectoring roughs, incapable of the weakness of supposing any Oriental worthy of courtesy. They are the remnants of the bullet-and-bayonet school, which, though it still finds a few followers in Japan and China, has almost entirely gone out of fashion in the former country, and cannot long survive in the latter. On the whole, however, they were less mischievous, though more savage, than the second class of traducers, who clothed the nakedness of their defamation in rags of hypocrisy. These censors, when they had employed every device to render Japan

execrable, told the world that they were advocates of Spartan discipline, and that "spare the rod, spoil the child" was not less true of nations than of individuals. The motive of their denunciation was to prepare the way for panegyric! The Japanese may be singularly patient and singularly discerning, but after all they are human. They are apt to attribute untiring censure and insult to a spirit of hostility rather than to earnest solicitude for their welfare. Yet it is noteworthy that they have always abstained from any exhibition of resentment. Even in the times to which we allude and in the presence of perpetual provocation, Japanese newspapers seldom spoke slightly of foreigners. Sometimes, indeed, they ventured to call them arbitrary or imperious, but on the whole they preserved, in the face of ceaseless scoffing and scurrility, a silence as dignified as it was remarkable. It is true that if a vernacular journal had ever thrown at a Foreign Minister even a tithe of the mud with which Japanese statesmen used to be liberally bespattered by their foreign local critics, the insult would immediately have become the subject of official remonstrance. But this restraint was of limited application. If the inclination to retaliate existed, or if foreign taunts had been embittered by a consciousness of their justice, both sides would soon have been engaged in a war of words that must inevitably have led to something worse. But Japan's belief in Western civilization was doubtless too sincere to be shaken by these disfiguring phases. She seemed to be conscious that they did not represent the real sentiments of her foreign acquaintances, and she probably foresaw that the better instincts of the latter would ultimately vindicate her cause far more effectively than she could have vindicated it herself by remonstrance or retaliation. Happily her instinct was correct. The spirit of hostile denunciation has given way to sounder influences. Of the three journals which devoted themselves to making their nationals unpopular, one has emigrated to a more congenial sphere; another has assumed a friendly complexion, and the third alone perseveres in a route palpably contrary to the tendency of the times. Yet, though the voices of this ancient malevolence have ceased to be strident, their echoes still live in the memory of the people. It cannot be doubted that every patriotic Japanese must continue for a long time to cherish feelings of bitter indignation at the abuse thus heaped upon his country, and that the consequences have been as positively injurious to English popularity as they have been negatively beneficial to American. Once, indeed, there was produced in Tôkyô a newspaper whose editor was an American, but its tone was more uncompromisingly friendly to Japan than that of any other periodical or book ever published. It has now a successor, which, however, does not at

present seem likely to shatter any reputations. On the other hand, the press of the United States, whenever it refers to Japanese affairs, shows a kindly sympathetic disposition. Its interest, too, in everything that concerns this country is evidently—and naturally—more keen than that of journals at a greater distance. And the Japanese, striving to win the approbation and respect of the foreign public, like to be noticed. It would be possible, no doubt, to adduce other causes for the fair fame enjoyed by the United States in this country. But however numerous and weighty those causes may be, we are strongly disposed to think that their consequences would not have survived the assaults which English popularity has suffered at the hands of English journalists in Yokohama.

#### BRIGHTENING PROSPECTS.

TO those of us—and are we not all in the same boat in this respect?—who have to seek our daily bread along the routes of industry and commerce, and who believe—as we have always believed and often urged in these columns—that there can be no prosperity for the commercial and industrial world so long as the burden of debts is continually increasing, and the aggregate of profits perpetually diminishing, there is much comfort in the thought that the financiers of the West are at length beginning to awake from their craze of gold monometallism, and that a question which, five or six years ago, was contemptuously pol-pohed, has now been placed almost in the forefront of practical politics. The Calcutta correspondent of *The Times*, writing under date May 9th, says:—

It will be remembered that Sir A. Colvin in his Budget speech two months ago dwelt at great length on the pressing importance to India of the silver question, and expressed a hope that the English Government would try to arrive at some solution of the difficulty by means of an international agreement. That the words then uttered have found an echo throughout the country is evident from the fact that the entire Indian Press is almost daily discussing the subject, being all but unanimous in favour of bimetalism. A still stronger proof of the interest which the subject excites is to be found in the formation at various places of 'Silver Associations.' The most important of these was lately founded at Simla. It has Mr. Justice Cunningham as president, while among the executive committee are Mr. Barbour, Financial Secretary to the Government, Mr. Westland, Comptroller-General of Accounts, and several other high officials. Its prospectus traces the depreciation of silver to the abandonment of bimetalism by France in 1874, and asserts that the remedy lies in a return to the double standard by international agreement. The objects of the association are to promote the intelligent discussion of the question, to dispel popular fallacies, to enlighten public opinion, and to bring it to bear upon the application of the only true remedy. Branch associations are being formed at various other places, even at remote stations like Quetta; and there seems to be every prospect that a vigorous effort will be made to arouse general interest in the question, and to apply strong pressure to the Ministry.

The Indian Empire having fairly developed this mood, English financiers cannot afford to neglect it. And they have other voices powerfully urging them to move.

Not, indeed, that any new arguments or startling theoretical considerations are advanced by the advocates of a double standard. On the contrary, reasoning which was iterated and re-iterated in the past, is again put forward quietly and firmly in the present, supplemented and supported only by the growing conviction that things are not as they should be, and that the explanations offered by the monometallists are wholly insufficient and unsatisfactory. To us nothing could more conclusively indicate the public's altered attitude towards this great subject, than the fact that men are suddenly beginning to examine, with a measure of surprised interest generally bestowed on novelties alone, arguments which had long ago become trite and ancient. A signal example of this is the attention attracted by M. LAVELEYE's recent essay in the *Contemporary Review*. M. LAVELEYE says nothing in that essay which has not been often said before by himself and others. His reasoning may be easily epitomized. The *Economist*, a bigoted monometallist, declared, seventeen years ago, that the then annual production of gold—thirty millions sterling—was barely sufficient to prevent the constant tendency of wages and prices towards decline; that any diminution of this production would be a serious danger, and that a discovery of new and rich gold deposits would immensely benefit the world. Eight years later, 1877, the annual supply had fallen to about twenty-two millions, and Mr. BAGEROT then pointed out that if the single gold standard were more generally adopted, the yield of gold would not suffice. At present, the conditions are these:—the annual supply of gold has fallen to seventeen millions, and "contemporaneously with this reduction, suddenly and universally, save in India, the free coining of silver is prohibited, and gold coin, heretofore a luxury, becomes all at once the sole means of international exchange." As for the complacent contention that things will adapt themselves, one day or other, to these straightened conditions, M. LAVELEYE asks what the world is to go through in the interim, and quotes the following passage from the American Monetary Commission of 1876:—"The labourers must make their wants conform to their diminished earnings. Consumption is, therefore, constantly shrinking towards such limits as necessity requires. Production, which must be confined to the limits indicated by consumption, is constantly tending to a minimum, whereas its appliances, built up under more favourable conditions, are sufficient to supply the maximum of consumption. Thus idle money, idle capital, idle labour, idle machinery, stand facing each other, and the stagnation spreads wider and wider. It is in the shadow of a shrinking volume of money that disorders, social and political, gender and fester; that communism organises, that riots threaten and destroy, that

labour starves, that capitalists conspire and workmen combine, and that the revenues of Government are dissipated in the employment of labourers or in the maintenance of increased standing armies to overawe them." To this terrible prospect the Belgian economist adds another item. The public debt of the world is five thousand millions sterling, and the taxpayer has to find the interest on this huge sum. "Governments do not take payments in kind; the producer has to stop on his way to the tax-gatherer, and turn his goods into gold. In proportion, therefore, as gold has risen in value, he has to sell more goods in order to get gold enough to meet the tax-gatherer's demand. When wheat is at 30s. a quarter, the farmer must raise twice as much to pay the same taxes as he would have to raise if wheat were at 60s. The greatest sufferers from this cause will be the oldest nations, since they, for the most part, have the largest debts and the least reducible expenditure."

Now in all this there is nothing new; nothing that has not been said before over and over again. Yet hear what the astonished *Spectator* remarks on the subject:—

We are not, we must repeat, accepting these inferences as proved. All we say is that they are startling, and that if they can be established, they are of surpassing importance. At this moment there is nothing that all the statesmen of Europe put together could do which would so increase the sum of human happiness as to bring the industrial depression to an end. According to M. de Laveleye, the adoption of a double standard would at least start us on the high road to this result. Other eminent economists hold the opposite opinion; but it is safe, we think, to say that they do not hold it quite so confidently as they did. They are not bimetallicists, but they are not the assured monometallists they once were. The question has been brought back into the region of controversy; from a craze, bimetallicism has become a theory. We might expect, therefore, that, in all countries, Governments and politicians would be throwing themselves ardently into the question; that everywhere Royal Commissions and Parliamentary Committees would be collecting evidence and drafting reports; that the public at large would be chafing at any delay interposed between the inquiry and the practical conclusion; that the commercial crisis would be the sole and persistent occupation of all minds. Most of all, one might think, this would be the case in England.—England, the most sensitive of all countries to the variations of trade, and which has the special advantage of a great financier for its First Minister. Yet, as a matter of fact, what do we see in England? The great financier is absorbed in political vivisection. He is cutting the United Kingdom in two, in order to ascertain whether the vitality of the halves will be equal to that of the whole; and his followers are too bent upon ensuring him a free field for his experimental knife, to have either time or thought to spare for anything else. How is this strange contradiction to be explained? Is it that man has become conscious that he does not live by bread alone, that the inferiority of mere material comfort by the side of the realisation of ideals is at length felt and admitted? Hardly. Is it that politicians are blinded to everything that cannot be expressed in terms of party warfare, and that, in comparison with a party victory, national advantage has lost its attraction? We fear so. But however it is to be accounted for, the fact remains: and the indifference with which the great trade depression has been regarded in England will hereafter be counted one of the strangest features of this strange epoch. It will be said that while the people of Europe were growing from misery into a Socialist temper, their statesmen were intent, especially in England, solely upon politics.

Is it likely that the statesmen of Europe will continue to allow their attention to be diverted from such vital problems? We think not.

#### WHENCE THE MONEY COMES.

SINCE the resumption of specie payments, there has been a marked cessation of the habit of hoarding, which had undoubtedly attained large dimensions in Japan during the period of fiat currency. When the lower orders learned to regard the Government's paper tokens as things of wholly uncertain value, they gradually laid hands on all the subsidiary coin they could procure, whether silver or copper, and hid it away as something secure against the startling fluctuations that disturbed other values. On several occasions between 1881 and 1884, we drew attention to the extraordinary demand for copper coins throughout the country, and in July, 1884, we noted that, from the time of its establishment (27th November, 1870) until June 30th 1884, the Imperial Mint at Osaka had struck off over ten million *yen* worth of such tokens. During the same period the total amount of silver coins struck was, in round members, 49 million *yen*, and of this aggregate no less than 20 millions consisted of subsidiary coins. There could be no question that considerable quantities of these copper and silver coins were finding their way into old stockings, to remain there until public confidence in the currency was restored. These coins are now emerging from their hiding places. Since the beginning of the year there has been a marked increase in the amount of the deposits at the various savings banks, and we learn that, whereas two years ago copper coins were inconveniently scarce in the country districts, they are at present so plentiful that their circulation is difficult. The resumption of specie payments has also had an effect on the wealthier classes. That considerable sums in gold and silver were laid by in the godowns of the former nobility and other capitalists was never questioned. So long as the Government was unable to establish its credit by resuming specie payments, the owners of these stores chose rather to keep their money safely than to risk it for the sake of obtaining a small return. But now that all apprehensions as to the stability of the currency and of the Government's credit have been dissipated, there is a corresponding eagerness to utilize whatever means of investment offer. It is impossible, of course, to reduce these results to figures. We can only state the general fact that money was never more plentiful in Tôkyô, although, at the same time, it is not easily procurable for trade or industrial enterprises, nor is its presence accompanied by any marked disposition to spend or to speculate. What every one seeks is a form of investment promising moderate returns with a minimum of risk. Hence another impulse in the direction of public loan bonds and a steady appreciation of such securities. In a recent article we described the policy of the Minister of Finance so far as it could be deduced from

a comparison of effects with their apparent causes. It may now be added that the influences noted above have, in all probability, materially assisted Count MATSUGATA'S endeavours to lower the rate of interest. The important question is: Will this result, now virtually attained, be sufficient to turn the attention of capitalists in the direction of trade and industry? We are disposed to think not. Cheap money is no doubt a great incentive to enterprise, but cheap money does not necessarily signify money easily procurable. Capitalists who are content to accept five, or even four, per cent. so long as their principal is in government securities, may find no temptation in eight or nine per cent. where risks to the principal sum are involved. Before Japan can be embarked fairly on the route of commercial and industrial activity, some development of the system of credit is essential. We are not among those who go so far as to assert that credit is the soul of industry and commerce, the food of labour, the main-spring of progress. Neither do we hold with such extremists as M.M. BOUROU and BRELAY, who regard credit as the poison rather than the medicine of prosperity. But we do believe that without some considerably larger growth of credit than that which exists at present in Japan, the national capital cannot be productively employed. There is money in the country and the people are only too willing to lend it to the Government. But they will not lend it to one another. Japan as at yet virtually a stranger to that method so familiar in the West under the name of floating an enterprise. If a man has a clever conception, his only hope of putting it into practice lies in official aid. To get it taken up by a company of capitalists is out of the question. A few years ago companies were all the fashion among giddy, frivolous speculators, who rode their hobby so hard that the term *Sha* (company) became a byword. Every *Sha* was a failure, the public laughingly said, except *Finrikisha* and *Geisha*. Now-a-days companies are formed only for the purpose of maintaining monopolies—the bane of healthy commerce. How is this to be remedied? It is a large question, which we would gladly see discussed by practical men. For our own part, we repose our faith chiefly in the removal of those trade restrictions which forbid partnerships between foreigners and Japanese. Such associations would probably possess that element of stability which is at present limited to Government securities.

### SALE OF LAND IN HOKKAIDO.

#### ORDINANCE NO. XIV. OF THE CABINET.

It is hereby notified that Regulations for the sale of land in Hokkaido have been established as follows.

Count ITO HIROBUMI,  
Minister President of State.

Dated the 29th day of the 6th month of  
the 19th year of Meiji.

#### REGULATIONS FOR THE SALE OF LAND IN HOKKAIDO.

Art. I.—Unreclaimed land in Hokkaido in the possession of Government will be sold according to these regulations.

Art. II.—The extent of land that may be purchased by one person is limited to 100,000 *tsubo*. But if land in excess of this is required for the purposes of an undertaking the object of which is recognized as sound, such additional land may be sold under special provisions.

Art. III.—Applications for the purchase of land should be submitted to the Hokkaido Administration Board, stating in detail the name of the locality, the number of *tsubo* required, the objects of the undertaking and the method of accomplishing those objects, as well as the probable degree of success that is expected. When the land is intended for cultivation and building, the period within which complete reclamation is contemplated should be stated, giving the number of *tsubo* to be cleared each year.

The Hokkaido Administration Board will allot the land when the method of carrying out the undertaking proposed is approved of. No rent will be collected.

Art. IV.—The period of allotment will not be more than ten years; but will be determined according to the state of the land, and the difficulty or otherwise of the undertaking. Should it be deemed necessary, in the case of pasture land, to prolong the term of allotment, such extension of time may be allowed after the expiry of the first period.

Art. V.—In the case of land designed for cultivation and building, annual inspection will be made of the ground that ought to be reclaimed during that year; but in the case of land to be used for drying marine produce, and for pasturing purposes, inspection may take place at any time.

Art. VI.—When the extent of ground reclaimed in any year falls short of that originally contemplated, all land except the area already reclaimed will, in the case of ground intended for cultivation and building, be resumed by the authorities; and in the case of land set apart for drying marine produce, and for pasturage, failure to comply with any of the conditions set forth in the original application, referred to in Article III., will be followed by forfeiture of all the land allotted.

In the event of such failure having arisen from natural calamities or other unforeseen circumstances, the matter will be reported to the Administration Board for consideration and disposal.

Art. VII.—If it is found that on any land, possession of which is resumed by the authorities, trees have been cut, suitable compensation will be payable.

Art. VIII.—Should it be found desirable for the public interest to appropriate land previously allotted to persons, possession of such land may be resumed by the authorities, even though the period of allotment may not have expired. In such an event all money expended on such property under the allotment will be returned to the person to whom the original allotment was made.

Art. IX.—Land allotted as above may not be transferred to others; but, in special cases, where unavoidable circumstances render such transfer desirable, application may be made to the Administration Board over the joint signatures of the persons by whom and to whom the transfer is con-

templated. In such event the period of allotment may be renewed.

Art. X.—The price of land is fixed at 1 *yen* per 1,000 *tsubo*. Land may be sold on the completion of the objects for which it was originally allotted; in which event a title deed will be granted. Neither Imperial nor local land tax will be leviable on such land for ten years, calculated from the year following that in which the land is sold.

Art. XI.—The process of enforcing these regulations will be determined by the Chief of the Hokkaido Administration Board.

#### SUPPLEMENTARY REGULATIONS.

Art. XII.—In the case of land which has been purchased according to the Regulations for the Sale and Allotment of Land in Hokkaido, published by Imperial Proclamation No. CCCIV., in the 5th year of Meiji, and of land which has been purchased from the original purchaser, and on which the original undertaking has not yet been completed, a report should be made to the Hokkaido Administration Board before December next, describing the mode in which it is proposed to carry out the work during the ten years beginning with the 20th year of Meiji, according to the 1st section of Art. III. When such report is not made, or when the work is not carried out as stated in the report (natural calamities and unavoidable circumstances apart), all the land except the portion already reclaimed will be taken back at the price originally paid for it.

Art. XIII.—The Regulations for the Sale and Allotment of Land in Hokkaido, published by Imperial Proclamation No. CCCIV. in the 5th year of Meiji, Notification No. IV. of the Colonization Commission, in the 7th year of Meiji, and Notification No. IV. A, of the Colonization Commission, in the 11th year of Meiji, are here revoked.

### ASIATIC SOCIETY OF JAPAN.

The Annual Meeting was held on Wednesday June 23rd, 1886, at the Society's Rooms, 33, Tsukiji, Tōkyō, the President, N. J. Hannen, Esq., in the chair.

The minutes of the preceding meeting were taken as read.

The election of the Rt. Rev. Bishop Bickersteth, and S. Mori, Esq., was announced.

The SECRETARY then read a *résumé* of a paper on the "Vine in Japan," by Mr. J. Dautremer, the original paper being in French.

#### THE VINE IN JAPAN.

According to accounts furnished by Mr. Fukuwa Yaito, Director of the Vineyards at Harima, and from official Reports of the Minister of Agriculture and Commerce, translated from the Japanese by Mr. J. Dautremer, Interpreter to the French Legation in Japan, the vine is found nearly everywhere in Japan, but it is cultivated more especially in the province, or rather district, of Kōfu in the centre of the country. There is a tradition that 700 years ago, in the reign of the Emperor Gotoba, A.D. 1185, it was noticed by two peasants on the mountains of Kōfu, near the village of Kami-iwasaki. The peasants whose names are preserved, transported this wild vine to their garden at Ziō-sei-zi, and after carefully tending it and endeavouring to propagate it, they succeeded so far that in 1193 they became possessed of thirteen plants. They proceeded to develop the culture, and in a few years were able to lay out plantations, the fruits of which became celebrated, and the reputation of the Kōfu grape still stands high, the fruit being greatly esteemed.

There are two species of vine; the *vitis vinifera* and the *vitis labruska*; but the former only is cultivated. Its fruit is much esteemed. The latter, superior to that found in America, is inferior, however, to the *vitis vinifera*. It is found in the mountains, where it shoots out like grass. It abounds in the provinces of Echū, Kaga,

Noto, Hida, Mutsu, Uzen, Ugo and in Hokkaido. In Echium and Kaga, as well as in Hokkaido, several varieties of the wild vine are found—as many as twelve; some with stems indicating a growth of a dozen years. On the mountains of Kaga the author of this paper met with a vine the stem of which measured 1m. 80cm. in circumference, and covering a hectare of land, having produced, moreover, 1,200 kilogrammes of fruit. Such dimensions are not rare; many examples are found in the province of Idzu. Specimens of this size are not found in Europe; but at Oran and at Kasba in Algeria, vines with a diameter 0.24m. and area 120m. and fruit 1,000 kilogrammes occur. This is looked upon as prodigious. Unfortunately, the Japanese have overlooked the value of this plant, and have left it to run wild, without special care being bestowed upon it. It is only in quite recent times that they have begun to engage themselves on its cultivation and to take an interest in the fruits.

The *V. vinifera* in Japan produces three sorts of grapes: the red, like the *Chablis*; the black like the *Frankenthal*; and the white, like the *Riesling*. They are all found in Kôfu. The black grape grown near Kyôto is the best in Japan.

Formerly the grape was only cultivated for eating. The plant in its wild state shows great vitality, and the yield is considerable; but latterly the Japanese have grafted and transplanted it and have found that it is capable of furnishing a good quality of wine-grape.

In the cultivation of the vine two methods are in vogue, as in Europe, viz: (1) By slips inserted into the ground; (2) By allowing the vine to propagate itself by its branches taking root. This latter is the way in which the vine-dressers of France renew their plantations.

The Japanese prefer for the vine sloping lands—stony or sandy. After digging a ditch 1m. 20cm. deep and about 2 metres wide, and having made the channels so that the water may flow freely, they fill the ditch with manure and earth and proceed to plant. This is usually done in autumn, but in Hokkaido, where the climate is cold, the spring is preferred. For manure they use bone-dust, rice-husks, the refuse of brewers, the residuum of oil manufacture, and finally clover-manure. But these manures have each their specific properties. The bone-dust, the rice-husks, and the *saké* refuse give to the grape a certain sweetness, and increase its size; the other manures give force to the plants and make the bunches more compact and complete. It is therefore necessary to employ a mixture to obtain good results.

The pruning is done in the autumn; the stem is left 1m. 80cm. high, so that below the section two or three branches or shoots may be left for the coming spring.

#### FIRST ATTEMPT AT WINE-MAKING.

The first idea of the Japanese was to cultivate the vine in order to eat the fruit; yet we are told that the people of Kôfu used the grape to make a liqueur, probably a sort of wine; for what purpose we do not know, for they certainly did not drink it. It was not until 1875 that an inhabitant of Kôfu resolved to make wine of the grape. But he neither knew the ancient nor the modern processes; the grapes which he used were not sufficiently ripe, and he did not succeed. In 1876, a certain person named Ôto Matsugoro, having returned from California, where he had studied wine making, again made an attempt in Kôfu, and succeeded in producing a wine superior to that of his predecessor. Now the same vineyard produces 200 hect. of white wine, and as much alcohol. I have tasted several kinds of Kôfu wine, and I declare that it was detestable. At the present time in Hokkaido and in the provinces of Harima and Owari, some thousands of hectolitres of wine have been made, and yet the plants are only 5 or 6 years old and the bunches are naturally not large. In two or three years no doubt twenty to thirty thousand hectolitres will be produced, but it is doubtful whether the wine will be drinkable here for a long time. The produce is mixed by Japanese merchants with European wines and sometimes this mixture is sold to the Japanese as pure Bordeaux.

#### EUROPEAN AND AMERICAN VINES IMPORTED INTO JAPAN.

The first European vine transplanted into Japan was given to the *Shôgun* by the Emperor Napoleon III. in 1858; afterwards came the *Isabella* and the Concord from America. They then imported the *Frankenthal* from Austria, as well as other vines from France; at last California furnished a considerable number of plants. We may say that there are altogether some 200 sorts in Japan. The attempts to cultivate them had generally been made in Tôkyô, at the Botanic

Garden at Mita; but none have succeeded. For the European vine the soil of Tôkyô is too damp; although the vine grows well there it produces no fruit; the American vine only succeeds in Tôkyô; but the bunches although superb, are not of the first quality; they are certainly much inferior to Japanese grapes. Thus at present it is found that the proper way is to introduce vine-stocks from Europe, and those only which produce well.

The chief plantations are to be found in Harima and also in Ikiushiu. In this latter island the *Muscad Pinot* and the *Chasselas* succeed marvelously; thanks to the geological nature of the soil. The *Chasselas* succeeds very well in the district of Harima, producing large and full bunches.

The Grape of Palestine has only been planted two years and has already given very fine results. Last year Mr. Fukuiwa Yaito, director of the Gardens at Harima, gave a bunch of these to Mr. Sarazin, adviser to the Minister for Foreign Affairs, and he in turn presented it to the French Minister. It weighed 3 kilos.

#### VITICULTURE IN JAPAN.

The Government encourages the culture of the vine by the establishment of schools of viticulture, and by bringing from Europe a considerable number of young plants, and there is little doubt but that in a short time Japan will become a vine-growing country. They have introduced into the Harima establishment the *Gamay de Bordeaux* and *Pinot Noir*, and they hope soon to produce wine from them.

The Harima grounds are 30 hectares; those of Owari 50 hectares and those of Hokkaido 40 hectares. The vines which succeed best in these places are: The *Gamay de Bordeaux*, *Bordeaux Blanc*, *Ballet Noir*, *Meslier Blanc*, *Meslier Noir*, *Frankenthal*, *Folle Blanche*, *Charbonneau*, *Muscad de Frontignan*, *Zinfandel*, *Riesling*, *Malvoisie*, &c.

#### DISEASES OF THE VINE.

The chief are the *oidium* and the *broussure*. These began in 1867 and since then the stems of the vines have suffered more or less. The ordinary remedy for the *oidium* is sulphur; but no means has been found to get rid of the *broussure*. As the stems of the vines in Japan are larger than those in Europe, the diseases are more difficult to cure. Insects are the great enemies to the vine, but they are comparatively easy to destroy if care is taken, and especially if the *Phylloxera castatrix* be not present. This insect had not yet appeared here until last year, 1885. It has been necessary to scorch the soil occupied by the affected vines. This is a perfect remedy. The Japanese believe that this insect was brought to Japan from America with the vines imported in 1881.

#### YIELD.

Before the appearance of the *oidium*, 17,000 to 20,000 kilogrammes per hectare were harvested in the provinces of Kôshiu (Kôfu), Kawachi and Yamashiro; but after 1867 the yield fell off suddenly 3,000 to 3,500 kilogrammes. It is, however, expected that with care the disease will disappear and the yield be increased. The most productive vines are the *Zinfandel* and the *Folle Blanche*; the average yield being 18,000 kilogramme per hectare after five or six years' culture. These plants are superior to the Japanese, and their proneness to take disease is much less. The year 1885 was less favourable and the yield was low; it was only in Kôshiu and Hokkaidô that the vine succeeded. The heavy rains which fell at the time of blossoming in Kawachi, Harima, and Owari, and the inundations which followed, destroyed nearly all the blossoms, and the vines suffered very much.

After this a few remarks were made by Mr. J. C. HALL, generally confirming the views expressed in Mr. Dautremer's paper.

Because of the press of other business, Mr. Hall agreed, on the suggestion of the PRESIDENT, to postpone to the general meeting the introduction of the motion relative to the Society's attitude towards the translation movement.

The Annual Reports were then presented to the Society, and were adopted on the motion of the Hon. P. LE PORR TRENCH.

The PRESIDENT moved, seconded by the CORRESPONDING Secretary, that the Society record their thanks to all who during the past year have presented books, maps, and other valuable gifts to the Library.

The motion was agreed to unanimously.

#### REPORT OF THE COUNCIL FOR THE SESSION 1885-6.

The Council has to report that during the past session a number of interesting papers have been presented to the Society, but it has to regret that the monthly general meetings had to be postponed three times owing to the want of papers to read before the Society; and the Council would respect-

fully call the attention of the members of the Society to the necessity of exerting themselves to furnish papers on some subject which it is the object of the Society to elucidate. The papers need not in every case be very long or very learned, but should contain information, or show research calculated to throw light upon the history, the religions, the languages, the natural productions or natural phenomena of the East, and especially of Japan. The discussions on such papers would frequently be of great interest and value, independently of the value of the original papers.

In the subjoined list (Appendix A) will be found an enumeration of the papers read before the Society and the names of their authors.

In another list (Appendix C) are given the names of the books and maps contributed to the Society's Library, and the names of the periodicals, etc., with which the Society exchanges its publications. It will be observed that some most valuable works have been contributed by the Smithsonian Institution of Washington.

Many volumes have been bound, and others are to be bound as soon as the missing numbers of certain periodicals are forthcoming. In regard to this point, members are requested to return as soon as convenient any books or periodicals which they may have borrowed, in order that the Librarian may discover, if possible, any missing volumes.

The Council has to express its sorrow in recording the death of one of the oldest friends of the Society—Rear-Admiral Shadwell—who always took great interest in its welfare, and contributed much to its success in the beginning of its career.

The name also of Thomas R. H. McClatchie, of H.M.'s Consular Service, cannot be omitted. He died at Penang on his way home last year at an early age having given proofs of a sound scholarship; in his death there is much to be regretted.

The Society has lost a few of its members, but has increased the number on the roll by some eight or ten new members.

In (Appendix B) will be found the Treasurer's report.

#### APPENDIX A.

##### LIST OF PAPERS READ BEFORE THE SOCIETY DURING THE SESSION 1885-6.

On the Tenets of the Shinshiu or "True Sect" of Buddhists; by James Troup.  
The Abacus in its Historic and Scientific Aspects; by Carl G. Knott, D. Sc. (Edin.) F.R.S.E.  
Buddhism and Traditions concerning its Introduction into Japan; by Rev. James Summers.  
Past Participle or Gerund? A Point of Grammatical Terminology; by Basil Hall Chamberlain.  
Notes on Japanese Landscape Gardening; by Josiah Conder.  
Situation de la Vigne dans l'Empire du Japon, par M. Joseph Dautremer.

#### APPENDIX B.

##### ASIANIC SOCIETY IN ACCOUNT WITH J. M. DIXON.

1885.	Dr.	
June 24rd—To Corresponding Secretary for current expenses		10.00

#### APPENDIX C.

##### BOOKS PRESENTED TO THE SOCIETY, 1885-6.

*Le Journal Asiatique* (1873-85); by the *Société Asiatique* of Paris.  
*Nova Acta Academiae* (Halle), 3 vols.; by the Society.  
*Indogermanische Grammatiken*—Band II. Supplement Original from

The Roots and Verb-forms of the Sanskrit Language; by Professor William Dwight Whitney of Yale College.  
 A Roll of Maps from the Geological Survey Office of the Dominion of Canada.  
*Japanische Mochen*; by Professor Dr. D. Brauns, of Halle.  
*Über d. Japanische Wildschwein*; by Dr. Nehring, of Berlin.  
*Fernere Nachträge zu den Bemerkungen über den Geographischen Verbreitung der Singvögel Japans*; by Professor Dr. D. Brauns, of Halle.  
*Kotoba no Soma*, or "Garden of Language"—a Japanese Dictionary, 6 vols.; by M. Kondo, Esq.  
 Australia: a Charcoal Sketch; by Frank Cowan.  
 A Visit in Verse to Hale-maumu; by the same.  
 The Terraces of Robomahana, a Poem; by the same.  
 A History of Japan in Japanese (after European models); by the author.  
 Publications of the Smithsonian Institution of Washington: Miscellaneous Collections, 14 vols.; Contributions to Knowledge, 21 vols.; Smithsonian Report, 1882.  
 Reports of the Director of the Bureau of Ethnology, one volume.  
 The Census of the United States. From the State Department.  
 United States Geological Survey Reports 1880-1881, 1881-1882, 1883, 3 vols.  
 United States Survey of Territories Wyoming and Idaho, 3 vols.

## BOOKS PURCHASED FROM DR. FAULDS.

The Chinese and Japanese Repository, 2 vols.  
 Faber's "Confucius."  
 Beal's "Dhammapadam."

As a preliminary to the formal election of Officers and Members of Council for the ensuing year, it was moved by Sir FRANCIS PLUNKETT, seconded by Mr. GUBBINS, that the offices of Corresponding Secretary and Librarian be combined for another year as they had been during the past two years. The motion was carried by a large majority.

The ballot for officers and members of Council resulted as follows:—

PRESIDENT:—N. J. Hannen, Esq.  
 VICE-PRESIDENTS:—B. H. Chamberlain, Esq., Rev. Dr. J. L. Armerman.  
 CORRESPONDING SECRETARY AND LIBRARIAN:—Rev. J. Summers.  
 RECORDING SECRETARIES:—Dr. C. G. Knott, W. J. S. Shand, Esq.  
 TREASURER:—M. N. Wychoff, Esq.

## COUNCIL:

Dr. E. Divers, F.R.S. Dr. N. Kanda, Esq.  
 J. M. Dixon, Esq. Dr. D. MacDonald.  
 J. H. Gubbins, Esq. E. R. Miller, Esq.  
 J. C. Hall, Esq. J. Milne, Esq.  
 Dr. Hepburn. R. Yatabe, Esq.

The meeting then adjourned.

## REVIEW.

*Transactions of the Seismological Society of Japan.*  
 Vol. IX. Part 1. 1886.

THE First Part of Vol. IX. of the Transactions of the Seismological Society of Japan has been issued. It contains three essays, one by Dr. C. G. Knott, F.R.S.S., and two by Professor R. Shida, of the Imperial University. Dr. Knott discusses that interesting problem, the frequency of earthquakes. His methods are marked by great originality and industry. By a skilful tabulation of earthquake observations and an ingenious application of Faurier's Theorem, for the expansion of a periodic function of a variable, he obtains an earthquake curve "whose longest period is the semi-annual, if such exists." This process he has applied, at the expense of no little labour, to the cases of Japan, Europe, New Zealand, the East Indies, and Chili. The ultimate object of his method is to determine the relative potency of factors which are supposed to be influential in producing earthquakes; namely, the tidal movements caused by changes in the sun's and moon's declinations and distances from the earth. In connection with this he gives an interesting *resumé* of scientific dicta with regard to the rigidity of the earth as a whole, arriving at the conclusion that our planet is as rigid as an equal-sized globe of steel. His ultimate inference is that the tides have comparatively little effect as seismic agencies, and that the snow gradient and the barometric gradient are more important factors. We cannot do better than quote his conclusions in his own terse and clear language:—

The cause of earthquakes is probably to be referred to the earth's heterogeneity of structure or to the inequality of stress due to the irregularities of its surface. Rupturing or yielding is not determined by the amount of stress only; it depends in great measure upon how the stress is applied. For rupture to take place the stress must be different in different directions; and the difference between the greatest and least stresses is an important datum in estimating the tendency to break. So far as can be judged, the only periodic stresses which exist of period long enough to tell upon the earth's substance are the fortnightly, monthly, semi-annual, and annual tides; the annual variation of snow-fall, and the steady annual and perhaps semi-annual oscillation of barometric pressure over the earth's surface. Inasmuch as the earthquake frequency reaches its maximum in winter wherever there is a marked winter season, we must pass from the tidal stresses due to the sun as of little account. We seem, however, to find in the accumulations of winter snow and in the long period oscillations of the atmospheric pressure two possible determining factors in earthquake frequency. The steeper the gradient, the more frequent the earthquakes.

The argument in support of this view is of a cumulative nature. First we notice that earthquakes occur chiefly in littoral countries, just where the greatest stress due to inequality of surface distribution may be expected to exist, and where also the snow and barometric gradients are steepest. Secondly, earthquake frequency has a distinct annual period in those regions where these gradients have a distinct annual period—maximum corresponding to maximum. In equatorial regions there is no marked maximum for either earthquakes or gradients. Thirdly, we have evidence of a semi-annual period in earthquakes; and in reality the barometric gradient has a semi-annual period, whose summer maximum, however, is small compared to the winter maximum.

It may be urged as an objection that the difference of pressure over contiguous areas is surely far too small to have any appreciable effect at a depth of several kilometres, where no doubt most earthquakes originate. But in dynamics we have many applications of the well known maxim that it is the last straw which breaks the camel's back. If the earth's crust has at any instant a strong tendency to yield to accumulated stress, a very slight additional stress will be enough to hasten the rupturing; and, after all, a difference of pressure of 6 millimetres of mercury between the ends of the arc joining Tokyo and Nagasaki is no despicable stress. And yet this steady average gradient lasts for three months of each year.

The conclusion then, is that the annual periodicity in earthquake frequency, when it does exist, finds a possible explanation in the annual periodicity of two well known meteorological phenomena—namely, snow accumulations over continental areas, and barometric gradients; at least no other cause that can be named or imagined fulfils all the conditions.

The first of Professor Shida's papers treats of an instrument designed by himself for measuring earth currents automatically. He discusses the subject in detail, examining mathematically the conditions which such an instrument should fulfil, and explaining how his instrument is constructed to secure them. His second paper treats of earth currents generally. It gives a succinct account of all the principal work that has been performed hitherto in this direction, adding his own results. The essay is worthy of the high reputation which Mr. Shida has already won for himself, and we do not doubt that in his hands the important subject of earth currents will find new developments. It is a source of much satisfaction to see the Seismological Society preserving its vitality and steadily contributing such valuable additions to our knowledge of a recondite and highly interesting subject.

## THE AGRICULTURAL PROSPECT.

We take the following report on the agricultural prospect throughout the country from the *Official Gazette*:—

**TOKYO FU.**—As the time when the young tea leaves appeared was about ten days earlier than last year, it was hoped that there would be a good crop for this year, but to the dismay of farmers, after harvesting the first crop, it was found that the aftermath must be insignificant owing to the warmth of last winter, and the unusual coldness of the first part of May. Those who are industrious in the cultivation of tea are said to get 140 to 150 *kan* of raw leaves yearly from one *tan* in a plantation established some 14 or 15 years ago.

**AICHI PREFECTURE.**—The climate was regular and mild, and the application of manure was sufficient, so that barley, wheat, and rye grew vigorously for some time; but after the middle of May the weather was rainy and, on the 22nd of the same month, a violent thunderstorm, accompanied with hail in some districts, caused great damage to the plants, so that even an average crop is hardly to be expected.

**SAITAMA PREFECTURE.**—The weather has been regular without either heavy rains or droughts since spring, and, reasoning from the present state of things, cereals (rice excepted) are expected to be plentiful being only slightly attacked by smut. Silk worms were all hatched out except in the district of Chichibugori from the 22nd of April to the 5th of May. Since then the weather has been regular for some time, but as the temperature was well suited for the worms, some of the early sort have already spun, and most of them are in the third and fourth stage. Mulberry leaves are plentiful and a fair result is expected. Tea was free from injury from frost and insects. The young leaves have come out four to five days earlier than usual. The crop was a fruitful one and the methods of treatment pursued have been generally sound. The tea prepared by the new patent machine invented by a native resident of the prefecture, called Takabayashi Kenzo, gives brilliancy of appearance and good flavor.

**ISHIKAWA PREFECTURE.**—Rice was free from injury after germination and transplanting. Other cereals are attacked every year more or less by insects and disease, but this year the damage was insignificant and the crop will be a fair one.

**Gifu PREFECTURE.**—Silk worms raised in the experimental silk factory established at the public expense have now mostly attained the cocoon stage, no adverse conditions being observable since hatching.

**TOYAMA PREFECTURE.**—Silkworms began to hatch out after the 7th of May, except those raised in the cool mountainous region, which hatched up till the 20th of that month. Although violent thunder occurred on the night of the 26th of the same month, accompanied with a sudden change of temperature, the worms fortunately sustained no harm. Warmly raised worms are at present in the fourth stage, and others in the second. Mulberry leaves are delicate and abundant enough to promise a fair result.

**MIYE PREFECTURE.**—Cereals (rice excepted) show better growth than usual, but the morning frost of the 15th May, induced smut which will lessen the harvest. Silkworms raised in the experimental silk factory were all hatched out between the 2nd and the 27th of April. They continued healthy through the different stages and all became cocoons during the seven days from the 21st of May. We are certain, although the estimate of the real quantity of cocoons is not yet made, that the result will be a fair one.

**SAGA PREFECTURE.**—Silk worms began to hatch out after about the 18th of April, 2 to 3 days earlier than usual. The weather was irregular and cold so that the second stage was very late. At present worms are in the third and fourth stages. The early kinds began to spin from about the 28th of May. The result will be better than usual.

**FUKUOKA PREFECTURE.**—Silk worms were all hatched out between the 18th and 23rd of April. Their growth was rather quick. Some have already got through the fourth stage. It will take two to three weeks more to finish the spinning. The result will be successful.

**TOCHIGI PREFECTURE.**—From some cause, supposed to be injury done by insects, barley is now increasing in colour and is somewhat unsound. No remedial measures have yet been found. The crop will consequently be small. Flax met no injury after its germination and is now five feet high and quite vigorous in growth. A good crop is expected, if it receives no harm before summer.

**Original Prefecture.**—Silk worms were not

healthy, having been injured by thunderstorms and unusual changes of temperature. At present they have almost recovered and may raise fair cocoons. One kind of injurious insect was hatched out recently which eats voraciously the young leaves of vegetables and trees. Steps are now being taken to exterminate it.

## CRICKET.

## ENGLAND V. THE WORLD.

Saturday's match between England and The World resulted very much as was expected,—in the discomfiture of the Englishmen. "The World" batted and fielded better than their opponents; though the difference in the fielding may be attributed to want of care in the placing of the men; balls batted by "England" seemed to be at once met, very few hits getting outside the field. The teams were captained by Mollison and Trevelthick. Trevelthick won the toss and sent Edwards and Hodges to the wickets; Sutter and Duff commencing the bowling. In Sutter's second over Edwards was caught out by Mollison—a dispiriting opening for Trevelthick's men, it must be admitted. Griffiths joined Hodges, who, however was immediately after caught by Till—fielding for "The World" at the time as a substitute. This brought Melhuish out, who also was almost caught out at the very beginning. Some runs were made, Griffiths hitting a 2, and Melhuish making a slip for 2, when shortly afterwards the former fell,—caught and bowled by Duff,—a splendid side catch with the left hand; three for 21. Till, the next to go in, commenced in a way which raised some hope he would repeat his previous Saturday's free-hitting, but a ball from Duff took him; and Hearne also fell, bowled in much the same way in the same over. Baggallay then appeared and made two good hits to square leg for 3, one off Sutter, the other off Duff, before being clean bowled by the latter. Trevelthick joined Melhuish, who was keeping his wicket well, and several runs were put on, the former making a slip for 2 and two good drives for 3 before being caught at slip by Mollison off Read, who had relieved Duff at the Settlement end. Brewer, like Till, was less successful on Saturday than in the last match. Read taking his wicket after he had contributed but two. Easton followed Brewer, Kenny relieving Sutter in bowling. Easton made one hit for 2, before succumbing to Duff, who had again taken the ball, going on at the Pavilion end this time. Kilby then joined Melhuish, and made five,—two ones and one three. Melhuish, who played much better than usual, notwithstanding the two catches he gave (the second would probably have been held had it not been for the sun), added another 3, and was then caught off a ball from Sutter. The innings closed for 24, a third being for extras, much of "The World's" bowling being very erratic.

Hellyer and Pearson opened the batting for "The World," Edwards and Hearne bowling. The former bowler's fifth ball took Hellyer's stump, and made way for Dodds, who would probably have done better had he had a little more rest. Pearson, who through going in last in both innings in the last match had not had an opportunity of showing whether he could be counted upon as a bat or not, made a pretty tip for 3 and two hits for 2, one off each bowler, before retiring before a ball from Edwards. Duff joined Dodds and the two stayed together a little time, the latter eventually being bowled by Hearne. Duff began hitting about pretty freely, scoring first a 3 off Edwards, then 2 and 3 off Hearne; and Sutter, who followed Dodds, also got hold of the ball, driving Hearne's first for 3, following that soon afterwards by another 3 off the same bowler. The batsmen giving promise of making a stand, Griffiths relieved Hearne at the Pavilion end. Still the batting got the best of things, Sutter driving Griffiths for 3 three times (making two of them in one over), and Duff scoring 2 and 3 several times, one of them being a splendid hit for 3 off Edwards. After a while Melhuish took Edward's place at the Settlement end, and not long afterwards Duff was caught at long-field by Hearne off Griffiths—a masterly catch which was deservedly applauded. Mollison, the next to bat, was as unfortunate as Edwards, being caught by Griffiths almost immediately upon going in. Read then went in and stood a while with Sutter, who was still hitting freely, thanks to one or two of the catches he gave having been missed. Edwards at this stage went on bowling again, taking Griffiths's place at the Pavilion end. After contributing ten, Read was caught out by Baggallay at long-leg, off Edwards. Kenny, who followed, was very well caught by Edwards off the second ball he delivered. Vivanti made 2

off Edwards's first ball, only to be clean bowled with the next one. Forster joined Sutter, hit a 2 and a 3 off Melhuish, and retired before the first ball received from Edwards; score 124. Hepburn, who unfortunately was very late in putting in an appearance, was the last to bat. Sutter soon after was caught out by Kilby—the innings closing for a total of 126. Judge Hannen and Mr. Barlow, relieved at times by one or two other gentlemen interested in the match, kindly acted as umpires. We append the full score and bowling analysis:—

## TRANSLATIONS FROM NATIVE JOURNALS

## ON COMMERCE.

(Translated from the *Nichi Nichi Shinbun*.)

[By OKURA KIHACHIRO.]

Two years spent in travelling through Europe and America constitute, I am aware, far too short a period of time to make one acquainted with the social, political, and economical conditions of Western countries. But, aided by my personal experiences, I profited not a little by my recent trip in the Occident, so far as concerns my own profession. While commerce is daily progressing in the West, Japan is still in a state of infancy in business matters, and at present especially her condition is extremely unpromising on account of the general trade depression. Unless we make extraordinary efforts to help ourselves out of our present embarrassed condition, our future prospects will be extremely dark and gloomy. I accordingly desire to call the attention of my fellow countrymen who are engaged in trade and manufactures to the measures I have to propose for the encouragement of commerce. I must beg their indulgence, for I am aware that my task may prove little better than preaching to Buddha or keeping a water store by the river side.

The object of the nation must of course be the advancement of the civilization of the country, and in order to attain this object, we shall have to strengthen our army, to extend railway, postal and telegraphic communication, to encourage education, to improve our sanitary condition, and to pay attention to an almost countless number of other things associated with the progress of humanity. But what is required at the outset is money; without it nothing can be done. The first requisite, therefore, for the attainment of our primary object is to increase the wealth of the nation. Something of the extreme poverty of this country may be seen by viewing the revenues of two European States. In England, the population of which is about 35 millions, the revenue usually reaches *yen* 500,000,000, or *yen* 14 per head; while France, with a population of about 37 millions, has a revenue of as much as *yen* 700,000,000, or *yen* 19 per head. Now, Japan has as numerous a population as the latter country, but her revenue hardly exceeds *yen* 70,000,000, or less than *yen* 1.90 per head. While Englishmen find it easy to bear as much as *yen* 14 and Frenchmen *yen* 19 per head, our countrymen are complaining of heavy taxes, although in reality the amount they pay per head is less than *yen* 2. Under these circumstances, it is simply idle to talk of such a subject as the strengthening of our army. We must by all means endeavour to increase our wealth; and for this purpose we must develop our productive resources and augment our foreign trade. While commerce is of such vital importance to the nation, the military prejudices of the people have not yet been

entirely swept away, and trade is still looked down upon with contempt. This lingering bias of feudal times is exerting a most baneful influence upon the development of our commerce. We accordingly find that, while in politics, law, education, army organization, etc., wonderful improvements have been wrought, trade alone remains almost unaltered until this day. If the public regard commerce with contempt, those engaged in business can have little respect for themselves. It is, moreover, extremely rare to find among commercial people a man possessed with sufficient daring and enterprise, the majority being contented with small profits and temporary ease. They are so depraved, too, that it is not uncommon to meet with a merchant who regards dishonesty as an ordinary feature of the mercantile profession. What is to be done? There may no doubt be many measures of more or less utility, but it is first of all necessary that the leading merchants of our country should exert themselves to the utmost to set the example in adopting European modes of doing business, and in the next place, that Government should give certain protection to merchants thus engaged in leading the way to improvement.

It is desirable that Government should give due protection to the foreign trade of the country. Of the staple products of the land, the most important are three in number, silk, tea and rice. These products are, however, by no means peculiar to this country; rice is exported from Russia, China, and India; silk from China, France, and Italy; while China and India produce enormous quantities of tea. Let us take tea and compare the respective amounts exported from China and Japan; the figures stand thus:—

	CHINA.	JAPAN.
	lbs.	lbs.
1883	210,673,000	37,147,000
1884	211,743,000	35,805,000
1885	221,770,000	38,579,000

Comparing the average for both countries for those three years, the amount exported from China is six times as large as that exported from Japan. If we now look at India, we find that she is making a very rapid advance in the tea trade; in 1883 the amount exported from India proper was 67,510,000 pounds, in 1884, 61,650,000 pounds, and in 1885 67,000,000 pounds; while Ceylon exported in 1883 1,600,000 pounds, in 1884 2,285,000 pounds, and in 1885 4,350,000 pounds. Thus we have to compete with those countries in the Western market, and in order to compete with success it is necessary to reduce the cost of production. This can be effected by reducing the expenses of transportation both on land and sea. It will also be important to take off either the whole or part of the export duties on staple products. In France, producers of sugar are receiving special protection at the hands of the authorities, while the Indian Government encourages production by reducing the railway rates. In England, too, import duties on gold and silver bullion are paid back in the event of reexportation after being wrought into finished articles. These are some of the instances in which State protection is extended to trade in other countries. Unless our Government can follow the example of those countries and give sufficient protection to home producers, our foreign trade will never flourish. Now, supposing that the cost of production has been sufficiently lowered and due facilities and protection given to products, the next thing required is to improve the mode of exportation. It is a commercial fact established by history that a country which sends its own merchants abroad will certainly prosper, while that which keeps its merchants at home cannot flourish. For the verification of this truth we need not look to other countries. In the reign of the Tokugawa dynasty the internal trade of the country was in the hands of the merchants of the Province of Ōmi, because it was their habit to go anywhere in the country, while the merchants of other provinces remained at home. Speaking generally, our merchants have accustomed themselves to severe political restrictions, and have confined themselves to domestic trade. It is true that the opening of the ports gave a salutary impulse to the development of our foreign trade, but the habits which took some centuries to form cannot be easily cast off. Whether in selling or buying merchandise, our merchants still rely upon foreigners, and consequently our foreign trade has been monopolized by foreign merchants. Not only is this practice a great loss to our mercantile classes, but it has a direct bearing upon the prosperity of the country. It is of course necessary that merchants should exert their utmost to regain the advantages of foreign trade; but it is equally important that the Government should give judicious and economically wise protection to those engaged in the task of improving our commercial status, so as to afford them the fullest scope of action. For example, when Government makes important purchases,—rails, men-of-war, guns, etc., the business ought to be entrusted

Original from

to Japanese merchants, instead of putting it in the hands of foreign merchants as heretofore. It is usually urged, in defence of this course, that Japanese merchants are inexperienced and have little credit in the foreign business world. I am unable to accept this apology; for in commerce, no less than in other things, experience and credit can only be obtained after practice in actual business. If our merchants are inexperienced and have little credit in other countries, the wisest course would certainly be to encourage them to engage in active business. But if Japanese merchants are denied, as at present they are denied, the only means of acquiring experience and credit, when will the day arrive when they can be trusted with important business? Moreover, it is not at all certain that every foreigner is experienced and honourable. Buying is comparatively easier than selling, and with a slight knowledge of foreign trade, any Japanese may manage to effect purchases fairly well. It is therefore to be desired that the Government business should in future be put in the hands of Japanese merchants, giving them the usual commission. This will lend a salutary impulse to trade in general, besides affording profit to the native merchants engaged in the particular transaction. Every large manufacturer has agents throughout the world, but we do not hear of an instance of a Japanese merchant becoming the agent of a foreign factory. All important purchases by our Government being made through foreign merchants, no Japanese can become agent for the business. If, however, this were entrusted to native merchants, they would find it easy to become the agents of foreign firms from which the articles are to be bought.

In the next place, I desire that Government should change the commercial system of the country on the model of European countries, so far as lies in its power to do so. In attempting the improvement of business transactions recourse has to be had first of all to reforms in material things, for improvements in the exterior will gradually lead to changes in the interior. Begin the work of improvement by establishing in this city large public places for carrying on business after the fashion of the bourses in Europe and America; change the system of Rice and Stock Exchanges into those of European exchanges, and introduce warehouses, wharfs, etc.

Thirdly, I wish to allude briefly to the question of mixed residence. If foreigners will denude themselves of their extra-territorial privileges, we must open the country for mixed residence, but in so doing, we must take precautions to prevent mixed residence from leading to disadvantageous consequences. These are various opinions as to the opening of the country, but in the present state of affairs, we must grant mixed residence. The immediate introduction of foreigners, however, will be accompanied by several undesirable consequences; so that it is of importance to change the business customs in the interior in favour of European and American customs, before admitting foreigners to live among us. It is also to be borne in mind, that under the term "foreigners" are included not only Europeans and Americans,—whose superiority over Japanese in intellect and morals will be of vast benefit to us,—but that in it are included other people, whose are below the Japanese in point of civilization, who lack the spirit of progress and are consequently contemptuously treated all over the world. When once the country is opened for mixed residence these people will swarm here in vast numbers; and circumstances are not wanting which prove that their introduction into this country will be anything but beneficial. Numerous countries are suffering from their presence to-day. It is, therefore, important to provide against this element of danger in granting mixed residence. This matter may at present appear to be of small consequence, but it will exert a vital influence upon the commerce of the country in the future.

I shall now address myself to my fellow workers in the field of commerce and industry, and beg leave to advise them to make themselves acquainted with the state of affairs both at home and abroad, and to spare no effort either in commercial or industrial undertakings to ably and firmly compete with foreigners. Speaking from my own observation while abroad, there is a circumstance which has touched my sensibility most keenly. I allude to the fact that the policy of each European country is evidently directed towards the East. For some years back, all have been vigorously at work in colonization; France in Annam, England in Port Hamilton, and in Upper Burmah, and Germany in the Carolines, the Marshalls, and New Guinea. These countries all vie with each other for political and commercial influence in the East. England designs to lay a railway line through Burmah into the south-western Provinces of China, while the Germans are trying to get into

their hands the work of supplying China with their manufactured articles and of laying rails in the Middle Kingdom. Thus the European nations are all earnest in their endeavours to attain a monopoly of power, commercial or political, or both. It is now high time that not only those engaged in foreign trade, but also all merchants should keep a sharp look-out and be prepared to meet any emergency that may at any time arise. With a formidable enemy at our doors, no moment should be lost in taking prompt measures of defence. Those of our countrymen who are engaged in foreign trade, are indeed in dangerous waters; they must arm themselves with the courage of the soldier and fight out the war as best they can. Those engaged in industry are in no less critical a position. In Europe and America, markets are places of competition between different manufacturers. For instance, when a manufacturer sells an article for a hundred yen, another will bring forth the same article at ninety yen, which still another may try to produce for the same price an article for superior in quality. Thus each manufactures to beat the others, by reducing the cost of production, which is effected by various methods. If, therefore, our manufacturers desire to widen the range of demand for their productions, they will endeavour to lower the cost of production and to improve the quality of their work. Besides these suggestions, there will be almost numberless measures and steps to be taken, but it is out of the limit of this essay to consider them all and I shall close my observations here. In concluding, however, I cannot help repeating, what I have already alluded to, that it is now time to adopt European systems of polity, literature, and manners, and that it is of pressing necessity that similar reforms should be inaugurated in commercial affairs. I have no doubt that should our merchants and Government act in harmony to carry out what I have briefly indicated in this essay, an important advance will be made in the commerce of the country.

#### NATURALIZING JAPANESE IN AMERICA

(Translated from the *Fiji Suimpo*.)

In our last issue, we mentioned that Americans, from their perplexing experiences with Chinese, are entertaining serious apprehensions as to the emigration into their country of our countrymen, the more enterprising of whom have become aware of the advisability of going abroad; and we further took the trouble to expose the folly of such apprehensions. Connected with the distrust of Americans in regard to Japanese, there is another matter of grave importance which we cannot pass by with indifference. We refer to the circumstance that a class of Americans, applying their feelings of dislike toward Chinese to our people without the least discrimination, are loud in discussing the necessity of prohibiting the emigration of Japanese. Their arguments may be summed up as follows. In 1872, the United States Government made an enactment respecting the emigration and naturalization of foreigners, restricting the right of naturalization to the white race and to African negroes; and when, in 1876, laws were established prohibiting the naturalization of Chinese, no enactment was made granting other people, apart from the Chinese, belonging to the yellow race the right of naturalization. From this circumstance the inference is drawn that Japanese, being neither whites nor negroes, are excluded from the right of naturalization. The Americans who differ from this view urge that the primary object of the enactment of 1872, was to prevent Chinamen from being naturalized, and that the later specific enactment of 1876 was made, in order that no ambiguity might remain as to the purpose of the earlier law. Thus the object aimed at was to deny Chinamen the privilege of being made Americans, and there ought to be no question as to the naturalization of Japanese. Public opinion is in this way divided in the United States of America. Which of these conflicting interpretations of the American law is correct, is a question about which we do not care much. Even granting that the enactment of 1872 really disables Japanese from becoming citizens in the American Republic, we have no doubt that Americans will readily avow their intention to amend the law and treat us on a better footing. Now on what grounds do they dislike Chinamen? The Americans were the first people who destroyed all the distinctions that wealth and social position give rise to, and in the face of this circumstance, it is inexplicable why they should attempt to prevent other people from enjoying their natural rights of liberty. Does their dislike of the Chinese arise from the fact that the latter have a yellow, instead of a white, complexion?

This is hardly conceivable, for the African Negroes, whose complexion differs from that of the whites far more than does that of Chinamen, are allowed to be naturalized. It will, then, be evident that the colour of the skin has nothing to do with the matter. In our opinion, the causes of America's unwillingness to admit Chinamen to citizenship are principally the following. In the first place, the Chinese people do not like Western civilization, and in political, religious, and social affairs and even in their mode of living, they persistently stick to their own civilization as the best on earth. Even those who live in America amidst civilized people still carry pig-tails on their heads, wear their native costume, eat rice, and worship idols. However long they may remain there, no impression seems to be made upon their minds; and it is quite natural that Americans should hold them in extreme detestation. In the second place, the Celestials are industrious and frugal, but they are the most parsimonious of people. As soon as they accumulate a sufficient amount, they pack up their furniture and go back to their native country leaving nothing behind them. This is another circumstance that has led to their unpopularity in America. Lastly, Chinamen are noted for their unclean habits. Everywhere they go they care not a whit to offend other people by the obnoxious aroma of their persons. These three circumstances are the most important reasons of the American detestation of Chinamen. Now, turning to Japanese, no one will deny that they have nothing in common with these peculiarities of Chinamen. When was there a nation as enthusiastic as the Japanese to cast off its old and antiquated customs and manners and to adopt those of civilized countries? In religion, politics, science, arts, military affairs, agriculture, commerce, and even in the modes of living, no reluctance is shown to copy from the West. Some of our countrymen go even so far as to dislike our yellowish complexion, and propose the encouragement of intermarriage as a means of improving the race. Indeed, in the magnanimity and liberality of our views, we do not yield a step to the people of America; and superficial people even denounce us as an unpatriotic people. There is no gain-saying then that in this respect we are very different from the Middle Kingdom. Next with regard to monetary matters, we go to the opposite extreme of the Chinese character; we are more prone to spend, than we are skilful to make, money. In point of economy we stand far behind Chinamen; and notwithstanding that the more far-sighted of our countrymen sincerely lament the extremely un-economical habits of the nation, it is not an easy task to change the customs which took several centuries to form. Lastly, cleanliness of the person almost constitutes a natural characteristic of the Japanese nation. Not only the Chinese but also the civilized people of Europe and America are in the eyes of Japanese very unclean. That we are the most cleanly people on earth, the Americans themselves will fully agree.

As argued above, there is nothing objectionable in our being naturalized in America. If the American people will take a little trouble to look closely into the matter, they will only be too willing to admit our countrymen into citizenship. If they persist in making no distinction between us and Chinese and attempt to deny us the right of naturalization, we shall be ready to defend the honour of the Japanese nation against their iniquitous actions.

#### AFFAIRS IN KOREA.

The following extract from a private letter from Seoul has been placed at our disposal:—

Seoul, June 16th.

The French Ambassador and suite have ended their mission and retired in no very good humour. They came bent on having religious liberty granted, and knowing it to be a question on which there would be much discussion, M. le Ministre sent his secretary to the capital to announce that he would not quit the fleet unless this clause of the treaty were granted at once. Now, Koreans like all Orientals are slow going people, and could not understand the cause of all this rush. They were averse to granting a decision on a subject that had not yet been presented to them. They therefore informed the secretary that while they wished to entertain the Ambassador and open negotiations, yet, if business was so pressing he would simply have to go. He didn't go, but came to Seoul. What is more, he gave up the religious liberty clause entirely, and asked for a reduction of tariff on some 25 articles of French manufacture. This was not granted, and the Envoy was about to leave without having accomplished anything, when the duty was cleared up, the duty was reduced on

12 articles, and the whole affair, which had lasted near a month, closed up with a dinner at the Foreign Office.

Captain Parker, U.S. Minister, has arrived and assumed his duties. He has created a most favourable impression and will doubtless well sustain the good name America holds in Korea.

The King and his counsellors are completely broken up at the thought of losing Lieut. Geo. C. Foulke, ex-U.S. Chargé d'Affaires. They will use every means to keep him in the country, and if possible secure him as an official of the Government.

A Korean company are negotiating for the purchase of two small steamers to ply between Chemulpho and Soul, a distance of some 80 miles by the large Han river.

The King of Korea has decorated Dr. Allen with a jade button and the third rank of nobility for medical assistance rendered during the *émeute* of 1885, and for starting a hospital soon after. The hospital has proved a great success and has recently published its first annual report.

### NOTES FROM KOREA.

(FROM OUR OWN CORRESPONDENT.)

Soul, June 23rd.

The First Annual Report of the Korean Government Hospital at Soul, for the year ending April 10th, 1886, has just been received. This hospital is one of the good results of the *émeute* of 1884. Dr. H. N. Allen came to Soul in the fall of that year, and the riot of December, in which Min Yong Ik was fearfully chopped up, gave him an opportunity for the introduction of Western Medical Science. The results being such as to attract the attention of the Koreans favorably, many of them wished to have the benefit of the superior science. "A proposal for such an institution," says the report, "was therefore drawn up, and Lieut. Geo. C. Foulke, U.S. Chargé d'Affaires to Korea, transmitted the document to the Korean Government. It was kindly received and acted upon at once. A good compound was selected, buildings made over to suit our wants, several hundred dollars appropriated for medicines and appliances, and a full staff of Korean officers appointed to represent the Government in this institution." It was opened formally April 10th, 1885. At first Dr. Allen was alone. A few weeks after the opening Dr. W. B. Scranton arrived and lent his assistance until Dr. J. W. Heron came, who was specially sent out by the Presbyterian Board of Foreign Missions to work in the hospital. Under the management of these two physicians the hospital flourished, so the close of the first year finds it well established and patronized.

During the spring a school, for medicine under the hospital management was begun. "Twelve students will be appointed annually. They will be given board, lodging, tuition, etc., and after completing their course they will enter the Government service with the rank of 'Chusah.'"

It is hoped when the first vessel of the Korean Navy goes into commission that we shall be able to supply her with a medical officer.

The whole number of dispensary patients treated is 10,460; hospital in-patients, 265. The treasurer's report shows that \$2,171.87 was given by the Government for running the hospital. Instruments and medicines to the amount of \$1,012 have been purchased by Dr. Allen.

While on this subject it may be proper to mention the private hospital founded by Dr. W. B. Scranton. He, too, is meeting with encouragement and success in his work. With these three trained physicians Korea may be expected to get a good introduction to western medical science. As shown by the figures above, their work is already appreciated.

Captain W. H. Parker, U.S. Minister and Consul-General to Korea, arrived in Soul on the 8th inst. Lieut. Foulke, the young and able Chargé d'Affaires *ad interim*, will have a well earned vacation of three months.

The "nursery tale" from the *Mainichi Shinbun* published in your edition of the 5th inst. surpasses anything I can give you. The "enterprise" of some papers in fabricating news from Korea is one of the marvels of modern journalism.

The obsequies of the late Marchioness Tokugawa, (wife of Marquis Tokugawa Mochitsugu) who died on the 29th ultimo, took place on the 7th instant, at the Honmonji, a Buddhist temple at Ikegami, in the presence of members of the Imperial family, peers, and old retainers numbering about five hundred.—*Fiji Shimpō*.

### LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, June 12th.

During the ten days which have elapsed since I last wrote, the only topics of interest have been the wedding of the President, and the political struggle in England. A few hours after my last letter went to sea, Mr. Cleveland and Miss Folsom were made man and wife by the ministrations of the Rev. Dr. Sutherland of the Presbyterian Church. There were but twenty-six invited guests, chiefly members of the Cabinet and their families, and personal friends of the groom and bride. Care was taken to exclude reporters, and the whole affair went off as quietly as if Mr. Cleveland had still been a practising attorney at Buffalo. After the wedding, which was celebrated at 7.30 p.m., the happy couple took a special train for Deer Park in Maryland, when they spent a quiet week's honeymoon in a cottage belonging to Senator Davis. The only circumstance which distinguished the wedding party from any other was the presence of a dozen detectives, who, during Mr. Cleveland's stay at Deer Park, patrolled the cottage grounds and permitted no one to approach within two hundred yards of the cottage. On Wednesday last, the President and his bride returned to Washington, where arrears of correspondence, and bills passed by Congress have kept him busy ever since.

The other topic of interest—the English political imbroglio—has been more generally interesting than the marriage. It has engrossed attention to the exclusion of home politics. Everywhere, on 'Change, in the clubs, in the streets, in private drawing-rooms, in the Courts, nothing is talked of but Home Rule. It is not Irishmen or the descendants of Irishmen who are excited on the subject. It seems to go home to every American. We talk as if we were still British subjects. People are for or against Gladstone with an intensity of passion which recalls the fight between Blaine and Cleveland in 1884. Everybody seems to want to take a hand in the coming elections. The situation curiously illustrates the ineradicable kinship between the English and ourselves, and shows how little geographical divisions have to do with popular feeling.

Meanwhile, Congress is making progress with the appropriation bills, and as the weather grows hotter, the cry for an early adjournment gains strength. No measures of national importance have been passed, and none are likely to pass. Through the aid of their friends in the Senate, the railroads have succeeded in preventing the passage of any measures for their subjection or for the forfeiture of lapsed land grants. One of the favourite methods of corruption employed by the companies is to retain as special counsel the senators who are influential on Committees. On Wednesday, Beck of Kentucky introduced a resolution condemning the practice. Edmunds of Vermont vainly tried to get it referred to a Committee, in order to stifle it: it was put to a square vote, and passed by a large majority. But Hawley of Connecticut had voted for the resolution in order to move to reconsider; he did so, and this hangs up the subject for this session. The bill abolishing secret sessions of the senate hangs fire, and may be defeated by indirection. Senators have no notion of parting with either their power or their sources of revenue. In the house, Morrison has given notice that he will call up his tariff bill on Thursday. The Republicans, with the help of the protectionist democrats, profess confidence in their power to defeat it. The silver question is dead for the present. The Eastern howl over the cart-wheel dollar has died out. No one objects to part with property in exchange for a 76 cents dollar, and so long as this is the case, we cannot do better than accept the ill and the good the gods provide with becoming submission. To thoughtful observers it is becoming more and more evident daily that, without the discovery of new gold mines, it is merely a question of time when gold will demote itself by its scarcity. The future commerce of the world will have to be transacted with the aid of paper money, based not on specie redemption, but on interchangeability with Government bonds.

The great convention of the Knights of Labour has adjourned. Its proceedings were private, and nothing is known of its transactions except what has leaked from individual members. Powderly, the chief workman, says that the proceedings were harmonious, and the conclusions reached conservative. Others, again, declare that the extremists were in a majority, and that resolutions were adopted looking to a renewal of the warfare against capital. It is certain that the labour unions throughout the country are dissatisfied with the Knights, and that the former refuse to have their power of ordering men out on strike abridged by

any central body. Various accidents indicate that the labourers' cause is not in luck just now. The strike of the car-drivers at New York has collapsed, and the men have gone back to work. Its net results have been great suffering among the strikers and their families, some loss of earnings by the companies, and some inconvenience inflicted on the public: nothing whatever has been accomplished by the strikers. Meanwhile, the anarchists, who tried to take the lead of the workman's movement, are under the heavy hand of the law. Most, the German, has gone to the Penitentiary for a year; a couple of score of his confederates are preparing for their trial at Chicago; another batch is under the harrow at Milwaukee. Anarchy is an exotic which does not flourish on American soil. Herr Most said he could not have been worse treated if he had been in Russia. He is not the first man who has realized that the little finger of the American people may, on occasion, prove weightier than the loins of an Emperor.

It may interest the Government and the people of Japan to know that a new and imperative demand for labour is about to arise in this State. Railroad extension will open up this year vast tracts of land hitherto practically unpeopled, yet abounding in resources. In Monterey, San Luis Obispo, Santa Barbara, Ventura, and Los Angeles counties millions of acres are being opened to settlement by the new railroad from Soledad; this land will grow oranges, almonds, prunes, grapes, olives, and all the fruits and cereals for which California is famous. Simultaneously, the great lumber districts of Shasta and Siskiyou counties are being opened by the completion of the California and Oregon line. These sections are covered with a dense growth of red wood and sugar pine, and at present prices there is a handsome profit in lumbering. The trouble in the way is that we have no labour to speak of. White men from the east invariably manage to own their own labour. Every industrious and intelligent man contrives, after a few months, to become his own employer. Hence orchardists in the south and lumbermen in the north are crippled for want of hands. Our natural labour supply should come from China; but race prejudice and Irish jealousy of the Chinese have excluded this valuable race of workmen, and in a year or two, we shall be looking round for substitutes. It may be worth the while of the Japanese to consider whether they would not answer the purpose. There is at present no prejudice against Japanese, even among the hoodlums. Perhaps this is because there are so few of them here; if they came at the rate of 1,000 or 2,000 a month, the Irish would probably get up a howl against them. But the Japanese are more adaptable than Chinamen. They do not adhere to their native dress; they are not so clannish; they adopt American customs and ways of living; it would not be easy to get up a general cry against them such as the sandlot has roused against Chinamen. We have an impression that they are an industrious, sober, frugal, intelligent race. If so, they would be welcome in the new sections of this State. Judging from the recent shipments of Japanese to the Sandwich Islands, and from the accounts in the *Mail*, which have been republished here, of the periodical famines in Japan, it ought to be an object for the Japanese Government to find a new home for a few hundred thousand Japanese families, where they could prosper, and make room for those they left behind. I throw out the suggestion for what it may be worth. The first tendency of landowners in the new country will be to repeal the Restriction Act, and import Chinamen. But this will be met with resistance by the sand lot and by the politicians whom it controls. The habit of cutting off one's nose is deeply-rooted in this State, whereas it would take considerable time to awaken a general jealousy of Japanese; and possibly, by that time, public intelligence may have made such progress that, on the question of noses, people generally may have come to the conclusion of Moses, that "it's the fashion to wear 'em."

### SAILING RACE.

A more enjoyable feature by far of Independence Day than the mere cracking of fireworks, was the sailing race which took place on Monday as arranged for. The match, which may so far be regarded as supplementary to the race sailed under the auspices of the Boat Club the other day, was subject to the conditions which usually govern such events. The start was arranged to take place at the Pacific Mail coal wharf, the course as laid down by the starter being round the Lightship and Kanagawa Spit Buoy, and thence home; the race to finish in three hours. The entrance fees, it was provided,

Original from

should be applied to the purchase of a prize for the first boat and a flag for the second. The arrangements were slightly upset by the absence of one or two gentlemen who were expected to take a prominent part in the affair, but eventually Captain Gorham consented to discharge the duties of starter, umpire, and handicapper, all of which offices, it is needless to say, he filled to the entire satisfaction of every one concerned.

It was evident early in the afternoon that the clause limiting the time of the race would be inoperative, a fresh breeze blowing steadily from south or a point to the eastward of south in such proportions as led sailing masters to think seriously of reefs and ballast. The start was fixed for 4.30, but it was found impossible to get the boats off before 4.37. When the gun was fired, Ethel, Zephyr, and Mercury crossed the line almost simultaneously, the others following close behind. With the wind as it lay, weathering the Lightship was not by any means too easy an operation, but, under the strong air which swept the caps off the waves out in the Bay, Ethel lay well up for the mark, Zephyr on her weather quarter, and Mercury pushing on to windward under reefed mainsail and foresail. Busted along at their best, both the close deckers made good time to the Lightship, Zephyr crawling up rapidly to the leader's weather bow; but Mercury had to be humoured, and unavoidably lost ground on the trip. Out in the fairway the gusts were coming up black and heavy; and after escaping the dangers of the strong flood tide which set the boat steadily to leeward on the out stretch, the orders were fast and lively while jibing round the Lightship. Zephyr was the first to starboard, and went round at 4.50, Ethel following at 4.51, Mercury a bare minute later, and Tomioka and Mary at 4.53. Tomioka was unfortunate in going round, and, losing her jigger, had to stand away for repairs, being thus thrown out of the race. Fast time was made down to the Spit Buoy, Ethel losing ground during the prevalence of the lighter airs while Zephyr and Mercury gradually improved their positions. At 5.03 Zephyr rounded the Buoy and started off on the first homeward tack, Ethel following at 5.11, and Mercury at 5.8. Three minutes later, Mary also went round, and started in to make up for lost time. Beating home was a tedious process, not altogether without its incidents, however, owing to the varying positions of the leading craft. Mary was prompt in proving her weatherly qualities. The wind which had seemed to lull at the moment of starting, though lively enough on the stretch to the Lightship, came out briskly on the home-ward trip; and while the large boats were making short boards to get clear of the shipping, Mary, weathering the threatening bow of a large steamer which had proved an obstacle to the others, was stretching merrily out, and gathering up her lost ground. Mercury after a long reach in towards the English Hatoba came gaily out, and finding Zephyr somewhat loath to give way, as the latter came about, snatched a jigger boom by way of reminder; but Ethel, with a lead obtained on the first tack homeward, was well to windward. Mary, with an eye to the winning line, now kept her crew busy with short boards, and Mercury, reaching far up to the bonthouse, shook out her reefs and lay well out clear of the shipping. A misunderstanding with Ethel brought the latter's bowsprit in dangerous nearness to Mercury's main sail, but fortunately a collision was staved off, though the time lost in luffing was ruinous to both boats. From this point the match was fairly in Mary's hands, Ethel and Mercury, in spite of bails and good sailing, losing ground fast. A couple of smart shifts, however, just outside the line brought both Zephyr and Mercury close up, the result being that Mary crossed the line at 5.44, Mercury at 5.45, and Zephyr at 5.47. The result was to a certain extent a surprise; the general opinion being that Ethel or Zephyr would take the first place, always supposing the wind should hold.

The following was the prize list:

J. Donald's Mary, 10 feet, 260 secs.	1
F. E. White's Mercury, 30 feet, 40 secs.	2
G. Whitfield's Zephyr, 32 feet, scratch	3
A. Owsen's Bertha, 17 feet, 300 secs.	4
Capt. Carst's Tomioka, 28 feet, 80 secs.	5
M. Baggallay's Lily, 20½ feet, 115 secs.	6
F. Samuel's Ethel, 30½ feet, 30 secs.	7

## IN THE YOKOHAMA KEIZAI SAIBANSHO.

Before Judge YOFU.—FRIDAY, July 2nd, 1886.

### THE RECENT SILK FRAUD.

Continued from Tuesday last,

Mr. Takanashi said he was requested by his client to ask the Court to call the committee for this month of the association of *banto* serving in foreign firms, in order to ascertain the exact nature and extent of the custom obtaining among this particular class.

The Public Prosecutor remarked that repeatedly held examinations previously had thrown considerable light on the whole circumstances connected with the case. Moreover, all parties concerned in the case must be presumed to know the nature of such customs.

Mr. Takanashi stated that Morita's deposition as to custom obtaining among *banto* in foreign firms differed, in the opinion of his client, from the facts. Thorough knowledge of the ordinary routine of business conducted by the generality of *banto* here was essential to a satisfactory understanding of the case.

Mr. Otsuka objected to the application, saying that the process proposed was most objectionable. Apparent signs of the spread of cholera compelled him to think it prudent to finish the proceedings as soon as possible. He and his client knew the custom.

Mr. Masujima thought such an application should have been sent in before this, and ought not to be brought forward at this stage.

The Judge said he would not refuse the application if there were any possibility of throwing new and important light on the whole question by doing so. Considering, however, that previous examination would suffice for the purpose of the present trial, he would reject the application.

Mr. Takanashi said his client was desirous to bring a civil action against the *Naruto-gumi*, and he would ask the Court to allow that firm to be included in the forthcoming civil case, and also that Nagai be called when the argument on the present criminal case should commence.

The Public Prosecutor thought the application could be accepted, although his duties would not require him to say anything on the subject.

Mr. Masujima said that it was preposterous to bring up such an application in this connection. The superintendent of the *Naruto-gumi* who had been examined up to the present as a witness should not be brought into the position of defendant. A civil action against the firm should be raised separately from the present action. The plaintiffs' representative was evidently looking out for some evidence to crop up in favour of his intended claims against the *Naruto-gumi*. The application if accepted would lead to a considerable derangement of legal procedure.

The Judge said he would decide the question just before commencing the discussion on the nature of the penalty to be proposed hereafter.

Mr. Otsuka thought it improper to send in such an application irrespective of the timeliness or other wise of the occasion on which it was produced. As he stated before, the immediate desire of the parties concerned was to finish the hearing without loss of time.

Mr. Takanashi said decision upon this point had an important bearing upon the interpretation of the Code of Criminal Procedure. He then obtained the permission of the Court to state what he had to say in defence of his position, after the reading of the evidence was completed.

Mr. Nishimura, clerk of the Saibansho, then read to defendants important parts of the depositions prepared at the police station. When the written statements of Takagi, Kanematsu, Ota, and Kodama had been read,

The Court was adjourned till afternoon.

On resuming,

The written statements of Yamamoto Jiusei and the remaining defendants, the deposition of Mr. Schoene, a statement of his answers to the questions of the Court, and other documents were read, which occupied till 3.30 p.m.

Mr. Nishimura then read part of the written statement of the deposition to the Court of Nagai Seitaro, at the request of Mr. Takanashi.

The Judge intimated to the defendants that they had now occasion to point out any difference between the statements contained in the documents, and what they had deposed at the police station and in the Court.

Homma said he did not say, as stated in his de-

position, anything as to the action of his fellow-employees, but was forced to seal the document with his thumb, the police having assured him that it would be recorded simply as his supposition, whereas the fact was not stated therein.

Imai Hayashi and Yamamoto pointed out statements in their depositions which they did not remember to have made in the police station.

Mr. Otsuka stated that his client thought the value of the remaining good bales as estimated in the deposition of plaintiffs differed considerably from his own calculation, and he would like to have them valued by proper authorities on silk.

The Judge said it was not necessary at present to ascertain whether the plaintiffs claimed the sum said to be the difference between the value of the good silk and the total advances. The petition for the civil action did not contain any statement to that effect. The plaintiff might mean to raise a civil action for the whole sum advanced.

Mr. Otsuka thought it would be very inconvenient if the sum involved in the fraud with which his client was charged were not previously agreed on, but he would not insist on it.

The written evidence connected with the case was then shown to the defendants.

Mr. Takanashi put some questions as to the meaning of entries made in Morita's note book.

The Public Prosecutor then mentioned, at the request of Mr. Masujima, such of the depositions as would materially bear upon the defence of the accused.

Mr. Takanashi, referring to his previous application, stated that two objections were raised to his request to call in Nagai Seitaro, superintendent of the *Naruto-gumi*, as defendant, that was to say, that such an application could be made only before the hearing of a public case and ought not to be brought up at the same time. He cited various provisions of the Code of Criminal Procedure in defence of his position. In conclusion he said that apart from all consideration as to provisions of law the party who connived at the perpetration of a fraud could be proceeded against by the party injured. The judge who presided over the hearing of a public action would know the nature of the civil action to be raised in connection therewith.

Messrs. Masujima and Otsuka combatted Mr. Takanashi's views.

After repeated interchange of opinions between counsel for plaintiff and for the accused,

The Judge ultimately dismissed Mr. Takanashi's application.

At this stage the Court was adjourned till the 9th instant.

## LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]—

London, July 2nd.

### THE ENGLISH ELECTIONS.

The following members have been returned unopposed:—Unionists, 46; Gladstonites, 55; Tories, 96; Parnellites, 68.

London, July 2nd.

Passage, 16 days.

## LATEST COMMERCIAL.

## IMPORTS.

The Market continues to wear a cheerful aspect, and the general indications are that trade in the country has become decidedly more prosperous during the last month. The business in Yarns has been quieter, but other articles have been commanding more attention, and improved prices have been paid for Grey Shirtings, Velvets, and Italian Cloth in considerable quantities.

**YARN.**—Sales for the week amount to 1,150 bales English, and 350 bales Bombay; prices have been steady, but generally in favour of sellers.

**COTTON PIECE GOODS.**—Sales reported have been as follows:—3,500 pieces 7 lbs. T.-Cloths, 2,500 pieces 8½ lb. Shirtings, 7,500 pieces 9 lbs. Shirtings, 1,000 pieces Indigo Shirtings, 2,500 pieces Turkey Reds, 3,500 pieces Prints, 1,000 pieces Silesians, 400 pieces Twills and 4,000 pieces Velvet.

**WOOLLEN.**—Only 3,000 pieces Mousseline de Laine have been reported sold, but other sales consist of 4,600 pieces Italian Cloth, 480 pieces Silk Satins, 180 pieces Figured Orleans, 100 pieces Checks and 1,000 pairs Blankets.

White, No. 4 .....	4.90 to 5.00
White, No. 5 .....	4.10 to 4.15
Brown Formosa .....	4.50 to 4.60

## EXPORTS.

## RAW SILK.

Our last issue was of the 2nd instant, since which date we have had a quiet Market until yesterday (8th instant); when buyers for Europe came with a small rush, and settled in one day twice as much Silk as was bought in the previous seven days. Settlements from 1st instant until date are 175 piculs, divided thus:—*Hanks* 100 piculs, *Filatures* and *Re-reels* 75 piculs. In addition to the above figures native exporters have taken about 35 piculs which are included in the shipments given below. In our last we gave complete statistics to the end of June—at foot we commence figures for the new season.

As noted above, the Market was very quiet with a small business at about former prices until the 7th instant, when a buyer for Europe started in and was followed by several hongs on the 8th instant. The demand for America has not been large, but with the advent of true *Shinshu* filatures we may hope for more business in that quarter—the manufacturers in the States, however, do not appear to be very hungry just at the moment, having plenty of old Silk to work upon.

At the moment the best telegraphic news appears to come from Europe, where the manufacturing outlook is better than for some seasons past. This, combined with a drop in Foreign exchange, has given courage to some of our buyers here.

As to prices: these wavered a little on some kinds, and a few small purchases were made at a slight reduction on last week's rates; but now, with the increased demand, all is strong again, dealers asking an advance in many cases.

Silk is now coming in pretty freely from *Bushu*, *Koshu*, and *Yoshu* provinces; *Shinshu* is also beginning to contribute, and we shall soon be in full swing. The total stock in Yokohama is 2,100 piculs, of which about 400 are piculs New. The old staple is being bought in moderate quantities for Europe, but the bulk of the 1,700 piculs will undoubtedly find its way back into the country for home consumption.

There have been two shipping opportunities during the week: the American mail of the 2nd instant and the English mail of 3rd instant. The former took 85 bales for New York, and the latter 19 bales for Europe. Total export, is therefore, 97 piculs, against 201 piculs last year, and 65 piculs to 9th July, 1885.

*Hanks.*—These have been pretty firmly held with very little buying until yesterday (8th), when a few buyers came in to fill their requirements for outgoing French mail. Prices are strong, some holders refusing to sell at present. In the list are *Omama* \$525, *Maibashi* \$485, *Hachioji* \$480 to \$465, according to grade. A few bales *Shinshu Uyeda* are in, but without finding a purchaser at present.

*Filatures.*—Business for Europe both in Old and New embracing *Utsunomiya* and *Murayama* \$700, *Koshu* (*Yamanashi-Ken*) \$675, *Hachioji* (*Tashiro*) \$625. In full sized Silks *Rokkoshu* is reported at \$690, *Hakuzuru* \$650, *Kaimetsu* \$645, *Koshu* (*Kaikokushu*) \$620, but now dealers are trying to establish an advance all along the line, the *Kofu* men being particularly stubborn.

*Re-reels.*—Not anything done worthy of note; there will no doubt be business for the *City of Peking* if holders are at all current.

America .....	85	175	—
Total .....	104	208	73
Settlements and Direct Export from 1st July	97	201	65
Stock, 9th July	210	110	400
Available supplies to date	2,100	2,630	1,050
	2,310	2,740	1,450

## WASTE SILK.

Again a feeble business of about 50 piculs, part old part new staple. Settlements are divided thus:—Noshi 32 piculs, Kibiso and Neri, 18 piculs. Prices have advanced considerably in the up-country Markets, and middlemen are talking of high prices here.

The transactions are principally Old Oshu Noshi at \$116, and New Bushu Kibiso at \$37, not sufficient to make a Market, so we leave quotations blank.

The Thibet (3rd instant) carried 62 bales for Continental ports, and the export to date is, therefore, 176 piculs (mostly old staple) against nothing in the two previous seasons.

Natives report that good Waste will be scarce and dear this year because the cocoons reel so well into Raw Silk that very little waste is made. We ought at least to get some good quality Pierced Cocoons, but none have arrived up to the present time.

## Export Table, Waste Silk, to 9th July, 1886:—

	SEASON 1886-87. PICULS.	1885-86. PICULS.	1884-85. PICULS.

Total piculs .....	2,100	Total piculs .....	950

## TEA.

Fully 6,600 piculs of Tea have changed hands during the interval at easy prices, and this week's business brings the total settlements to about 135,780 piculs for the season, against 99,110 piculs last year, which is large considering the unsatisfactory condition of the Markets where they are selling at 3 to 5 cents per lb. less than the cost in Japan. The Market both here and at Kobe does not seem much influenced by the low prices that are now prevailing on the other side. Receipts are daily falling off, and the Stock on hand is about 13,000 piculs of all sorts. The O. & O. steamer *Belgie* took from Kobe 130,617 lbs. for New York, 156,653 lbs. for Chicago, 32,614 lbs. for San Francisco, and 198,264 lbs. for Canada, total 527,148 lbs. The steamship *Musser* took 237,596 lbs. for New York, and 224,184 lbs. for Canada, aggregating 461,780 lbs. from Yokohama. The *Belgie* took 1,028,086 lbs. on the 2nd July as follows:—for New York 179,262 lbs., for Chicago 403,179 lbs., for San Francisco 403,274 lbs., and 42,371 lbs. for Canada.

## WE SHOULD BLOT OUT DISEASE IN ITS EARLY STAGES.

The disease commences with a slight derangement of the stomach, but, if neglected, it in time involves the whole frame, embracing the kidneys, liver, pancreas, and in fact the entire glandular system; and the afflicted drags out a miserable existence until death gives relief from suffering. The disease is often mistaken for other complaints; but if the reader will ask himself the following questions he will be able to determine whether he himself is one of the afflicted:—Have I distress, pain, or difficulty in breathing after eating? Is there a dull, heavy feeling, attended by drowsiness? Have the eyes a yellow tinge? Does a thick, sticky mucus gather about the gums and teeth in the mornings, accompanied by a disagreeable taste? Is the tongue coated? Is there pain in the sides and back? Is there a fullness about the right side as if the liver were enlarging? Is there costiveness? Is there vertigo or dizziness when rising suddenly from an horizontal position? Are the secretions from the kidneys highly coloured, with a deposit after standing? Does food ferment soon after eating, accompanied by flatulence or belching of gas from the stomach? Is there frequent palpitation of the heart? These various symptoms may not be present at one time, but they torment the sufferer in turn as the dreadful disease progresses. If the case be one of long standing, there will be a dry, hacking cough, attended after a time by expectoration. In very advanced stages the skin assumes a dirty brownish appearance, and the hands and feet are covered by a cold sticky perspiration. As the liver and kidneys become more and more diseased, rheumatic pains appear, and the usual treatment proves entirely unavailing against the latter agonising disorder. The origin of this malady is indigestion or dyspepsia, and a small quantity of the proper medicine will remove the disease if taken in its incipency. It is most important that the disease should be promptly and properly treated in its first stages, when a little medicine will effect a cure, and even when it has obtained a strong hold the correct remedy should be persevered in until every vestige of the disease is eradicated, until the appetite has returned, and the digestive organs restored to a healthy condition. The surest and most effectual remedy for this distressing complaint is "Seigel's Curative Syrup," a vegetable preparation sold by all chemists and medicine vendors throughout the world, and by the proprietors, A. J. White, limited, London, E.C. This Syrup strikes at the very foundation of the disease, and drives it, root and branch, out of the system. Ask your chemist for Seigel's Curative Syrup.

"Fast-street Mills, Cambridge-heath,

"London, E.C., July 24th, 1882.

"Sir,—It gives me great pleasure to be able to add my testimony in favour of your valuable Syrup as a curative agent. I had suffered for some length of time from a severe form of indigestion, and the long train of distressing symptoms following that disease, I had tried all possible means to get relief, by seeking the best medical advice. I had swallowed sufficient of their stuff to float a man-of-war, so to speak, but all to no avail. A friend of mine, coming on the scene in the midst of my sufferings, brought with him a bottle of your Seigel Syrup; he advised me to try it, trusting he felt confident it would benefit me. Being weary of trying so many drugs, I commenced it before trial, thinking it could not possibly do me any good, but ultimately determined to take the Syrup. After doing so for a short time it worked such a change in me that I continued taking it for nearly two months, and I then felt thoroughly cured, for I have discontinued its use for five weeks, and feel in the best of health, and can partake any kind of food with ease and comfort. I am therefore thankful to you that, through the instrumentality of your valuable medicine, I am restored to the state of health I now enjoy.—Yours truly,

"To Mr. A. J. White."

"W. S. FORSTER."

Those who are in the "Asthma Furnace" should lose no time in obtaining relief by the use of "The Rosingweed Tar Mixture," but do not use the medicine unless you will follow all the directions "to the letter."

Poor Asthma sufferers, who are strangers to "tired Nature's sweet restorer, balmy sleep," should make use of "The Rosingweed Tar Mixture." Quiet refreshing sleep will follow its use.

"Waterloo House, London Stile, Chiswick,

"February 17th, 1882.

"Messrs. White and Co., London.

"Gentlemen,—It is with great pleasure that I add my testimony to the wonderful effects of Seigel's Syrup. For years I had been suffering from bilious attacks, which began with giddiness, then most would come before my eyes, so that I should not be able to recognise any one or anything at the distance of a yard or two from my face. This would be followed by excessive trembling of my knees, so that I could not stand without support, after which a severe headache would occur, lasting often two or three days. I have tried various remedies for these distressing symptoms, but until I tried Seigel's Syrup I had no relief. Since then I have had excellent health in every respect, and if ever I feel a headache coming on I take one dose of the Syrup, which arrests it. Hoping that this testimonial may be the means of inducing others (who suffer as I used to) to try the Syrup, as I feel sure they will receive speedy benefit and ultimately be cured, I beg to remain, yours faithfully,

"A. H. HORTON."

Seigel's Operating Pills prevent ill effects from excess in eating or drinking. A good dose at bed-time renders a person fit for business in the morning. If you have Asthma use "The Rosingweed Tar Mixture."

## ELECTRIC LIGHTING.

AN ELECTRIC LIGHT ENGINEER, representing one of the LEADING ENGLISH FIRMS, is at present in Yokohama and will remain for a FEW WEEKS.

During his stay he is prepared to give ESTIMATES for Installations of ELECTRIC LIGHTING APPARATUS—driven by Gas, Steam, or Water—for HARBOURS, MINES, RAILWAY STATIONS, STEAMSHIPS, FACTORIES, Public and Private BUILDINGS, DWELLING HOUSES, &c., and to Survey or effectually Repair existing Plant. Open for consultation on any matter concerning the above. Address in first instance, by letter,

S. MAVOR,

Club Hotel, Yokohama.

Yokohama, July 6th, 1886.

t.f.

## NOW READY,

In 3 Parts, Demy 16mo, limp,

A ROMANIZED JAPANESE READER; consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION AND NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Tokyo; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, \$2.50.

The *Hiogo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c., Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

London: TRÜBNER & Co. YOKOHAMA: KELLY & WALSH, Limited.

Yokohama, June 4th, 1886.

## WEBSTER

In various styles of Binding.

Supplied at a small extra cost with PATENT REFERENCE INDEX. A great improvement in book-making.

The latest edition has 118,000 Words, 3000 Illustrations, a Biographical Dictionary (nearly 1000 names) and other valuable features.

IT IS THE STANDARD

Authority with the U. S. Supreme Court and in the Gov't Printing Office, and is recommended by the State Sup'ts of Schools in 36 States, and by over 50 College Presidents.

The *London Times* says: It is the best Dictionary of the language.

The *Quarterly Review*, London, says: It is the best practical Dictionary extant.

The *Calcutta Englishman* says: It is the most perfect work of the kind.

The *Toronto Globe*, Canada, says: Its place is in the very highest rank.

The *New York Tribune* says: It is recognized as the most useful existing "word-book" of the English language all over the world. BEST FOR FAMILIES AND BEST FOR SCHOOLS. G. & C. MERRIAM & CO., Publishers, Springfield, Mass., U. S. A.

THE GREATEST WONDER OF MODERN TIMES.

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

## SIMPLE, SAFE, AND CERTAIN! HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and house food poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of pigs, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

## LIEBIG COMPANY'S EXTRACT OF MEAT

FINEST AND CHEAPEST  
MEAT-FLAVOURING

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 17TH, 1886.

### BIRTHS.

On the 16th instant, at No. 214, Bluff, the wife of A. H. DARE, of a Son.

### DEATHS.

On the 12th instant at his residence, Nagatacho, Tôkyô, Mr. MORI, aged 81, father of H.E. A. Mori, Minister of State for Education.

On the 14th instant, suddenly, at Miyaneshta, GEORGE NACHTIGAL, aged 51 years.

## SUMMARY OF NEWS.

A JAPANESE Consulate is to be established shortly in Columbia.

THE REV. MR. BACHELOR is compiling a dictionary and grammar of the Aino language.

THE Imperial University will be closed from the 11th instant, till the end of the summer vacation.

AN Imperial Decree has been issued prohibiting the circulation of 10 *ten* notes after June, 1887.

THE MARQUIS YAMANOUE, who had been suffering from *kakke*, died on the 16th instant at Kochi.

IT is stated that His Majesty the Emperor will inspect the *Yanawa Kan* so soon as she is in order.

THE proposed line of railway between Shimonsaki and Yanagawa has been decided upon. Its length will be 85 miles.

THE cholera has so far abated in Kyoto that the authorities have under consideration the removal of quarantine regulations.

THE section of railway between Naoetsu and Sekiyama, with the exception of the bridge over

the Katami-gawa, will be completed in time for the line to be opened on the 1st of August.

THE value of imports at Nagasaki for the month of June was *yen* 64,947.26; and of exports for the same period, 325,277.21.

THE premium on silver has increased to *yen* 1 per *yen* 1000 in Kobe, owing to the growing demand for silver in business.

FIFTY physicians will in future attend in turn at the Private Dispensary at Yokohama and give prescriptions without charge.

THE Korean refugee, Kim-yo-Kun, having failed to leave the country within the prescribed period, has been placed under arrest.

THE present number of students in the Tôkyô Commercial College is to be increased from two hundred to four hundred next autumn.

DURING the month of June, over 20,000 tons of coal were shipped in native and foreign bottoms, at Kuchinotsu, mostly to Shanghai.

THE authorities having given their permission, the ex-Daimyo of Sendai is raising the necessary funds to establish a college in that city.

MESSRS. KURIGA and MISAKA, Foreign Office clerks, have been attached to the Japanese Consulates in New York and Pusan respectively.

THE Governor of Kanagawa visited the Foreign Office on Friday, the 9th instant, on business connected with the expulsion of Kim-yo-kun.

IN 1882 there were only two or three dairies in Osaka, but the demand for milk having considerably increased, there are now twenty-one.

DR. SANO, Chief of the Medical Inspectors of Kobe, is trying cholera experiments with several hares which he has obtained for the purpose.

H.E. SIR FRANCIS PLUNKETT, K.C.M.G., and Lady Plunkett, left on Friday evening for Nikko, where the Misses Plunkett are already staying.

A JAPANESE newspaper called the *Shinonome*, or Dawn of the Morning, was recently started at San Francisco by a number of Japanese residents.

COUNT INOUE, Minister of State for Foreign Affairs, will proceed to Isobe on the 20th instant. Countess Inoue left for that place on the 13th instant.

TWO graduates of the Engineering Department of the Imperial University have been appointed engineers in the Agricultural and Commercial Department.

THE Eastern Hongangi is about to send fifteen priests to Europe to report upon the condition of religion in the various countries on the continent.

IT is stated that a Japanese and a foreign engineer have received instructions to survey

the line of country along the route of the Tokaido for the construction of a railway.

MR. E. KNIPPING, whose term of engagement by the Home Department, will expire in March next year, has been re-engaged for another year.

HIS IMPERIAL MAJESTY THE EMPEROR inspected the recently completed iron bridge, the Kurihashi, on the 9th instant, leaving the Palace at eight o'clock a.m.

THE father of His Excellency Mr. Mori, Minister of State for Education, died on the 13th instant, and his remains were interred at Aoyama on the 16th instant.

THE Shinano-Echigo Railway line, which will be opened on and after the 1st August next, measures eighteen *ri* (one *ri* is equal to about 2½ miles) and has six stations.

THEIR EXCELLENCIES GENERAL COUNT YAMADA, Minister of State for Justice, and General Count Yamagata, Minister of State for Home Affairs, are on a visit to the Isobe springs.

THE military authorities have considerably improved the food supplied to the rank and file of the army, and have contracted for the purchase of about ten thousand head of cattle.

A COMMERCIAL college is to be established shortly at Fukushima with funds contributed by silk producers in the locality, and merchants in Yokohama who have dealings with them.

ACCORDING to official statistics for the year 1885, the total number of births in the country was 852,399, and of deaths 623,628, or a daily average of 2,335.33 and 1,708.57 respectively.

FROM March to June this year, 103,310 bags of sugar manufactured at the Government sugar factory at Mombetsu, in the Hokkaido, were exported, and 30,100 bags sold in the interior.

FIRE occurred at the Asakusa Park on the 13th instant, destroying eighty-nine houses. The fire originated in the explosion of some fireworks manufactured at the house of Kobayashi Ichi.

A GENERAL meeting of the shareholders of the Tôkyô Rice Exchange was held on the 12th instant when a dividend of ten per cent. per annum was declared for the first half of this year.

THE out-put of coal has considerably decreased of late in Kiushiu owing to continuous rain, which has damaged many collieries. The quotation in Nagasaki and Tôkyô is on the increase.

SO soon as the *Alaya Kan* is launched at Onohama Dockyard, the *Akagi Kan* will be laid down in the same shed, the plates and other material being all in readiness to commence work on the new ship.

GENERAL COUNT SAIGO, left Tôkyô on the 13th instant, for Europe. He was accompanied to Shimbashi and Yokohama by several Ministers of State, and a number of military and naval

officers, officials of *chokunin* and *honjin* rank, and representatives of the Tōkyō Merchants' and Manufacturers' Association.

THE authorities of the High Normal School have resolved on despatching to Europe and America competent graduates of the school every year in order to the completion of their studies.

OWING to the continuous dry weather, the water in the rivers in the neighbourhood of Tōkyō has considerably decreased, and in consequence several mills have been obliged to suspend operations.

THE Minister of State for the Treasury notifies that 10 *sen* notes, the circulation of which will be prohibited on and after 30th June, 1887, should be redeemed at the offices of the Bank of Japan before that date.

ABOUT fifteen thousand gold fish have been exported this year, at the rate of about *yen* 2.50 per 100. The larger number of the fish hitherto exported died on the way to their destination, owing to the imperfect method of conveying them.

THE new Naval Loan Bonds are now applied for at a premium of from 1 to 3 per cent. There is a great demand for the bonds in Osaka than in Tōkyō. Tenders for the first instalment of five million *yen* aggregated sixteen millions.

IT is stated that as the modes of egress and ingress at Shinjishi Station are highly inconvenient to the public, the present doors will in future be used as entrances, and exit gates will be opened where the lavatories are now situated.

AN official recently submitted a written statement of his views to the authorities on the subject of hunting, in which he proposed that all hunters should be subject to regulations whether they engage in hunting as a trade or for pleasure.

THE recent graduates of the Tōkyō Mechanics' School entertained Dr. Wagner, a teacher of the school, at the Ejimiken, Fujimicho, Tōkyō, in recognition of the value of the instruction given to them by that gentleman during the course of their study.

THE lessees of the theatres of Kyōto, having petitioned the authorities for permission to reopen their houses, have been informed that their request cannot be granted until the number of cholera cases sinks to 10 daily, and has so continued for a week.

THE Osaka-Sakai Railway Company has declared a dividend of 8 per cent. per annum for the second quarter of this year, against 10 per cent. for the first quarter. This decrease is due to the falling off in the number of passengers between the two places owing to the prevalence of cholera.

AT the annual meeting of the subscribers to the Hyogo International Hospital, held on the 13th inst., the report of the trustees was presented, and the accounts showed a balance in favour of the institution of 8714.50. It speaks well for the treatment of patients that, according to the report of the Medical Director, Dr. Thornicroft, only one small-pox patient was lost out of ten cases.

PROFESSORS in the Engineering Department of the Imperial University have established an association termed the House Architectural Asso-

ciation, and will deliver lectures on the subject of house architecture once a month at the office of the Geological Society at Nishi-Konyacho, Tōkyō. The object of the association is to investigate the art of house-building, in view of the increasing number of brick houses and the proposed improvement of the capital.

A sum of *yen* 58,000 has been remitted to their families at home by 1,180 Japanese emigrants to Hawaii, who left Japan in January and June last year. Those from Hiroshima, Yamaguchi, and Kumamoto Provinces are said to be the most saving, and in those Prefectures many people have since sent in applications for permission to go to the Sandwich Islands at their own expense.

A Buddhist temple at Tennojimura has been broken into by a gang of eight robbers, who, having securely bound the acolytes and attendants, demanded of the priest in charge the money in his possession, threatening him with death. The brave priest steadfastly refused, and the miscreants left the ecclesiastic more dead than alive, with six gaping wounds. They fled on the approach of assistance.

THE extensive business noted last week in some branches of Imports has continued; indeed the amount of the transactions during the interval has far exceeded that of its immediate predecessor, and this, too, at an advance on almost every description of goods in request. Sales of Yarn have been about 1,700 bales, of which three-fourths were English spinnings, and mostly at an advance on recent rates, the market closing firm. Quite 30,000 pieces 9 lbs. Shirtings were sold, at higher prices for early arrival, and the business of the week included 7,500 pieces 8½ lbs. Shirtings, and 3,500 pieces 7 lbs. T. Cloths at slightly better prices; 4,500 pieces Velvet, 6,000 pieces Turkey Reds, 3,600 pieces Dyed Shirtings, 2,000 pieces Prints, 4,500 pieces Silesians, and 1,000 pieces Victoria Lawns, all at rather higher rates. Woollens have also been in fair request, and the amount of business done and the prices obtained are an improvement upon the recent condition of the trade. As usual at the time of year, Metals are dull, and as buyers hold off, stocks arrive and accumulate, and holders—being further disheartened by a constantly falling exchange—are having a bad time. Nothing has been done in Kerosene since the big spurt at the end of last week, which appears to have quite filled immediate requirements. Sugar is in much the same state as last reported. Of Exports, the Silk trade has not yet assumed great dimensions. Buyers for Europe seem quiet, and although some business was done to ship by the last American steamer, the total was not great. There appears to be a considerable difference at present between buyers and sellers as to values, but news from consuming centres during the next two weeks will probably adjust matters to some extent. A little has been done in Waste Silk, both old and new, but holders have been asking rates which are prohibitive. The Tea trade is moderately brisk. At the end of last week a rush was made on the leaf on offer, and nearly 3,000 piculs changed hands in one day, but business has since toned down, and the week's transactions were within a few piculs of those recorded same time last year. Foreign Exchange continues on the downward line, the dollar being now very close to three shillings.

## NOTES.

WE learn from a home exchange that "Dr. Naumann, lately Director of the Geological Survey of Japan, is at present delivering lectures in various parts of Germany on Japan generally, and on the experiences and results of his survey in particular. At the twenty-third commemoration of the Geographical Society of Dresden he delivered a lecture, the report of which fills a column of the *Dresdener Anzeiger*, on Japan and the Japanese, which was the event of the meeting. The lecturer covered a very wide field; he spoke especially of the causes of Japanese seclusion, and discussed the effect of the introduction of Western culture and methods of administration. At a meeting subsequently of German geographers in Dresden he read a paper on the geological survey, and exhibited many maps which the Survey Department had produced. The last issue of the proceedings of the Geographical Society of Berlin also contains a paper by the same author on Japan, in which he first describes the geography of the country, and then discourses, like the valrus and the carpenter, of many things: but as he understands what he is talking about, and has the faculty of making everything interesting, the lecture reads very pleasantly. It can hardly be said that Dr. Naumann takes a doleful view of the future of Japan, but he certainly does suggest the possibility that all may not go well in the future. He appears to think that too many reforms are undertaken, merely because they are the fashion, and that resolution and tenacity in carrying them out are too often lacking." The spectacle of Japan hurrying on from the old to the new not unnaturally awakens a conservative instinct in many foreign beholders. And undoubtedly Dr. Naumann's criticism is correct, for it would not be difficult to point to more than one reform hastily undertaken and ultimately abandoned because of its own incongruity or the irresolution of its inaugurators. But as to the solidity and breadth of the average advance made by Japan during the past two decades, there cannot, we imagine, be much room for question.

MR. E. F. FENOLLOSA has just returned from an official inspection of the art relics in many of the temples of Yamato and the neighbouring provinces. Mr. Fenollosa was, we believe, the first to point out that, in spite of catalogues made several years ago by order of the Government, and supposed to include everything of value in the possession of the temples, their treasures were in gradual process of surreptitious dispersal. This was due to two causes. In the first place, the catalogues had not been made with sufficient care. The declarations of the priests had been taken as conclusive with regard to the relics in their keeping, and, as a natural consequence, only a portion of the contents of the godowns had been recorded. These catalogues thenceforth became the sole means of checking the *homatsu* at each temple on occasions of annual inspection, and whatever had eluded entry was, of course, disposed of when a good market offered. Then again, there was no way of identifying specimens. A picture entered in the catalogue as the work of Godoshi or Kohogen, might easily be replaced by a copy without running any risk of detection by the official inspectors, who seldom if ever possessed sufficient knowledge to distinguish

between a copy and its original. Advantage is believed to have been freely taken of the opportunities thus afforded, and the Government has adopted a most desirable, though we cannot say a timely, course in instituting an inspection through an expert. Mr. Fenollosa, with the aid of the officials who accompanied him, made his way into the store-houses of a series of temples and accurately catalogued every object they contained. Quite a number of rare and valuable specimens were unearthed, and as it is in contemplation, we believe, to extend the process to other provinces, there is reason to hope that a permanent check will be imposed upon that ruthless dispersal of the temples' art treasures which has been going on with little intermission ever since the Restoration.

Among the specimens discovered was a head of Buddha in white stone-ware, the hair only being glazed. This piece dates as far back as the Tang Dynasty (618-907). It is of Chinese manufacture, and the execution is described as exceptionally fine. Chinese stone-ware of such high antiquity is exceedingly rare, and this piece will possess immense interest for connoisseurs. It has passed into the possession of the Department of State for Education, and will doubtless find its way ere long to the Museum of Antiquities in Ueno.

THE *Nichi Nichi Shimbun* of the 7th instant contained the following reference to the case of Kim-yo-kun:—Our contemporaries have passed various criticisms upon the step taken by the Government in regard to Kim-yo-kun, but to us the whole affair is very plain, admitting no grounds of doubt. At the time of the fugitive's flight to this country, the Korean Government requested his extradition; to this our Government replied in the negative, for, in the first place, there is no extradition treaty between Korea and Japan, and secondly, even if there had been such a treaty, it is the usage of international law that a country is not bound to extradite a political offender. The standard of international intercourse is very low in China and Korea, and both countries no doubt viewed Japan with suspicion and distrust, because of her affording asylum to the Korean political refugee, although in doing so she had no ill-feeling toward either of her neighbours, being directed solely by a regard to international usages. We would have given China and Korea immense satisfaction had we complied with their wishes; but aspiring, as we do, to a position of equality with European and American countries, we cannot be expected to disregard such a plain requirement of international law as that which was then in question. Our Government, therefore, firmly rejected the requests for extradition. Subsequently nothing was heard about Kim until the apprehension of Oi and others at Osaka, who were reported to have laid a plan of attack upon Korea. Although he was not connected with that affair, he once more became an object of public attention, while Korea and China manifested considerable alarm over the event. Meanwhile, it was rumoured that Korea had an idea of sending assassins to kill Kim, and quite recently a man named Chi Un-ei was reported to have a commission from the King of Korea to effect the murder. This led to the return of the suspected Korean to his country, and to the step taken by the Government, as

reported in a former issue. As may be seen from these circumstances, as well as from the instructions issued by the Minister of State for Home Affairs, Kim has been ordered to leave the country, entirely from considerations as to the interest of the Japanese Empire, and the whole affair has nothing to do with any request from other countries; nor is it in any way connected with extradition. Such being the case, Kim has full liberty to select the place of his future residence. Moreover, the period during which he had to depart out of the country expired on the 27th ultimo, and another period of fifteen days was granted as grace, on his application. During this period he will be able to leave for America, his present difficulty being the expense for the voyage. Thus our Government has on the one hand averted cause of apprehension as to our internal and external peace and safety, and, on the other, has maintained the right of independence by dispensing with extradition; while to the personal safety of Kim himself, the step has been highly favourable. While it is derogatory to an independent State to deliver a political fugitive to his own Government, diplomatic statesmen can hardly be indifferent to ill-feeling on the part of a friendly country. In such a case, it is customary to order the fugitive out of the dominions of the Government under which he has taken refuge. Such a step is specially necessary when the presence of the refugee is prejudicial not only to the external safety but also to the internal peace of the country in which he has sought asylum.

The *Hochi Shimbun* has the following on the same subject:—By the account we elsewhere give (taken from the *Japan Mail*), our readers will learn many facts relating to Mr. Kim-yo-kun. He belongs to one of the most important families in Korea, and is a gentleman of daring and talent. Visiting this country some years ago, he was fascinated by our progress in civilization, and, believing in the importance of Japan as an ally, he went home with a firm resolve to start Korea on the path along which we are now marching. His pro-Japanese tendencies roused the hatred of the Chinese party. Indignant at the obstruction offered to his patriotic projects by his conservative antagonists, he at length resorted to force in December, 1884, with the result we so well know. Was it his ambition or his patriotism that prompted him to this step? We need not decide which, for the public has already formed an opinion on the point. When he fled to this country after his unsuccessful attempt, both the nation and the Government willingly gave him asylum, following the customary usages of international law. And it is the wish of the Government as well as the people of Japan to give the unfortunate patriot as much protection as possible; but such is the unsatisfactory condition of human society that it has become necessary to refuse him the hospitality we are only too willing to extend to him. At the time of his flight hither, both the Chinese and Korean Governments repeatedly applied to our Cabinet for his extradition; but the Government rejected all such demands as contrary to the usages regulating the laws of nations. It being within our power to afford asylum to a political fugitive, we have been doing nothing contrary to justice. But the existence of bad feelings on the part of the Korean and Chinese Governments cannot be lost sight of. In giving asylum

to Mr. Kim-yo-kun, we entertain no ill-will to either Korea or China, but it is evidently necessary to take sufficient precautions against his making preparations for a renewed attempt, for by allowing him to do so we violate the duty of friendship to his country. Has Mr. Kim-yo-kun done anything of the sort, tending to create serious trouble to the country which has hitherto done its utmost to give him asylum? If so, our Government has a right to visit him with the due penalty of our laws, for he does not enjoy extraterritorial rights. But that the Government has taken no such steps, proves that he had not made preparations for a new attempt upon his own Government. Why is it, then, that he has been ordered to leave this country? Recently a Korean, Chi-un-ei by name, came to Tôkyô. He was suspected of murderous intentions in reference to Mr. Kim, who at once applied to our Government for protection. The official examination of the suspected assassin resulted it seems, in a vague justification of the suspicion, for our Government then asked the Korean Government whether the King had given any such orders to Chi-un-ei as he was asserted to have received. The answer was of course in the negative, but to prevent any future trouble, he was sent back to Korea. Who knows that a real assassin will not in future cross the strait and lay hands on Mr. Kim? In such a case, will there be no fear of diplomatic complications between this country and Korea? This, we suppose, is the principal cause which has led to the recent step taken by our Government concerning Mr. Kim. When a political criminal escapes to another country, his Government has a right to apply to that which has given him asylum to take measures to prevent him from making another attempt. But the extreme limit of this right ends at requesting the deportation of the criminal to another country. To this request consent cannot be required unless there is evident proof that the Government of the country in which the criminal resides, is unable to prevent him from harbouring dangerous designs. Now, our Government can never be supposed to be incapable of taking sufficient precautionary measures. Hence it is clear that our Government have ordered Mr. Kim to leave the country, not on account of any request of either Korea or China, but simply because his presence here is deemed prejudicial to the internal administration of the country and to our foreign relations. It is, however, asserted in certain quarters that the consequences of giving him asylum must have been apparent from the first, and that to order him, after the lapse of a long interval, to leave this country, creates a doubt as to the consistency of our foreign policy. It is, moreover, said that by suffering him to remain in this country as before, there is little fear of any serious consequences, and that to be over apprehensive of such consequences, is to show lack of decision and firmness on our part. These opinions are worth considering.

The *Foron Shimbun* refers to the case in the following terms:—While three of his comrades, shortly after their flight, went to America, Kim alone remained in this country. In the meantime, the Korean Government sent Joshô-u and Mollendorff to effect, among other things, the extradition of the fugitive, but in this they were completely unsuccessful, as our Government would not consent to anything of the kind. The Korean Government, however, were un-

flagging in their attempts, secret and open, to accomplish the arrest of Kim. But to their great disappointment, all their efforts were vain, when an adventurous youth appeared to make a profitable use of the opportunity, in the person of a brother of the favourite mistress of the King of Korea, named Chō-Ju-Kei, otherwise Kō-Fuku. He had for a long while resided at Kobe, where he possessed a house of his own. About June last year, he went to Sōul, and was at once taken in to the confidence of high officials there in consequence of his offering himself for the task of assassinating the rebel, Kim. In August he reached Japan, carrying with him a document of commission, and several thousand yen. His conduct was, however, totally different from that of an assassin; he took no note of the movements of Kim but resumed his accustomed way of living. The Korean officials soon found out that they were cheated; and the whole affair subsided into silence, after being a temporary theme of conversation. Subsequently nothing was heard about Kim, till another enterprising spirit appeared in Korea,—Chi-Un-Ei, a petty official in the War Department of the Korean Government, who early imbibed ideas of progress and civilization from his master Kim-yo-kun, but who, being now employed by a conservative Government, recommended himself to their favour by the reputation of being a spirited youth. Embarking on board the *Mino Maru*, which left Ninsen on February 23rd, he reached Kobe; and after staying a little over a month at Kobe, where he met Chō-Ju-Kei, he started for Tōkyō, where he arrived on May 1st, after visiting Ōsaka and Kyōto and travelling along the Tokaido. Lodging at the Isokan, Ichōme, Minami-nabecho, Kyōbashi-Ku, he wrote on the following morning to Kim, who at that time lived at Yariyachō in the same urban division, requesting an audience of him, which the latter refused. Meanwhile, [the three students, Riu-Kaku-Ro, Shin-O-Ki, and Tai-Ran-Ryō, who were living with Kim, narrowly watched the movements of Chi-Un-Ei, and found many circumstances which appeared to them highly suspicious. One of them, Kiu-Kak-Ro, who was on confidential terms with Chi, one day invited the latter to a restaurant, where Riu, desirous of obtaining some tangible confirmation of his own and his fellow refugees' suspicions as to Chi, told him that all the fugitives were repenting their former crimes and that Chi would put them under an inestimable obligation by mediating on their behalf. Riu then went on to ask whether Chi had come to Tōkyō with a secret command of the Korean King to take Kim's life, at the same time alleging that he and his fellow students would be only too glad to execute the business for him, should he act on their behalf and obtain leave for them to return to Korea, and pointing out that, as Kim was very watchful, he (Chi) would be unable to do the thing himself. Deceived by these declarations, Chi confessed that he was sent for that purpose by the King, and that he had received a dagger from him. Chi, moreover, told his companion that, should he succeed in murdering Kim, he (Chi) would give him as a reward a sum of 5,000 yen. At the request of Riu, this promise was put down in writing with Chi's seal, under date April 29th (June 1, in our calendar) in the 496th year of the Korean era. That nothing might be wanting to establish the true character of the suspected assassin, Riu

requested to see the document of commission and the dagger, which were at once brought from the Isokan. The dagger was of Korean make, about 18 or 19 inches in length, and the Royal letter of commission ran thus:—

"We hereby commission you to cross the sea, and apprehend the rebel, to accomplish which object you shall have full power to act according to circumstances, using due caution not to make fruitless attempts."

[Royal Seal.]

Being in imminent danger, Kim at once applied to the Government for protection, but being suddenly refused further accommodation in his then lodgings, he removed to Yokohama on June 3rd, and took rooms at the Grand Hotel, while Chi and the three students lodged at the Club Hotel. On the issue of the order by the Minister of the Interior on June 12th, the Governor of Kanagawa ordered Kim to leave the Empire, sending him a copy of the order. On the other hand, the Government at once telegraphed to Sōul, asking whether the King had given a commission to Chi to assassinate Kim; to which the Korean Government replied in the negative, and ordered Chi to return to his country. Accordingly Chi was sent back on June 3rd on board the *Tokohama Maru* under the escort of Messrs. Sawada and Nakajima, the one a police sergeant and the other a detective of the Kanagawa Prefectural Government. As to Kim; on the 27th ultimo, he applied for another period of 15 days' grace, which was granted, and he is still staying at the Grand Hotel.

The *Hochi Shimbun* publishes a very pretty sermon on the proper method of conducting a nation's foreign policy. "Adopt a well considered line, and follow it unflinchingly"—that is the sum and substance of our contemporary's counsel. Good counsel, no doubt, but too abstract to be interesting. If the *Hochi* had explained to what incident of Japan's foreign policy we are indebted for its homily, the thing would have been worth attention. Our contemporary, however, seems to be inspired solely by a general solicitude that Japan should make herself respected by China and Korea. One would imagine that she had been doing something calculated to forfeit their respect, but if such be the case, the *Hochi* does not say so. It has often been declared of China that the only way to win her esteem is by smiting her hard. We wonder whether the *Hochi Shimbun* advocates anything of that sort. There is nothing in dispute at present between China and Japan, and we are at a loss to understand how the former is to make a display of firmness capable of winning the *Hochi's* approval, unless the occasion be first created.

Mr. PROUDEN, who, we perceive, has now supplemented his claims upon public credulity by adopting the title of "Captain," and who also enjoys the honour of writing after his name the letters F.R.G.S., contributes, to the *Pottery Gazette*, the following remarks upon glass manufacture in Japan:—"The process of glass-making appears to have been known in Japan for some centuries, but it was not extensively carried on. Small articles, of no very great antiquity, but undoubtedly Japanese, were to be met with in Yedo, twenty years ago, when many of the old families were disposing of their family art treasures. In Nagasaki, and in Yedo, glass-blowers carried on operations on a small scale. Scientific apparatus, thermometers, barometers, vials, test tubes, &c., were made of suitable mate-

rials, but the 'pots' and furnaces were too small to enable large articles to be produced. Erasmus Gower, Esq., the adviser on mining, &c., to the Government, about fifteen years ago, induced the Japanese to erect a small establishment in Yedo, and skilled workmen were engaged from Europe. The first buildings were erected near the new railway cutting that runs through that part of the well-known suburb of Shinagawa that was reserved as the site of the foreign legations, and at the rear of the hill called 'Ten Thousand Pine Trees Hill' (*Banshō-san*) on which stands the temple, 'Eastern Ocean Shrine' (*Tokai-ji*). Glassware was imported in large quantities, and though comparatively cheap, had little sale amongst the natives, partly on account of its fragile character. Until quite recently, window-glass was not in use, the houses not being adapted; and it is only in recently-erected public buildings, and to a small extent private residences, where (*sic*) the windows have been glazed. Artistic glass has not yet become a large item of trade. Imitation of translucent crystal has been carried on to a considerable extent; indeed, a buyer must now be careful not to be imposed upon. The colloquial for glass in the southern towns is *bedoro*, and in the eastern and northern, it is *giamman*. Alchemy, as well as astrology and other occult sciences, practised from time immemorial on the adjacent continent, was introduced from China centuries before Europeans visited Japan. Indeed, the Chinese Emperor who is reputed to have built some considerable portion of what is known as the Great Wall, sent ambassadors to Japan to discover the elixir of life and the philosopher's stone. So it is not to be wondered at if the manufacture of glass was, although not extensively carried on, at least known centuries ago in old Japan." We may supplement Mr. Proudén's information by saying that the date of the first manufacture of glass in Japan is somewhat uncertain. It is known, however, that a glass factory existed in Nagasaki in the second year of the *Shōtoku* era (1712). The *Sankui Meisan-zue*, a well known work published in that year, says that the art was derived from the "Southern Barbarians" (*Nambanjin*), a term applied originally to the Spaniards and Portuguese, but subsequently used to describe all foreigners. We may safely infer, therefore, that Japan did not, as might have been expected, acquire the process from China, where it had been carried to a high degree of perfection, but from the Dutch. The latter, indeed, had reaped considerable profits by importing glass. Fine specimens of cut glass (*Giamman no Kiriko*)—we may mention *en passant*, that *giamman* seems to be a corruption of *diamond*—were always in high favour among Japanese amateurs, and many dishes, vases, &c., of such ware are still to be found in private collections. But they were always imported. The native manufactures never succeeded in producing anything worthy to compete with the work of the Dutch. It will easily be understood that they did not derive much assistance from the settlers in Hirado. It is related that before the Chinese were freed from their delusion as to glass being ice a century old, they used to pay immense prices to the merchants who brought them this ware from the Roman Empire. The Japanese never, so far as we know, entertained any such belief, but it is nevertheless recorded that they disbursed very considerable sums in the acquisition of good pieces of *giamman no Kiriko*.

WRITERS on economic doctrines which are subjected to the heat of public discussion should have good memories. There was a time when the London *Economist* refused altogether to admit the doctrine that the export trade from silver-using to gold-using countries had been encouraged by the demonetization of the white metal. But now that the doctrine serves the purpose of its own argument, we find the London journal taking it up readily enough. Sir Auckland Colvin, in his recent Budget statement, laid immense stress upon the fall in the gold-value of silver. Whatever the Government of India might do, however it might economise, said Sir Auckland, the results of all its efforts "disappeared in the great gulf of exchange." The *Economist* is not pleased that a statesman of Sir Auckland's standing should thus publicly testify against its favourite doctrine of gold monometallism, and it applies itself to demonstrate that he has exaggerated the suffering of India. The actual loss on exchange for the current fiscal year is set down in the Indian estimates at £4,837,000, a very respectable sum. Against this loss the *Economist* quotes the fact—as it now acknowledges it to be—that the appreciation of gold has given a great stimulus to the export trade of India. "It has enabled the Indian exporter of wheat to compete at great advantage with the agriculturists of those countries which have repudiated the use of silver in their currency, except for purposes of subsidiary coinage." Nor is this all. The *Economist*, in its anxiety to arrest the agitation which India's financial difficulties are beginning to excite, proceeds to another admission; namely, that although the import trade of India has been discouraged, and the Indian consumer of foreign goods has been obliged to pay high for them, yet this loss has been borne in part by the foreign manufacturer. For he "has not raised prices to anything like the full extent of the fall in the value of the metal in which he receives payment, because, if he had done so, he would have greatly narrowed the market for his goods. He has been compelled, as our cotton manufacturers know only too well, to take upon himself a very considerable portion of the loss on exchange, and, on balance, the gain to India from the stimulus afforded to her export trade very largely exceeds the partial loss which may have been sustained on the import trade." This is a very pretty showing for gold-using countries. We should like to hear the *Economist* explain what is their gain under all these circumstances.

UNDER the somewhat sensational heading "Ten centuries of Art and Industry," the *Pall Mall Budget* devotes a couple of columns to Mr. Ernest Hart's collection of Japanese curiosities, lent by that gentleman to the Society of Arts to illustrate three lectures which he delivered in the middle of May. The *Pall Mall* avoids the silly errors which we had occasion to point out in reviewing a recently published prospectus of the same collection. The only criticism suggested by this notice is that an amateur who selects a faience statuette in Imado clay to represent the work of Kenzan cannot have any real idea of that artist's merits and genre. The following is the *Pall Mall*'s notice:—

The carved ivories, gilded lacs, the hanging picture rolls, the elaborate metal work, the varied ceramic ware, of Japanese collections have always had a great attraction from their intrinsic beauty and their supreme technical merits. But they have suffered much in interest from the want of authentic information as to dates, periods, and masters. Japanese art, unlike other Oriental art, is essentially personal and individual. The artists of the feudal

daimios lived in the intimacy of their lord, and were themselves not uncommonly enabled, with certain exceptions they signed their pieces, whether great or small (and especially the smaller), and the reputation of a great artist was maintained by the academy which he founded and by the successors whom he trained and adopted, and to whom he sometimes transmitted his signatory seal. But where was the beginning and where the end? Who should decipher the signatures, who record the historic succession of schools, and who unravel the tangle of fable and fact which meshed the early stories of historic art? Mr. Franks and Mr. Anderson are doing much towards this end. But the collections of connoisseurs are still apt to be rather magazines of trice-a-brac than orderly series of authenticated and classified objects. A further attempt to remedy this defect is made this week at the Society of Arts, where the council have arranged for the public exhibition of the very extensive private collections of Mr. Ernest Hart, which he has consented to lend for the next fortnight, in illustration of three lectures which he is giving there during this month on the historic arts of Japan. These collections were made with the assistance of Mr. Wakai, of Tokyo, the expert of the Imperial House, and catalogued by Mr. Hayashi. They range in order of succession through many centuries of art, and contain examples of the work of most of the founders of the leading schools of art work, and their most famous successors.

Of the Buddhist pictures of the ninth and twelfth centuries, the work respectively of Kanaka and Takuma, we may speak with reserve. So much of the colour is gone that we do not find in them the rich harmonies and the mystic beauties which the critics of France and Japan identify with these famous masters. In the paintings, however, of Mitonobu (fifteenth century) (whose Tekkai exhaling his spiritual essence is a masterpiece of this school); in the Jokes and birds by Okiku; in the stately dames of Chosun; the carp by Naeki Shijo's school mysteriously darting through gleaming water; in the ghostly apparition of a loveless spirit maiden bending over a skull hidden beneath the grass by Genki, date 1750; in the eagle of Masanobu, date 1430; in the birds and flowers of Hoyen, all will recognize charms of colour and feeling and magic of brush which justify the enthusiasm with which Burty, Gonse, De Goy court, Rousseau, Millet, and De Nittis have hailed the works of old Japanese masters hitherto wholly unknown here. The monks of Seson (eighteenth and nineteenth centuries) are recognized masterpieces, in which the utmost skill in delicate brush work is combined with an obviously affectionate appreciation of the simian character. He loved them to the extent of spending half his life in their society and imitating their attitudes.

The other great feature of these collections are the lacs and sword guards, which range from the fifteenth century to the first half of the present century, and the metal work. The history of lac is henceforth established. There are here the early and austere work of Ketsu and his predecessors, followed by the boldly impressionist incrustations of Korin; the delicately and often high gilded works of Shoinsho and the Court lacquerers of Kioto in the seventeenth and eighteenth centuries. Built up by months of labour bestowed on polishing and hardening layer after layer of a translucent varnish (*shui-jinichiro*), sometimes the most delicate work, it is said, was done in a pent on a lake, out of reach of aerial dust. Every petal and stamen is delicately touched and modelled with fidelity to nature. Centuries have not dimmed their beauty; while modern lac quickly spoils. The great triumphs of the Japanese artists, however, are in metals. The iron armour by Miochin, tenth century, is hammered in high relief in thin plates of very hard cold iron; the mysterious suppleness and grace which this most untractable metal assumes in the twelfth century water-lily plateau; the living articulated iron lobster and crab of the same academy of artists, are marvels; so too the buttons, and the pierced and chased iron sword guards, and the sabre ornaments which need to be examined with a magnifying glass. The chasing is masterly, the incrustations unequalled in boldness of design and delicacy of finish. In the seventeenth and eighteenth century guards the mysterious alloys (*shibuchi* and *shakudo*) supplemented by their exquisite colours the poverty of nature and the coldness of ordinary metallic surface. The bronzes of Itozun and Seimin are the highest achievements of wax casting. Cellini has more than one rival here. We have no space to speak of the series of carved ivory and wood net-screens. They are of a glass better known, although abominably trace-tied by the trash which is imprinted in masses. The ivory statuettes, known as kimono, and manufactured for the European market, are not represented here. They are, without exception, a modern invention to please the European eye, and have no historic prototypes. A final word only may direct attention to the old Satsuma faience, of which so much poor imitation abounds; to the Imari porcelain figure of a Court lady of the seventeenth century by Kakiyama, the *no plus ultra* of sculpture in porcelain, and to the famous figure in faience by Kenzan, of mother and child at play, which we reproduce (Kenzan was the greatest of Japanese potters, and this *chef d'œuvre* has been more than once illustrated); or the Temple Guardians of Nara, of the sixth century, reproductions in miniature by Risano, minuscule colossal unworthy of the Greeks. Altogether the collection deserves its high reputation, and repays study. It is historically highly representative, and filled with authentic objects of singular beauty and fascination. The catalogue by Tadamasa Hayashi is a landmark in the history of Japanese art.

Demos, that great unknown and unknowable power, seems to be verifying the old adage that his instincts seldom err. The bulk of the English and Scotch voters probably know little if anything about the true aspects of Home Rule. Hodge and Duncan can scarcely see beyond the point where the paths of Gladstone and Goschen diverge. But Hodge and Duncan have a wholesome objection to leaping in the dark. Domestic autocracy has taught them only one way of preserving discipline and order. In their eyes

the Irish Nationalist is a rebel, and to give a rebel what he wants instead of compelling him to do what his lawful master wants, is an experiment which neither Hodge nor Duncan is anxious to try. Over and above this sound instinct there is probably a wide-spread inability to comprehend how Home Rule is to work any good. To seven men out of every ten the only practical aspect under which it presents itself is that of a prelude to separation. As a preliminary step to Irish independence, its bearings are easily grasped. But as a means of redressing Ireland's alleged wrongs, it can do nothing—except at England's expense—which the Parliament at Westminster cannot do equally well; for to assert that a Legislature comprising 103 Irish members cannot understand Ireland's wants is to betray over much credulity. Such are probably the views of the mass of British voters, and they are acting upon them at the polls. We do not pretend to say that they are right, but only that their instinct is sound so far as their lights go. They have not yet had time to study Home Rule under its higher aspects, and it may be long before their education in this respect is completed. But that Ireland will be given some measure of Home Rule, we entertain not the smallest doubt. What we hope, however, is that the giving will be done by a Conservative and Unionist Cabinet, for then we may expect that enthusiasm will not counsel concessions which force alone can retract.

The *Official Gazette* gives the following report on the state of agricultural work in various prefectures:—Niigata Prefecture.—An experimental silk nursery was established some time ago at Kosendanimura, Kitanomimagori. To this establishment three kinds of worms—*Aohime*, *Shironakasu*, and *Akashiku*—were brought from Obatamura, Fukushima Prefecture. At first their growth was most favourable, owing to the warmth of the weather, but subsequently frequent rains retarded their progress so that they only attained the first sleep about the 28th of May. They are at present in the second and third stages. Adverse weather prevailed even after the second stage was attained by the more advanced worms, but care having been taken to provide, by the construction of the rearing rooms and the method of nursing, conditions similar to those obtainable in Fukushima Prefecture, the worms are perfectly healthy and promise well. Gifu Prefecture.—Tea from this prefecture has gradually fallen in price, quotations at present being, furnace fired, 1 yen 20 to 30 sen per kan, sun-dried, 60 to 70 sen. With the exception of furnace fired, inferior teas are not in demand in Yokohama and Kobe, and the producers of those low class teas are consequently considerably embarrassed. The first crop has been for the most part manufactured, and the second is about to be commenced. Iwate Prefecture.—All cereals except rice are making good progress, owing to the warm weather which accompanied seed-sowing. Unless injured by rats and other pests, a good crop is expected. Kumamoto Prefecture.—The harvesting of *nutane* (rapeseed) barley and rye is now finished. Owing to the favourable weather the crops are quite ten per cent. above the average. Wheat, which is expected to be ready for the sickle in about a fortnight, promises to be a fair crop. Kagoshima Prefecture.—In some districts barley, wheat and rye suffered greatly from

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

cold weather at the period of germination, and consequently the young plants did not come up well. With good weather towards the close, however, a fair crop has resulted. The yield is about 7 to 5 *sho* per *tan* in Oenurigori, 3 to 5 *sho* in Kanzokugori, and 4 to 7 *sho* in Minami-morogatagori. Sweet potatoes are somewhat under the average, the earlier tubers being hurt by frost, while even those that survive have suffered from the prevailing scarcity of fish manure. Tobacco so far promises an unusually good crop, and rice, which is free from insect pests, also looks well. Ehime Prefecture.—Cereals, except rice, have been more or less injured by rain in certain districts towards harvesting time. The earlier crops have sustained comparatively small damage; the second have suffered to the extent of 10 to 20 per cent., and the third or latest to the extent of about 10 per cent.

Amongst the passengers by the *Oceanic*, which arrived here on Saturday morning, was Professor Anderson, the "Wizard of the North," who has just made a successful tour through the United States and Australia, and will remain a short time in Yokohama, during which he will give four performances at the Public Hall, particulars of which will be found in another column of this issue. We understand the Professor's *répertoire* includes many of the new and marvelous tricks recently performed at the Egyptian Hall, London, which have caused so much comment in the home papers, and astonished the thousands of spectators who frequent that popular place of entertainment. The Professor is accompanied by Madame Anderson, who, amongst other unique performances,—we quote a Honolulu paper—"mystifies the audience with the great bank-note trick. The lady was seated in the middle of the stage with her back to the audience. Professor Anderson then came down from the stage into the orchestra, and borrowed a bank note from a gentleman in the audience. The Professor gazed intently at the note without speaking, when, to the astonishment of all present, the number of the note was written on a slate and held up before the audience by Madame Anderson." Professor Anderson has drawn large audiences during his recent tour, which is the best criterion of the class of entertainment he provides for his patrons.

THE negotiations which have been for some time pending between London and Berlin concerning English and German interests in the Western Pacific recently resulted in an agreement satisfactory to all the parties interested. The declaration signed by both parties provides for freedom of trade in all German and English possessions and protectorates in the Western Pacific, which term is defined as including that part of Australasia and Polynesia lying between 15° north and 30° south latitude, and between 165° and 130° east longitude. A line of demarcation is agreed upon which is to separate the "spheres of influence" of the two nations, and this line, beginning at Mitre Rock in New Guinea, the point where the English and German possessions touch, is thence drawn south of the Solomon Islands and then directly north-east in such a way as to leave the Marshall Group on the north. All south of this line and within the limits of the Western Pacific as defined in the agreement, is recognized as under British influence, and no German protectorate is to be declared within the region thus defined. The

same provision *mutatis mutandis* is made for the islands north of this line. The independence of the Samoa and Tonga as well as of the Savage Islands is recognized, and so also, as a matter of course, is the present status of islands already under the protection of any European Power other than England or Germany. Each Power guarantees to the subjects of the other the right of settlement, the protection of property, the right of trading, and of establishing factories and plantations under the same conditions as those extended to its own subjects. Religious toleration and equal protection are to be given to both British and German colonists on whichever side of the line they may settle. Ships entering and clearing harbours are to be subject to the same treatment as to harbour dues, etc., and goods of whatever origin and introduced under whatever flag, if so introduced by either British or German subjects, are to be subject to no higher duties than those which are demanded by the other Power under the same circumstances. All territorial claims made by the subjects of either Power before the declaration of a protectorate affecting such claims, are to be decided by a mixed commission appointed by both governments, unless the claimant expressly asks for the decision of the local authorities. Neither power is to establish any penal settlements, and the term "possessions and protectorates in the Western Pacific" is not to be so construed as to include colonies properly organized and having legislative assemblies. This agreement puts British and German subjects on the same footing in the Western Pacific, and commercial competition is placed on a fair and equitable basis. The present understanding arrived at by the two governments is practically the outcome of the previous agreement regarding New Guinea, and there can be no doubt that it will work well when carried out. The development of the Polynesian islands can, in the nature of the case, only increase the prosperity of the Australian colonies, and whereas, in the Navigator Islands, German shipping interests seem to preponderate, only too many lose sight of the fact that the imports carried to these islands in German bottoms are largely of English manufacture. The absence of any intention on the part of the German Government of establishing penal settlements is another source of satisfaction to the colonists in Australia, and the recent appointment of a Governor-General for German New Guinea is another sign that the Berlin Government will now vigorously push the organization of its colonial possessions in the North Pacific.

THE *Yiji Shimpō* writes:—Had the country not been in a state of chronic warfare, Toyotomi Hideyoshi would have died a poor peasant in the Province of Owari, and Tokugawa Ieyasu, a petty feudal chief in the Province of Mikawa. Warfare is bliss to men of such extraordinary parts. At present the country is enjoying uninterrupted peace. In the political field no violent movement distracts the attention of the nation, but in other directions we can hardly say that all is going on well. Trade, which was so active in 1880-81, has gradually declined; industry has collapsed, and capitalists have been deprived of profitable means of investment. The consequence is indeed alarming; public bonds bearing 7 per cent. annual interest were only six or seven years back quoted at 70, or even as low as 60, *yen*, but now the same

bonds are eagerly bought at more than 110 *yen*; everywhere throughout the whole Empire the wealthy class is becoming smaller, while cases of ruin and bankruptcy are hourly happening. In a word, the country is now passing through a period of exceedingly violent commercial commotion. The disappearance of old figures is always accompanied by the rising of new ones. At present it might be surmised that what we see is but the disappearances, and that as yet there are no new forms to take the place of those that are going. But we think otherwise. The commercial world is very wide and trade affairs are very complicated, so that it may not be easy to say just who or what sort of people are rising to take the place of the ruined capitalists, but that there are enough men who are secretly laying foundations for large projects is as plain as anything can be. Many a Hideyoshi and many an Ieyasu are secretly planning schemes of commercial ascendancy, and the day when such schemes will actually bear fruit will probably not be very long in coming. What moves our pity in connection with the approaching commercial struggle is that a class of ignorant and self-contented people, who shut their eyes alike to the principles of political economy and to the teachings of practical affairs, will find out their folly only too late.

OUR advices from home indicate that on the re-assembly of Parliament in August the relative strength of the parties composing the House will be tested by a vote on supplies. A motion to accompany the vote with some limitation inimical to Mr. Gladstone's Irish scheme will make it clear at once whether he can command a working majority. If the Unionists muster in force, it was expected, at the date of our advices, that Mr. Gladstone would at once resign, and that Lord Salisbury would be invited to form a Cabinet. In the contrary, and now impossible event of Mr. Gladstone being sustained, he would remain in office and Parliament would be prorogued till October. It would be a novel and interesting development of parliamentary institutions should the new House be found to contain a second librating factor—the Unionists—of nearly equal strength with the Parnellites. Very possibly the elections may result in something like the following division of parties:—Conservatives, 300; Gladstonians, 200; Parnellites, 86; and Unionists, 90. The Parnellites will then have the pleasure of knowing that their obstinate obstruction has developed its own antidote, another middle party as strong as theirs, and ready to throw its influence perpetually into the scale against them.

A GENERAL meeting of the shareholders of the Specie Bank was held at the chief office in Yokohama on the 10th instant. Mr. Hara Rukuro, President, read the report of the bank for the first half of this year, in which it was stated that a purchase of Six per Cent. Chinese Government Loan Bonds had been made by the bank in London. A dividend at the rate of eight per cent. per annum was declared for the half year. The following shows the condition of the bank's accounts:—Profit, *yen* 868,911.388; written off as bad debts, *yen* 21,503.533; reserve for bad debts, *yen* 241,700; bonus to officials, *yen* 54,570; addition to reserve fund *yen* 200,129; addition to reserve for the equalization of dividends, *yen* 40,000; dividends for shares held by the Imperial Household (representing *yen*

1,000,000) yen 40,000; dividends for shares held by the public (representing yen 2,000,000) yen 160,000; and balance carried forward to the next half year, yen 32,823,855. The total reserve fund and reserve for the equalization of dividends amount respectively to yen 941,000 and yen 200,000.—*Fiji Shimpō*.

**SPEAKING OF HERR MOST'S** arrest, the *St. James's Budget* says:—"The foe of princes and of law was arrested under prosaic circumstances. He was dragged by the heels, pale with fright, covered with dust and cob-webs, angry, and noisy, from under a bed in a low house of ill repute. What a plight for the intrepid apostle of a regenerated world! And there was some reason for his terror. A rifle, a policeman's truncheon, an empty bomb, and 'a few books on the manufacture and the use of dynamite; were found in the room: and they will need a good deal of explanation before a Yankee jury.' The view taken by a Yankee jury resulted in six months' imprisonment for this civilized savage, and the *Freiheit*, his newspaper, published a ferocious article 'invoking vengeance upon the authors of Herr Most's arrest, and appealing to the socialists to arm against the blood-sucking capitalists.' The socialists, however, have learned a salutary lesson and the world at large has gained appreciably, by recent events in America. For though it was proved that the social heresy had spread largely among Teutons and Slavs in the United States, and that Chicago, Cincinnati, and New York were the centres of not inconsiderable conspiracies, it was also proved most conclusively that the people of the United States will not for an instant tolerate this species of madness, but will trample it under foot as they would a venomous reptile. That is a comfortable thing to know, for in truth it did seem at one time as though American democratic tolerance of everything done by a sufficiently large section of the populace amounted to an infatuation."

Poetic justice asserted herself in a most instructive fashion in the case of the Chicago Anarchists. During the riots these ruffians made a raid into a chemist's shop and refreshed themselves from the bottles on the shelves, supposing their contents to be alcohol. In this performance they consumed considerable quantities of colchicum and other tinctures, the result being that eight or ten died in great agony. This is the first episode in the career of American socialists under the unrestrained conditions which they seek to establish.

FROM the annual report of the North British and Mercantile Insurance Company we learn that the net premiums received in 1885 amounted to £1,148,510 as against £1,114,068 in 1884, showing an increase of £34,442. The losses by fire during the year amounted to £615,228 which included all losses actually ascertained and paid, and a full estimate of all claims that had arisen prior to 31st December last. The directors set aside one-third of the fire premiums received during the past year, amounting to £382,836, as a provision against liability on the unexpired fire policies of 1885. In the life department 1,009 policies were issued during the year 1885, assuring, after deducting sums reinsured, £897,290, and producing new premiums to the amount of £32,756, together with 142 bonds securing annuities to the amount of £7,406, for which the company received the

sum of £70,641. The claims during the year, including 14 endowments, were 345 in number, under 405 policies; and the sums amount, with bonus additions, to £306,449. The quinquennial investigation into the life business of the company, which fell to be made on the 31st December, 1885, exhibited a surplus profit of £396,919 which, after deducting one-tenth appertaining to the shareholders, enabled the directors to declare a bonus of £1 9s. per cent. per annum on the sums insured. The profit and loss account for the year 1885, including the unappropriated balance of £55,939 brought forward from 1884, and the sum of £67,691 being the quinquennial division of profits due to the shareholders from the life and annuity business, amounted to £371,121. This sum was distributed as follows:—£80,000 to the reserve; £12,500 to the clerks' pension fund; £100,000 to a dividend of 20s. per share on 100,000 shares, one half payable in May and the other in October; £125,000 on bonus of 25s. per share payable in May; leaving £53,621 to the balance of profit and loss account carried forward. At 31st December, 1885, after providing for the dividend and bonus payable in 1886, the paid-up capital, reserves, and undivided profits of the company amounted to £2,311,458.

THE following shows the spread of cholera during the week preceding the 4th instant:—

	CASES.	DEATHS.	DEATH RATE PER 100 CASES.
Osaka Prefecture	1,132	833	73.59
Kyoto Prefecture	120	119	99.07
Hyogo Prefecture	211	221	104.74
Shiga Prefecture	98	79	80.61
Yamaguchi Prefecture	324	150	46.31
Wakayama Prefecture	30	23	76.67
Tokushima Prefecture	181	110	60.77
Total	2,134	1,573	73.71

The above figures, compared with those for the preceding week, show that choleraic cases increased in Osaka, Hiroshima, and Ehime, and decreased in Kyoto, Hyogo, Okayama, and Wakayama. In Osaka the total increase was 179 cases. The average increase for all the infected cities and prefectures was 73 cases and 79 deaths.

THE extraordinary language used by the Czar in his proclamation to the Black Sea fleet naturally created some stir in Europe. A statesman and even a Sovereign may sometimes be rash of speech without startling the public, because a man's words are not always under the strict control of his wits. But in the phraseology of written documents no such latitude is allowed, and when the Czar proclaims in writing that, though desiring the pacific development of the Russian people, "circumstances may prevent the realization of my wishes and compel me to defend by force of arms the dignity of my empire," he can only mean to tell the world that he regards war as a very possible, if not actually a probable, contingency. Add to this the address made to the Czar, on his return from the Black Sea, by the Governor of Moscow:—"The representatives of the first city of the empire most humbly request you, Autocrat and Emperor, to accept our bread and salt and the expression of our love, and to be assured of our joy in seeing you, the Czarina, and the Czarewitsch. You come to us from that blessed south, where you have restored life to the Black Sea. Our hope gains wings, and strength is imparted to our belief that the Cross of Christ will yet shine upon St. Sophia. So thinks Moscow, and in this hope remains steadfast." Such utterances are not made without the assurance that they will be welcome. It looks very much as though the

Czar, six weeks ago, seriously contemplated another strong and speedy stroke in the direction of Constantinople. We are of opinion, however, that the danger has been averted, temporarily at all events, by the intervention of Germany. The threatened union of the two Bulgarias under Alexander was the occasion to which Russia looking forward. In that event, she was to call on Turkey to enforce the conditions of the Treaty of Berlin, and, failing the Porte's active interference, it was expected that she would undertake the task herself. But, at the critical moment, Germany stepped in with an intimation that Russian interference in Bulgarian affairs would not be favourably viewed in Berlin. It is perhaps not too much to say that Germany, at this juncture, has preserved the peace of Europe. But how long will the calm be maintained?

THE *Hochi Shimbun* has the following with reference to Kim-Yo-Kun's memorial:—"In his memorial to the King of Korea, Mr. Kim points out to his Royal master that it is highly injurious to his own reputation and his country's dignity to entrust a murderous commission to any of his subjects. Had the emissary been able to accomplish his object on Japanese soil, the affair would certainly have led to a difficulty between Japan and China; and Mr. Kim's counsel to his King to be more deliberate in action is only too pertinent under present circumstances. Considering that Mr. Kim, who had for some time been admitted into the most intimate relations with the King, could not say that the letter of commission was not in the latter's own handwriting, it would have been an easy matter for Japan to make it a pretext of creating trouble, had she really any intention upon the peninsula as the Chinese suspect her of having. But it is fortunate for Korea that we do not harbour any such designs. Mr. Kim next proceeds to complain of the over-powering influence of the Bin family, and recounts the circumstances and considerations which led to the *émute* of 1884. He incidentally justifies his reliance upon a foreign Power; but we are left in darkness as to what country he means thereby. He next describes the difficulty of Korea's situation, and then proceeds to discredit the story of Li Hung-chang sending an assassin to this country with the connivance of our Government, but intimates that the Japanese Government is anxious to put an end to his life so as to prevent him from letting out disagreeable truths about the late *émute*. If our Government were really guilty of such an ignoble intention, it would not have waited so long to attain its object; nor would it have given him such ample protection under its jurisdiction. In the next place, Mr. Kim declares that neither China nor Japan can be relied upon, and, speaking of this country, he remarks that she once showed great zeal in interfering in his country's affairs, but that she has entirely abandoned Korea since the late *émute*. This accusation is hardly intelligible; in the first place, to what policy on the part of Japan does he look for a justification of his assertion that we interfered in Korean affairs? In the second place, on what ground does he say that our Government has forsaken his country since the late disturbance? Is it necessary for a country to lend aid in the shape of money and men in every emergency to a neighbouring State? If, however, all that is re-

quired be to maintain sympathetic and cordial relations, then there is no reason why Japan should not be a trustworthy neighbour to Korea; for in the task of leading that kingdom on the path of progress, and in wishing for the good of her people, Japan did not and does not yield an inch to any other country. Lastly, Kim advises the King to be on friendly terms with Western Powers; to introduce various internal reforms; and to recall his comrades, Bok and others. As for himself, he does not claim anything beyond having his honour cleared of its stains. A spirit of loyalty and disinterestedness pervades the whole document, but it remains to be seen whether Mr. Kim will be true to these honourable declarations.

THE Free Ship Bill introduced by some members of the House of Representatives in Washington has thus far succeeded in again calling the attention of the public to a state of affairs to which, from time to time, general attention is directed with no other result than that the people after a short lived agitation again relapse into their former indifference. Whether this time, too, agitation will be as ephemeral and as barren of results as formerly, remains to be seen. The facts, as given by American papers, appear to be sufficiently startling. It is stated that the percentage of their own ocean freights carried by the principal commercial nations of the world is as follows:—England 86 per cent., Sweden and Norway each 40 per cent., while Germany carries 38 per cent. of her freight and France 32 per cent. Then come Holland with 22, and Italy with 18 per cent., while the United States with the largest sea boards, the most numerous population, and some of the finest harbours of the world, carries but 15 per cent. of its ocean freight in its own ships. Great Britain is stated to have 4,852 sea-going ocean steamers, or 58 per cent. of the commercial steam tonnage of the world; while the United States have but 355 such steamers, and their steam tonnage forms but  $4\frac{1}{2}$  per cent. of that of the world. While in Congress there is substantial unity as to the facts in the case, the people's representatives are by no means agreed as to the causes that have brought about this decline, and consequent upon this it is natural that opinions also differ as to the remedies to be applied. A considerable number favour the immediate repeal of all restrictive laws which deny to Americans the privilege of purchasing ships where they can be bought cheapest, and of having ships thus bought registered as United States vessels. It is argued that, before 1856, the United States easily maintained a leading position on the sea owing to the abundance of timber in the country and the universal use of wooden sailing vessels, and that up to 1859 the United States carried in their own ships 75 per cent. of their ocean freights. But since that time iron and steel have been in ever increasing and successful competition with wood, and as fast as iron steamers could be built the world's trade was transferred to them. By the application of free trade principles alone the friends of the Free Ship Bill expect to raise American shipping to its former position in the world, and the chief spokesman of this movement, Representative Dunn, of Arkansas, denounces the practice of granting bounties, calling it a game of national poker carried on to the detriment of the tax payers. The opponents of the Bill, on the other hand, above all deprecate the radical change of

a policy which has been consistently followed for many years, and which is in their judgment truly American. The effects of the Bill, if passed, would be equivalent, they say, to the ruin of American shipbuilding, for if a fully equipped British built ship were once allowed to register as an United States vessel under American laws, then the great shipbuilding industry of the country would be doomed, and ten thousand skilled workmen would be driven into other already overcrowded industries to their own and their fellow labourers' embarrassment and injury. No nation can expect to obtain and to maintain maritime supremacy unless that nation is able to build its own ships. It is, of course, an appeal to the protectionist elements in Congress, when the opponents of the pending Bill claim that it should be called: A Bill to close American ship-yards and to provide for the construction hereafter in British yards of whatever vessels may be needed for the American Merchant Marine. The real advantage of Great Britain, they assert, does not arise from the fact that she can build from 10 to 12 per cent. more cheaply, but has to be sought in the far more weighty fact that the higher wages and better food demanded by the American sailor place the country at a permanent disadvantage not easily remedied. Finally, the Bill in their opinion, would effect a result exactly opposite to the one desired, inasmuch as it would act in the nature of a permanent invitation to United States citizens not only to buy abroad but also to sail under a British register.

THE *Hochi Shimbun* says:—By Instruction No. 7, the Minister of State for Home Affairs has issued standard rules for the regulation of hackney carriages, *jinrikisha*, hotels, lodgings, etc., and streets. These rules contain nothing deserving our attention from a national point of view, but considering that they are to have a direct bearing upon the people, and also that local authorities have to take them as the basis of special regulations applicable to their respective localities, it may not be altogether needless to state our views on this topic for their consideration. In all civilized countries, in England, in Germany, in the United States of America, we find similar rules in force, though there may be some difference as to the degree of their severity or minuteness. There are apparently two reasons for the enactment of these rules; (1) the maintenance of the good appearance of cities, and (2) the protection of the public. In a country whose people have no conception of the necessity of either keeping cities in good order or of ensuring the safety of the public, these rules are, of course, of no value. But in a country like Japan which aspires to be admitted into the comity of nations, their importance cannot be over-rated. No one can dispute this point who has viewed the actual state of things in the capital; who has at all observed how filthy some parts of it are; how dangerous it is to ride in a *jinrikisha* drawn by an emaciated coolie. On a few points we fear the Minister of the Interior has gone too far; but the pervading spirit of these rules, we are glad to say, is in the right direction; and although a considerable number of men will be deprived of their present means of livelihood on the rules coming into operation, it must be remembered that these consequences always accompany the progress of a nation in civilization. That the necessity of enacting such rules for the sake of the public safety and the main-

ance of the appearance of cities is fully recognized by Western nations, may be seen by referring to their existing rules. Except those people, then, who pretend to say that we need not trouble ourselves how foreign nations regard our own country, nobody can withhold approval of the rules now issued by the Minister for the interior, especially if we bear in mind that the question of treaty revision is now receiving the practical attention of the Powers concerned in the matter. Coming next to the question, in what localities are these rules applicable? we have to answer that they are applicable in their present form to Tôkyô and three or four other large cities, and that in other places they will have to be considerably modified and simplified before being put into operation. And there are good reasons to believe that this is actually the idea of the Minister for the Interior. We have been told that the localities, for which these rules were specially intended, are the three Cities and the five Ports. Lastly, we wish to call the attention of our police authorities to the fact that hitherto their efforts seem to have been chiefly in the direction of judicial policing, instead of executive policing, as they should have been. In putting the newly issued rules into force, the police authorities should bear this point in mind, and endeavour to follow the true spirit of the rules, thus avoiding the disagreeable consequences of creating new criminals.

THE *Pottery Gazette* has the following:—"The *Sprechsaal* has recently described a Japanese teapot of a specially interesting character standing about 3 $\frac{3}{4}$  inches high, including the knob on the lid, and with a diameter of about 4 $\frac{1}{2}$  inches. The colour is dark reddish-brown, the knob and the ornaments being white, the border being in open work. With few exceptions the white ornamentation is exactly on a level with the red surrounding without the appearance of being painted on or coated, and displaying the same twilled appearance as the red surface. The white looks like fine unglazed porcelain, or like parian, which is always without glaze. The style of drawing is rather full, the finer and more ornamental features of Japanese decoration not being apparently applicable in this case, and the work partaking of the nature of mosaic or intarsia. The knob can be turned round, in this detail recalling certain specimens of Herend and Worcester ware displayed at the Paris Exhibition of 1878. Some wood models in the Berlin Museum of Industrial Art serve to illustrate and explain the class of manufacture employed in this instance." This tea-pot, we take it, is a specimen of modern *Banko-yaki*, a ware in which many of the most curious and delicate results of Japanese Ceramic industry are now achieved.

As an example of a pleasing experiment performed upon dogs, the following is worth quoting:—Dr. Beriah H. Watson, the Jersey City surgeon of the Pennsylvania Railroad, was arrested yesterday on complaint of George F. McAneny, president of the Society for the Prevention of Cruelty to Animals. The doctor is a student, and in his researches as to nervous affections he some time ago rigged an apparatus in his stable, on Fairview-avenue, by which the dogs that he used as subjects were raised to the ceiling feet foremost, then the clamps were released and they were dropped through traps arranged in the two floors of the barn, striking against an iron frame back foremost. The

object was to break the subject's back or injure his spine. The physician carefully noted the symptoms from the time the brute was injured until death. It has been known for several months that the physician was purchasing dogs, which disappeared in the stable and were not seen again; and the police took the place under surveillance, but did not stop the doctor's scientific investigations. Yesterday, when the doctor was arrested, the contrivance and six dogs were found in the stable. Edward Brown, the colored stable boy, was taken into custody. He said that the dogs usually lived ten days after the fall, although they were not fed. He fixed the number of dogs that had dropped through the traps at forty-one, and that number of complaints were entered against the physician, who gave bail to answer the charge of cruelty. He claims to have a perfect right to use dogs for the laudable purpose of benefiting mankind, and denies having been unnecessarily cruel. In this he is sustained by Dr. Arrowsmith, the veterinary surgeon of the Society for the Prevention of Cruelty to Animals, who said that he had known of the operations for a long time. The doctor's desire was to find whether a concussion to the spine will, after a lapse of two, three, or six months, produce a decrease of vitality or loss of nervous power along any portion of the spinal cord. The dogs, he said, are placed under the influence of an anæsthetic before being subjected to the blow or fall.

CHOLERA returns for Yokohama for the past week are as follow:—Saturday, 10th instant, 28 new cases, 20 deaths; Sunday, 21 new cases, 10 deaths; Monday, 35 new cases, 14 deaths; Tuesday, 28 new cases, 23 deaths; Wednesday, 61 new cases, 27 deaths; Thursday, 48 new cases, 22 deaths; Friday, 72 new cases, 46 deaths. Total, for the week; new cases, 293; deaths, 161.

In all probability the authorities will at once take the action which would seem to be essentially consequent upon the above figures, declaring Yokohama a cholera infected locality and closing all places of public assemblage. It is terribly disheartening to find that the exertions of the Kencho officials have proved unavailing to keep the disease from spreading, but people will eat intemperately and drink immoderately, in spite of the warnings addressed to them. There is still hope that the change of weather for which the farmers are crying so loudly may take place, but the sudden access of virulence now observable, and the extent to which the cases are scattered over the city, promise ill for the future.

In connection with the present outbreak of cholera we have had several complaints as to the condition of the Public Market. It is alleged that proper supervision is not exercised over the produce offered for sale, and that the market is not kept as clean as such places ought to be. We may say in reference to these complaints that there are two officials permanently detailed for the duty of inspecting the market, and that, since danger of cholera breaking out became apparent, a large staff of inspectors have been appointed, who are charged with the office of examining all food offered for sale anywhere in the town. It is possible that there may now and then arise what appear to be instances of negligence, but it should be remembered that the powers of the authorities are at present very

heavily taxed. Fire-engines are kept going almost constantly in order to flush the sewers, and the officials connected with sanitary matters have but few intervals of rest. The authorities are undoubtedly exerting themselves to the utmost to stamp out the disease, and will, we feel certain, gladly welcome and act upon any information that may be furnished to them as to the sale of unwholesome food.

THE following notice to mariners, relating to the Tsao-fei-tien Lighthouse, in the Tientsin District of the China Sea, has been issued from the Coast Inspector's office of the Chinese Imperial Maritime Customs:—Notice is hereby given that the Light on the island of Tsao-fei-tien (marked on the British Admiralty Charts as Sha-lui-tien) was exhibited for the first time at sunset on the 18th instant. The illuminating apparatus is Dioptric of the Sixth Order, showing a fixed White Light visible all round. The Light is elevated 50 feet above the level of the sea, and in clear weather it should be visible at a distance of 10 nautical miles. The tower is octagonal, built of brick and stone, and 45 feet high. Approximate position:—Latitude, 38° 56' N., Longitude, 118° 31' E.

By an order of Her Britannic Majesty's Court for Japan, we learn that the summer vacation will commence on the 19th July and end on the 19th September. During this period no ordinary civil suits, other than those already set down for hearing, will be heard, except by consent, and the time allowed defendants to answer petitions filed between the days above named will be computed from the 20th September next. Admiralty, bankruptcy, summary, civil, and police cases will be taken as usual, and the offices of the Court will be open from 10 to 12 o'clock daily.

THE *London and China Express* has the following, with reference to an exhibition lately held at Portsmouth:—"Some valuable and rare specimens of lacquer-work, ivory carving, enamel, bronze work, and other arts of Japan, form one of the most interesting features of the exhibition. Both old and modern examples are included in this curious collection, some of the more recently made cabinets, vases, boxes, and various objects for use or ornament, bearing testimony to the fact that there are as yet few signs of decadence either in the skilful workmanship, the remarkable patience, or the quaint ideas of decoration associated with that ingenious nation. One of the finest of the antique specimens is a bronze Toro seven feet high. It was the offering of a pious resident of Osaka to his temple, and is a perfect example of casting, the plaques being considered not inferior in finish to the panelling on the celebrated gate of the Battistria at Florence. Another beautiful work is a lacquered cabinet inlaid with antique china plaques and medallions, and ornamented with flowers, birds, and emblematic devices. Handsome pieces of modern work are two gadrooned bronze vases designed with peacocks, golden pheasants, woodpeckers, and other birds. A round gold-lacquered picture with a droll figure of a monkey ingeniously wrought in the centre; a bronze group, representing a man crawling and clutching a rock washed by the sea; an old gold-painted screen by a well-known artist named Ippo; and an ivory-lacquer carving representing one of the eight principal disciples of Buddha, should attract

considerable attention amongst the hundred pieces or thereabouts that Mr. T. J. Larkin has sent to the Exhibition. These, however, are only a small part of the collection of curiosities that adorns his unique gallery.

ALL doubt as to the final issue of the elections in England is now over. The returns from thirty-seven constituencies have still to be received, and already the Tories and Unionists number 380, or a majority of 90 in a full House. It is quite on the cards that we shall see a coalition Government with a solid majority of over 100. This ought to open the eyes of the Parnellites and teach them to moderate their demands.

FIRE broke out on Saturday morning about one o'clock in the house No. 50, Bluff, belonging to Mr. Gabaretta and occupied by Mr. A. Geyeo. The fire arose from the hook of a hanging lamp giving way, the lamp, which fell on a table at once setting the room in flames and Mr. Geyeo who slept in an adjoining room had barely time to save one trunk and awake the servants before the whole house was on fire. The contents of the house were not insured.

MR. VON FALLOT, a resident of Tôkyô, was found dead on Saturday morning, by the roadside, near the Iceworks, at the bottom of Campbell. It is not known how he got there, though no suspicion of foul play is entertained, as a gold watch and a considerable sum of money were found on his person when discovered. Subsequently a *post-mortem* examination showed that death resulted from apoplexy.

THE captain of the Nippon Yusen Kaisha steamer *Sukune Maru* which was wrecked off Namerigawa, Kazusa, on the 10th ultimo, was recently examined before the Marine Court of Enquiry and found guilty of committing an error of judgment in the discharge of his duty. His certificate was suspended for six months.—*Mainichi Shinbun*.

THE *Yiji Shimpô* estimates that the railway which it is proposed by Government to construct between Yokohama and Yokosuka will cost yen 600,000. The line, it is stated, will pass through Henmimura, in the Miura division of Kanagawa Prefecture, and Kamakura and Fujisawa.

THE *Takachiho Kan* has gone to Shinagawa and not to Yokosuka, as stated on Saturday, the appearance of cholera at the latter anchorage having led the authorities to change their intentions for the present.

HIS EXCELLENCY COUNT SAIGO TSUKUMICHI and suite departed on Tuesday in the *City of Peking* on a tour through Europe.

THE British bark *Mary A. Troop* sailed on Tuesday for Portland, Oregon, with a full cargo of tea.

THE members of Chiarini's Circus and Menagerie Company arrived by the *Yokohama Maru* on Thursday from Shanghai.

THE U.S. frigate *Alert* (4), Commander Barclay, left on Thursday for San Francisco.

HIS IMPERIAL MAJESTY THE EMPEROR visited the Fukiage Park on the 7th inst. at 9 a.m.

THE French frigate *Turenne* (14), Captain Dupuis, left on Monday for Hakodate. Original from

## KIM-YO-KUN'S MEMORIAL.

THE memorial addressed by KIM-YO-KUN to the KING of Korea shows that the author of the *éméute* of 1884 has at least the merit of understanding his country's condition. We speak, of course, as outsiders, than whom KIM ought naturally to be much better informed. But it does not always follow that an Oriental is easily competent to put his finger upon the faulty features of the conditions under which he has lived. On the contrary, this species of perspicacity is rare, and if KIM displays it in a marked degree, it is doubtless because his intercourse with foreigners, especially Japanese, has provided him with spectacles not subject to the refraction of national prejudice. There is remarkable justice in his criticism that the spirit of industrial enterprise is completely checked among his countrymen by the oppressions and extortions of the upper classes; that the peninsula, owing to its own weakness and the hot-and-cold policy of the Chinese Government, lies virtually at the mercy of foreign aggression, and that the members of the Government, instead of adopting measures to avert this peril, think only of promoting the interests of the faction to which they belong. Korea, indeed, is in the unhappy condition of a kingdom whose paltry strength cannot be concentrated for national purposes owing to the unpatriotic rivalries of those who ought to direct it. People used to say that the enterprise of KIM himself was an instance of this unwholesome rivalry. But the refugee labours hard in his memorial to remove any such impression. He seeks to persuade the public—for to them, of course, the memorial is really addressed—that his *coup d'état* was inspired solely by a desire to assure his country's independence, to develop her resources, and to redress the grievances of the people. What measure of conviction his words will carry, we shall not attempt to determine. But it is only fair to say that the conduct of the man himself and of his associates, during their very brief tenure of power, was not inconsistent with the aims by which he now claims to have been inspired. He must have seen—every thinking Korean must see—that so long as China pursues her present policy of fitful interference and periodical repudiation of responsibility in Korea, the little kingdom, feeling itself to be the plaything of an inscrutable Power, will remain without either the confidence of a dependant or the courage of freedom. In truth China's attitude is perfectly conceived to defeat her own purpose. She takes care that the world shall entertain no respect either for Korea's independent rights or for the ties that bind it to its neighbour, and that Korea, at the same time, shall be kept in a state of uncertainty fatal to her self-respect.

Appreciating these vital elements of the situation, it is perhaps unfortunate that

KIM-YO-KUN lacks the qualities to utilize his knowledge. But that he does lack them this memorial plainly shows. He is without that trait essential to the character of the true patriot—the capacity of self-sacrifice. To vindicate his own reputation is the leading purpose of his memorial. In pursuit of that purpose he does not hesitate to place his SOVEREIGN in an embarrassing position before the world, and to assail the reputation of the Japanese Government upon whose coöperation he nevertheless professes to have relied, and whose protection he enjoyed for eighteen months. That KIM had the approval of the KING of Korea in the *coup d'état* of 1884, few are disposed to doubt. But to proclaim the fact now is simply to embarrass his SOVEREIGN without the prospect of any compensatory advantage. If he has faith in the just instincts of the KING, there was no need to recapitulate circumstances which must lie very close to the monarch's heart. If he has no such faith, he ought at least to have refrained from utterances which must compel the KING to identify himself still more closely with the party that KIM denounces. There are occasions when a patriot must be content to suffer wrong silently, lest by seeking premature redress he may imperil larger interests. The present is such an occasion, and KIM, by not rising to its level, has contributed to the permanence of the evils he laments.

His references to Japan are open to similar criticism. That he believed himself justified in counting on Japanese coöperation in 1884, may be readily admitted. Whether or no he had any valid grounds for such a belief, is altogether a different question. It is very possible that the Japanese Legation's active sympathy with the cause of Korean progress may have suggested exaggerated inferences to KIM and his friends. It is even possible that that sympathy may have been sufficiently injudicious to warrant such inferences. But KIM knows perfectly well that Japan has always been the fosterer of Korean independence, and that, within the bounds prescribed by international law and the general peace of the Far East, the inclination of the Japanese nation is to promote the aims of Korean patriotism. How does it happen, then, that such a paltry purpose as the vindication of his own sagacity impels KIM to alienate the good-will of his country's only friend? The fact that Japan, after affording him an asylum for a year and a half, and after refusing again and again to hand him over to his enemies, is now induced by high considerations of State to bid him seek refuge elsewhere, seems to have stirred him to such bitter resentment that he goes out of his way to pronounce a hostile and foolishly extravagant verdict on the Riukiu affair. There are times when the courage which induces a man to burn his ships behind him is admirable. But KIM, by this operation, cuts himself off from the pursuit of the only projects which raised him above the level of a vulgar intriguer. His memorial, in short, so far from vindicating his conduct, goes far to establish the fitness of his present fate.

## GERMANS IN TRADE.

AN indictment, which would be formidable were it less intemperate, has been preferred against the Germans in China by a correspondent of the *London and China Express*, who signs himself "En Vedette." According to that very outspoken writer, the share which German merchants recently managed to obtain in Chinese trade is chiefly attributable to three causes, differing only in degrees of illegitimacy: first, diplomatic pressure; secondly, the free use of bribes; and thirdly, tendering at figures which forbid the supply of even moderately good materials. Disappointed rivalry is to be discerned so plainly in the background of this sinister picture that we may put it aside without waiting to examine how much truth it represents. If these are the sources of German success, they are destined to be soon exhausted. "En Vedette" invites the public to a more rational and interesting discussion when he cites, among the factors of German commercial development, the supineness of English merchants and the ability and willingness of the Germans to learn even such a difficult language as Chinese. A long sermon might be preached upon this text, but the gist of the whole would be simply that times are changing, and that stiff-necked people who will not adapt themselves to the change are bound to be left behind by their versatile competitors. We transfer our thoughts to Japan, since there we deal with matters that directly concern us and are more familiar. Consider the circumstances under which trade is carried on in Yokohama. Does it not seem as though foreign merchants had determined to play the rôle of keeping the Japanese at arm's length? The isolation provided by the Treaties is bad enough; but the ostracism contrived by the merchants themselves is far worse. Probably there are not half a dozen among them who can converse intelligibly in Japanese. Colloquial facility in that language is not so very difficult to acquire. But the effort to acquire it is not made. "One can get on very well without speaking Japanese," is the ready answer to remonstrances upon the subject. Such a reply belongs to the category of excuses that shirk the main question altogether. For the point is not whether by the aid of an interpreter, and some words of "pidjin," a bale of shirtings may be sold or a parcel of silk bought. The point is that the absence of any desire to converse with the people in their own language implies entire content to hold no intercourse with them beyond that necessitated by the bare transactions of commerce. It is indisputable that if foreign residents wanted to know the Japanese, to mix with them socially and to cultivate their friendship, their first aim would be to master the Japanese language. They want nothing of the sort, and so they leave the language alone.

Original from

Their supineness was well enough, perhaps, once upon a time—the time when our intercourse with Japan seemed likely to remain a question of force. But a different era was long ago inaugurated, and unfortunately it has not been accompanied by any corresponding change of mood on the part of foreigners. They still adhere to the old-fashioned indifference. The Japanese exhibit some increase of disposition to study German, and we immediately cry out that the nation is about to be Germanized. *Mutatis mutandis*, we should raise the same cry if French or Italian entered largely into the curriculum of their schools. But for our own part, we superciliously eschew the study of Japanese. Having no wish to exchange ideas with the people, we very logically consider the means of doing so superfluous. Have the Germans begun to appreciate and profit by the opportunity which this unamiable mood offers? Have they understood that those who move with the times must be the first to happen upon any chances lying in the path? “*En Vedette*” says as much of them in China, and we are by no means sure that his story might not be truthfully extended to embrace Japan. For though we cannot point to Herr This or Herr That as recent *débutants* among Sino-logues, we certainly can detect signs of the growth of an intimacy between Germans and Japanese which implies that the former are disposed to step out of the antique groove. A strange groove it is, to be sure. Some few years ago we remember observing in the office of one of the leading merchants of Yokohama a wooden form such as might be used to seat prisoners in a Lambeth magistracy. This piece of furniture was so strikingly incongruous with its surroundings that curiosity impelled us to enquire its purpose. “To accommodate Japanese traders when they come to see me,” was the reply of the head of the firm. Evidently it seemed to this gentleman quite proper that his Japanese clients should be entertained as though they were servants or labourers. The incident is fairly typical. All through the intercourse of foreigners and Japanese in Yokohama there runs the same strain of contemptuous superiority on the part of the former. In truth there is no intercourse, properly so-called. There is casual association for business purposes; otherwise, complete ostracism. Outside his office the foreigner has nothing, and will have nothing, to do with the Japanese. He neither visits them in their homes, nor invites them to his. One might infer, not unjustly, that his permanent aim is to reduce to a minimum the points of contact between himself and them. Of course he will tell you that they are not fit to be his social friends; that the native merchants of the settlement are men of low origin with whom their foreign *confrères* cannot possibly mix on equal terms. The fact that he wears such a creed on his sleeve is precisely what we

criticise. If, coming here for commercial purposes, he determines to stand aloof from the people who are to be his customers and clients, then all that need be said is that he is above his work. The Germans, we believe, have arrived at this conclusion. They are a thrifty, thorough-going, highly gifted people. They will work longer than Englishmen for a smaller prize. If to these qualities, already dangerous in competition, they add a resolve to substitute genial good sense for morbid prejudices, it is easy to foresee the place which awaits them in the race.

#### THE U.S. CONSUL-GENERAL'S NOTIFICATION.

THE *Japan Gazette* takes exception to our criticism of the notification recently issued by the United States Consul-General. We commented on the terms of the notification, and drew attention to the obvious inference they suggest. The Consul-General said:—“I have to request that all citizens of the United States of America within this Consular District will lend cheerful aid and coöperation to the Local Authorities in all sanitary measures undertaken by the latter.” By using this formula of “request” he plainly indicated that he had no power to compel such “aid and coöperation,” and that he depended entirely on individual volition. The *Gazette* meets this objection to the use of such a formula by asserting that we were “evidently in the dark as to the tenure of the circular letter which had been addressed by the Kenrei of Kanagawa to the Foreign Consuls under date of the 2nd instant.” That document, according to our contemporary, ran thus:—“I have, consequently, the honour to request you also kindly to call upon your respective countrymen to exercise every care and to report immediately any case of cholera occurring in the settlement.” “This request,” the *Gazette* proceeds to explain, “was at once responded to by Consul-General GREEN, in words of a similar nature to those used by the Kenrei.” Now, the facts, by our contemporary's own showing, that the Prefect of Kanagawa requested the Consul-General to “call upon” his nationals to do a certain thing, and that the Consul-General responded by “requesting” his nationals to do it. It appears slightly disingenuous to ignore the difference between officially “calling upon” a man to take certain steps, and “requesting” him to do so. The one is an order; the other simply an entreaty. That is the whole point of the matter. Our contemporary misses it so palpably as to suggest that he does not wish to see it. We were careful to point out, and we may repeat here, that our intention was not to find any fault with the present Consul-General of the United States. He merely followed a precedent to which his prede-

cessor adhered. But we repeat that nothing could be more irrational and inexpedient than the theory which holds the foreign residents exempt from all obligation to obey Japanese local regulations. The Consuls have no power to make such regulations. The power is vested solely in the Japanese. But the foreign residents set Japanese authority at naught while acknowledging their own incompetence to provide any substitute. Therefore we say again, as we have often said before, there is virtually no municipal government in this settlement. The roads are repaired; the drains are kept clean; drunken men are arrested, and the streets are watered. But whenever an unwonted occasion—like the present cholera epidemic—presents itself, then the discovery is made that each foreign resident is free to observe or neglect, according as the fancy takes him, the rules promulgated by the Local Authorities in behalf of the public safety. Everyone is so thoroughly accustomed to this burlesque that its repetition passes almost unnoticed. Yet in point of fact such absurdities grow daily more monstrous. A foreign Consul is simply acting a comedy when he avails himself of the advertising columns of a newspaper to “request” that his nationals will observe a Japanese rule. The folks who do not read newspapers are precisely those that ought to be brought within the scope of sanitary regulations, and are, at the same time, the very people to snap their fingers at an official request. Surely there cannot be one among the Consuls who does not fully appreciate the difficulties of the present system, and who would not gladly welcome any reform calculated to impart an element of practical earnestness to this game of government without administration. We should not venture to suggest that the American Consul-General is satisfied with a situation which requires him to prefer a “request” to his nationals through the advertising columns of a newspaper in matters lying at the very root of good government. If the *Japan Gazette* desires only to show that Consul-General GREEN acted in accordance with precedent and in spite of his better judgment, the demonstration is quite unnecessary, so far as we are concerned. But if the *Gazette* seeks to frame a general justification of the Consul-General's course, and therefore of the system he is condemned to follow, then our contemporary takes a line along which the Consuls themselves, unless we are greatly mistaken, will be unwilling to follow him.

## THE MERCHANT'S ROLE.

THE voice of the public is beginning to be raised against the middlemen of commerce, that is to say, against the merchants. M. PAUL LEROY-BEAULIEU leads the attack in the *Economiste*. We all know that nearly every article of commerce has fallen heavily in price during the past few years, and is still falling. This is an evil which, under ordinary circumstances, ought to carry with it its own remedy, since reduced prices generally mean increased consumption. But in the present instance the remedy is not efficacious—is not even in operation, if we may credit the French economist. For the fall of prices affects the producer alone: the consumer does not profit by it. Corn, meat, butter, sugar, coffee, and a thousand other objects bring smaller and smaller returns to the producer, but the consumer pays nearly as much as ever for them. In some cases the reduction has been divided, but never in due proportions. The producer, then, receiving less, and the consumer paying as much, or nearly as much, as ever, it is plain that the difference must go to the middleman—the distributor. Not that individual merchants obtain a larger share of the profits than formerly, but that their number multiplies inordinately. Thirty years ago, there was one baker in Paris for every eighteen hundred inhabitants. To-day, there is one for every thirteen hundred. The number of butchers, fruiterers and so forth, has increased, we are told, in the same proportion. If that be so, it evidently means that each intermediary, in order to gain as much as before, must levy fifty per cent. more from each client, since his *clientelle* is now only two-thirds of what it was. It will be at once observed that, to render this reasoning rigid, statistics must be adduced to show that the average of individual consumption has not increased. Very possibly every thirteen hundred citizens in Paris may consume as much bread and meat now as every eighteen hundred consumed thirty years ago. But the editor of the *Economiste* does not pause to consider this. He proceeds complacently with his deductions. "The condition of the intermediary, he tells us, is not improved. On the contrary, being a member of an overstocked profession, he gathers a bare and precarious subsistence. His expenses, too, are greater than ever. He employs more hands and is obliged to pay more attention to the superfluous accessories of his trade. 'There can never be too many producers,' writes M. LEROY-BEAULIEU—though the admission surprises us coming from a bigoted monometallist—"but there may be far too many of those indirect auxiliaries of production, the distributors—wholesale and retail merchants, clerks, and employés of all sorts." In short, the French economist holds that of the two essential functions of society, that of distribution has

attained a wholly disproportionate development. And the reason, he thinks, is not far to seek. It is the spread and exaggerated value of education. There is a species of mania about education in the nineteenth century. Reading, writing and arithmetic are well enough, but they do not unfit a man to be a simple producer. The delusion of the age, a delusion fostered by law-givers, journalists, and professors, is that, if a man possesses these rudimentary accomplishments, it is derogatory for him to remain in the labouring classes. There never was a period in the world's history when greater solicitude was taken for the workman's welfare; never a period when to be a workman was to be less respected.

In view of these circumstances, the remedy proposed by M. LEROY-BEAULIEU is the establishment of monster warehouses and of coöperative societies. The difficulties in the way of such enterprises are great, but not sufficiently great to be deterrent. Courage and effort are needed to emerge from hard times and an abnormal situation. "It is incontestable," concludes M. LEROY-BEAULIEU, "that the present organization of commerce is too cumbrous, too onerous, and that it inflicts injury on producers and consumers alike. Its reformation cannot be effected in a day, but a beginning must be made."

## A GREAT JOURNALISTIC EVENT.

(COMMUNICATED BY A JAPANESE.)

A MEMORABLE event recently took place in the history of Japanese journalism. On March 21st, the *Hochi Shimbun*, the most enterprising of Liberal papers, came out with a piquant article entitled "Aim at Excellence; Reject Imperfections," in which that journal charged its conservative contemporary, the *Nichi Nichi Shimbun*, and by implication the Government of Count ITO, with aping the imperfections of other countries; the imperfections noticed being three, namely: the monarchical or irresponsible system of the Ministry; the severe restrictions of freedom of speech and the right of holding meetings; and the centralization of political power. The *Nichi Nichi Shimbun* was roused by this attack, and in a long series of highly animated articles refuted the charges brought against it, especially that concerning the question of the responsibility of the Cabinet. If the *Hochi Shimbun* had been somewhat sarcastic in its tone, the *Nichi Nichi Shimbun* was hardly less pungent in its denunciation of its contemporary's opinions. The *Nichi Nichi Shimbun* plainly and authoritatively stated that a parliamentary system of constitutional government, like that of England, cannot be introduced at once into Japan, and that the government of our immediate future ought to be like that of Prussia, in which the Ministers are responsible to the Sovereign and not to Parliament. This declaration of the conservative paper was the

signal for an instant and almost simultaneous outburst of opposition from all quarters of the newspaper world. The leading newspapers in the capital, the *Hochi Shimbun*, the *Mainichi Shimbun*, the *Choya Shimbun*, and others, fiercely attacked the position taken by the conservative paper, particularly with regard to the subject of Cabinet responsibility, which soon became the principal point at issue. The only paper of note that was conspicuous for its entire silence throughout the long sustained controversy, was the *Yiji Shimpō*, which seems to have little taste for the discussion of high sounding political principles. After a long series of replies and rejoinders, extending over a period of more than two months, the great journalistic fight was recently brought to a close; the contest having been maintained on both sides with a degree of zeal and earnestness not likely to be again witnessed in journalistic controversies for a long time to come.

Considering that the promised Constitution is yet to be made public, it might appear premature, if not wholly useless, to talk seriously about the question of the responsibility of the Cabinet. But a glance into the past history of the march of political ideas in this country will make it clear that opinion on this topic has for a long time been secretly ripening, and has only been prevented from public expression by want of a favourable opportunity. As far back as, and indeed much earlier than, 1881—the year in which the urgent appeals of the nation induced HIS MAJESTY'S Government to promise the opening of a National Assembly in 1890—it was the desire of the people to adopt a system like that of England. But the more sober and farsighted of those who entertained this desire were by no means certain that the constitution selected by the Government would be the one they had in their minds. When it was announced that Count (then Mr.) ITO was to be sent to Europe to study Western constitutional systems by way of preparation for the framing of our future constitution, the nation's attention centered in his person. It shortly became evident that he was paying special attention to the constitution of Prussia, whereupon the feelings of doubt which had from the outset arisen in the minds of an intelligent portion of the public became more confirmed. This uneasiness was still further intensified by the measures which followed the Count's return from Europe; such, for instance, as his assumption of the portfolio of the Imperial Household, which thereby acquired an increased and entirely new importance, and the creation of new orders of nobility. Pending, however, the publication of the Constitution, no open controversy could be maintained, although sentiments were now and then expressed clearly indicating the drift of public opi-

Original from

nion. But it became daily more evident that in no distant future the question would seriously force itself before the nation. The public mind was in this state of secret anxiety and impatient expectation when the Cabinet was reconstructed in December last under the presidency of Count ITO; and the nation was agreeably surprised by a number of salutary and drastic reforms, which followed one after another in rapid succession. For a time, the whole atmosphere was filled with loud and unanimous voices of applause. But soon it became tolerably transparent that the object of the new Government was to transplant the Prussian form of constitution into Japan, and the explanatory articles of the *Nichi Nichi Shimbun*, which followed the publication of each successive measure of importance, left little room for doubt on this point. The opportunity thus afforded of discussing this subject of the responsibility of the Cabinet was not to be lost. The *Hochi Shimbun* opened the fight, and the result was the hot controversy alluded to above.

From what has been written, it will be clearly understood that the question of the responsibility of the Ministry had long been secretly agitating the minds of the people, and that it had always been expected to assume some day a real and serious aspect. It is also evident that this question will always be present in the minds of the public. Its solution one way or other must have a vital bearing upon the future of the country. Evidently, then, it is of the utmost importance that we should study the matter in sober earnest, and take our view from a standpoint raised above mere party considerations, guarding ourselves on one side against the stupefying influence of ultra-Loyalism, and on the other against the equally dangerous influence of reckless zeal for absolute Republicanism.

Let me now briefly present the principal points of argument on both sides. In a long series of articles extending over not less than thirty issues, the *Nichi Nichi Shimbun* courageously took up single-handed the cause of monarchism. Its arguments amount to this: Japan stands in an entirely different historical condition from that of European and American countries. From the time of the Roman supremacy, down through the Middle Ages, until this very day, the one underlying principle of Western nations has been the principle of democracy, which, though at times apparently over-powered by the monarchical principle, has at last come out victorious, and is now holding the ground fairly in its own possession. The conservative organ makes a special study of the political history of England, in order to prove that the democratic principle has been from the very first the fundamental trait of her people; and with this view it succinctly recounts various stages of the development of popular government in that coun-

try. Thus, so far as Western countries are concerned, the *Nichi Nichi Shimbun* admits, not without apparent reluctance, that national politics are more and more advancing towards complete democracy. But, turning to Japan, the *Nichi Nichi* emphatically urges that her historical condition is essentially different from that of Occidental States. In this country the governing principle has been, from the very commencement of the empire until this day, the principle of monarchism. Every subject of HIS MAJESTY is therefore bound to respect this national principle. Thus, drawing a fundamental historical distinction between Japan and Western countries, the *Nichi Nichi Shimbun* passes on to consider the nature of the two forms of constitutional system now in existence—the one in which the Cabinet takes or resigns office according to the majority in Parliament, and the other in which the Ministers are only responsible to the Sovereign and hold office quite independently of a parliamentary vote. The former the conservative paper stigmatizes as democracy veiled in constitutional garments, while the latter it holds up as the true form of constitutional monarchism; for, while under the former form of constitutional government the supreme power is vested in the parliamentary majority; under the latter form, on the contrary, the Sovereign retains it in his own hands. What necessity, the Tōkyō journal emphatically asks, is there in Japan to adopt the parliamentary system and usurp the supreme power from the hands of HIS IMPERIAL MAJESTY? Further, here in Japan it is HIS MAJESTY himself who has taken the initiative for the establishment of the true system of constitutional government, with a gracious consideration for the future good of the nation. Is it not, then, the duty of every Japanese subject to exert himself to the utmost to further the accomplishment of HIS MAJESTY'S benevolent resolve? Those, who, far from thus discharging their primary duty, go to the length of demanding the adoption of parliamentary despotism, are blamable for disloyalty to the Crown. As corollaries to the above main argument, the *Nichi Nichi Shimbun* discusses various topics of more or less weight. Among these may be mentioned the principles that a parliamentary government is necessarily a government by party, which ultimately leads to democracy; that under parliamentary supremacy the Sovereign has little or no actual power, illustrations being specially taken from the political position of the English Crown; that in a constitutional monarchy the authority of the Sovereign ought to be like that of the German EMPEROR—that is, he should reign as well as govern; that it is erroneous to maintain that, under a monarchical system, the Cabinet is irresponsible, because the Ministers under that form of government are held responsible to the Sovereign, as is

clearly laid down in Art. XLIV. of the Prussian Constitution; that even in Europe, there being many strong States (especially Germany) in which a pure monarchical form of constitutional government is adopted, and the historical condition of Japan being such as has already been described, to attempt the adoption of a parliamentary system of government in this country, is to ignore the history, the traditions and the character of the nation; and that even after the establishment of the National Assembly in 1890, our Cabinet must stand above political parties, looking solely to the best and true interests of the country, because universal experience teaches us that, under government by party, political factions are invariably led by their mutual rivalries to run to the extremes of their respective political tendencies, which inevitable tendency would assume most dangerous dimensions in Japan, where, there being no party which we may properly call Conservative, the only possible parties will be the Liberal and the Radical.

To the arguments of the *Nichi Nichi Shimbun*, the Liberal papers reply each in its own fashion; but their line of reasoning is in the main that adopted by the *Hochi Shimbun*. In addition to the circumstance that that journal was the first to open the question, its consistent energy as well as its animated treatment of the subject, entitle it to be regarded as the representative of Liberal views. It argues in this wise. The quality of a government is not determined by the magnitude of the powers wielded by the Sovereign; the best government is that in which both the maintenance of the royal authority and the claims of popular rights are harmoniously adjusted. Granting, however, for argument's sake, that the best government is one which secures to the Crown the fullest scope of authority, the *Hochi Shimbun* by no means thinks that this end will be attained by the form of government which its Conservative contemporaries advocates. The Liberal paper then goes on to discuss various disadvantages to which the Sovereign will be subjected under the monarchical form of constitutional government. These disadvantages are: that the Sovereign's authority will be usurped by his Ministers, the best example being found in Germany, where Prince BISMARCK virtually wields the supreme power; that the Cabinet in such a form of government is inevitably in conflict with the parliament, a condition which leads to the unpopularity of the Crown; that the Cabinet not being held responsible to the people, the Sovereign himself will have to answer for all the acts of the administration, although he may have taken no part in them, a circumstance full of dangers to the dignity and the safety of the Throne. It thus results, remarks the *Hochi Shimbun*, that the only party benefited by the monarchical form of constitutional government are the members of the Cabinet, who have the advan-

tage of getting and retaining power even if opposed by the people, and also of evading their responsibilities on the plea that the Sovereign directs in person all the work of administration. Such a state of affairs would tend to the demoralization of the political life of the country. Returning to its own ground of argument, the *Hochi Shimbun* declares that democracy is the goal toward which not only European and American countries, as the conservative journal admits, but all the world is drifting. A government whose principle is opposed to this universal current is doomed to ruin, while one which follows it is safe. The existence of the so-called fundamental historical distinction between Japan and Western countries, upon which the whole argument of the *Nichi Nichi Shimbun* is based, is emphatically denied by the Liberal paper. As one out of the many proofs of the early existence of the germs of the principle of democracy in this country, the *Hochi Shimbun* points to the notorious fact that most of the best of our Emperors made it their whole object to promote the well-being of their people. Even admitting that the principle of democracy did not exist in former days, the tendency of affairs since the Restoration has been unmistakably in that direction. If proof is wanted, we are told to look at the grant to the people of the right of ownership in land, at the establishment of City and Prefectural Assemblies, and at the promised grant of the Constitution and the establishment of the National Assembly. Even if it be allowed that the democratic principle is the peculiar property of Occidental nations, the *Hochi Shimbun* holds that, if that principle best promotes the dignity of the Crown on the one hand and the welfare of the people on the other, it should be the duty of every loyal and patriotic citizen to introduce it into this country. As to the maintenance of the monarchical form of Government in Germany, the *Hochi Shimbun* attributes it to the extraordinary influence of the Emperor WILIAM and Prince BISMARCK, and to the exceptional circumstances attending the creation of that Empire, and believes that the death of these men will be the signal for the overthrow of the present monarchical system. The Liberal journal repudiates the idea that in a parliamentary government the Sovereign has little power. It holds that the true power of a monarch does not consist of the unrestrained exercise of his despotic will, but is based on the affections of his people. Lastly, the *Hochi Shimbun* maintains that government by parties is best conducive to the well being of the country, for the national affairs are, under that form of government, administered by the will of the majority of the nation.

From this very brief, though, so far as my intention goes, impartial, sketch of the main line of the arguments on both sides, it

will be seen that the *Nichi Nichi Shimbun's* reasoning turns on the question of the fundamental historical difference between Japan and Western countries. Indeed, the importance of a historical treatment of political subjects generally, but more especially such a subject as that now engaging our attention, is very evident. I attach little weight to the *Hochi Shimbun's* idea that the germs of democratic principle have existed in this country from ancient times. But the admission that the nation at large has little idea of what democracy means, does not necessarily lead to the position taken by the *Nichi Nichi Shimbun*—that, because the authority of our Emperors has never been questioned by the nation, the prevailing element in our polity has been the principle of monarchism. It is quite true that our Imperial family has been, to say the least, wonderfully free from any of the unhappy consequences of sovereignty, by which all the ruling families of other nations have been overtaken. But this does not justify the conclusion deduced by the *Nichi Nichi Shimbun*. If the sovereign power of our Emperors has been little questioned, and still less opposed by the people, that power has seldom or never been exercised by our Emperors themselves. The truth is that the real power of government was for many centuries entirely in the hands of the military class, the *shizoku*. That is to say, the prevailing element of our polity has been the principle of the aristocracy of talent and strength, at present represented by about two millions of men, or one-eighteenth of the whole population. Moreover, among the *heimin* class, also, symptoms of the healthy development of democratic ideas are not wholly wanting. Even during feudal times, men of extraordinary force of intellect or character constantly appeared among the *heimin* class, and rose to positions of great political power by virtue of their own merits. Since the Restoration, the number of such *heimin* has considerably increased, and at present in the ranks of journalists, lawyers, higher classes of merchants, and members of local assemblies, the *heimin* class is represented by a great number of able men. Going still lower and looking at the bulk of the *heimin*, the country peasantry, it is noticeable that they are fast accommodating themselves to the new order of things. Recently, when I visited my native province about one hundred and fifty miles south of Osaka, I was present at a district meeting (*chōsōukai*). The meeting was held in one of the halls of an ancient Buddhist church; some thirty members were present, seated on chairs arranged in a single row round the hall much in the same fashion as they are arranged at City and Prefectural Assemblies. A member of the Prefectural Assembly presided. The subject of deliberation related to the amount of district rates for the next year,

and their distribution over various items of expenditure, such, for instance, as the maintenance of schools, salaries of teachers and clerks of the district, repairs of roads, etc. These matters may have been familiar to all the members, but it is at any rate certain that they discussed them with a degree of practical sense and intelligence far surpassing what I had expected. The whole tone of their manner convinced me that they fully realized that the economical affairs of the district were their own concerns, and had accordingly to be managed by their own consent. I have not been present at any other district meetings, but I presume that the same salutary change in the thoughts of the lower classes of the people will be witnessed in most cases.

I believe, then, that the nation is fast advancing toward democracy; that sooner or later our polity will have to become like that of England; and I hope that every patriot will labour toward this end with a sincere and disinterested heart. But at the same time, I must state that I am not so sanguine of the realization of our aim as the *Hochi Shimbun* and other Liberal papers seem to be. Rapid and wonderful as our past progress has been, I am not yet so sure of the real advance of the people in political ideas as to think it necessary that the government should be entrusted to them. We ought to proceed step by step, establishing ourselves firmly by upon each new ground before making another advance.

I have no means of knowing the true ideas entertained by Count ITO and his able colleagues on this subject, but judging from their past career, I am inclined to think that they likewise look to a parliamentary form of government on the English model as the final goal to be reached. At any rate, the path before them is clear enough. The nation, whose future it has fallen to their lot to mould, is rapidly advancing toward the principle of democracy, and already the Party—I say the Party and not Parties, because in principle the Kaisinto and Jiyuto are much alike—the Party opposed to them contains no despicable amount of intellectual and moral force, and moreover has the sympathy of a considerable portion of the nation. Should the Government show at this stage of progress any signs of deviation from that line of advance which its leaders have taught the people to follow, the result will be extremely unfortunate both for themselves and for the nation at large.

# WITHDRAWAL OF TEN SEN PAPER MONEY.

## IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the prohibition of the use of ten sen paper money, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual.]

[Privy Seal.]

Dated the 9th day of the 7th month of the 19th year of Meiji.

Countersigned by Count ITO HIROBUMI,  
Minister President of State.

Count MATSUKATA MASAYOSHI,  
Minister of State for Finance.

## IMPERIAL ORDINANCE No. 1.

The use of ten sen paper money shall be prohibited after the 30th day of the 6th month of the 20th year of Meiji.

## ORDINANCE No. XXV. OF THE DEPARTMENT OF FINANCE.

It is hereby notified that, whereas the use of ten sen paper money will be prohibited after the 30th day of the 6th month of the 20th year of Meiji, as proclaimed by Imperial Ordinance No. 1, application for the exchange of such money should be made at the Nippon Ginko, or its branch offices, or agencies before the date fixed, and it is further notified that the names of such agencies shall be advertised by the Nippon Ginko.

(Signed) Count MATSUKATA MASAYOSHI,  
Minister of State for Finance.

Dated the 12th day of the 7th month of the 19th year of Meiji.

## GRADUATION DAY AT THE IMPERIAL UNIVERSITY.

The Graduation Ceremony of the Colleges of the Imperial University took place on the 10th instant, in the Central Hall of the Engineering College. The Hall was draped with the flags of the world, united, one by one, with the Japanese *Hi-no-maru*. On the platform were their Excellencies Prince Sanjo, Lord Keeper of the Seals; Count Ito, Minister President of State; Count Yamada, Minister of State for Justice; H.B.M. Minister, the Honourable Sir Francis Plunkett, K.C.M.G.; Mr. Watanabe, President of the University; Messrs. Yamao and Otori, Senators; Mr. Inouye Masaru, Chief of the Railway Bureau; Mr. Shibusawa, Herr Roesler, and the Directors and Professors of the various Colleges. The Minister of State for Education was absent, owing to illness, and his place was taken by Mr. Watanabe, President of the University. The body of the Hall was crowded with students, and under the galleries on either side sat a large number of visitors. There were very few ladies present; a fact which did not fail to attract the attention of those who look to see the women of Japan take their proper place in the life of the nation. The ceremony commenced with the presentation of certificates to graduates of the various Colleges. Each successful student, being summoned by name, advanced to the dais, and received his certificate from the hands of the Director of his College. We need scarcely say that the young men thus distinguished showed all the aplomb and absence of self-consciousness for which the Japanese are remarkable. But they showed also, and that very plainly, the effects of hard study, many of them looking pale and worn out, and fully forty per cent. wearing spectacles. The rising generation of Japan is purchasing its literary and scientific acquirements at a physical cost which we would gladly see lessened. The names of the

recipients of certificates and of the Presidents of Colleges are as follows:—

## COLLEGE OF JURISPRUDENCE.

Director—President WATANABE HIROMOTO.

### LAW.

Uemura Shunpei.  
Tomizu Hirodo.  
Okano Keijiro.  
Oinuma Nagayasu.  
Sakakibara Ikuwaka.

Sawasaki Yorisnosuke.  
Ito Sokenori.  
Inui Fushi.  
Hanyu Akichika.  
Nakano Shogo.

### POLITICS.

Sagane Fujiro.

## COLLEGE OF MEDICINE.

Director (Acting)—Professor OSAWA KENJI.

### MEDICINE.

Tsutsumi Sokyo.  
Sarai Kyuyō.

Ninomiya Seichirō.

## COLLEGE OF TECHNOLOGY.

Director—Professor FUMICHI KIMITAKE.

### CIVIL ENGINEERING.

Mukasa Seitaro.  
Saburi Kazutsugu.  
Sugawara Kuran.  
Ogawa Umesaburo.  
Oyama Tomonao.

Kuno Tomoyoshi.  
Uyeda Toshiro.  
Kuroda Toyotaro.  
Torioe Kinnosuke.

### MECHANICAL ENGINEERING.

Atsumi Sadamoto.

Utsunomiya Kan-ichi.

### NAVAL ARCHITECTURE.

Tanaka Yasutada.

### TELEGRAPHIC ENGINEERING.

Hayashi Seisuke.

ARCHITECTURE.

Tanaka Toyosuke.

### APPLIED CHEMISTRY.

Okubo Shinsei.

Ichikawa Toshio.

### MINING ENGINEERING.

Yonekura Seizoku.

Ohigata Ichisuke.

\* The Students of these courses studied in the former Kōbu Daigaku.

### CIVIL ENGINEERING.

Kobayashi Hakujiro.

Tanimura Tachima.

### MECHANICAL ENGINEERING.

Shimayama Hidehisa.

Watanabe Ryu.

Ohira Matsujiro.

Suzuki Chiyokichi.

### APPLIED CHEMISTRY.

Ichino Kin-ichiro.

### METALLURGY.

Yamada Buntaro.

\* The Students of these courses were formerly attached to the Technical Department of the Tokyo Daigaku.

## COLLEGE OF LITERATURE.

Director—Professor TOYAMA MASAKAZU.

### PHILOSOPHY.

Hitaka Mazane.

Nagasawa Ichizō.

### JAPANESE LITERATURE.

Toda Tsunetaro.

## COLLEGE OF SCIENCE.

Director—Professor KIKUCHI DAIROKU.

### PHYSICS.

Hirayama Jun.

Saneyoshi Masutomi.

### CHEMISTRY (Theoretical).

Makino Kiyosato.

### ZOOLOGY.

Tsuboi Shogoro.

### BOTANY.

Shirai Kōtaro.

Ōyatsu Naomaro.

At the conclusion of this part of the ceremony, addresses were delivered by President Watanabe, the Honourable Sir Francis Plunkett, H. E. Count Ito, and Herr Roesler.

Mr. WATANABE spoke in Japanese. The following is a translation of what he said:—Your Excellencies the Ministers of His Imperial Majesty, your Excellencies the Plenipotentiaries of Foreign Powers, and Gentlemen: This is the first public occasion in the history of the Imperial University, and since my appointment to the honorable position of President of that institution. My appearance here to-day before you all affords me the greatest gratification and pleasure. Shortly after the Restoration, His Imperial Majesty issued a Proclamation containing five articles, one of which runs as follows:—"Search after knowledge throughout the world and strengthen the foundations of our empire;" and another: "Cast away the corrupt customs of the past; and adhere to the great Principle of the Universe." Now, this Proclamation has been the origin of very great changes, the greatest ever wrought in our country, which have determined our national policy, and have also led, I believe, to the recent establishment of the Imperial University. For how can we search after knowledge throughout the world, unless it be through

science? The great principle of the universe, also is unattainable except by science. We thus see, that the idea of promoting education in this country, was part and parcel of the grand scheme contemplated by His Imperial Majesty at the Restoration. Soon after the Restoration, the Daigaku was established and placed on an equal footing with the other public departments of the State. A number of schools were at the same time founded, and many old ones were resuscitated and enlarged. In the fourth year of Meiji, the Educational Code was promulgated, and all the schools in the land were, for the first time, brought under one system. In the tenth year of Meiji, the University of Tokyo was founded, embracing the four departments of Law, Science, Medicine, and Literature. The services of professors, both native and foreign, were secured, the course of instruction was greatly improved, and a systematic education was, for the first time, given to the students. Some of these students, moreover, were sent abroad. Both the Government and people took a great interest in educational matters, and accelerated their rapid and steady progress. Those who have received certificates, and, since the institution of degrees in the eleventh year of Meiji, have been honoured with the title of Gakushi, number no less than 472. Meanwhile, many students were sent over to Europe and America, for the further prosecution of their studies. They are all fulfilling their duty as scholars, both in educational and in administrative posts, and in practical work; and their services, in contributing to the prosperity of the State are incalculable. The same is the case with the technological arts, which received a most signal recognition of their importance in the foundation of the Engineering College, which has sent forth as many as 200 Kogakushi and graduates. These two institutions advanced side by side, and brought about the grand results which we witness to-day. But in the practical matters of politics and national economy the need of the aid of science increased day by day, and the importance of a thorough investigation of these subjects became more and more clear. Hence by Imperial decree, dated the first of March of this year, the University of Tokyo and the Engineering College underwent great modifications, and the Imperial University was established, which added the Engineering Department to the four Departments of Law, Medicine, Literature, and Science. The new institution thus embodied five colleges in all, with a Director and a head professor in each special college, over all of which the President of the University, assisted by the Senate, presides. The graduates of the special colleges are allowed to enter the University Hall, in order to pursue further special courses of study, wherein they may excel, and are honoured with degrees according to the results of their work. Thus, by uniformity in the course of study, the unity of science is recognized, and by the renovation of the system of instruction the standard of learning is elevated. The five colleges henceforth are to work in harmonious concord, acting together on the one hand, in order to enable all the different branches of knowledge to commune with each other, thus showing the unity of the principles of all sciences; and on the other hand, preserving each its individuality, in order to enable each student to pursue some special branch of knowledge, thus making the sciences and arts necessary to the State as concise and clear as possible. The graduates of the special colleges are either to employ themselves in practical fields and prove of utility to the State, or to continue their scientific studies further and investigate the principles previously unfolded. Thus on the one side, practical men, and on the other, erudite scholars are to be developed, and both of them are to elevate the national standard of learning; and then, and not till then, we shall have brought into effect the idea involved in the Imperial proclamation, issued at the beginning of the Restoration:—to seek knowledge throughout the world and strengthen the foundation of the Empire; to cast away corrupt customs and adhere to the great principle of the universe;—and for the first time then, also, shall we have realized the grand idea embodied in the third Imperial Edict. Those who have the honour of receiving certificates to-day number 11 in the Department of Law, 3 in that of Medicine, 27 in that of Engineering, 3 in that of Literature, and 6 in that of Science, making a total of 50. They all have passed both their Preparatory and Main Courses, and by laborious study for these many years, and by regular attendance at the classes of the curriculum, they now occupy, by the blessing of Providence, the honorable position in which we see them placed to-day, a position which may well be the envy of all. My earnest wish is, that those who leave the University now, and devote themselves to practical work, will utilize their attain-

Original from

ments in their new spheres of labour, and thus gain deeper knowledge and greater skill; and that those who enter the University Hall will pursue with ardour the special branches of knowledge they have chosen, and thus unfold mysteries yet unknown, both classes alike contributing to the prosperity and enlightenment of the State. In doing this, they are fulfilling the duty they owe to His Imperial Majesty, and at the same time satisfying the expectations of all loyal citizens. And what the University most urgently desires is that, in future, the number of the graduates both of special colleges and the University Hall shall increase year by year, so that not a single social institution shall remain which has not felt the power and the blessing conferred by learning. Though this short address is far from doing justice to my feelings of gratification on this interesting occasion and to the hopes I entertain for the future, I trust that I have conveyed some idea of my feelings and ideas. I owe you many expressions of gratitude for the kind attention you have paid to my address. Most deeply also do I thank Your Excellencies the Ministers of His Imperial Majesty, Your Excellencies the Plenipotentiaries of Foreign Powers, and you my friends and guests, for your presence to-day, which has added much to the brilliancy and imposing nature of the ceremony. I conclude with the hope of having the pleasure of seeing you all again at the entertainment of this evening.

Mr. UEMURA SHUNPEI, the first graduate in the College of Jurisprudence, replying on behalf of himself and his fellow-graduates, read a Japanese address, of which the following is a translation:—Your Excellencies the Ministers of His Majesty the Emperor, Your Excellencies the Ministers of Foreign States, and Gentlemen: I have the honour to speak a few words in behalf of the present graduates of the five colleges, in response to the hearty congratulations and kind encouragement addressed to us by the President. We feel highly grateful to those who have honoured us with their presence upon this the occasion of our graduation ceremony. We are not bold enough to imagine that we have succeeded in an achievement so high as that represented by our President, but we do not pretend to deny that some portion, at least, of the praises bestowed upon us are fairly our due. Here we must not fail to mention the sincere gratitude with which we regard the benefits we have received from the professors and officers of the University, whose indefatigable efforts and kindness have always been powerful incentives to our progress. While we congratulate ourselves on whatever amount of success we may so far have achieved, we cannot but anticipate great and difficult work in the future. In this country, science and art have always been the pioneers of national progress, and so should they ever be. The curriculum of the University, therefore, should be gradually fixed higher and higher, and specialists should constantly seek to push their researches deeper and deeper. The students of the newly instituted University Hall must aim at carrying their investigations as far as human intellect is permitted to go. Such is the principal purpose and object of the recent re-organization of our University. We, who have fortunately been enabled to avail ourselves of this rare opportunity and who are enjoying special facility for scientific study and investigation, must seek to turn these advantages to the best account. First, we must cultivate ourselves, and then our care should be turned to the promotion of the national well-being. For the latter is the ultimate aim of individual improvement and development. It is, therefore, our duty and obligation to assist and improve ourselves mutually in our scientific and practical training, and never to stop short until we have done all that lies within our power. This, we believe, is the only way to heighten and preserve the glory of the achievements upon which you have been kind enough to congratulate us. This, too, is the only method by which we can look to fulfil the hopes and expectations with which our President regards our future. Let me assure you, gentlemen, that this shall always be the most earnest desire of the present graduates.

The Hon. Sir FRANCIS PLUNKETT, who was most warmly received by both foreigners and Japanese, was the next speaker. He said:—Mr. President, your Excellencies, and Gentlemen: The annual graduation ceremony is an occasion not only of congratulation to those amongst you who have received the rewards earned by industry and perseverance, it is also, and

perhaps more especially, an occasion on which all should take stock of the work done during the year, and draw courage from it for the future. I feel it a great honour to have been allowed to address you a few words on this auspicious occasion, and I do so with the greater pleasure in this establishment, the success of which as a College of Engineering has been so largely due to the efforts of directors and instructors whom it is my pride and pleasure to claim as countrymen of my own. It is a source, also, of real gratification to me to be able thus publicly to congratulate those whose distinguished studies have this day been rewarded. These prizes are not only a reward for past diligence; they are an encouragement to future effort. Let what you have gained, or what you see your fellow students gain, be a spur to all of you for continued, and if possible still more strenuous, exertion on your part. Let the knowledge you have already imbibed, whet your appetite for deeper draughts from that well of learning which is the true source of all social and material progress. For many of you this day marks one of the most important epochs in a man's life; for to-day you go forth from the sheltering support of the University to face the realities and difficulties of practical life. To you more especially I would beg to address a few words which are inspired by the friendly interest I bear to your country, and the confidence I feel in her eventual successful development. It is an old saying that "the boy of to-day is the man of the future," hence the paramount importance always attached to education, and to the subsequent employment of that education in the manner which the peculiar idiosyncrasy of the individual may make most advantageous to himself and most beneficial to his country. We cannot all do everything; but probably all of us, if we employ our talents with judgment and prudence, can do well some one thing or another. The secret, I believe, of success in life is to discover what that something is, and then to work accordingly. At school, one man has a talent for mathematics, another for history, another for languages, and so on through all the various branches of knowledge. In after life one man has a talent for commerce, another for the army or navy, another for engineering, another for political life, another for the fine arts, &c., &c. Few, very few, men have the gift to be equally good in all branches; or, if so, it is probably for the sole reason that they are masters in none. Let me, then, urge you to weigh well before deciding for which calling you have the greatest aptitude, and in what direction circumstances offer you the best opening. When once you have settled this point, devote yourself to the appropriate studies with that energy and concentration which do you so much credit, and of which all your instructors have reason to be proud. You may perhaps object that I have said I am addressing myself principally to those who are leaving the University to-day, and that I am urging a continuance of study on young men whose studies technically are finished. Quite so; what I would wish you to lay to heart, and to remember both now and in the future, is this: To-day end your school studies of books and theories; to-morrow commences for you that much greater and more difficult study which, indeed, we must all continue all through our lives, namely, the study by which we learn to adapt to the daily requirements of our different positions the lessons and theories which we have learnt in the school. Education consists of two parts; the first and easier portion is learnt at school, but this education is very incomplete until the finishing touch is put to it by subsequent experience, which moulds the youth, for good or for evil, into the developed man. The second, and most important, part of your education depends mainly on your own patience, industry, and prudence. On your decision in this respect, and on the manner in which you turn to practical advantage the scholastic instruction you have received, depends your future success in life. Indeed, I may add without exaggeration that it is on the prudent development of youth that depend the greatness and prosperity of a country. The many excellent qualities which you have shown as students are a guarantee that your future progress will not be less than the past, and I feel that you will lay to heart the friendly words of advice which I offer you, while expressing my best felicitations to the Prize-men of to-day. I conclude by congratulating His Excellency Mr. Watanabe on the great progress which has already been made, and in wishing prosperity to the Imperial University, the success of which must necessarily so closely affect the welfare and greatness of the Japanese Empire.

His Excellency Count Iro spoke in Japanese. The following is a translation of his speech, which was frequently interrupted by bursts of applause:—Excellencies and Gentlemen, I consider it a great honour to address on this occasion of the graduating ceremony of the Colleges of the Imperial University, a few words of congratulation to the young men who have completed their courses of study. For the promotion of the welfare of the State and for the increasing prosperity of the people upon a lasting basis, the results of science have always been and will ever continue to be among the most essential elements. Looking at the world, we see that the prosperity of States is due to a variety of causes, but that their strength and wealth keep step with the progress they make in science and general knowledge. The knowledge of individuals becomes the knowledge of a nation and brings it into intellectual communion with other nations, whereby the relations of friendship and harmony of one country with another become extended and strengthened. We have proof of this in our own experience in our intercourse with Western lands. I feel sure that to secure the foundations of our nation in permanency, to promote the lasting prosperity of our people, to bring our country to a condition of equality of footing with the great peoples that compose the family of enlightened nations, the development of intellectual power and the progress of science in our midst must keep pace with what is occurring, in this respect, in the external world. In establishing the Imperial University so soon after the Restoration, and in procuring the services of eminent foreign professors, it was, as it continues to be, the intention of His Gracious Majesty, famed for His wisdom and foresight, to more fully adapt higher education to the youth of His subjects, in order to meet the actual modern requirements of the State. The University is to be the nursery of our future statesmen, legislators, and functionaries, as well as of the followers of the liberal and technical professions, the exercise of which is demanded by the necessities of political, social and private life. It is, therefore, Japan's principal seat of learning, and is open to all aspirants after distinction. Young men, certificates of graduation are to-day granted to you who have completed the course of your studies in such branches of study as you have selected. You are now prepared for practical work, and I can assure you that the field for your labours, in which your ability will be tested, is not a small one. The Government since the Restoration has pursued an undeviating policy of progress, and for the last nineteen years has always been on the advance. It is to be noted that by the great reforms accomplished since that event, the different laws framed for the organization of the Government have been gradually forming one great completeness. The changes that have been wrought have enlarged, to a great extent, the field in which you can exert yourselves for good, and put into practice the results of your long years of study. The future of our beloved country depends greatly upon the success you will achieve, by practically utilizing, with a view of producing useful work, all the knowledge you have been acquiring. You are therefore, to take prominent parts in the future work of our national progress. And, young men, bear in mind that the realization of the expectations centred in you, is due from you, and that you have to respond to His Imperial Majesty's high-minded wishes; you must bring forth good fruit, cultivate refinement, and never cease your exertions for good practical ends. In conclusion, let me express my thanks to the President of the University for his invitation to be present here to-day, and my hopes that you will push on higher and higher, with loftier and loftier aims.

Professor ROESLER then addressed the assembly at considerable length. He spoke in German to the following effect:—By such an occasion as to-day, when the first scientific institution of the country celebrates its first anniversary after its reorganization, we cannot but feel ourselves invited to make some short reflections on the nature and object of science. Our age, if any, may be called a scientific one. Never before has science been studied so extensively, and no other time has shown such a marked tendency to extend the influence of science to all the various relations of life. Is it the case that with this overflowing of science our knowledge has become better, clearer, and more perfect? In many respects it is the case,

but not in all. At least, scarcely ever has there been so much confusion and conflict of opinion as at present. This may be partly due to the present condition of practical life, which has most vehemently inflamed the struggle of opposing interests, and spread it into all the strata of modern society. In my opinion, however, it is so also because science is not always rightly understood and studied. What is science, properly speaking, and what are its ends? The answer to this question is not so easy and clear as at the first view it might be thought. In the original German language, in which thought and its expression are for more intimately connected than in the mixed languages, one can very often deduce the sense of a word from its form. The word "Wissenschaft" (science) is composed of two words "wissen" and "schaft." The word "wissen" comes from "weisen" (to show, to prove). A "wissen" is that which is shown, proved, certified. To prove is an action of the intellect pointing to the clear exposition of truth. The object of this action can be only that which requires proof. What we believe, we do not require any proof of. The same applies to that which is certain, *ipso facto*; for example, what we see with our eyes or otherwise perceive with our senses. Therefore, all the objects of belief or of purely sensual perception are excluded from the sphere of science. Science must be directed to the discovery of truths that are not open to our senses—to the explanation of the inner nature or entity of things. The inner nature of things is a matter of pure intellect, and points to unity, order and connection, to a harmonious relation of the whole to its parts. If this unity and order of things did not exist, we could not apply our intellect thereto—because our intellect and thought itself are based on the principle of order and unity. For all our thoughts are subservient to a certain law which is expressed by certain logical forms or categories. Therefore the inordinately chaotic, could not be a proper object of human thought. Science is consequently an action of the intellect which is based on the principle of unity and order and directed to its explanation. But also the syllable "schaft" has its special meaning. This syllable usually means something whole or entire, e.g. "Studentenschaft," which means the entire body of students considered as a unity. Accordingly, the word "wissenschaft" would be not the sum of all and every knowledge as a quantity; but knowledge as an entire unity; or in other words, science must base all special knowledge upon entire knowledge, and chiefly be directed to explanation of general notions or ideas. Therefore the explanation of general ideas showing the intellectual nature and connection of all things, would seem to be the object of science. So Schelling said:—"whether one studies science with the intellect and with that higher inspiration which is called scientific genius, depends upon whether one is capable of discerning the connection of the special things with the original and entire unity." And when Goethe makes Dr. Faust say: "I see that we cannot know anything," and his Wagner: "I know indeed many things, but I should like to know them all," those sayings, though in caricature, still indicate the conscious unity of science, by which it is destined to open to us the understanding of the last reason and connection of all things, of course so far as human intellect is able to comprehend it—a restriction that, by the bye, seems to have been forgotten by Dr. Faust. Is that not, however, too ideal a conception of science? It may seem so, from the point of view of the present tendency of science to direct everything towards special knowledge for practical purposes. Nevertheless, the present general search after specialties remains subjected to the striving to connect all the single parts into a whole, and to derive therefrom general ideas and fundamental laws of universal significance. I remember here only such questions as the origin of man, the nature of generation, and the like, as favorite problems raised by the Darwinian school of naturalists. In spite of this extreme specialising of scientific labour, however, the so-called "Fach" or "Fakultats" sciences are always studied as indivisible unities. There is only one science of law, one science of medicine; not a science of civil and criminal procedure, or of surgery. The study of science has for its basis, therefore, at least relatively speaking, the unity and totality of science. To add to this, in many countries, a classical education is considered as a necessary condition of scientific study, the classics representing, though only for ancient ages, the unity of sciences; and at least in Germany besides the *Fachbildung* (professional education), the so-called philosophical studies are required, which prepare and deepen the professional education upon the basis of a general scientific education. And there is also a general understanding in Ger-

many that all the "*Fakultats wissenschaften*" (professional studies) find their higher unity and their mutual support and completion in the University, and that the different branches of knowledge cannot have an independent existence outside of the university. Although we ought not to undervalue the importance of these external institutions, it cannot, however, be denied that they maintain only to a certain extent the original unity of all the different branches of science, and that to professional education (*Fachbildung*) an undue importance is attached which is in many ways incongruous with the original and real object of science. In ancient ages and generally in the middle ages, there existed science in its full extent; science was not divided into different professional sciences. Under the name of philosophy (love of wisdom), it included the totality of general knowledge. In Germany the word, "Weltweisheit," universal science, was formerly used for it, which shows clearly that science was understood as a universal knowledge, not as an accidental and unconnected conglomerate of much knowledge, but as a search for the highest general truths—knowledge of the foundation and connection of all things, an attempt to determine those general conceptions which enable us all to understand very easily the different specialties. In this sense philosophy is even at present the natural source of all knowledge, and classical erudition is the historical requirement and basis of the study of its different branches. It is on account of this position and nature of the science of antiquity that it has some preferable attributes compared with modern science. These attributes are profoundness, clearness, logical consistency of thought, and the capability of exact expressions of thought. These advantages are especially shown in case of the Latin language, which has never been surpassed in simplicity, power, and logical development. The antique science has worked out a highly perfected general erudition, from which we must even at present draw our nutrition. It is recognized that the study of classical languages, especially of Latin, has an advantageous influence on exact thinking, and on the acquisition of general erudition that can not be too highly estimated. Whoever has acquired that general erudition can acquire very easily the knowledge of specialties necessary for practical purposes, while the modern dissociation of sciences leads very easily to shallowness, and spreads false and loose thinking and judging. For without correct general conceptions and without thorough mental training, we cannot judge clearly and exactly upon special things, just as one cannot become a good piano player without having previously learnt a clear and pure touch and a correct fingering, though he cultivate ability to play all possible pieces. But one may ask, "How can one understand the whole, without having investigated beforehand all the individual things, even to their smallest parts?" To this we may answer, with Schelling, that science, as well as art, requires a certain natural gift or higher inspiration without which all investigation of details is of doubtful value. To a Newton the fall of an apple to the earth was sufficient to suggest the law of gravitation. Whosoever has not got this natural gift of intellect cannot compensate for the defect by aggregating several specialties. Of course it is impossible that all scholars should be men of genius, but it seems to me that higher and not lower attainment is the measure of scientific requirements. Human thought is not a simple mechanical process, which can be put in motion by mere will. I should think that human thinking is a very complicated act. Man thinks involuntarily under the influence of the general state of his mind; of his individual, moral, and logical conceptions; of the conditions and exigencies of his time, as well as under the influence of his individual experiences, inclinations, and interests. It is on account of this that even supposing an average of capacities and knowledge, such a large mass of conflicting opinions are existent, and that scientific theories are constantly changing. We must admit that human thought is exposed to errors in a high degree. I do not know whether animals can think; but this much seems to be certain—that animal perception within its restricted limits is much more trustworthy than human. The animal is able to distinguish, with the infallibility of a natural law, good and bad food, days, times, and seasons, the weather and localities, and so forth. Human thought is not an act of nature but of freedom, and is therefore subjected to moral laws and moral responsibility. I am inclined to believe that the scientific gift consists chiefly of moral gifts, viz., strength of character shown by infatigable perseverance in and devotion to an object, and receptivity of straight and pure truth. It is in this sense that one of the most learned and intelligent of Romans, Cicero, said that science without

justice is only astuteness and no real science. Thus the ancients were already of opinion that scientific thoughts must also be governed by moral ideas, and that this is also the case with the investigations of natural science. I think, naturalists of the first rank express the opinion that investigation into the physical foundation and relation of things must lead to moral ideas, which one must have in oneself, in order to recognise them in the external world. It was the object of these few words, to urge upon the students of this University that the object of scientific education is not confined to the acquisition of special knowledge for practical purposes, but that it is chiefly to be directed to the acquisition of a deep, general, mental training, to the reception of correct general ideas, to the capability of clearly and purely thinking, to understand the special from the general, and the students should never forget that the success of scientific endeavours depends in a high degree on the coöperation of moral powers, or in other words on a healthy mind in a healthy body.

#### COMMENCEMENT EXERCISES AT THE SEN-SHU-GAKKO.

The graduation ceremony, or rather commencement exercises in connection with the Sen-shu-Gakko, or school for special courses of instruction, took place on Sunday afternoon at the Nakamura-ryō, Ryōgoku, Tōkyō. Few educational institutions in the capital have a more interesting history than the Sen-shu-Gakko; and now that the adverse circumstances against which it had to struggle at first have disappeared, and its usefulness is gaining increasing recognition, none are doing better work in imparting knowledge than it is accomplishing in its own peculiar branches. The establishment of this school in 1881 may be regarded as a recognition at the same time of the importance of a thorough legal training, and also of the necessity of providing for students the means of acquiring such training without the imposition of the condition which accompanies entrance to the Imperial University, that is, acquaintance with the English language. The promoters, Messrs. Soma, Hata-yama, Megata, and Tajiri, rightly reasoning that this restriction served to exclude the large class of students who from various causes are either ignorant of, or only imperfectly versed in, English, decided in the year mentioned to start a school in order to meet what they believed to be a want. At first their efforts were but moderately successful. Twenty scholars was reckoned no small attendance in the couple of rooms hired for the purposes of the project, during its earlier days, under the roof of the Meiji Kaido. But time amply vindicated the views and fulfilled the hopes of the projectors, who now possess a commodious building erected by means of the earnings of the school, on ground acquired by them at Imagawa Kōji, Kanda. The faculty of the institution consists, almost without exception, of men who have obtained at least some part of their education abroad, and the best text books procurable are used by the teachers. These latter are all gentlemen who, out of sympathy with the object of the founders, readily sacrifice their evenings to the work of teaching. Two branches alone are taught, law and political economy, and in return for the instruction afforded them the students are required to make a nominal payment, which, as the teachers give their services gratis, is devoted entirely to the equipment and maintenance of the school. The classes are now attended by about 250 students, and already the success of the institution has encouraged the establishment of similar schools which are also doing their part well in the work of education.

The gathering of Sunday was attended by less formality than that which marked the graduation ceremony at the Imperial University on the previous day. The meeting took place in one of the large upper rooms of the Nakamura-ryō, the well known tea-house Ryōgoku Bridge. The diplomas were presented with but little ceremony, and the students were almost without exception dressed quietly but tastefully in light European clothes or in *hakama* and *haori*, instead of the black garments and white gloves worn by the University graduates.

Mr. Komai, Director of the institution, presided and read the report for the year.

Addresses were then delivered on "The relation of Law to Society" by Mr. Takahashi Kazuo; on "Monetary Circulation" by Mr. Kasama Chiichiro, and on "Law and Political Economy" by Mr. Takahashi Bunnosuke, all graduates.

The diplomas and prizes were presented to the graduates by the Chairman.

Speeches by Mr. Miyoshi, Vice-Minister of Education, and Mr. Hosokawa, Senator, followed, after

which a valedictory address was given by Mr. Uyeno Taichiro, one of the graduates.

The proceedings were varied by music discoursed by a string band of seven performers.

The following are the names of the graduates:—

LAW.	
Takahashi Bunnosuke.	Uchiyama Nobutami.
Otaguro Hincho.	Ueno Taichiro.
Toyama Sentaro.	Ozaki Kitaro.
Ohara Tetsuji.	Wakayama Shintaro.
Abu Nobukazu.	Ariizumi Yoshitsura.
Nabe Juku.	Ashino Kango.
Yamamura Tetsuroku.	Baba Kozataro.
Tanaka Tsunema.	Takamori Kyoya.
Iwasaki Ikko.	Takahashi Sazuo.
Ota Shinsai.	Suzuki Otozo.
Murayama Shigeyoshi.	Hirayama Kiyoharu.
Ido Michiyoshi.	Ito Junosuke.
ECONOMY.	
Kobayashi Uncho.	Takahashi Bunnosuke.
Toyama Sentaro.	Mizushima Ushinosuke.
Kasama Chuichiro.	Hirata Komanosuke.
Ito Zenjiro.	Takamori Kyoya.

### KIM-YO-KUN'S PETITION TO THE KING OF KOREA.

The *Nichi Nichi Shinbun* of the 9th instant reproduced from the *Choya Shinbun* the following petition addressed by Kim-Yo-Kun to the King of Korea:—"I, Your Royal Majesty's humble servant, Kim-Yo-Kun, have long thought of presenting to you a memorial, but until to-day I have been prevented from carrying out my wishes by want of proper opportunity. Recently, however, a man named Chi-Un-Ei arrived here, and as it was reported that he had Your Majesty's secret commission to assassinate me, I made careful observation of his actions; and now I cannot but address to Your Majesty a few words of advice. Will it not be highly injurious to Your Majesty's reputation, if such people as Chi-Un-Ei are sent abroad under Your Majesty's commands? Whether the document brought here by Chi is genuine or not, I do not pretend to decide; but last year also when I was at Kobe, I was told that a man named Chō-ki-Fuku had personally received a similar order from Your Majesty. Now, these documents may have been false, but should they happen to be true, I am sincerely grieved to think of their mischievous effects upon the dignity of the country and the reputation of Your Majesty. Your Majesty ought to bear in mind that now-a-days all the people of the world are vigilantly watching each other's affairs, and that you have already, as the ruler and father of the nation, concluded treaties with other countries.

In the next place, I have to plead before Your Majesty concerning my own grievances, and to ask you on what ground you regard me as a rebel. However, I need not be particular on this point, as it is most probably not Your Majesty, but Your Majesty's ruthless servants who are really to blame in this matter. There are some people who condemn the affair of 1885 as having been too violent and radical in character. But I entreat Your Majesty to calmly reflect on the condition of the Bin family. Everybody who is called by the name of Bin is held in confidence and reverence, however meagre may be his personal qualifications. Yet, let me ask, how many have there been among the Bin family, who, during their twenty years of political supremacy, have done anything to strengthen and enrich the country? Have they not, rather been remarkable for their treachery, disloyalty, and shameless reliance on China? Your Majesty is too well aware of this fact, for you once instructed me to devise some means of neutralizing their unscrupulous audacity. I then thought that unless some decisive steps were taken to remove the political power out of such dangerous hands, Your Majesty might, in some future time, be reckoned among the forgotten rulers of an obliterated country. And for this purpose I sacrificed myself. Is it not clear, then, that it cannot be Your Majesty who calls me by the disgraceful name of rebel? I and my fellow workers are blamed for relying upon a foreign Power, but in doing so, we only acted, as Your Majesty is very well aware, as was required by the urgent necessity of the times. It is not my own desire to wander about in foreign lands, but having failed to accomplish my original object for the good of the country and your throne, my present intention is to pass what remains of my life as a nameless wanderer in the world. I pity Your Majesty's servants for the shame they have incurred in guarding their own selfish interests. I beseech you, my gracious King, to free yourself from all sorts of doubt and suspicion, and to stand firm against the delusive instigations of your servants; so that you may save the country from ruin and your dynasty from extinction.

Now-a-days the world's affairs are marching forward at a marvellous rate, and it is extremely unsafe to remain idle. We have already a very good illustration of the dangerous nature of our situation in the occupation of Port Hamilton by England. How Your Majesty regards this affair, and what policy Your Majesty's servants propose to take about it, I cannot tell. But how many, I ask, are there among your officials who know where England is? Very few. No wonder, then, if they speak about important national problems like people in a dream. On the other hand, the Chinese assume the position of protecting Korea, and interfere with the domestic affairs of Your Majesty's country. But how is it that China does nothing to wrest Port Hamilton from English occupation? I was informed that China had told Your Majesty's Government that England had no design of acquiring new territory, but that, being then in imminent danger of encountering Russia, she had been obliged to take temporary possession of that group of islands, so that no anxiety need be felt on the part of Korea. This information filled me with indignation. If Your Majesty were the Sovereign of either Russia or England, Germany or France, might you not, on the same principle, hasten to take possession of any country in which no resistance is made against foreign invaders? If England is entitled to occupy a certain group of islands in our waters, why may not Russia also do so?

While the country is in such a dangerous position, not one of Your Majesty's servants is in the least concerned for its safety. They are all engaged in extorting money from the people and subjecting them to every other species of oppression, while within the Government they have no occupation but that of making distinctions as to the faction to which each of them belongs. My stay in a neighbouring country has given them a rare opportunity of advancing their own private interests, and many harmless people have been made the victims of their avarice and greed. Even Your Majesty has not been free from their instigations. Should Your Majesty show any disposition to listen to their shameless advice, the ignorant populace may become alarmed and create civil commotions. As already stated, my purpose has been simply to work for the benefit of the people, and moreover the Japanese Government could have no such unjust intention as to lend their army to a foreigner to raise trouble in a neighbouring country. As to the story that Li Hung-chang sent an assassin here with the connivance of the Japanese Government, I have little inclination to give credit to it. The Japanese Government may now be regretting their former interference in Korean affairs, and may find it convenient to extinguish all source of information by taking my life. But still it is inconceivable that either they or the Chinese Viceroy should do anything of the sort. The story has originated, it appears to me, with such childish fellows as En Seigai and others, whose sole object is to advance their personal ambition. Your Majesty will do well not to be duped by such people. If China really means to protect the interests of Your Majesty's dominions, she ought to have sent to our country abler and more experienced men than En Seigai, whose object is simply to please your Majesty and win the favour of Li Hung-chang. What is more lamentable is that your servants are disgracing the national honour by identifying themselves with such ignorant men as En Seigai and others.

At present neither China nor Japan can be relied upon; both countries have enough to attend to in maintaining their own independence. China is not strong enough to remonstrate against the occupation of Annam and Riukiu. Is it not, then, ridiculous to rely on such a country for protection. For some time Japan sedulously interfered in Korean affairs, but since the late *Enette* she has held her hands, and is no longer to be trusted. What, then, are we to do? The only way in which to secure the safety of Your Majesty's country is to be on friendly terms with European and American countries, and to reform the internal administration, educating the people in the principles of civilization, and encouraging the rise of industry and commerce. Proceeding in this manner, it may not be impossible to make Englishmen depart from Port Hamilton, and induce other Powers to renounce their intentions upon the peninsula. The population of the Kingdom exceeds twenty millions, and in point of natural products the country may be favourably compared with the northern portions of Japan and China. Especially is it rich in mines of valuable metals. Your Majesty will remember that I once memorialized you as to the necessity of abolishing the *yampan* class (corresponding to the Japanese *shizoku*). In ancient times Korea stood foremost in the Far East in the manufacture of all kinds of implements and other industries; but where is she now?

The decline of her industry has been caused by the oppression of the *yampan* and official classes, who pounce upon any citizen who has made money enough to attract their notice. In some cases this rapacity does not stop with money; even the lives of the unhappy people are taken. Rather than lose the fruits of their hard labour the people have abandoned the farms and manufactories, and the consequence is a superabundance of lazy and unoccupied hands in the country. If the *yampan* class be suffered to continue as at present, the ruin of the country is a mere question of time. Your Majesty ought to reflect on these matters; you should dismiss ignorant Ministers, abolish family aristocracy, and use talented men so as to secure the centralization of political power. It will be important to educate the people, and also to introduce foreign religion as an aid to education. The *Tai-won-kun* was once ignorant of foreign affairs, but since his defeat in his conservative attempt some years ago, he seems to have changed his mind and now the hope of the nation. It will be a wise policy to put him at the head of the national affairs under the guiding eyes of Your Majesty. Moreover, I and others—in all numbering more than ten—who are now wandering in foreign countries, when once recalled and put at our posts, will not fail to render our services to Your Majesty to the best of our capacity. The three men Buk-ei-kō, Ju-kō-han, and Jo-sai-hetsu, are still young, but they have been tried by hardships and taught by experience in foreign countries. So far as I am concerned, however, I do not claim anything beyond the clearing of my name from disgrace. As to Chō-ki-fuku and Chi-on-ei, it is not necessary to put them to death, although they are guilty of a serious offence. For, without some encouraging opportunity, they would not have thought of making such attempts. I hope that Your Majesty's magnanimous spirit of benevolence will be large enough to accept the straightforward counsels of your humble servant."

### REVIEW.

*Romanized Japanese Reader.* By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Tokyo; author of "A Simplified Grammar of the Japanese Language," &c., &c. London: Trübner & Co. Yokohama: Kelly & Walsh.

MR. BASIL HALL CHAMBERLAIN has published a *Romanized Japanese Reader*, in three small volumes. Of these, the first contains a number of carefully selected Japanese exercises, printed in Roman letters and numbered; the second contains translations of a more or less paraphrastic nature, and the third comprises notes and various information, grammatical, syntactical, and historical. The Reader forms a sequel to Mr. Chamberlain's recently published "Grammar of the Japanese Language." The latter sets forth, clearly and concisely, the rules of construction, the accents, and so forth of the Japanese tongue; the former illustrates these principles and paradigms by examples excerpted from standard Japanese authors. The scheme of the Reader is to lay before students a graduated series of exercises, passing from easy to difficult, and selected so as to illustrate the various styles in common use; e.g. Sinitic-Japanese; classical; historical; poetic; popular narrative; semi-epistolary, and common. Mr. Chamberlain says, and we agree with him:—"It is confidently believed that those who shall have mastered all the words and constructions here given, will be in a position to enter with profit and interest on the study of Japanese literature in all its branches, whether ancient or modern, classical or popular." Considering that this large result is to be accomplished by perusing and analysing exercises comprised in a tiny book of 106 pages, measuring 6 x 4 inches, it must be confessed that Mr. Chamberlain has made his selections with great judgment. The division of the work into three volumes is also an excellent device, since it leaves the student free election as to the use he may make of the aids contained in the second and third volumes. The translations are, as a rule, very happy—neither too free nor too formal. As a specimen take the following:—

#### THE CROWS CONVERSATION.—22.

A number of crows being assembled in a certain forest, one of them asked, during the course of a miscellaneous conversation:—"What is the most fearful thing in the world?" To this all the crows unanimously replied:—"The most fearful thing in the world is a bow shot by a skillful archer. When he shoots higher, either comes the arrow, and shoots you down; when he shoots lower, either comes the arrow, and

misses not its aim. As one gets shot down by it, there is nothing so fearful as this.

Among the others was an old crow, who made a wry face and said:—"Well, well! It is owing to you all being young fellows, that you are so inexperienced as to fear only the bow and arrow of the skillful archer, and not to fear the bow and arrow of the clumsy archer. Owing to the bow and arrow of the skillful archer not deviating from the mark the arrow will surely miss you and you will have your life saved, if you fly a little to one side. But the bow and arrow of the clumsy archer,—that is just the difficulty. Whither will it be best to slip to, whither to fly away? Truly, truly, the impossibility of knowing the direction in which to escape it,—that, oh dear! oh dear! is the fearful quandary." At this speech all the assembly of crows,—at least so it is said,—were struck with admiration.

Or take again the following as an example of Japanese humour humorously rendered:—

A CASE IN WHICH WAITING WILL MAKE THE CIRCULATION COME RIGHT.—31.

In former days, in the mercantile quarter of the capital, there lived a skillful matchmaker called Granny Nod. Making this her means of livelihood all the year round, she never failed of bringing matters to a satisfactory conclusion. Well, she had arranged a marriage between a girl of fifteen and a man of five-and-thirty whose age she concealed, had made them send each other the gifts of engagement, and had settled the whole matter. But afterwards the parents of the girl found out the bridegroom's advanced age and said:—"As for property, he has no insufficiency, but there being in any case a difference of twenty years, we certainly will not give him our daughter." On the man's part again, the contention was that he must get the girl in any case. So the matchmaker was perplexed, and the matter came to a lawsuit, when the judge called for both parties and said:—"With regard to the man, if there is anything specially wrong, you must declare it. As for the fact of the difference of age, after receiving the tokens of contract, you must surely give your daughter." The parents then said:—"With regard to this matter, the person who acted as match-maker told too outrageous a falsehood. Our daughter being fifteen, there is a difference of twenty years between her and a man of five-and-thirty. We would give our daughter if it were at most a difference of half. Pray hear this matter with discrimination. It is a request which we have the honour to make for the withdrawal of the pledges of an unsuitable match." Then the judge is said to have commended thus:—"You shall, according to your wish, give him your daughter five years hence. The bridegroom too must wait till then. When he becomes forty, the woman will be twenty. That is the time when their ages will differ by half."

The extracts will suffice to show that in making selections with the view of illustrating grammatical and syntactical rules, the author's wide acquaintance with Japanese literature has enabled him to present to the public a compilation possessing interest and value for reasons quite apart from the proximate purpose of its preparation. Students of Japanese owe a heavy debt of gratitude to Mr. Chamberlain. By the aid of his publications, and those of Messrs. Satow and Aston, it has become comparatively easy to acquire a sound knowledge of both the written and the spoken languages of Japan. And this Reader is by no means the least valuable of Mr. Chamberlain's works. It will save the learner incalculable labour, and enable him to enter upon the study of Japanese literature with a confident assurance of neither meeting any serious difficulties nor falling into any grave blunders.

## LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London May, 12nd.

Much interest is being taken in Mr. Macaulay's expedition to Tibet, which is now being prepared at Darjeeling. Tibet has always been a mysterious country; the average man connects the name with snow, lamas, and polyandry, but otherwise it is a blank to him. There is said to be some danger of the expedition being too large; botanists, geologists, secretaries, and escort, and all the paraphernalia of a mission of this kind in India will, it is thought, possibly frighten the Tibetans, who appear to have a great dread of annexation by Great Britain, or rather by the rulers of India. Let us hope, however that Mr. Macaulay will secure his treaty without mishap, and it is expected that his Chinese letters will remove many obstacles from his path. I may take this opportunity of strongly recommending to such of your readers as may not already be acquainted with it, a book on Tibet published in 1879 by Mr. Clements Markham. It contains the narratives of the visits of Boyle as the envoy of Warren Hastings to Tibet and of Manning's journey to Lhasa in 1811, together with all the latest information on the coun-

try. It is one of the most instructive and interesting books I have ever read.

The negotiations between China and the Vatican with regard to the appointment of a Legate to reside at Peking have reached an interesting stage. The project was started by the Chinese soon after the conclusion of the late war with France, and their object, of course, was to deprive the French of the political benefits which they derived from the protectorate. In Tonquin and Annam the missionaries were openly and avowedly the advocates and agents of the "forward" policy of the Republic; in China they are ready at any moment for conversion into political tools. The aim of the Chinese is therefore quite clear and comprehensible. That of the Vatican is likewise easily explained. The Pope is told that his emissaries would enjoy far more success and popularity if they were free from their political shackles, and he is prompted for them the astounding success of the early Jesuit fathers. The Legate, it is said, will be received in Peking with the same respect and attention as other diplomats, and his representatives will be treated in the same way. The French, it was known from the first, would offer violent opposition to the scheme, but then, it was argued, a considerable number of the Roman Catholic Missionaries in China are not French citizens at all, and even if they all were, the Pope has only to order them to have recourse to the Legate and to no one else. The French Minister might object; but where was his *loco standi*? If men would not go to him to complain, what ground does this give him for a quarrel with the Chinese? The negotiations have been dragging on for a considerable time, and lately have dealt with the position and privileges of the Legate. At this stage the French represented to the Pope their strong objections to the appointment of a Legate: protection of the missionaries was their right and duty by treaty with China, and they intended to stick to it. Hereupon, other negotiations followed, and the Pope was on the point of agreeing to an arrangement by which the Legate was to have no power or position of a political kind, and was not to interfere with the French Minister in representing the complaints of the priests to the Chinese Government. But here the Chinese stepped in and said that this did not suit them by any means; they wanted a Legate who had full control over the church in China, not one who was a sort of spiritual condottier of the French Minister, and they refused to have anything to do with such an arrangement. The Vatican then offered the French Government to appoint a Frenchman to be the first Legate, and to appoint one who should be approved of by France. This has also been rejected, and here the matter stands at present. But I learn that those engaged in the question feel confident of ultimate success in spite of the French hostility to the Chinese proposals, and also that Germany is taking especial interest in the affair. The fact that some of the Roman Catholic missionaries in China are South Germans would not wholly account for this, and each one is at liberty to suggest his own explanation of the friendly interest which Prince Bismarck takes in the conclusion of an arrangement between the Chinese and the Vatican.

Messrs. Gilbert and Sullivan's "Mikado" is coming to the end of its long run, and I went to see it a few evenings ago. No doubt all your readers who care for such things are well acquainted by this time with the play. They will recollect, for one thing, that a personage called "The Mikado" is brought on the stage, and is made very ridiculous. He sings foolish songs about his policy and method of administration, and is very funny and very absurd. The whole play, like all of Mr. Gilbert's, is topsy-turvy and fanciful, and very clever. One is generally in a reflective mood (at least I am) coming home from a play; perhaps one is tired after a long day, and inclined to do nothing but lazily chew the cud of sweet and bitter fancy. At any rate, I could not help thinking what would happen to the unhappy Japanese playwright who put a European sovereign, let us say the Emperor of Germany or our own Queen-Empress, on the Tokyo stage in this fashion. What a shindy there would be, to be sure! It puts one's brain in a whirl to think of the diplomatic representations, the de-patches to admirals, the movements of gun boats, the abject apologies drafted by the offended envoy and signed by terror-stricken ministers—I am talking, I need not say, of the brave days of old; diplomatic men and manners, I am credibly informed, are different now; but it makes me shiver even at this distance of time and space, to think of such a catastrophe as that suggested by my wayward fancy. The Biblical war-house, whose neck was clothed in thunder, and the glory of whose nostrils was terrible, is the only adequate comparison I can suggest for the representative of a sovereign thus treated in Japan. It is not so very long ago,

1877 or 1878 I think, that an unfortunate theatrical manager in Osaka was forced to withdraw a play (I am not sure that he was not otherwise punished; the new head of the Tokyo University will know all about it, for he was Governor of Osaka at the time) based on the Sakai massacre and the subsequent execution of the officer responsible for that crime, or rather error. The whole story has a powerful dramatic interest; the offence, the demands for redress, the speedy, condign, and terrible punishment, the peculiarly solemn circumstances under which the punishment was carried into effect (which will be found described, I think, in an appendix to Mitford's "Tales of Old Japan") all make a story of the kind which the Greek tragedians would have loved to treat. But a fussy English Consul, who was then acting as French Consul also, presented a solemn demand for the suppression of the play, and suppressed it was accordingly. Heaven only knows why, for there was as little anti-foreign, or anti-French spirit in Japan in 1877 as there is now. Our venerable forefathers used to say that what was sauce for the goose was sauce for the gander; but we have gone far beyond that in modern times; these heavy old sayings and the principles they represent are all very well in their place; but that place was not Japan in the years 1877-8. Meaning Messrs. Gilbert and Sullivan, and their enterprising manager, Mr. D'Oyley Carte, have scored a great success, and, in my poor judgment, have deserved it.

The Marquis T'seng, who is shortly to leave us, is at present making a tour through various manufacturing districts in England, and is creating much interest there. The newspapers chronicle his movements as if they were those of a royal personage; but he has hitherto avoided meeting public bodies, or placing himself in a position requiring a speech. Some other time I may take occasion to say a few words about the general impression he has made in England. There is, I believe, sincere regret here that he is going, more especially as he leaves the British question open. But one god and another cometh, and just as the Chinese Minister leaves another star from the East of the last magnitude rises above the horizon, and makes his presence felt. This is Sir George Bowen, who is ubiquitous. He pervades every place as the Emperor of Brazil did when in England. No assembly is complete without him. The last place he appeared was at Dury Lane Theatre in the small hours of the morning, at a supper given by the enterprising Augustus Harris to Colonial dignitaries.

Many of your readers will be interested to hear that the lawsuits arising out of the China Steamship Conference are dragging their slow length along. There are three different sets of plaintiffs, the Anglo-Australasian Company, Gellatley, Hankey and Sewell, and the Mogul Company, each claiming damages for injury done to their vessels by the action of the conference. The list of defendants is a pretty long one. Here it is:—McGregor, Gow & Company, T. Skinner and Company, D. J. Jenkins & Company, the P. & O. Company, the Ocean Steamship Company, Wm. Thomson & Company, Thomas Sutherland, F. O. Barnes, Alfred Holt and J. S. Swire. The plaintiffs allege intimidation, bribery, and conspiracy, and claim very large sums for damages. I believe the case at present has reached a stage in which a commission is to be sent out to the East to take evidence respecting the facts in Shanghai, and Hankow. When it is going to be disentangled from these preliminaries, and placed in such a position that it can be heard before a judge and jury no one can say, but probably it cannot be settled within the present year. Some time I may write more on this matter, as the subjects of steamship "rings" is just now engaging attention in commercial circles here.

## LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, June 22nd.

The Senate has ratified the extradition treaty with Japan, and if the Japanese Government has done its part, it will go into effect forthwith. This will obviate the escape of criminals by way of Asia in future. A similar treaty with China will probably be negotiated when other matters now pending between the two Governments have been adjudged. The bill awarding indemnity for the Rock Springs massacre, and a bill amending the Restriction Act have passed the Senate and await action in the House. It is understood that if the latter passes, it will be vetoed on the ground that it is in violation of existing treaties.

Other business in Congress makes some pro-

gress. On the 17th, the Morrison Tariff Bill was killed by a vote of 157 to 140, 35 Democrats under the lead of Randall of Pennsylvania voting with the Republicans against tariff reform. This will probably prove an expensive victory for the protectionists; while men differ on the abstract question of Protection and Free-trade, all are agreed that the tariff is unequal and exorbitant, and ought to be reformed. It would not be strange if it proved another case of the Sybilline books. The free-traders are about to issue an appeal to the country showing their position, and pointing out the embarrassments under which they labour. The appropriation bills are being rapidly passed; the River and Harbour bill, which is the great steal of the session, appropriates twenty millions. Whether it will pass in this shape, and if it does, whether the President will sign it, are conundrums. The Democrats, under the lead of Beck of Kentucky, are making an effort to check one source of corruption by forbidding senators who are lawyers from accepting retainers from railway corporations. This vigorously resisted by Edmunds of Vermont, Evarts of New York, and others, who derive a handsome income from this business; it is presumed that their Republican brethren will rally to their support, and defeat the reform. All the various forms of corruption are allied; if the *beneficiaries* allow their line to be broken in any one place, they will be defeated along the whole line. Hence the Protectionists and the subsidy men, and the land grant men, and the railway henchmen, and the corporation tools, all stand shoulder to shoulder to resist reform.

It may be noted, as one of the signs of the times, that the President's marriage seems to have increased his popularity and led to a more considerate appreciation of his performance. Opposition to his nominations has ceased in the Senate; all the nominees are being conferred as fast as the Senate can reach their cases. His attitude on the silver question, which has not been satisfactory to the West, has just been defended with effort in the House. The clamour of disappointed office-seekers is dying out. People are settling down to the conviction that Mr. Cleveland is doing his best, and is making no more mistakes than might have been expected from a novice in Federal politics. At any rate, his administration is pure, which is more than can be said of that of his predecessors. The drift of public sentiment is exasperating to the Blaine people. Blaine himself made a frantic attempt to regain popularity by making a fierce onslaught on Lord Salisbury; but he took nothing by his motion except to elicit a sarcastic remark from John A. Logan that the gentleman from Maine seemed determined to run not only the politics of this country, but those of Great Britain as well. The *New York Tribune*, whose Editor, Whitelaw Reid, would be minister to Paris if Blaine became President, continues to try to keep alive sectional hate by inventing all sorts of lies about rebel brigadiers, and servile sheets like the *Cincinnati Commercial*, and the *San Francisco Chronicle*, which haven't such excellent reasons for desiring Blaine's success, copy the stuff. But the public is sick of it. People see that the country gets along just as well under a Democratic régime as it did under Republican control; that there is less corruption; that there is no disposition anywhere to revive the issues of the war; and that, in 1888, the Democracy might be kept in power without any risk of public injury.

The labour troubles, which were at white heat a few weeks ago, have blown over. Most, the Anarchist, who was caught under a woman's bed, is serving his time on Blackwell's Island, where he will have leisure to meditate new schemes for getting at "the money, the fine clothes, the rich meats, and the champagne." Mittelstadt and his associates in this city have served there twice, and are at large. That unmitigated scoundrel, Coroner O'Donnell, who presides over sand lot meetings on Sunday afternoons, invited Mittelstadt to address the crowd from his rostrum last Sunday, but the dynamiter was wise enough to talk commonplace. The Chicago Anarchists are on their trial. Cincinnati has settled down to quiet. At East St. Louis, where a large body of strikers, who are out of a job, are stealing and giving trouble generally, an appeal was made three or four days ago to Gov. Oglesby for military protection; the Governor replied that a town with 10,000 inhabitants ought to be able to protect itself, and he declined to interfere. The old soldier believes in the duty of self-reliance and self-protection. The boycotters have become ridiculous. Returns to the office of Internal Revenue show that, notwithstanding all their efforts to boycott Chinese-made cigars, neither production nor consumption has fallen off; there are just as many Chinese-made boots as ever; steady, honest Chinamen can get just as much work as ever. The only effect of the crusade has been to diminish very seriously the strawberry

crop, which, in many localities, was left unpicked for want of Chinese hands.

This is the sporting season, and in the East business and politics are both being laid aside for the turf and the regatta. On the former, California horses are winning all the races. Haggin, of this city, with a colt called Ban Fox, and another known as Ben Ali, has made a pot of money. After he has beaten the best blood of Kentucky, Mr. Haggin will probably take his string to Europe—say next year—in time for the Derby and the Grand Prix, and our friends across the water will be put on their mettle. California certainly does seem to raise some astonishing stock, which may in part be due to the fact that there is substantially no winter here, and that horses may go on with their training through the winter months without fear of colds or confinement in stables. The regatta season began ten days ago. The English have built a new yacht to be known as the *Galatea*, which will take the place of the *Genesta* of last year, and compete for the America's cup some time in August. She is said to be something very remarkable; cutter rigged, of course, like her predecessor, with all the latest improvements. To meet her, two new yachts were built last winter in the East, the *May-flower* and the *Atlantic*. But three trial races, which were sailed last week, have established the fact that the favorites of last year—the *Priscilla* and the *Puritan*—still retain their claim to supremacy, and the honour of defending the cup will devolve on one of these—probably the *Priscilla*. Americans are confident that the result will furnish one more proof of the superiority of the centre-board boat—unless it should blow a hurricane.

The man hunt in Arizona and Sonora drags its weary length along without any stirring episodes. About 1,500 American troops and scouts, and as many Mexicans, are in chase of a handful of Apache Indians, who elude pursuit, swoop down on defenceless settlers, burn, ravish, and murder, and then make good their escape to the inaccessible fastnesses of the Sierra. The latest incident of note was the recovery on Saturday of a little Mexican girl, twelve years old, who was captured by the savages some months ago. She shared the usual fate of such captives, was handed from chief to chief, and endured untold outrage; in six months she will be a mother.

Sir John McDonald, at the instigation of the British Government, has revoked the orders of the Canadian Fisheries Department directing the seizure of American fishing craft, entering Nova Scotian ports in search of bait. Thus the danger of trouble has passed over, and Mr. Blaine's hope that he could make capital out of the quarrel has vanished into thin air. Some foreseeing person has drawn the attention of the British authorities to the fact that the discovery of the Alaskan cod and halibut fisheries puts a new face on the principles laid down in the treaty of 1818. It is obvious that in the course of a few years, the Alaskan fisheries will be more valuable than those off the British coast on the Atlantic. Any rules as to bait and supplies, enforced for the purpose of securing to the Canadians a monopoly of the latter, would operate to exclude British Columbian fishermen from the former. Hence there is a fair prospect of an equitable adjustment, notwithstanding Nova Scotia's threat that she will secede from the Dominion, and seek admission to the Union. Such an adjustment might well be based on the homely old proverb—which was invented for a different purpose—that there are as good fish in the sea as ever were caught.

As the subject of education has attracted considerable attention in Japan, you may be interested in knowing that Senator Stanford is about completing his arrangements for starting his university at Palo Alto in this State. It is destined to be a model institution, to embrace all the best features of the great universities of the East and of Europe. Gov. Stanford has given it all his land in this State, which will afford it an adequate present income, and will in time constitute a princely endowment. The Governor is so much engrossed in the project that he talks of resigning his seat in the Senate, and his Presidency of the Pacific Railroads to devote his whole attention to education. He has sent Francis A. Walker of Boston to Europe to collect information. When he gets his university in working order, it might benefit your educational authorities in Japan to pay it a visit.

## IN THE YOKOHAMA KEIZAI SAIBANSHO.

Before JUDGE YUFU.—FRIDAY, July 9th, 1886.

### THE RECENT SILK FRAUD.

Continued from the 2nd instant.

The Public Prosecutor, rising to address the Court, said that the case was very complicated and ramified in its relations with other matters, and in eight sittings that have been held new light was thrown on the subject on every fresh occasion. This fact showed the intricate nature of the whole affair. Twice already he had stated the circumstances of the case, and he would now recount them on the strength of the evidence adduced since then. In the present case the cause of the defendant's criminal action was that after 1883 they contracted debts with the Naruto-gumi to the amount of yen 40,000, which loan they contrived to repay by some means or other. Towards the end of July, 1885, the accused having been pressed by the Naruto-gumi for the payment of their previous debts, they (Takagi Dainoshin, Kodama, and Ota) held a consultation at Takagi's residence at Miyazakicho as to the measure to be taken for the payment of the debts. There they arrived at the fraudulent plan forming the subject of the present hearing. The Public Prosecutor had stated before on the basis of the report from the police that bad bales were exchanged by members of the Shinsei-gumi for good bales previously pledged to No. 177, but the evidence produced afterwards showed that a number of spurious bales were sent along with good ones to Mr. Schoene for mortgage. On July 15th, for the first time, 19 bales, out of which 7 were spurious, were pledged in No. 177 for \$3,100, and after that bales of silk, a number of which contained spurious matter, were sent on eight occasions, the whole lot amounting to over 200 bales. The question to be decided now was whether each crime should be considered as a separate act or as the carrying out of the plan inaugurated on a previous occasion. The principal motive, however, being to repay a debt of about yen 40,000 that the accused incurred to the Naruto-gumi, the separate actions of the accused might be regarded as a single crime. The result of the whole affair was that Messrs. Schoene and Mottu directly sustained loss to the amount of yen 70,000. The public prosecutor learned from a report in the newspapers that the fraud perpetrated by the accused had influence upon transactions carried on between Japanese and foreign merchants. It had damaged the foreign credit of Japanese merchants, without which there was no hope of commercial prosperity, and altogether the defendants gave the greatest possible shock to foreign confidence in the Japanese commercial classes. Moreover, Yokohama being the principal open port of Japan, the accused must be regarded as having most seriously affected the confidence of the Japanese public. He would take Takagi Dainoshin, Kanematsu Tojiro, Itsuro Shokichi, Homma Sozaburo, and Kodama Yasujiro as the principals. The culpability of the first four was apparent from the evidence already produced. He added the last two defendants because they treated bad bales at Yoshidamachi, Horaicho, and Aioicho. They bought bags, bricks, and other materials used for the accomplishment of the crime, and actually participated in the preparation of bad bales. Imai, Kobashi, Yamamoto, and Kobayashi had confessed that they had previous knowledge of the fraud being carried out. As to Morita's case, the Public Prosecutor stated that he was a special representative of Mr. Schoene, and should have exercised corresponding care and experience in his business dealings. Morita was engaged in the silk trade and was specially paid by his employer, Mr. Schoene. He ought to have exercised the greatest care and attention in his dealings with the Shinsei-gumi. Great carelessness was shown by the fact that he was unaware of the existence of the fraud. It was contended as proof of his criminal intention that he had taken extra interest at the rate of .08 and storage, which his employer did not demand; and that he received money and presents from Takagi, and that he was at the Shinsei-gumi whenever bad bales were carried to No. 177, in order not to attend their inspection. The Public Prosecutor was of opinion that Morita did not know the existence of the fraud because all the other defendants deposed to that effect, and the facts mentioned before were weak evidence. If he had participated in the crimes he would not have been satisfied with such small remuneration. In ordinary intercourse between friends the presenting of clothes or other articles was not a matter to be wondered at. The evidence against him was insufficient, and therefore the Public Prosecutor would abandon the charge against him.

Mr. Masujima stated that there was no necessity for detaining his client in Court after the accusation against him was abandoned.

The Judge remarked that as judgment was not given on the subject he could not concur in Mr. Masujima's view.

After some discussion as to the civil action to be brought against Morita,

Mr. Takanashi said that he must define the duty of a banto in a foreign firm. When, as Morita said, buying silk, an inspector would examine the silk offered for sale, and when taken in deposit the banto had to ascertain that it was a *bona fide* article. It was a mystery that Morita failed to find bad bales out of so many lots of spurious goods. There must be some cause even in a mystery. His culpability was evident from the depositions of the other defendants. Takagi said at the police station that he was avaricious, and that he knew the existence of the fraud. Takagi paid more than he was required to. He paid storage which, Morita's employer, Mr. Schoene, did not demand. Takagi said he was obliged to pay the sum, as he had to trouble Morita in various ways. Morita did not examine the silk pledged to No. 177. His duty was to attend to silk offered for mortgage, but he did not attend to the silk brought from the Shinsei-gumi. He evaded the consequences of the possible discovery of the crime. Takagi would not have said to Morita that he should defend himself when requested by him to exculpate him, were he conscious that Morita did not know the fraud. In the case of Morita, who held such a position of trust and confidence his crime must be punished by the law. That the money received by him was too small was a poor excuse. There was no knowing how much he had received from the Shinsei-gumi. He must have been confident that the crime would not be discovered, and that fact accounted for the smallness of his gains. Kanematsu wrote to Morita two days after the discovery of the fraud that he had committed a mistake and must beg pardon of Morita. He could not have written in that way if the fraud was discovered for the first time on that occasion. Mr. Takanashi commented on other circumstances in support of his arguments.

Mr. Litchfield stated that he had not much to say about the present public proceeding after Mr. Takanashi had so exhaustively stated the facts of the case. Morita was the sole negotiator between No. 177 and the Shinsei-gumi. It was strange enough that Schoene did not find any bad bales out of several lots he personally inspected. This must be due to the management of Morita. Mr. Litchfield then narrated from the depositions prepared in the police station his conversation with Morita, the tenor of which he claimed was sufficient to prove that Morita was implicated in the fraud. He must conclude that the depositions made in the police station were more trustworthy than the statements of the defendants made in Court. They had changed their mood now that they could see one another, and had occasion to depone in favour of Morita. The presents taken by him might have been insignificant, because he had no fear of his being incriminated.

Adjourned till the afternoon.

On resuming,

Morita stated that plaintiff's representative was mistaken when he stated that when taking silk in pledge in a foreign firm its banto was charged with its inspection. It was impossible that a foreign employer should entrust the inspection and management of all silk to his Japanese servants. According to Mr. Takanashi, Mr. Schoene was a puppet, but that was not the case. The depositions made by Takagi and Kanematsu at the police station were prepared by the police, as was distinctly stated by the defendants in previous sittings. He denied having implored Takagi while at the police station to exculpate him because he participated in the fraud. Supposing that he had taken part in this gigantic fraud, he, who was not a relative of the defendants, would have appropriated a considerable portion of the loot obtained. That he did not take any portion of the booty conclusively showed that he had no desire to get money.

Mr. Yano, counsel for Kanematsu, Ota, Kodama, Homma, and Kobashi, thought that evidence was still wanting to incriminate his clients. A criminal fraud consisted in the improper appropriation of other's property. In this case, however, they were intent from the first stage to redeem the bad bales. The business relations between the Shinsei-gumi and the Naruto-gumi and No. 177 warranted him in thinking that the transactions forming the subject of the present trial were entirely carried on out of the confidence placed in the Shinsei-gumi by Mr. Schoene. The case was wanting in an element necessary to construe it as a criminal fraud, that was to say, intention to deceive others criminally.

Mr. Otsuka stated that one of the principal

points he would bring forward in defence of his clients and Morita was as Mr. Yano pointed out that their action lacked in that criminal intention to appropriate others' property which constituted a fraud. Even supposing that all the defendants were culpable, the charge against four of the Shinsei-gumi's employees was wanting in evidence. It was necessary to see whether the action corresponded to the conditions stated in article 300 of the Criminal Code. He could not place implicit belief in the statements of the newspapers, that the fraud had given a great shock to the commercial community here. The very exercise of additional caution on the part of foreign firms in their transactions with Japanese merchants argued in favour of the general carelessness of foreign merchants as regarded mortgaging business. The sum involved was *yen* 40,000 or *yen* 70,000 and the whole case could not be stigmatized as a great fraud case as the Public Prosecutor called it. The fraud did not damage public credit to the extent stated by the Public Prosecutor. It was impossible to point out who were the principals and abettors in the present case, for all were concerned in the perpetration of the crime. Mr. Schoene believed in the honesty of the men instead of the goods offered for mortgage, and therefore the fraud must be construed as having a civil nature attached to it. Secondly, Takagi, Kanematsu, Kodama, and Ota were concerned in the perpetration of the crime from the first stage. The action of two others was not of a nature to warrant their being proceeded against as principals. They had no power in the management of the Shinsei-gumi. One of them confessed even that he thought they were intended for decoration. Imai and Hayashi neither took bad bales to No. 177 nor treated them. Even supposing that they had treated bad bales they could not be proceeded against as accomplices, as no evidence was brought forward to establish that they had intended to commit a fraud.

Mr. Masujima was obliged to argue in defence of his client even after the Public Prosecutor released him in consequence of the judge's opinion. The case was not serious at all. Morita never gave answers against his convictions. The manner and deportment of the defendant in Court showed his upright character. The allegation that he ordered the godown keeper to place bad bales in dark quarters of the godowns was defeated by the latter's deposition that he had control over the management of all bales in the godowns. That Morita told Takagi to increase the number of bales on a certain occasion was nothing when considered as an ordinary occurrence.

A long discussion, chiefly as to the culpability of Morita and the other defendants, then took place, after which the Public Prosecutor submitted that the principal prisoners should be dealt with according to the provisions of articles 300 and 304 of the Criminal Code, and the accomplices under articles 104, 105 and 109.

Mr. Otsuka contended that the penalty of the principals should be reduced by one degree and that the four accomplices be dismissed as not guilty. The Court then adjourned.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Treasure, \$326,000.00.

## REPORTS.

The Japanese steamer *Omi Maru*, Captain Swain, from Kobe, reports fine weather with light winds and smooth sea.

## LATEST COMMERCIAL.

## IMPORTS.

The past week has been a remarkable one, and has surpassed its predecessor in the amount of business transacted. Dealers have willingly paid an advance on many descriptions of goods sharing in the activity of the Market, and sellers as a rule have been currently disposed, in spite of the further decline in sterling exchange, which will add seriously to the cost of replacing sales.

**YARN.**—Sales of English Yarn for the week amount to 1,250 bales, and of Bombays to 400 bales. Prices are generally very firm, and occasionally a slight advance has been paid.

**COTTON PIECE GOODS.**—Sales comprise 30,000 pieces 9 lbs. Shirtings at an advance for early arrival; 7,500 pieces 8½ lbs. Shirtings, and 3,500 pieces 7 lbs. T-Cloths at slightly better prices; 4,500 pieces Velvet, 6,000 pieces Turkey Reds, 3,600 pieces Dyed Shirtings, 2,000 pieces Pinks, 4,500 pieces Silexians, and 1,000 pieces Victoria Lawns, all at rather higher prices.

**WOOLLENS.**—7,000 pieces Mousseline de Laine, 3,500 pieces Italian Cloth, and 1,000 pieces Silk Satins have been sold at higher rates, also 1,000 pairs Blankets at quotations.

## COTTON YARNS.

	PER PILL.	PER PILL.
Nos. 16/24, Ordinary	\$24.00	to 26.50
Nos. 16/24, Medium	26.75	to 28.75
Nos. 16/24, Good to Best	28.75	to 29.75
Nos. 16/24, Reverse	29.50	to 30.75
Nos. 28/32, Ordinary	29.00	to 30.00
Nos. 28/32, Medium	30.50	to 31.50
Nos. 28/32, Good to Best	31.50	to 32.25
Nos. 38/42, Medium to Best	35.00	to 36.00
No. 32, Two-fold	32.75	to 33.75

No. 208, Bombay	25.50	to 27.25
No. 168, Bombay	25.00	to 26.00
Nos. 10/14, Bombay	23.00	to 24.50

## METALS.

Dullness reigns supreme, aided by the "Bon Matsuri" and general heat. Arrivals come in, but the workers in iron assert that the weather is too hot to manipulate the metal, and seem inclined to hold off for the usual summer recess. Between unwilling buyers and the torturing thumb-screw of a continually falling exchange, importers are having a bad time just now. Quotations unchanged but quite nominal.

	PER PILL.	PER PILL.
Flat Bars, 4 inch	\$2.40	to 2.50
Flat Bars, 3 inch	2.60	to 2.70
Round and square up to 4 inch	2.40	to 2.60
Nailrod, assorted	2.40	to 2.50
Nailrod, small size	2.60	to 2.70
Wire Nails, assorted	4.00	to 5.00
Tin Plates, per box	4.75	to 5.00
Pig Iron, No. 3	1.15	to 1.17½

## KEROSENE.

Market relapsed into a state of suspense; dealers are apparently filled up for the time, and offer a considerable reduction on holders' asking prices. Quotations at foot are therefore purely nominal, for a decided cut must be accepted to induce trade just now.

	PER CASE.	PER CASE.
Devco	Nom. \$1.70	to 1.72½
Comet	Nom. 1.65	to 1.67½
Stella	Nom. 1.60	to 1.62½

## SUGAR.

Arrivals continue, and stocks are heavy, particularly of Brown Formosa, but sales have not been large, and prices are weak.

	PER PILL.	PER PILL.
White, No. 1	\$7.25	to 7.30
White, No. 2	5.00	to 5.95
White, No. 3	5.60	to 5.75
White, No. 4	4.90	to 5.00
White, No. 5	4.10	to 4.15
Brown Formosa	4.50	to 4.60

## EXPORTS.

## RAW SILK.

Our last circular was dated the 9th instant; since then we had quite a spurt for the *City of Peking*, but after her departure all became quiet once more. Settlements for the week are 15 piculs *Hanks*, and 235 piculs *Filatures* and *Re-reels*. In addition to these figures, about 50 piculs have been sent as Direct Export by the native *Kwaisha*.

As hinted above, there was quite a small rush for the United States mail steamer; since then all is calm, and presumably there will be little or nothing done until near the departure of the *San Pablo*. Dealers have been rather disinclined for business, the natives generally having been occupied for three days with the "Bon" festival. At the same time they are preparing to ask more for their goods as foreign exchange declines, and feel confident of getting all they may demand.

In other kinds there is nothing but Old Silk on the market. Exporters do not apparently want this to any great extent, and it filters back slowly in small lots to the interior.

*Noshi*.—*Bushu* (good) now held for an advance on \$140. *Foshu*, assorted, done at \$94½, while the present up-country price is said to be \$105!

**THE GREATEST WONDER OF MODERN TIMES.****HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

**HOLLOWAY'S OINTMENT**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

**LIEBIG COMPANY'S****EXTRACT OF MEAT**

FINEST AND CHEAPEST  
MEAT-FLAVOURING  
STOCK, FOR SOUPS,  
MADE DISHES AND SAUCES.  
Annual Sale, 8,000,000 Jars.

"Is a success and boon for which Nations should feel grateful."—See  
Medical Press, Lancet, Brit. Med. Jour., &c.

To be had of all Storekeepers and Dealers throughout India.

**CAUTION.**—Genuine ONLY with fac-simile of Baron Liebig's Signature in blue ink across Label. The title "Baron Liebig" and his photograph having been lately largely used by dealers having no connection with Baron Liebig, the public are hereby informed that the Liebig Company are the only manufacturers who are able to offer the article with Baron Liebig's guarantee of genuineness.

**LIEBIG'S EXTRACT OF MEAT Co., Limited, Fenchurch Avenue, London, England.**

Invaluable for India as  
an Efficient Tonic in all  
cases of Weakness.

Keeps good in the hottest  
Climates, and for any  
length of time.

## The Japan Weekly Mail.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 24TH, 1886.

### MARRIAGE.

June 23rd, at H.B.M.'s Legation, Tokyo, by the Rev. E. Champneys Irwine, M.A., THOMAS LISTER BOAG to LIZZIE SMITH.

### SUMMARY OF NEWS.

YOKOHAMA has been declared an infected port.

SIR RICHARD RENNIE has arrived in Japan on leave.

THE United States Minister left for Ikao on the 17th instant.

THE German Minister left for Hakone on the 17th instant.

FOUR students have graduated at the English Law School.

COUNT ITO and his family proceeded to Nikko on the 16th instant.

THE HONOURABLE SIR FRANCIS and LADY PLUNKETT are at Nikko.

THE new Russian Minister to Japan will leave St. Petersburg in November next.

MR. INAGAKI TASHO, Second Class of Fifth Grade, has been created a viscount.

THE authorities propose to complete the new Tokaido Railway line in three years.

THE German Minister has received the decoration of the First Class of the Order of the Rising Sun.

It has been shown by the returns that of cholera patients treated in the hospitals as against

their own homes, more than three times the number of recoveries have occurred in the former.

THE coinage of subsidiary coins to the amount of yen 800,000 has been commenced in the Osaka Mint.

A NEW Department is to be established shortly in the Tokyo Mechanics' School to give instruction in the art of dyeing.

THE number of cases of cholera in Kanagawa Prefecture during the week was 622, and the number of deaths 344.

MR. TANIGUCHI, a military surgeon of the first class, has received orders to proceed to Germany to complete his studies.

It is stated that His Excellency Count Ito will shortly make a tour of the Prefectures of Saitama, Tochigi, and Gumbu.

It is stated that the commencement of the proposed railway between Seoul and Pusan has been postponed till the 11th of next month.

A NOTIFICATION has been issued substituting the Tokaido route for that of the Nakasendo in respect of the Tokyo-Kyoto railway.

OVER ten thousand persons joined in the procession following the coffin of the late Marquis Yamanouchi, on the occasion of the funeral.

THE silk crop in Ina-gori, Shinshu, is estimated to amount to about yen 750,000 this year, against the usual annual average of yen 500,000.

MR. OKUBA, Governor of Yamagata, has been appointed Governor of Fukushima, and Mr. Shibahara, Senator, succeeds him in his former post.

A NUMBER of leading merchants in Tokyo met at the Bankers' Institute on the 19th instant to discuss measures for the development of the Hokkaido.

THE revision of the Companies Regulations has been completed in the Senate after a lapse of eleven months from the time when they were submitted to that body.

THE Nippon Yusen Kaisha's steamer *Shima Maru* was sold to the Korean Government on the 16th instant. She is the first steamer ever possessed by Korea.

THE first instalment—five million yen—of the newly issued Naval Bonds, has been greedily taken up. The Bonds sold at premia varying from 3 to 10 per cent.

HIS EXCELLENCY MR. MORI, Minister of State for Education, attended his office on the 17th instant on the expiry of the mourning period the death of his father.

THE Prefect of Kanagawa has forwarded a written application to the Minister of State for Home Affairs, asking that a proper official title be given to Mr. Mitsuhashi, who is now officiat-

ing in the capacity of a supernumerary in *sonin* rank. The office of supernumerary has been abolished in all government offices.

THE returns of the number of prisoners in the gaols of Hyogo *ken* show a remarkable decrease, the total now being 2,637 against 4,237 last year at the same time.

THE Austrian Minister, who will return to Austria after the conclusion of the conference on Treaty Revision, will first visit Korea to inspect the condition of that country.

THE 20th instant being the third anniversary of the death of the late Mr. Iwakura, members of the Imperial family and Ministers of State paid visits to his tomb at the Kaianji, Shinagawa.

MR. BOCKMAN, a German architect of the Bureau of Construction, will take a number of Japanese mechanics to Germany, where he intends to give them practical training in foreign architecture.

AT Nigo-han-mura, Musashi, where rice is cropped at the earliest date in this country, new rice is expected to be harvested about the 5th of next month, being earlier by ten days than the average date.

THE inhabitants of Fukuoka *ken* are agitating for a railway. The scheme most in favour is a line 150 miles in length, which would cost 3,000,000 yen. This project is backed up by the Governor.

A SUPPLEMENT to the *Official Gazette* notifies that vessels arriving in Tokyo from or through infected places will be inspected at the second fort at Shinagawa, the Kazusa water-course, and off Kanasugi.

THE Tokyo Marine Insurance Company received a telegram on the 18th, stating that the Nippon Yusen Kaisha's steamer *Fetchin Maru* had gone ashore off the coast of Ishihama on the preceding day.

THE authorities of the Metropolitan Police Bureau have obtained permission to increase the estimated sanitary expenditure of the Bureau to yen 25,700 in view of the probable prevalence of cholera in Tokyo.

MR. TASAKI GOROKU, Police Inspector-General, has issued a notification pointing out to inhabitants of the capital the advisability of suspending visits to Yokohama in view of the prevalence of cholera at the latter place.

THE Minister President of State has verbally communicated to the promoters of the proposed Utsunomiya-Nikko railway, that official permission will be given for the carrying out of the scheme in due course of time.

THE iron bridges, to be constructed in connection with the laying of the proposed railway line along the Tokaido, will measure altogether about five miles in length, and the required expense is estimated at about yen 2,000,000.

THE Savings Bank in the Exchequer Department now grants loans of from yen 1,000 to yen

10,000 on security of Public Loan Bonds and shares of the Yokohama Specie Bank, at the rate of  $4\frac{1}{2}$  per cent. per annum.

**THE Improved Silk Company in Gumma Prefecture** is about to establish a Warehousing Company for the storage of silk, in accordance with its stipulations with the Government, which granted a loan of *yen* 300,000 to the company.

WITH respect to the proposed revision of the commercial treaty between Japan and China, it is stated that all forms of imposts on Japanese produce imported to China will be abolished and that the general relations between Japanese and Chinese merchants will be considerably improved.

AT the annual general meeting of the International Hospital, Hyōgo, on the 13th inst., the report and accounts were unanimously agreed to, and the trustees elected for the ensuing year were Messrs. Evers, Falque, Fearon, Jernigan, and Masfen.

IT is stated that Mr. Tsu Tou, who failed his attempt, as manager, to keep the China Merchants' steamers on the coast of Japan, has made arrangements with the owners of English and Russian bottoms to commence next month running in opposition to the Nippon Yusen Kaisha.

REPORTS from various parts of the country show that in a few districts water for irrigation purposes was getting scarce owing to a continuation of unusually hot and dry weather. The paddy fields, however, were planted under favourable circumstances, and the recent fall of heavy rain for several days all over the country has removed apprehension as to the prospects of the crop.

THE Osaka Spinning Factory, the capital of which was increased to *yen* 600,000 in January last, and in which about 11,500 spindles are run at present, has declared a dividend of 8.5 per cent. per annum for the first half of this year. The factory, which gives employment to 493 hands at present, has turned out 100,462 *kun* (a *kun* equals about 10 lbs.) of yarns during the same period. These yarns have been sold in Osaka and the neighbouring provinces and Kiushiu. They are divided into four classes, the first of which exceeds in quality the finest thread imported.

OR Imports, the market for Yarns and Cotton Piece-goods continues in the condition reported for the past two or three weeks, a large business having again been done at steadily rising prices; and, as evidence of the genuine improvement of the trade, the deliveries have been very satisfactory. Sales of Yarn, the greater part of which has been English, have been over 2,000 bales, and prices, which are higher, leave off firm. Cotton Piece-goods have been active all round, and recent rates are fully maintained. Woollens of some kinds have fetched better prices, whilst others the higher rates required by holders in consequence of previous heavy transactions have had the effect of checking sales for the moment, but the general tone of business is indicative of a real improvement. There has been a small general business in Metals of which Wire Nails and Tin Plates have had the principal share. In Kerosene there have been no large transactions, and dealers are waiting for a fall, while holders maintain a firm attitude. There is but little passing in Sugar of any kind. Of Exports, rather more has been done in Raw Silk, though longer figures have

had to be paid, and the markets in the interior are continually on the rise. Holders prognosticate still higher rates, and are not at all in a hurry for business. In Waste Silk the market has taken much the same course, and a wide gap separates buyers and sellers, the latter affirming that prices up country are a good deal above the best offers made here. The Tea trade continues large, over 6,000 piculs of leaf finding buyers during the week, the bulk of which was good common and medium grades, for which prices remain unchanged. Foreign Exchange is without alteration.

#### NOTES.

WE have received from three Korean gentlemen, signing themselves Yu-hiok-Noh, Shin-Un-hi, and Chiung Nan-kio, a document which purports to contain an account of the incidents of the *émeute* in Seoul in 1884, in regard of the share which these gentlemen took in it, and of their relations with the Japanese Legation. The writers call themselves "private Korean citizens" who "fled to Japan by the aid of Mr. Takezoze" and who "through his gift have been able to keep their lives till now." Accepting this, their own statement of the case, we should be glad to know on what principle they now seek to create embarrassments for Mr. Takezoze's Government by publishing a story which, in many respects, conflicts materially with the attitude assumed by Japan in her subsequent negotiations with China and Korea. Mr. Kim-yo-Kun and his associates were not at any time objects of public sympathy. They never succeeded in showing that their aims were lofty enough to atone for the savage violence of their methods. Still, as fugitives hunted by two Governments and known to have been condemned without a hearing, they might have counted upon some measure of civilized pity. At present, their unique purpose, apparently, is to prove themselves wholly unworthy of any such sentiment. Admitting the extravagant hypothesis that they acted—as they evidently desire to persuade the public—at the instigation of the Japanese Legation, are they so singularly obtuse as to ignore the alternative between which they must then choose? By their own showing, they were either Mr. Takezoze's instruments or his associates. If the former, what title have they any longer to pose as patriots, since they consented to disturb the peace of their country at home, and to expose it to grave danger from abroad, at the bidding of a foreign intriguer? They may indeed claim that they obeyed Mr. Takezoze with the hope of establishing Korea's independence through his aid. In that case, do they owe him no better requital than to publish his indiscretion? And if they were his associates, does it become them now, or does it establish their heroism, that they should seek to place upon his shoulders the whole responsibility of an affair in which they were themselves partners? It is a new article in the code of brave men that they should endeavour to exculpate themselves at the expense of one who, by their own showing, combined with them to contrive their country's benefit, and who was subsequently the means of saving their lives. These reflections are the inevitable moral of the story told by Mr. Kim and his fellow-refugees. As for that story, although we believe that it could not stand the test of publicity, we do not purpose to make these columns a medium for ventilating it. We can

discover no motive but selfishness in Mr. Kim's indiscretion. If he had at any time a title to consider himself a patriot working for his country's independence, he has now effectually forfeited that title, since the mere shadow of personal discomfort induces him to blacken the reputation of the Government that has hitherto granted him an asylum, and to estrange the good-will of the empire which alone of Oriental States may be counted friendly to his patriotic purposes. Mr. Kim evidently aspires to the *odium cum dignitate* of a political refugee who has income-earning claims upon the nation where he is pleased to seek asylum. He says that he desires only to pass the remainder of his life in quiet and obscurity. His lofty purposes, then, have not long withstood the shock of adverse circumstances. But if his patriotism has ceased to be active; if his imprudence is childish and his ingratitude repellent, we can at least admire the simplicity of a man who endeavours to find a purchaser for his silence by publishing his confessions at the market cross.

THERE are subjects which appear to lend themselves with special facility to misrepresentation and misapprehension. Consular jurisdiction occupies a high place in the category. Even the *Hyōgo News*, a journal which is certainly not remarkable for inability to see straight, has fallen into some curious errors in criticising our comments on the recent Notification of the United States Consul-General. It is surely a work of supererogation on the part of our contemporary to remind us that American citizens in Japan are required to respect the laws of the Empire *qua* Japanese laws. That fact, and its contrast with the action of certain other Powers, have always received the fullest recognition at our hands. And with regard to Japanese Sanitary Laws, should they happen to emanate from the Central Government, they would be binding, *ipso facto*, upon American residents. But we were concerned recently, not with laws of the Empire, but with regulations issued by the Prefect of Kanagawa for the protection of public health within the limits of his jurisdiction. When such local regulations are in question, the attitude of the United States is just as silly and illogical as that of any other Treaty Power. Were it frankly recognised that all municipal competence rests with the Japanese authorities and with them only, a Consul's function would be simply to publish to his nationals the regulations issued by these authorities, with their accompanying penalties, which would of course be imposed by the Japanese. But there is a foolish fiction that exemption from the processes of Japanese Imperial laws must be construed, rightly or wrongly, as including also exemption from the Japanese penalties of Japanese municipal laws. Now it is perfectly obvious that an American Consul, who receives his commission from the Central Government in Washington, cannot possibly exercise municipal authority, since that is a part of State law and of State law only. If, then, he interferes between the Japanese Municipal authorities and his nationals, it must be in a purely arbitrary character. The U. S. Central Government might indeed acquire by treaty and delegate to its Consular officers special municipal authority in Japan. But it has acquired no such authority by its treaty with this country, and its Consuls have not more right to perform any function—except

Original from

that of a channel of communication—in regard of Japanese municipal laws, than they have to proclaim the municipal laws of Denver, for example, binding upon all their nationals resident in Japan. Are we not, then, witnessing a mere burlesque when the U. S. Consul-General politely “requests” his nationals to cooperate with the Japanese local authorities, and to be so kind as to observe the regulations issued by them to combat a terrible epidemic which is decimating the population? Could there be anything more childishly silly than this courteous formula of entreaty officially employed at a moment of public crisis? In certain parts of Abyssinia the natives employ a Tulchan to aid in milking refractory cows. The Tulchan is a calf's skin which the cow is invited to smell, and, while smelling, she is shackled and milked. But if it happens that the aroma of the deceased calf is disturbed by circumstances, such as an abnormal condition of the atmosphere, for example, the Tulchan fails and the cow goes unmilked. The Consular body is a species of Tulchan with regard to municipal affairs. It emits a faint aroma of anciently usurped authority which in quiet times serves to content the public. But whenever events travel out of their wonted courses, then, as in the case of the U. S. Consul-General's Notification, people perceive with astonishment what a mockery is this odour of a dead calf, and what a fiasco is our resolve to be governed without being administered. Let us repeat, once more, to avoid mistakes, that we are not finding any fault with the American Consul-General personally, or America in particular. All the Consuls and all the Treaty Powers have placed themselves in the same pretty predicament, and until they get out of it, they must go on masquerading as practical jesters.

MACAULAY'S *Essays on Warren Hastings* and *Lord Clive* are favourite books with Japanese students. No others, indeed, seem to be so much used as exercises in composition and style. But Macaulay's information was so large and his memory so tenacious that his numerous references are very puzzling to the ordinary reader. It has been said, not without truth, that any one perusing the great critic's *Essays*, and conscientiously studying the references they contain, would find himself possessed of a very liberal education at the end. Few readers, however, have either the time or the means to consult the wide range of literature covered by Macaulay's references, and in order to obviate this difficulty in the case of the *Essay on Hastings*, Professor J. M. Dixon has published a volume of notes which were collected originally for the benefit of his students in the Imperial College of Engineering. Professor Dixon takes the edition of “*Warren Hastings*” issued by the Tōkyō University, and goes through it, page by page, explaining not only whatever idioms or turns of expression seem likely to puzzle Japanese, but also the various references, whether of a historical, mythological, or purely literary character. He has performed his task with great thoroughness and conferred no small obligation upon Japanese students. We observe that he relegates the “*Impey*” of “*Warren Hastings*” to “a place in fiction.” This is well done, but we could wish that Professor Dixon had given a few reasons for his dictum. In the whole of English literature there has never, perhaps, been such a

terrible injustice perpetrated as that done by Macaulay to the reputation of Sir Elijah Impey. An innocent, honourable man, and a just judge, Impey was held up to posterity by the enchantments of Macaulay's style as the very “spider of hell” to which Burke likened Hastings. “He owed his moral ruin,” as Sir James Stephen recently wrote, “to a literary murder,” and even here in Japan there ought to be no hesitation in undoing Macaulay's great wrong. This, however, is a point to which Professor Dixon probably considers that he has devoted sufficient attention by the references in his preface. For the rest, the only criticism we have to offer is that his admirable little book is most execrably printed. It is one of the worst specimens of printing we have ever seen in Japan; which is saying a good deal. One can detect, too, that the author had a weary and unsuccessful struggle to get his corrections inserted. We have examined four pages, taken at random (pp. 20, 21, 22, and 23), to which no reference is made in the list of Errata and Addenda, and we find no less than six typographical errors. This is unfortunate in a book intended for use by students.

If there be any who have not yet decided where to spend a portion of the summer, it will not be too late to say something which may probably have the effect of directing their steps to a locality which, while very little known to foreigners, is certainly one of the finest sanatoriums in Japan. The spot to which we refer is the little village of Kusatsu, situated high up among the mountains of Joshu, and well known as a health resort by Japanese, who, during the summer months, flock to its springs from the most distant parts. Few foreigners, however, visit Kusatsu, and then only when afflicted by some of the more severe of the many ailments for which sulphur baths are usually prescribed. This, of course, is due to the great inaccessibility of the place, which can be reached only by the most rugged paths and the most inconvenient methods of conveyance. To the person who is bold enough, however, to undertake the journey, a visit to Kusatsu, whether in consequence of actual ill-health or simply for pleasure, will be productive of real enjoyment and much bodily benefit. The traveller can go by train either to Maebashi or Takasaki, whence jinrikisha and *kago* will take him to his destination. The distance is usually covered in two days. Chief among the hardships with which one must lay one's account is this long journey, tedious to a most disheartening extent. Those who are not afflicted by ill-health will be able to pass a few weeks very pleasantly in the neighbourhood, taking the baths just as it suits them to do so, and varying this by excursions to the many interesting places that lie within easy reach, among the most striking of which are the peak of Shirane San, on which there are numerous evidences of active volcanic commotion, and the picturesque dell where the river that flows through the town finds its origin in a multitude of sulphur springs. Indeed, a scene more impressive than this latter could with difficulty be imagined. In an amphitheatre-like hollow, which seems to have been dug out of the shoulder of the mountain, generations of pilgrims have erected numberless little cairns of stones finely balanced upon each other; and while one is somewhat awed by the silence of the place, it is not difficult to persuade oneself that the large pebble topped boulder

in the centre is a ghostly orator haranguing the silent crowd around him. By a person even in the enjoyment of ordinary health the value of a short sojourn in this region of coolness—Kusatsu is about 4,000 feet above the sea level, we believe,—will be appreciated, while those who wish to have sulphur bathing, and can afford the time, will find the waters of strength and efficacy without parallel anywhere else in Japan. There are at least half a dozen public baths, but foreigners may, if they desire it, use the private baths which are attached to most of the hotels. The hotel-keepers have not yet arrived at a sense of the necessity of providing European food, but the accommodation offered is good, and with a small stock of provisions one may sufficiently supplement the stores procurable in the locality. The baths, which are usually taken at a very high temperature—produce severe inflammation upon various parts of the body; but this effect is regarded by the Japanese as simply the escape from the system of the poisonous matter distilled from the blood by the constant use of the water. However, that may be, there can be no possible doubt as to the efficacy of the waters in regard to many grave diseases.

THE London *Economist's* opposition to bi-metallicism has hitherto been distinguished by obstinacy rather than ability. We are never surprised when the writer who is charged with the ventilation of this subject in the great financial journal makes an imposing parade of prejudice or conservatism. But of ignorance or wilful misrepresentation we certainly do not expect to find him guilty. Yet it is hard to see how he can escape the imputation of either the one or the other in an article which he publishes with reference to Mr. Giffen's paper at the last meeting of the Institute of Bankers. The *Economist* speaks thus:—“Much more pertinent to the controversy was the second issue raised by Mr. Giffen, ‘Whether, in point of fact, the steadiness of the ratio between silver and gold for many years prior to 1872 was due throughout to the existence of the bi-metallic ratio of 15½ to 1 in France.’ Mr. Giffen's argument on this point is, in brief, to the effect that the ratio was not maintained, as during that period there were not unimportant fluctuations in the relative values of gold and silver; and that what steadiness there was is not to be attributed to French bi-metallicism, because during a large portion of the time France was practically mono-metallic, gold having been driven out of circulation, and only silver money left in use. It is open to question whether the latter part of this argument is altogether valid. Mr. Giffen admits that if France had gold to exchange for silver, the legal ratio would have been effective in mitigating any fall in silver, and he shows also that France did have gold to exchange, because gold could be obtained by paying a varying premium. And in these circumstances, it is difficult to maintain confidently that the legal ratio had no effect in regulating the exchangeable value of the two metals. But however much bi-metallicists may question this part of Mr. Giffen's statement, they cannot deny that in the case of France, upon which they rely so much, the attempt to keep the two metals in circulation side by side has always been a complete failure. The result, as the bi-metallicists themselves acknowledge, has ever been practical mono-metallicism. In other words, instead of a double standard,

there has simply been an alternative standard. But the whole argument for bi-metallism is made to rest upon the assumption that the two metals can be kept in circulation side by side, both fulfilling the functions of legal tender. This co-equal use, it is maintained, is necessary, in order to keep the supply of currency adequate to the world's requirements. If so, however, bi-metallism has never yet been able to produce this necessary result, and the argument against it which plain men can most easily grasp is, that all past experience shows that the end which it seeks to attain is unattainable by the means proposed." Now we have never found a recognised advocate of bi-metallism who claimed that the simultaneous circulation of the two media, side by side, was an essential element of his scheme. All that is asked for is an alternative standard—that people should be at liberty to alternate from gold to silver, or from silver to gold, according to their convenience and to the relative abundance of either metal, that, in short, debtors should be in a position to discharge their obligations in whichever money is the easier to get. Such freedom of alternation is, in so many words, the system advocated by bimetalists as the only means of relieving the commercial embarrassments caused by imposing the whole function of currency on a single and insufficient method. That the *Economist* should so palpably err in its interpretation of a theory which has been before the public for years, is as unfortunate as it is unaccountable.

We take the following interesting extract from the corrected version of Mr. Blaine's speech on Irish Home Rule, as published by the *New York Tribune* :—

Mr. Gladstone's policy includes another measure. It proposes to do something to relieve the Irish from the intolerable oppression of absentee landlordism. Let me here quote Lord Macaulay against Speaking of Ireland, whose territory is less than the territory of the State of Maine, less than thirty-three thousand square miles in extent, Lord Macaulay in the same speech from which I have already quoted says:—"In natural fertility Ireland is superior to any area of equal size in Europe, and is far more important to the prosperity, the strength, the dignity of the British Empire than all our distant dependencies together; more important than the Canadas, the West Indies, South Africa, Australasia, Ceylon and the vast Dominion of the Moguls." I am sure that if any Irish orator had originally made that declaration in America he would have been laughed at and ridiculed for Celtic exaggeration and imagination. This extraordinary statement from Lord Macaulay led me to a practical examination of Ireland's resource. I went at it in a plain, farmer-like way and examined the statistics relating to Ireland's production. I gathered all my information from British authority, but could get no latter accounts than for the year 1880 and for the years preceding, and I give you the result of my examination, frankly confessing that I was astounded at the magnitude of the figures. In the year 1880 Ireland produced four million bushels of wheat. But what is no longer the crop of Ireland. She produced eighty million bushels of barley. But barley is not one of the great crops of Ireland. She produced seventy million bushels of oats, a very extraordinary yield considering Ireland's small area. The next item I think every one will recognise as peculiarly adapted to Ireland. [Laughter.] Of potatoes she produced 110,000,000 bushels, within 60,000,000 of the whole product of potatoes in the United States for the same year. In turnips and mangolds together she produced 185,000,000 bushels, vastly greater in weight than the largest cotton crop of the United States. She produced of flax 60,000,000 pounds, and of cabbage 550,000,000 pounds. She produced of hay 3,500,000 tons. She had on her thousand hills and in her valleys over 4,000,000 head of cattle, and in the same pasturage she had 3,500,000 head of sheep. She had 300,000 horses and 210,000 asses and mules. During the year 1880 she exported to England over 700,000 cattle, over 700,000 sheep, and nearly half a million of swine. Remember all these came from a territory not quite so large as the State of Maine, and from an area of cultivation of less than twenty millions of acres.

But with this magnificent abundance from this fertile land, rivaling the richness of the ancient land of Goshen, there are thousands of men in Ireland in want of food and appealing to-day to the charity of the stranger—compelled to ask alms through their blood and kindred in America. Why should this sad condition occur in a land that overflows with plenty and exports millions of produce to other countries? As commanded by the great Lawgiver of Israel, "Thou shalt not muzzle the ox that treadeth out the corn." And St. Paul in quoting this text in his first Epistle to Timothy declared "the laborer to be worthy of his reward."—(Applause.) And yet many of the men en-

gaged in producing these wonderful harvests of Ireland are to-day lacking bread to satisfy their hunger.

Mr. Gladstone believes, and we hope more than half of Great Britain believes with him, that the cause of this distress in Ireland is to be traced in large part to the ownership of the land. Seven hundred and twenty-nine Englishmen own half the land in Ireland. Three thousand other men own the majority of the other half of the agricultural land of Ireland. Counting all the small holdings there are but 10,288 owners of land in Ireland, and this in a population of more than 5,000,000 souls. Produce that condition of affairs in Maine or in any New England State and the distress in a few years would be as great as the distress in Ireland to-day. Mr. Gladstone, speaking as a Statesman and a Christian, says that this condition of affairs must cease, and that the men who till the land in Ireland must be permitted to purchase and to hold it.

An American correspondent, in forwarding this speech to us, writes :—"I suppose the enclosed speech of Mr. Blaine will seem to you presumptuous. I am free to say that if we had a Home Rule question in America, and if an English public man addressed an English audience gathered to consider the question, I should feel inclined to tell the aforesaid public man and audience to go to a climate warmer than that of Great Britain. James G. Blaine, it appears to me, when he wants to twist the tail of the British lion, might more appropriately limit his selection of instruments to the fisheries' tweezers, and not snatch at the princers which belong to Parnell & Co. At the same time, some portions of the speech strike me as well put, especially that part relating to the productions of the Irish soil as contrasted with the poverty of the Irish people. If the figures are correct, the contrast is startling. The unanimity with which the English papers attack Blaine shows that their resentment is stronger than their discretion. No doubt he has given them just cause for offence, but their comments are, allow me to say with all deference to your opinion, decidedly undignified. They speak contemptuously of Blaine; call him a low politician, etc., but whatever may be said of Mr. Blaine's methods and reputation, the man who mistakes him for anything other than a level-headed, shrewd and eminently able public man, makes a big mistake."

It has to be remembered that when the English papers commented on Mr. Blaine's speech, it included reflections upon Lord Salisbury of a very gross character. The speech, as subsequently amended by Mr. Blaine, contains nothing that ought to be considered offensive by Englishmen. As for our correspondent's suggestion that an American public man should not meddle with England's domestic policy and *vice versa*, we wholly dissent from it. American affairs have the deepest interest for Englishmen, and we trust that the same is true of English affairs in America. Although the sympathies of the people of the United States have, in the main, been enlisted in the cause which is at present out of favour in England, we believe that the consequence of this whole affair will be to draw Great Britain and her giant daughter closer together than ever.

Six weeks ago we stated our belief that the rumours of trouble with China about Burmah were exaggerated, and that the suspension of the negotiations was not due to any new complication but simply to the necessity of waiting for the arrival in Peking of Marquis Tseng, who was the author of China's demands, and who had carried them to a point somewhat beyond the easy comprehension of his colleagues in Peking. It is interesting to find that, at the time when we wrote, this view of the facts was simultaneously receiving ex-

pression in London through the columns of *The Times*. China, who, for a Power of full-grown dimensions and very practical instincts, makes herself sometimes quite remarkable by the earnestness with which she clutches at shadows, is apparently resolved to cling to her bogus suzerainty in Upper Burmah, and will gladly wink at English occupation if only some device can be found to save her face in this respect. Lord Salisbury's idea was to utilize the head of the native church in Burmah, under these circumstances. The passage of annual presents through ecclesiastical hands was expected to satisfy the Court at Peking without imparting any equivocal aspect to the position of England. This dodge, for it can be called nothing else, meant, of course, that China was to put whatever construction she pleased upon the receipt of these annual presents, it being understood that England need not be disturbed by "any bogey such as the fear of being called a tributary." Lord Rosebery's accession to power at the Foreign Office was supposed to have given the negotiations a new complexion, but even when Lord Salisbury returns to Downing Street—as he soon will—we shall be much surprised if the affair is settled before the arrival of Tseng in Peking. The Marquis is—or was at the date of our last advices—doing the manufacturing tour of England. It will be remembered—as was explained in these columns at the end of May—that his intended visit to the great German workshops prompted the advisability of inviting him to perform similar inspections in England. Meanwhile the pacification of Burmah is proceeding, and will, let us hope, be quite completed ere the Marquis reaches Peking.

Unpleasant conjectures are also beginning to circulate about the Macaulay mission to Tibet. The composition of the mission is criticised. It is said to be too pretentious, and the Chinese Government suggest the apprehension that its purpose may be misunderstood by the Tibetans, and that its friendly reception cannot be reckoned on with confidence. These rumours do not surprise us in the least. We long ago expressed our fears that the singularly snave demeanour of the Government in Peking towards Mr. Macaulay did not necessarily predict a successful ending to his mission. There is a lengthy chapter of possible accidents between Calcutta and Lhasa, and unless every one is unanimous in wishing that Mr. Macaulay should steer safely through them all, Tibet may be destined to remain some time longer outside the pale of international commerce.

With reference to our note of yesterday about the subscription started for the purpose of creating a fund for the relief of the families of those officials and policemen, engaged in stamping out the present epidemic, who have been unfortunate enough to fall victims to the disease in the performance of their duty, we have been requested by the Kencho authorities to acknowledge with grateful thanks the receipt of the following subscriptions received at the Kencho from the foreign residents of this port up to yesterday evening :—

	YEN.		YEN.

Mr. J. E. Lowder	25		
Mr. J. E. R. ...	10	Total	101
His Excellency G. Neyt	50		

With every succeeding legislative session the Congress of the United States finds itself confronted by an ever increasing burden of work. The number of bills before it is gradually assuming dimensions out of all proportion to the time at the disposal of legislators. Hence it is that while bills multiply, the percentage of them becoming law is continually decreasing, and the centre of legislation is more and more being shifted from Congress to its sub-committees. The thirty-ninth Congress was the first in which the number of bills submitted exceeded 2,000, but the fortieth was already called upon to dispose of 3,732, while in the forty-eighth the number of bills had reached the almost fabulous figure of 11,443, and the Congress now in session bids fair to surpass the record of its predecessor in that respect. It is, of course, self-evident that neither the House, nor the Senate, nor their sub-committees are able to do anything like justice to the bills, resolutions, and suggestions that are thus waiting for disposal, and hence two propositions have been made to remedy this certainly serious defect of the legislative machinery. The first is to lengthen the time of the sessions, and the second is that all private bills should first be submitted to specially constituted courts. The two propositions admit of being combined. With regard to the first, there are three different and differing bills before Congress, all aiming at lengthening the sessions, but fixing different periods for that purpose. The authors of these bills are Senator Hoar and Representatives Blanchard and Henderson. The great desideratum now is that Congress should find time to consider these proposals and to adopt one of them, and that as soon as possible. In the meanwhile, some American papers believe the moment propitious for pointing out to a long suffering country some of the representatives most remarkable for legislative fecundity; and the Senate in this respect carries off a not too glorious prize. Senator Plumb heads the list as father of 92 bills and 2 resolutions, but he is followed closely by the irrepressible Ingalls with 82 bills, the latter in turn being in this legislative race but little ahead of Senator Call with 78 bills and 4 resolutions. It can certainly not be made an objection to these Senators that they are idling away their time at the nation's expense. The chief strain on the legislative machine, however, is caused mainly by the super-abundance of private bills that clamour for a hearing, and that have to depend on a great deal of pushing from official and unofficial quarters in order to attract the attention of an over-burdened Congress. Hence the second proposition of referring all such bills to special constitutional courts promises greater relief to the members of both houses and will cause the political machinery at Washington to run more rapidly and with less friction.

The Chinese Indemnity Bill has now, after prolonged discussion, passed the Senate by a vote of 30 yeas against 10 nays. This Bill authorizes the President to make all possible inquiry into, and to ascertain, the actual losses sustained by the Chinamen in the Rock Springs Riot during last fall, and to pay whatever losses have thus been incurred. The sum appropriated for this purpose by the Bill amounts to \$15,000. The opposition to the passage of the Bill was not numerically large, but very determined in its utterances. It was claimed and proved from the official correspondence on the subject that

the rioters were all without exception foreigners, and it was further argued that both Chinese and white labour engaged in the mines at Rock Springs was not free labour, but had been brought there under a system of contracts, and with a view to supplanting the higher-priced but more skilled labour of the American miner. It was further maintained that, being in the employ of the same company, the men on either side did not look to the United States Government for the protection of their interests; but that, relying for their safety upon the power of their masters whose serfs, as it were, they had voluntarily become—the Chinese with the knowledge even and the connivance of their own Government—they had gone to the Wyoming mines and worked there. The opposition then denied that the United States were under any obligation to extend to Chinese and other foreigners any greater right of redress for wrongs than is extended to United States citizens under similar circumstances. The position which had been assumed by men like Everts, Edmunds, and Sherman was severely criticized, but, as the sequel showed, to little purpose. Singularly enough, a strong contrast was shown to exist between the freedom enjoyed by the Chinese in their movements and proceedings within the United States and the limitations and restrictions that hamper at almost every step the movements of American citizens in China. The whole basis of the recommendations of the President and the Secretary resolved itself into a feeling of pity towards the individual Chinaman, but the opposition did not believe that any obligation either legal or otherwise did exist on the part of the United States for action such as was proposed by the Indemnity Bill. How convincing these arguments were is sufficiently evident from the number of votes which the opposition was able to rally against the Bill, but its passage in June, 1886, after the perpetration of the outrages at Rock Springs in September of last year, does seem a somewhat tardy reparation, especially in view of the fact that the exact losses sustained by the sufferers from the riot are yet to be ascertained by a special inquiry on the part of the Government.

To the writers in the *Hochi Shimbun* and other vernacular journals, who recently advocated the transplantation of the English Constitution, root and branches, into Japan—writers who would proceed forthwith to reduce the functions of the Emperor to reigning without governing—we commend the following information taken from the columns of a recent number of the *Saturday Review*:—The Constitutions which have within the last fifty or sixty years been copied from the English model have, in almost all cases, varied like grafted trees from the original type. Germany, Austria, and to a certain extent Italy and Belgium, have been unwilling or unable to acclimatize the artificial institution of reigning without also governing. The French experiment succeeded but imperfectly during the struggle between Louis Philippe and his successive Ministers, and it was wholly discontinued during the eighteen years of the Second Empire. Victor Emmanuel and his son have commanded armies in the field; and the German Emperor retains in his own hands the control of military affairs. His great Minister is never tired of reminding the Prussian and German Parliaments that the general policy of his Government is independent of their votes and resolutions. The

late King of Spain, though he respected the restriction imposed upon him by the Constitution, claimed and exercised the power of appointing and dismissing Ministers without necessary regard to Parliamentary majorities. If he had been exposed, like his immediate predecessor, to insurrections organized by discontented generals, Alfonso XII. would certainly not have hesitated to take the command of his own forces for the suppression of disorder. In none of the States which have been enumerated has royalty yet shrunk into a fiction.

SIGNOR CHIARINI'S Circus and Menagerie opened on Saturday evening before a large and most appreciative audience. The show, which is situated on a piece of ground on the opposite side of the Creek from the French Foundry, consists of two large tents which are devoted, the smaller to the purposes of the menagerie and the other to the performances of the company. A bar, conducted by Mr. T. K. James, of the Japan Hotel, was fitted up in the former tent. The collection of strange animals which Signor Chiarini exhibits to his patrons is small, but the beasts are the very best of their kinds. The three Nubian lions are splendid specimens, which show little of the spiritless condition that caged lions usually manifest; and the three Bengal tigers are as sleek and tiger-like as if only brought the day before from their native jungle. Two elephants standing in one part of the enclosure attracted great attention, not only on account of their remarkable docility, but also because of their evident solicitude on behalf of a small Brahma bull, of the sacred breed, which was secured between them, and which they constantly fanned with their trunks. The monkeys were, as usual, the centre of attraction to a large crowd, and the cage of snakes, mostly Brazilian cobras, which occupied a position in the centre of the tent, was also the object of considerable interest. The Circus programme was in two parts, each prefaced by an overture from the capital band of the company. The first part commenced with the Roman sports representation, in which four ladies and the same number of gentlemen performed, under the leadership of Miss Victoria Blanche, a series of most difficult evolutions. Gymnastic exercises on the horizontal bar by Messrs. French and Angelo, following, after which Signor Chiarini brought out the two ponies, Figaro and Sonito, who, under his charge went through a most complicated and trying performance. Retro-equitation by La Petite Roland, the next act, was very well received, the young lady gaining warm applause after each of her difficult feats; and the first part was brought to a close by a comic equestrian scene called "The three nations," by Mr. Charles Stoodley, the comic business in this as in the previous piece being done by Mr. Godfrey. In the second part, Mr. Abadie introduced the two elephants, whose performances, on tubs and otherwise, evinced the most careful and patient teaching. A skilful equestrian performance by Miss Emma Stoodley, was followed by the appearance of the magnificent colt, Duke, which under the charge of Signor Chiarini showed to what an extent careful and discriminating tuition can train a generous and high-spirited animal. A comic scene in which some skilful juggling of peaked hats was done was next represented by Messrs. French and Angelo, and followed by the performance of the

Cynocephalus Porcaria, a Madagascar monkey, which, though the most contemplative and unostentatious of his kind, developed under the care of Mr. Frederick Sylvester a wonderful amount of enthusiasm, and screamed "gawn" to the horse on which it rode with all the verve of an old rider. The performance was brought to a close by Mr. James Frame's appearance among the tigers, which he caused to do various feats: the most astounding perhaps being that of the one which jumped several times through a burning hoop. On the whole, the performance was most successful and enjoyable, and we can safely predict for Signor Chiarini a very successful run.

THE cholera epidemic in this settlement is now as bad as it was in the worst days of 1882. It has been very sudden and sharp in its behaviour. Attacking twelve persons at its first coup on the night of the last day of June, it developed, in the space of a fortnight, a degree of vigour without precedent. If heat has anything to say to the spread of such an epidemic, the conditions have been eminently favourable, for never since 1871 have we been visited by such a long, unvaried spell of scorching weather. Still the old immunity is enjoyed by the foreign residents, and in a lesser degree by the better class of Japanese. Can it be, as we suggested in 1882, that house-construction is responsible for this difference? The subject is so important that we venture to repeat what we then said. Alluding to Dr. Ivan von Pettkofer's essay on the sanitary relations of the soil, read before the Association of German Naturalists and Physicians at Salzburg, in September 1881, we wrote:—

Some of the Doctor's conclusions are novel and full of interest for us at this juncture. He says that hitherto in estimating the hygienic effect of local influences, the first place has been given to the air, the second to the water, and the third to the soil. But this order has now to be reversed. Local air can only hold the first place in hygienic regimen so long as we forget that the average velocity of the atmosphere over the surface of the earth is ten feet per second, and that even in an apparently perfect calm, the air is moving at the rate of 100 feet a minute. Consequently, if air has properties or contains matters in one place which are not remarked in another, they cannot originate in the air itself, but must be derived from the soil and are then carried away in the free atmosphere, to disappear by dilution and other processes. The same is the case with local water. All the water that we drink on the earth falls from the sky, and is everywhere of precisely the same composition. Only when it penetrates the soil is it changed by taking up matter derived from the ground through which it flows. "The explanation of the frequent, sharply defined local limitations of cholera and typhoid has been sought first in influences, not of soil, but of water and air to which the germs of disease have been imparted from men; but a clear impartial examination of the local prevalence of these diseases in circles of greater or less extent has now furnished evidence that in many cases air and water can no longer be maintained to be the causes of the localization, but that the sources of the epidemic must be sought in the soil." Many instances are cited in corroboration of this theory, and the lecturer then proceeds to enquire what are the contents of the soil that exert such powerful influences, for good or evil, on our health. The most probable answer seems to be that the evil influences are derived from minute organisms or their products, "of which many millions of individuals can be put within the area of the head of a pin and which inhibit the porous soil from the surface down to a great depth." Just as certain plants have baleful, and others beneficent, properties, so these molds, as they are called, are capable of being either hurtful or harmless, according to their species, or as is probably the true solution, according to the nature of the soil they inhabit. Mycology, however, has not yet thrown much light upon the latter point. All that we surely know is that certain processes, not only drain, but sometimes convert an unhealthy into a healthy soil. Of this a notable example is furnished by the city of Rome, where fevers now prevail that were almost unknown in the times before the *cuniculi*—a channel served to drain the hills—had become choked and unoperative. An old experience is that certain infectious diseases have their favourite seats in alluvial soils, which after all differ from other soils mainly in the nature of their physical aggregation—that is to say, in their greatest permeability for air and moisture.

And this brings us to what is, perhaps, the most interesting part of the investigation; namely, to the fact that the evil influences of the soil are proximately due to the air imprisoned in its pores and impregnated with its impurities. "In common life we can hardly conceive the extent of the porosity of the soil on which we dwell. Heavy, towering buildings often stand on a soil which is filled to the extent of a third of its volume with air. The investigation of ground air has just begun, but it has already surprised us with some unexpected revelations. Ground air is distinguished from the air that passes over the surface by the higher proportion of carbonic acid it contains, which increases, as a rule, with the distance from the surface, and to which our springs owe their charges of that gas. This carbonic acid is chiefly derived from organic matters and organic life in the ground, with which it increases and diminishes. Air brought by Zettell from the dead dry soil of the Libyan Desert, sealed in glass tubes, showed no larger proportion of carbonic acid than the free superficial air, but the ground air from a palm-garden in the oasis of Farafreeh yielded much carbonic acid."

Still stranger than all this, however, is the fact that our houses are aired or ventilated in no small degree by the ground-air. Renk has been inquiring, with the aid of Recknagel's differential manometer, whether the air flows from the ground into the house or from the house into the ground, and has found that through most of the year the draft is from the ground into the house. He has also found that the ground air, which is sucked into the house, brings dust with it, and other observers have shown that the same air also carries germs susceptible of development in suitable solutions. It is thus easy to see how the soil affects our health without our having to eat it; the ground air plays the part of an always ready intermediate agent, as far as concerns the molds. In this light it is easily seen why some houses sometimes have to suffer so badly from certain conditions of the soil, especially when they are badly ventilated. The movement of air in a close house is many thousand times less active than where the circulation is free; and the air entering the house suffers correspondingly less dilution than that passing into the free atmosphere, and leaves in it much more of what it brings up from the ground. While the house is heated during the cold season and at night in the summer, while the air within doors is warmer than the surrounding out-door air, the houses act as draught-locks, and suck air out from the ground as if they were cupping glasses set over it."

All this is most instructive, and if credible, goes far to explain many circumstances connected with the present cholera epidemic in Japan. The feature of Japanese houses which mainly distinguishes them from European, is the construction of their floors. These are formed of thin boards with irregular edges, so joined that large interstices exist between every board. In the dwellings of the poorer classes the joists of the floor may be said to be laid directly on the soil, so that we have, at once, the most favorable conditions for the free ingress of the poisonous molds. Residences of more pretensions are raised farther from the ground, and thus, though their floors are still full of crevices, their inmates are somewhat protected by the current of air which precludes beneath. This latter advantage is always obtained in a house of Western construction, while, at the same time, the careful joining of the floors affords additional security. Thus it becomes easy to account for the immunity enjoyed by the inmates of the brick houses in Ginza, and for the mortality which has overtaken the wretched dwellers in the low-lying purlieus of Yokohama. It will be of little use to supply these latter with water from the Tanagawa, to inspect their sewers or even to sprinkle them every day with disinfectants. What they seem to want is to have their floors made air-tight. Probably a great deal of good could be done by pasting thick sheets of paper under the mats. But the radical remedy, so far as poison from the soil is concerned, would be either to raise the houses from the ground and construct their floors in Western fashion, or to spread a good thick layer of cement over the soil on which they are built. We strongly recommend the local authorities to make some experiments in this direction.

THE "fay's gift" is evidently not in the possession of Englishmen at large just now. Mr. Gladstone was steinily denounced by the Conservatives because he based his Home Rule proposals on the ground that Irishmen are not disposed to obey laws made for them by the people of another country. "Could anything be more outrageous," cried the critics, "than the suggestion, coming from the Prime Minister himself, that the English and the Irish are separate nations. Perish the thought! They are one and indivisible." Similarly, when an Irishman spoke of the Dublin Castle officials as the representatives of a stronger race, there was a chorus of disapproval; the agitator was denounced as a traitor and a rebel. Hear now, however, what a leading Conservative organ, the

*St. James's Budget*, writes upon the Irish question. "The author of the Home Rule Bill," according to that journal, "failed to remember that Ireland is not one nation but two." These two nations are "the Protestants, Loyalists, people of our own blood," and "their hereditary enemies" who "would not give sixpence for Mr. Gladstone's scheme if they had not the prosperous Protestant community of Ulster to bleed and to wreak their vengeance on." Then the *St. James's Budget* proceeds in the following strain:—

The discussion on the renewal of the Arms Act will be useful in bringing all this out more clearly, in the House of Commons and in the country alike. The most prominent question in debate is, Whether the Loyalists and Protestants of Ireland, supposing them to be deprived of the protection of English law, and placed by Act of Parliament under the control of a "foreign" Government (Mr. Gladstone's own word), would have any right to resist the authority of that Government. Sir Henry James and Mr. Bradlaugh hold that they would have no such right: the lawyer's contention being one that would authorize an English Government and Parliament to place any number of the Queen's subjects under the domination of any Power they chose to hand them over to. We repeat that, though the Queen's Government may possibly have a right to outlaw any portion of her loyal subjects, from the date of their outlawry they become their own masters. It is not for Mr. Gladstone or anybody else to say that they shall henceforth live under another Government—French, Irish, American, or what not. And we have no doubt whatever that the outlawed community would have every right to resist by force of arms the new and strange authority put over them. In this opinion every lover of freedom must concur, in a case where it is proposed to cut off a million and a quarter of her Majesty's white subjects from the Imperial Government, and to place them under a totally different Government: a Government composed of their hereditary enemies—men of alien race, of a bitterly hostile creed, and hungering and thirsting to dominate that they may humble and oppress. And surely this is to the purpose: Rightly or wrongly, resistance there would be, rebellion there would be in this case; it would be supported in the field if necessary by thousands of Englishmen and Scotchmen; while no conceivable English Government would dare to call out a regiment of the Queen's forces to assist a war of Catholics against Protestants, of wild Irish and foreign filibusters against loyal men of our own blood. Now we should like to know whether Irishmen who call the English a nation alien to themselves can be greatly blamed in the face of English declarations that a Parliament in Dublin would be a "foreign Government" in regard to the Irish Loyalists; "a Government composed of their hereditary enemies—men of alien race, of a bitterly hostile creed, and hungering and thirsting to dominate that they may humble and oppress"—and that to place the Ulster Loyalists under such a Government would be to "outlaw them."

THE progress of Russian railway enterprise in Central Asia does not seem to have been without effect on Persia. The long planned line from Teheran to Bushire *via* Kashan, Ispahan, and Shiraz, is to be undertaken, and the contract for its construction has been given to an American, Mr. F. H. Winston, who, having gone to Teheran to represent his country as Minister at the Shah's Court, resigned his position shortly after his arrival with a view, it would seem, of entering upon the task entrusted to him by the Persian Government. The contract covers a period of twenty years, and gives Mr. Winston power and authority to construct the Teheran-Bushire and Teheran-Meshed lines with all such branches as may be judged necessary in the interest of a proper development of the main lines. The construction of the Teheran-Bushire line is, from an international and commercial point of view, a most excellent and desirable thing, but from a strictly Persian and military stand-point, the Teheran-Meshed line is by far the most important, intended, as it is, to connect the centre of Persia with the outlying

and much exposed province of Khorassan. After its construction the sending of from ten to twenty thousand regular soldiers will be only a question of a few days, and if Persia has any serious intention of maintaining her neutrality during a future conflict on the Afghan frontier, this railway will afford her the greatest possible facilities for preserving Khorassan against becoming a camping ground and base of supplies to forces hostile to Persian interests. The advantage gained by Russia in forcing onward the Transcaspian Railway to Merv is strikingly illustrated by the fact that, according to the *Norv. Fremja*, Mr. Winston is making arrangements to come to St. Petersburg with a view of entering into negotiations for the conveyance to Meshed, by the Transcaspian line, of all the material he may need for the proposed construction of the Teheran-Meshed Railway. This item of news, very probable in itself—for there is no shorter and better road to Meshed than the one opened by Russia—would indicate that the line to Meshed is to be pushed on in preference to that to Bushire, and that military considerations in the council of the Shah's advisers preponderate at present over those of a commercial nature. As to supplying the necessary material for the line terminating at Bushire on the Persian Gulf, Great Britain will be able to furnish it cheaper and to convey it to Bushire at lower rates than any other competitor, especially if, as is very likely, these lines be built from Meshed and Bushire towards the interior, from the circumference of the empire to its centre, the difficulty of transport increasing in proportion to the remoteness of the provinces from the capital.

We learn that Mr. Aston has accepted the post of Japanese Secretary at Her Britannic Majesty's Legation in Tokyo. The news is very welcome, not only because it points to Mr. Aston's return at no distant date, but also because it indicates that his health must be greatly restored. By Mr. Satow's promotion to Bangkok, by the lamented death of Mr. McClatchy, and by Mr. Aston's appointment to Korea and his subsequent illness, the British Legation in Tokyo was deprived of the services of three brilliant sinologists. Only two gentlemen, Messrs. Hall and Gubbins, remained to sustain the high reputation for linguistic scholarship which the staff of the Legation had justly acquired. Mr. Aston's return to the scene of his old labours will be a notable accession of strength.

The long standing and interesting rivalry between New South Wales and Victoria as to which colony should first be able to count a million of inhabitants, has now been decided in favour of Victoria, the quarterly statistical abstract of the latter Government showing an estimated population of Victoria on the 31st of March of 1,001,756. The figures for New South Wales are 992,875 for the same date, and as the actual increase of that colony's population amounted to 12,302 during the first quarter of this year, it is safe to assume that New South Wales, in filling up the long coveted million, was but three months behind her sister-colony. The growth of these Australian colonies is marvellous indeed when we reflect how backward they were as late as 1835; and the impetus which by their growth has been given to English interests throughout the South Pacific is truly remarkable. The only drawback to this fine

picture of prosperity is the heavy indebtedness of all the Australian colonies, and on that ground there have been voices of advice and warning addressed to the colonies from more than one quarter of Old England. Nothing is easier for the Australians than to raise a loan in London, and although in no country of the world do we find so large an amount of debt per head of population, the credit of the Pacific colonies is unexhausted and seems inexhaustible. While many prophesy sure bankruptcy and a backset for a decade at least, the colonists point to the almost limitless resources of their land as the never failing mine whence they will draw the money to pay debts necessarily incurred for the development of wealth otherwise unavailable.

The silver question in the United States does not seem to be making much headway in Congress, and however desirable speedy action and a termination of the present discussion would be in the interests of the business world generally, the people's representatives are by no means agreed on what they actually want, though on what they do not want they have passed two resolutions supported by very respectable majorities. They do not want a free and unrestricted coinage of silver, neither do they wish the present coinage of that metal to cease altogether. The first resolution, free and unrestricted coinage, we find supported by 125 members of the House and opposed by 163. In analyzing this vote, according to the attitude of the two parties, we find 15 per cent. of the Republican, and 57 per cent. of the Democratic, vote in favour of free coinage, the rest of these parties being opposed to it. The second resolution, suspension of silver coinage, was supported by only 84 and opposed by 201 representatives. Of the Republican vote 42 per cent., and of the Democratic vote about 65 per cent., were opposed to the discontinuance of silver coinage. After these test votes the attention of the public was diverted from the question by the labour troubles that affected the country from one end to the other, and by the subsequent anarchist riots that opened the eyes of many to the active dangers of socialism even in the United States, a country which had been considered proof against the influence of socialist schemers. These momentarily important incidents diverted public opinion, and until the people turn to the matter again and imperatively demand a solution of the silver problem, it is not likely that Congress will take any decisive measure in a question concerning which it is difficult for the various representatives to ascertain with approximate correctness the sentiments of their respective constituencies.

Maxwell, who was arrested some months ago on suspicion of murdering a young Englishman named Preller, with whom he had been travelling, has probably been condemned to death ere this. It will be remembered that Preller's body was found in a trunk in the hotel where he and Maxwell had been staying, and that on the trunk was a label "So perish all traitors to the great cause." When Maxwell was arrested, he was in possession of Preller's clothes and money, but it seemed at first not unlikely that sufficient evidence to convict him would not be forthcoming. His story was that Preller's death had been accidentally caused by chloroform, and there was nothing to show that such might not have been the case. But the prosecution

ultimately produced a witness whose testimony imparted a different complexion to the affair. This was a detective who had caused himself to be arrested for forgery, and who, during forty-seven days passed in jail with Maxwell, obtained the latter's confidence and a confession. The important part of the latter was that, on the day of the murder—we quote Maxwell's words as given by the detective—"Preller was in his (Maxwell's) room and complained of pain. Maxwell told him he could remedy it by using a hypodermic syringe and urged that he should try it. Preller, he said, took off his coat and vest, and he said he gave him a good dose in the arm, which put him to sleep. When he was asleep he used some chloroform that he had there, and when he found that was not enough he went out and got some more chloroform. Then he found he was dead. He took off his clothes, took his money and cut off his undershirt and shirt and took off his drawers. He threw the things out, put him in the trunk and left the things in the room. This was four or five o'clock in the afternoon. He said he then stayed around until Monday morning, when he went out and bought several things, trunks among them. He then packed his own trunk, putting the things he had taken from Preller's body into it. He bought a ticket for San Francisco, for which he said he paid \$116."

The Prince of Wales, it may be presumed, did not send his sons abroad to revive the legend of the "Flying Dutchman." Yet that is what the Royal lads have done, for it is pretty certain that no part of their book will attract more curious attention than the following:—"July 11 (1881). At 4 a.m. the *Flying Dutchman* crossed our bows. A strange red light, as of a phantom ship all aglow, in the midst of which light the masts, spars, and sails of a brig 200 yards distant stood out in strong relief as she came up. The look-out man on the fore-castle reported her as close on the port bow, when also the officer of the watch from the bridge clearly saw her, as did also the quarter-deck midshipman, who was sent forward at once to the fore-castle; but on arriving there no vestige nor any sign whatever of any material ship was to be seen either near or right away to the horizon; the night being clear and the sea calm. Thirteen persons altogether saw her; but whether it was *Van Diemen* or the *Flying Dutchman*, or who else, must remain unknown. The *Tourmaline* and *Chopatra*, who were sailing on our starboard bow, flashed to ask whether we had seen the strange red light. At 10.45 a.m. the ordinary seaman who had this morning reported the *Flying Dutchman* fell from the fore-topmast cross-trees, and was smashed to atoms. At 4.15 p.m., after quarters, we hove-to with the head-yards aback, and he was buried in the sea. He was a smart royal-yardman, and one of the most promising young hands in the ship, and every one feels quite sad at his loss. At the next port we came to the Admiral also was smitten down." This, which the *Pall Mall Budget* calls a "most circumstantial yarn," will settle the question finally with the blue-jacket fraternity. There can be no higher authority than that of the two Princes. The *Flying Dutchman* is effectually resuscitated.

The Princes have evidently said a good deal about Japan in their book, but we find only this

quotation in the various reviews:—"During dinner the Mikado sent his own private band, the Reijin, to play on old Japanese, Chinese, and Korean instruments, most of them over 1,500 years old; it is a very rare performance, and the only place you can hear it is in the Emperor's palace. The sounds that proceeded from the inner room where these musicians were placed were so faint and plaintive that some of the party ignorantly mistook them for preparations of a band tuning up, and as it went on for some time inquired when they were going to begin to play. This music, in fact, like all Oriental music to a Western ear, appears altogether out of tune and full of discords, being set in a wholly different key, and seeming to speak a wholly different language to our own. But after listening to it attentively for some time, although we cannot say we like it, yet we can quite understand how some people do, just as others admire Whistler's pictures or a piece of faded old silk-work, or the faint flavour or smell of some, to our taste, sickly flower or fruit.

HERE is an interesting contribution to our knowledge of the state of popular opinion in Ireland. It is furnished by a correspondent of *The Times*:-

I wish some of the Ministers who refer with such satisfaction to "the wish of the country constitutionally expressed," could have been with me during a visit to Ireland, from which I have just returned. I went there with the impression that the demand for Home Rule is largely a fictitious one, and I came back with that impression more than confirmed. I found, when the people talked to one quietly and disclosed their real opinions, that they fully realize that the agitation has done nothing but harm to the country, and that the Parnellites alone have profited by it. A hard-working and industrious tenant-farmer and Roman Catholic, whose rent amounts to some £30 a year, thus expressed himself:—"Times are bad," he said, "couldn't be worse. This agitation done a great deal of harm. And they think to bring a Parliament home to Dublin, as if this country was a sheet of gold!" "Mishter Parnell got plenty of money," he went on, "sure didn't he get enough to redeem his property and to pay those fancy mimbers?" "Ejections," he said, "did ye ever see a striving industrious family ejected? The farmers are living in grandeur, and not minding their land at all."

A respectable herd, also a Roman Catholic, spoke very much to the same effect. "This agitation," he said, "ruined everything and spoilt the world. There never was any luck in the country since it began. Any man that has money 'll hold it, and not lay it out, not knowin' now things will be." Parnell's a wonderful man," he continued, "lashin' of money and a fine trade, and there he has all his mimbers together in one lump."

I did not in any way "interview" either of these men; they started the subject in each case themselves, and evidently expressed their genuine opinions; and yet I have not the smallest doubt that they both voted for the Nationalist at the last election. I said so to the keeper of a small hotel in the neighbourhood. "Yes," he replied, "they must; they're lashed up to it and they must." In fact, as Mr. Brodrick put it in his excellent letter of last week, there is no such thing as independent public opinion in Ireland.

The next man I came across was a well-to-do Protestant farmer. "Well, will the Bill pass?" he said. "If it did, we might all go out of Ireland. The country is bent down altogether with the agitation. If they'd attended to their work, instead of going about to meetin's and drinkin' and Land Legin', they'd be a great deal better off." "Oh! all the money is gone out of Ireland with the agitation," he went on, "and the farmers are 'nt inclined to pay rent at all. I saw a good cow in a fair the other day. 'That'll pay the rent,' I said; and they were all up at me at once to spake of such a thing as 'rent at all.' "They were 'nt put every Protestant and every landlord out of Ireland," he said; "and thin they'll fight each other, and Mr. Parnell and the Archbishop 'ud be the first to go! Ask whom I would, nowhere could I get a satisfactory answer to the question how they expected to be better off under Home Rule, or what beneficial results were likely to accrue to the country from its establishment."

While it is widely understood that the mission of H.E. Count Saigo, who started for Europe in America by the *City of Peking*, is connected with naval affairs, it is supposed in certain quarters that the principal object of the tour

relates to some political business, a supposition prompted by the consideration that, as Count Saigo has little experience in naval matters, some other official would have been sent in his place, were this the nature of his mission. This supposition might have been partly justifiable had the business been connected with such points as the purchase of vessels, armament, etc. But when the object in view is connected with the general affairs of the navy, the only person fitted to undertake the tour is evidently Count Saigo himself. We also believe that the Count, having already been once to Europe, the present tour will be productive of good results in matters—political and social—outside the direct sphere of his mission. With the single exception of Viscount Tani, all the members of the present Cabinet have visited the West; Viscount Tani, indeed, is now travelling in Europe. We are convinced that the observation of both Viscount Tani and Count Saigo will be highly beneficial in more than one way. Since the Restoration the visits to Europe and America of our countrymen, especially those occupying important political posts, have been among the most potent means of advancing civilization in this country. If it is admitted that the result of Count Oyama's tour in Europe has been the improvement of our army: should we not look to a similar result in the case of Count Saigo? Matters in every department of our polity are being constantly improved in expectation of the establishment of the National Assembly in 1890, when the Eastern sky will for the first time witness a civilized State of European type created under it. After its establishment it will be highly desirous to have intelligent and active men of European experience within both the Government and the Houses of Parliament. We therefore strongly advise our Cabinet Ministers to visit Europe and America before 1890, so as to study the workings of constitutional systems there. The importance of visiting Europe is not confined to Cabinet Ministers alone, the same recommendation may be made every official and private individual, who has the prospect of possessing power and influence under the polity to be inaugurated in 1890.—*Nichi Nichi Shimbun*.

It is at once an unprejudiced and ingenuous performance on the part of art amateurs and collectors to bid at a public auction for *chefs d'œuvre* which they know to be stolen. That is what happened at the sale of the Dudley china, the other day, and every one seemed to find it perfectly natural and proper. "The most interesting, although not the finest, pieces of Sèvres in the sale were two cups and saucers and two plates, having turquoise grounds, adorned with exquisite cameo portraits, and a floral E surmounted by an Imperial crown in their centres. These had originally formed part of the celebrated service of *pâte tendre*, made at Sèvres in 1778 for the Empress Catherine II. of Russia, a service for which that Czarina had objected to pay. Over the matter of these cups and saucers there was a fierce diplomatic correspondence, but the price—about 13,000*fr.* or nearly 4,000*£.* at the present value of money—was at last paid. The adventures of this expensive crockery were not to end here. During a fire, some energetic person took the opportunity of decamping with 16 of the 744 pieces of which the set consisted, and conveyed them to England, where they were sold to Mr. Webb, charged with complicity in the recent silk Nor were they yet done with. The where-

abouts of the stolen pieces was discovered by the Russians, and shortly before the Crimean War they were repurchased by the Emperor Nicholas, with a few exceptions, and it is but natural that these exceptions should be highly valued. Last week, in two instances specimens of this beautiful and interesting service realized less than on a former occasion. Nevertheless, a cup and saucer made 112 guineas, and a plate 140 guineas." The Imperial family of Russia will be pleased, doubtless, to find that fragments of their dinner service are so highly appreciated by English connoisseurs, but can they be equally pleased to see their stolen property thus openly disposed of?

If the new gold-field discovered in Western Australia should prove prolific, the world may be brought some relief from the suffering which rash financiers have inflicted upon it. Western Australia is a very big place—bigger than France, Germany, and England run into one. There is no knowing what stores of wealth it may not contain, though hitherto it has been virtually neglected by the settlers. But the most interesting feature of this new discovery is that it has thrown the very monometallists into a fever. These gentlemen, who stoutly decline to admit that too much work has been imposed upon gold, or that failing supplies of that metal have anything considerable to do with the fall of prices and the depression of trade, are nevertheless singing paeans over the prospect of an increased output, which, they hope, may initiate "the leaping and bounding commercial era of forty years ago." How are they to reconcile this exultation with their previous declarations? If the capacity of the present stock of gold is not overtaxed, whence their jubilant welcome of the Australian discovery? It seems to us that they are behaving very much like people who, while declaring, in a season of cholera epidemic, that sewers choked by long drought have nothing to do with the spread of disease, nevertheless throw their caps into the air when they hear the sound of rain.

ALTHOUGH there were several races set apart for half-breeds at the Spring Meeting of the Kyôdo Keiba Kaisha, the movement turned out a "frost" through being left entirely to individual enterprise. To avoid this at the autumn gathering, the committee of the Club has taken the matter in hand, and has secured eight horses, which it is proposed shall be subscribed for and allotted in the usual way. The horses are all three-year-olds, some half and some three-quarter bred, and come from Shimosa; and as six races will be introduced into the programme for the eight animals, there ought to be no difficulty in getting the necessary number of subscribers. They will cost \$150 each, but to this must be added \$30, for about half the entries are compulsory. The list now lies at the Secretary's office at Shinobadzu, and will close on the 25th inst. If there should be more subscribers than there are horses, the first eight names on the list will have the preference, and the drawing will take place at Shinobadzu on the 1st of August at eight a.m. The Autumn Meeting of the Kyôdo Keiba Kaisha will not take place until after the Yokohama races this year.

JUBONNET was delivered on Wednesday at the Keizai Saibansho, in the case of the prisoners charged with complicity in the recent silk frauds, as follows:—Of the principals, Takagi

Dainoshin and Kanematsu Tojiro were sentenced to 4 years' imprisonment, with hard labour, a fine of 40 yen each, and police surveillance for 2 years; Kodama Itsuro, to 3 years' imprisonment with hard labour, to a fine of 20 yen, and to police surveillance for 18 months; and Ota Shokichi to 2½ years' imprisonment with hard labour, a fine of 15 yen, and to police surveillance for 15 months. Of the six accomplices, two were sentenced each to 10 months' imprisonment, a fine of 10 yen, and to police surveillance for 6 months; and the remaining four to 3 months' imprisonment, a fine of 5 yen each, and police surveillance for 6 months. As to the civil claim of Mr. Schoene against the defendants, they were ordered to pay yen 65,750 as claimed by the plaintiff, and interest due thereon for the months of April and May last, and till the date of execution of judgment. The claim of the Comptoir d'Escompte de Paris has been rejected. Morita Kohei, *banto* of Mr. Schoene, charged with complicity in the crime, was acquitted through want of evidence.

THE cholera cases reported in Yokohama for the week ending Friday last were:—Saturday, 83 new cases, 38 deaths; Sunday, 115 new cases, 49 deaths; Monday, 118 new cases, 51 deaths; Tuesday, 59 new cases, 63 deaths; Wednesday, 78 new cases, 55 deaths; Thursday, 82 new cases, 43 deaths; Friday, 87 new cases, 45 deaths. Total, 622 cases, 344 deaths.

The usual steps towards declaring Yokohama a cholera infected locality have been taken. On Friday it was decided to close all places of public assemblage, and on Saturday a notification was issued by the Minister of State for Home Affairs declaring Yokohama an infected place. Mr. Mitsuhashi at once proceeded to Nagaura and made the necessary arrangements for closing the quarantine establishment there, the result being that with the exception of a few men left at Nagaura to take inventories of stores, &c., all the officials formerly employed in connection with the disinfecting station, some thirty in number, are now at work in Yokohama, having been detailed for duty immediately on their return. Notice was given to all restaurants and tea-houses prohibiting them from serving raw fish to their customers, and every police constable is vested with discretionary power to destroy at once any fruit or other food which upon examination proves to be unripe, over-ripe, or otherwise unwholesome. Most of the food, rice, &c., eaten by coolies is subject to similar examination whether sold in shops or by street peddlers. The disease has now spread to nearly all the districts surrounding Yokohama, Kanagawa, and Shiba, other places in the neighbourhood being all infected in the ordinary sense of the word. In their decision to formally declare Yokohama an infected place the authorities were largely influenced by the consideration that as yet the capital is practically free from cholera; but it is not proposed to adopt any more severe inspection in reference to the traffic between this city and Tokyo. Any process of disinfection at the railway stations would be accompanied by enormous inconvenience; and in any case the supervision exercised could only be of a partial character. Nor is it in immediate contemplation, so far as we are informed, to impose any restriction on pas-

sage between Yokohama and the adjacent districts, as this also would only be partial in its effects. There are as yet only two cases within the limits of the foreign settlement, both patients being in the employment of foreigners, but in more than one instance it has been found that persons whose cases were reported from the Japanese town had been vomiting and purging during the day in the foreign Settlement. In their efforts towards disinfection, &c., the authorities have been willingly assisted by the residents concerned.

We understand that a subscription list has been started at the Kanagawa Kencho for the benefit of any of the police constables at present attached to the Local Health Office who may unfortunately be attacked by cholera while engaged in the performance of their duties. Already two policemen have fallen victims, and should the terrible malady continue much longer in its present virulence, other cases will be certain to occur. Deprived of their usual intervals of sleep and rest, these officers have to expose themselves with weakened and exhausted frames to very great danger in attending to the calls made upon them; and it does seem as if the knowledge that their families will to a certain extent be provided for would not be encouragement beyond their deservings. We heartily commend the object of this subscription to the consideration of foreign residents, whose contributions will be gladly received at the Kencho.

Nor many weeks ago there were suspicions in the air of China. It was believed that the young Emperor would never assume the reins of government. Between him and the Throne there were people who, so said rumour, could not be persuaded to divest themselves of power. These dark hints derived a certain shadow of probability from the young Sovereign's apparently precarious health. Illnesses came to him with suggestive frequency, and it looked as if the public was being prepared for a catastrophe. An Imperial Edict recently published in Peking dissipates these suspicions. The Ministers of State are called upon to select "an auspicious day" in the first month of the next Chinese year, for the assumption of the government of the empire by his Majesty Kuang Hsü in person:—"The Decree states that the Emperor is now able to read documents, to understand history, and to judge between right and wrong. The Empress therefore decrees that the Emperor shall perform the ceremonies of worshipping Heaven and Earth on the day of the Winter Solstice this year. The Decree also states that Prince Ch'un and Prince Li, who had been informed of this determination by the Empress, considered that as the Emperor should still continue his studies, the Empress might put off his assumption of the throne till the future. The Empress recognizes the sincerity of these representations, but decrees that the Emperor shall assume the reins of government after a propitious day has been determined on. The decree is dated July 11th."

THE Minister of State for the Navy has forwarded to the Minister President of State the following report as to the sale of the Naval Loan Bonds:—The issue of the Naval Loan Bonds to the amount of yen 5,000,000, out of a total of yen 17,000,000, was announced by Notification No. 23 of the Exchequer Department, in June last, in accordance with the provisions of the Naval Loan Bonds Regulations;

and the applications for the purchase of the bonds at a premium received by the Nippon Ginko, and its branches and agencies, up till the 10th instant, amounted to over yen 15,960,000. The above sum alone exceeds the face value of the bonds issued by yen 10,960,000, which, if added to the amount of applications made at par, yen 670,000, will represent a total excess of yen 11,630,000. Pending the receipt from the Nippon Ginko of a detailed account of the amount of applications from each locality, and the quotations offered, the highest of which is 110, I hereby send the annexed rough account.

Applications received	YEN
Applications received at par	10,960,000
Applications received at a premium of yen .005 to yen .010	670,000
Applications received at a premium of from yen 3 to yen 10	10,495,400
—Official Gazette.	5,464,900

WHAT is the function of a worm in creation? is a question we have occasionally heard. Here is an answer, extracted from an interesting account of the recent floods in England:—"An excessive amount of rain and cold seems very prejudicial to worms. Every road during the prevalence of the floods was strewn with their blanched bodies. I have often noticed the thing before; and here again harm is done to the fields, which cannot afford any great loss of this useful creature. Forty-six years ago the sea broke through the bank in North Lincolnshire, and, spreading over a great extent of country, killed the earth-worms. For years afterwards the ground was unproductive and heavy."

DURING the week ending May 21st, the only settlement at Philadelphia for Japan was that of the American ship *John F. Berry* 48,000 at 25 cents. We may also note that the *Gulf of Papua*, expected here from New York, comes via Rangoon.

HIS Excellency the Minister of State for Foreign Affairs and the Countess Inouye will start for Hokkaido, the 5th proximo. His Excellency will be accompanied by two Secretaries, Messrs. Sameshima and Furusawa.

THE Post and Telegraph Office which was destroyed by the Krakatau eruption, is to be again erected at Anjer. The present temporary office at New Anjer will then be discontinued, but official notice will first be given.

THE *Bylgia* has been chartered to load part cargo 8,000 piculs sugar at Takao for this port, at the lump sum of \$1,500. On discharging she will proceed to Puget Sound, and there load lumber for Shanghai.

WE are informed that the P. & O. steamer *Zhibet* left Nagasaki for Yokohama via Hyogo at 6.30 p.m. on Wednesday, and that the *Tcheran* left Nagasaki for Hongkong on the same day at 7.30 p.m.

THE Dutch ship *Utrecht*, from New York for Nagasaki, passed New Anjer on the 11th June, and the British barque *Lalla* on the 14th June for Hyogo.

WE note the arrival, by the *Tokio Maru*, on Wednesday, of Sir Richard T. Rennie, Chief Justice of H.B.M.'s Supreme Court, Shanghai.

THE HON. SIR FRANCIS AND LADY PLUNKETT left Tokyo on Friday evening for Nikko, where the Misses Plunkett are already staying.

THE HON. P. LE POER TRENCH returned to Tokyo on the 14th instant, from Miyanoshta.

## SCHOOL SAVINGS BANKS.

THE Educational Society (*Kyō-iku-kai*) has just published an excellent and most useful treatise in the Japanese language on School Savings Banks. The actual publisher of the work is Mr. OMURA, a prominent member of the Society, and its author is Mr. PAUL MAYET, who was formerly in the service of the Department of Finance. The purpose of the work is to popularize the system of school savings banks in Japan, and to render both teachers and scholars familiar with the methods of carrying out the system. The subject is one which has excited some controversy in Europe. People who advocate inculcating habits of thrift in children, argue that the educational value of the school savings bank is incalculable; that "children, even more than grown-up people, need the living force of acts to give reality to words, and that to ply them in school houses with abstract lessons about saving, while the real practical lesson of the penny bank is left to take care of itself, is likely to be as fruitful as would be the attempt to teach them writing by sight only without the use of pen, ink, and paper." The opponents of the system contend, on the contrary, that it is calculated to develop selfishness in a child's disposition; to destroy its trustfulness, its generous, and uncalculating impulses; to "convert it into a little sordid, narrow-minded, cold-hearted economist; to form a race of screws and misers." We need scarcely say that in this controversy the victory remains with those who advocate the wisdom of teaching by gentle pleasant means at school lessons which, if left untaught, will have to be learned afterwards, perhaps too late, from the rough experiences of life. Yet the school savings bank has not yet begun to flourish vigorously on English soil. In France, thanks to the untiring zeal and energy of M. DE MALARCE, the number of such institutions increased from 8,033, in 1877, to 23,222 in 1885; the number of depositors from 177,040 to 488,624, and the aggregate deposits from 2,983,352 francs to 11,285,046 francs. The comparative want of success in Great Britain is ascribed by Miss LAMBERT—whose essay, "Thrift among the Children," in the *Nineteenth Century* for April will well repay perusal—to the ignorance of teachers, the indifference or prejudice of those who could enlighten and support the teachers, to the want of official incentive, and to the discouragement arising from failure where bad systems have been adopted. Curiously enough this lady says in the same essay:—"In Japan the waste of money on sweetmeats has so far come to be regarded as a matter of public concern that the authorities of the Japanese General Post Office have recently been making arrangements to take on deposit very small sums with the direct object of affording school children and students such

facilities for saving their pocket-money as shall wean them from the habit of fooling it away on the national equivalent for toffee and bull's-eye." Miss LAMBERT might have added that one of the leading aims of education in Japan is to prevent the development of a sordid disposition in children. In the families of the better classes money is seldom, if ever, put into the hands of a child, partly, no doubt, through fear of encouraging extravagance, but chiefly because it is considered strongly desirable to keep the little one's mind from busying itself with pecuniary affairs at all. The theory is, perhaps, wanting in practicality, and it certainly does not find a place in the creed of the lower orders. For their children the possession of a few cash to spend on lollipops is a treat the delights of which parents scarcely think of disputing. Hence those wonderful artists of confectionary, the *Ameya*, the *Karintoya*, and their brethren, who impart to the world of toffee and sugar-plums an atmosphere of romance essentially Japanese. We shall be sorry to see these picturesque landmarks of more debonnaire days swept away by the wave of hard practicality that flows in the wake of Western civilization. But the change has to come. If children are to put their cash into savings banks, they must say farewell to those genial and gifted hucksters so charmingly described in "Our Neighbourhood." We are not aware how far the present Minister of Education may be disposed to favour the establishment of school savings banks, but the inference suggested by his reputation is that such a practical measure will command his hearty coöperation. In that event, this work by Mr. MAYET will be found of immense assistance. The great thing is to interest teachers in the reform, and to show them that by a little attention to routine, the labour of managing a school savings bank may be reduced to a mere bagatelle. Mr. MAYET'S scheme appears to us eminently simple and labour-saving. It combines the use of stamps, as originally conceived in Germany and subsequently developed in England, with that of savings boxes. To every school desirous of establishing a bank, three boxes are supplied, each containing stamps aggregating the same value. The stamps are of three denominations—10 *sen*, 1 *sen*, and 1 *rin*. In this empire interest is allowed by the Post Office Savings Bank upon sums of 10 *sen* and upwards, whereas in Belgium, the country where depositors obtain the most favourable terms in Europe, no sum less than 20 cents carries interest. The smallest interest-bearing sum—10 *sen*—fixes the maximum denomination of the stamp. We need not enter into exact details as to the methods pursued in distributing the stamps. These are minutely explained by Mr. MAYET. It will suffice to say here that a pupil can buy a stamp of any denomination up to ten *sen*, and that the money he pays for it is put into the box from

which it is taken. Thus each box invariably contains the same aggregate value, whether in stamps, in money, or in both together. A bag is furnished to each little buyer. On this bag the rules of the system are printed, and in it the pupil keeps his stamps, taking care to convert those of lower into high denominations as quickly as possible. The 1 *sen* and 1 *rin* stamps may be used any number of times; the 10 *sen* stamps only once. These last are marked by the teacher when they are sold to a pupil, and if the pupil pleases, he may write his name on the back so as to be secure against theft. At the end of each month the boxes are handed into the local post office, and their tale of stamps is made up in exchange for the money they contain. Thus the business of saving and depositing goes on without entailing any labour of writing or calculation on school teachers. A pupil may accumulate stamps and keep them in his bag until the end of his time at school, but he is encouraged to transmit them to the Post Office and open an account in his own name as early as possible. So soon as the stamps come into the Post Office—whether at the end of one or several years—their value, plus interest calculated annually from the 1st of the month subsequent to that marked on them, is either paid to their owner, or placed to the credit of his bank account. Such is the system in outline; an incomparably easier and less laborious system than that pursued in any European country. Mr. MAYET'S book contains every detail required for putting the scheme into operation, with rules and directions for every possible contingency. We believe that, if Japan adopts this plan, she will stand at the head of all countries in the matter of School Savings Banks, and will very probably have the pleasure of seeing her methods imitated in the West.

## AN OCCASION TO REFLECT.

DURING the past two years the tendency to adopt European modes of life and fashions of dress has been growing more and more marked in Japan. Something of this impetus is due, no doubt, to the fact that the sympathies of the fair sex have been enlisted in the movement. At first the ladies of Japan showed an evident disposition to adhere to their old style of apparel. Of course they were not quite free to choose. They had to consult the prejudices of the stern sex, and the men, while they were willing enough to adopt the *sangiri* tonsure, and even to exchange the embarrassing *sode* of their country for the tight sleeve of the West, could not immediately reconcile themselves to similar radicalism on the part of the women. This state of subjection to the fancies of their lords and masters, so far as concerned externals, was entirely consistent with the position of woman in the East, and would

have continued had that condition undergone no change. But the Japanese woman, if she is docile and submissive, does not lack either wit or courage. She quickly appreciated that her interests were vitally concerned in the adoption of Western civilization, since not otherwise could a due place be won for her in social and domestic circles. After this discovery, it became impossible that she should abandon the new movement entirely to the will of the stern sex, and her impulse to take a part in it has been remarkably *en evidence* during the past two years. Girls began to attend school and to study with an eagerness which was more than a reflection of the industry of the stern sex. Then they ventured to let their aspirations travel into the domain of personal adornment. Foot gear was first essayed. The one-toed sock and the wooden clog were replaced by garter-sustained stockings and patent-leather pumps or kid shoes. Such changes, being more or less invisible, were comparatively easy of accomplishment. Then there was a pause. What should be the next step? Whatever it might be, the knowledge that it must challenge observation caused it to be preceded by much hesitation. At last some genius suggested that, having begun with the feet, the next reform should attack the other extremity. A popular newspaper was persuaded to ventilate all the hygienic and financial evils of the Japanese style of dressing the hair, and in a trice "bangs" and plaits came into vogue. In the spring of 1886, one began to meet troops of school-girls with something delightfully neat and piquante in their appearance. So well did the foreign coiffure become them that it often failed to suggest itself as the cause of the happy change in their aspect. Two classes of persons alone objected to it; gamins and artists—excepting, of course, the hair-dressers, whose trade it ruined. The gamins invented a very ugly name for plaited locks, and the artists pretended to think that heads supported by slender necks and sloping shoulders ought to be crowned by heavy crops of puffs and protruberances. But the unerring feminine instinct won for the new style a speedy triumph over ribaldry and romance. Its universal adoption is now only a question of time. Meanwhile, the skirmishers of the final advance—the adoption of European costume in its entirety—are already in the field. One meets them daily in greater numbers, and hears their claim to be called the leaders of fashion admitted with constantly increasing readiness. The *Hochi Shinbun* spurs on the movement. It urges the foundation of companies to build brick houses, and of coöperative societies to procure meat cheaply, predicting that the adoption of foreign costume must speedily follow that of foreign dwellings and foreign food. Were anything we might say capable of adding force to the *Hochi's* advocacy of solid houses and sus-

taining diet, we should gladly say it. But when it comes to a question of female costume, we are strongly of opinion that the ladies of Japan would do well to act leisurely. Whether their national dress is more picturesque than that of Western Europe, we leave others to decide. But of the relative advantages or disadvantages of the two, there can, we think, be very little doubt. It is sometimes said that the balance of decency inclines to the European side. If so, the scale must be disturbed by prejudice. The Japanese *kimono* is certainly not designed for active exercise or stormy weather. But can any comparison be fairly set up between the accidental displays it involves under exceptional circumstances, and the semi-nudity which the fashionable ball-dress of Europe perpetually aims at achieving? Of the Japanese lady it can at least be said that she never in any respect wittingly follows the example of LONGFELLOW'S snowy-bosomed belle. There are some again who claim that the skirt of the West permits greater freedom of limb than the close-fitting folds of the *kimono*. This is probably true so long as the former is not constructed on the model of a dust-scoop. But what shall be said of the corset as compared with the *obi*? The one is an instrument of torture less barbarous than the miniature shoe of the Chinese woman only in this—that the degree of suffering it entails depends upon individual choice. The other is a comfortable, healthy article of raiment with many benefits and no evils. In our opinion the difference between the corset and *obi* is enough of itself to decide the question in favour of Japanese costume. But what strikes us as specially ill-advised is the disposition to adopt European habiliments at the very moment when their absurdities and inconveniences are beginning to turn the minds of Westerns towards a radical change. If anything can be predicted about such a capricious influence as fashion, it is that the ladies of the West will soon discard a style of raiment which hampers their movements as much as it impairs their grace. For centuries they have been trying to make their skirts hang in pretty curves. Bustles, crinolines, farthingales, and such devices have all been inspired by this purpose. But, as might always have been predicted in the nature of things, they find themselves reduced to one of two styles; they must either ape mediæval majesty by dragging dust-collectors in their train, or copy the clinging skirt of CLEOPATRA. The former fashion is too foolish to survive; the latter, in so far as its practical aspects are concerned, points unmistakably to the divided skirt. Now, the Japanese already possess in the *hakama* a divided skirt of unexceptional character. The *hakama* with its neat waist, prettily peaked behind, its graceful folds, and its perfect adaptability to every movement, seems to be as nearly faultless as a piece

of raiment for the lower half of the body could possibly be. It would be difficult to imagine—indeed, as yet no one has succeeded in imagining—a garment which more thoroughly combines practicality and prettiness. The dress of the Chinese woman is practical enough but dreadfully ugly. It is all bagginess and squareness, without one attractive curve or tapering tendency. The *hakama* and its accompanying garments, on the contrary, preserve decency without marring the lines of the figure, or offering any impediment to the free use of the limbs. We all can understand and sympathise with the desire of Japanese ladies to assimilate every detail of a civilization which promises them so much. But Japan has set the West an example in matters of art, to which category female attire, at all events, ought to belong. Why should not her ladies become the leaders in a fashion which has already received the approval of the most artistic nation in the world, and which their sisters of the West are longing to follow under good guidance?

#### LORD ROSEBURY'S INSTRUCTIONS.

"THE TIMES" is struggling with self-created embarrassment. Having rashly adopted the rôle of advocating diplomatic aid to commerce, it is now disturbed by the spectre of its own raising. The big journal is in the plight of EUCRATES, who uttered the charm that set a broomstick to draw water, and found his house flooded by the irrepressible energy of the wooden labourer. Mr. MACLAREN'S motion in the House of Commons seems to have opened the Thunderer's eyes. The honorable member proposed "to call attention to the successful efforts of the German and other foreign Governments in pushing the trade of their respective countries in foreign markets in competition with English manufactures; and to move that, in the opinion of this House, the Government ought to consider the desirability of appointing properly qualified diplomatic agents in all foreign capitals or seats of government, for the express purpose of promoting the extension of British commerce." This was shockingly plain-spoken. To begin with, the reason assigned by Mr. MACLAREN was humiliating. England was to convert her diplomatists into commercial agents because certain rival Powers had set the example. And not that only. Mr. MACLAREN and his school would not be satisfied with the countenance and coöperation of British Ministers and Consuls abroad. There must be created a special Corps of diplomatic agents, duly accredited to Eastern Courts, and charged with the duty of promoting the business interests of their nationals. In short, the QUEEN'S Government was to send out commercial travellers with credentials and uniforms to tout for orders in Oriental

high places. Held up to the sun in all its nakedness, this proposition startled *The Times*. Yet it was nothing more than the inevitable sequel of the agitation inaugurated by that journal. Once let it be granted that England is to compete commercially with foreign Powers through diplomatic channels, and there can be little question that she must adopt the plan suggested by Mr. MACLAREN. For it would evidently be much wiser to entrust the business of commercial touting to special agents, than to bring HER MAJESTY'S diplomatic representatives into discredit, and to destroy their legitimate influence, by adding such a duty to their orthodox functions. *The Times*, appreciating but not caring to acknowledge this, applies itself to calm the inconvenient agitation by blowing a judicious mixture of heat and cold. "The legitimate extension of British commerce," writes our London contemporary, "is an object which no representative of this country should be suffered by the Foreign Office to neglect. There are many ways in which this important duty may be discharged. We have already pointed out some of them on a former occasion. Diplomats must not be allowed to think that commercial interests are beneath their notice. Lord ROSEBURY has already issued instructions to HER MAJESTY'S representatives in China and Japan to give their support to British commercial interests in cases where the representatives of foreign Powers interfere to their detriment. These instructions, which might perhaps be made general, are a proof that a new spirit is beginning to prevail at the Foreign Office. It is not desired that British representatives abroad should "tout" for orders or constitute themselves the agents of powerful firms at home. But they ought not to turn the cold shoulder to British merchants, nor to let it be supposed that commercial interests are outside their sphere of action and interest. They should be ready to give their assistance and counsel to all who seek it on behalf of commercial interests, and they should be as eager to frustrate a commercial intrigue as they are to secure a purely diplomatic advantage." Taken out of its shell of euphemisms, the kernel of this counsel is that HER MAJESTY'S Representatives in the East are to go on doing just as they have done hitherto. They have never thought that commercial interests are beneath their notice; therefore, they must not think so any more. They have never turned the cold shoulder to British merchants; therefore, they are not to turn it any more. They have invariably been ready to give their assistance and counsel to all who seek it on behalf of commercial interests; therefore, they are to go on being ready. That is what the whole agitation comes to. *The Times* has been injudicious, and would fain allay the excitement it has raised. We sympathise much more heartily with

its present sobriety than we did with its former rashness, and would gladly persuade ourselves that no mischief has been done. But such a hope would be too sanguine. Lord ROSEBURY'S despatch was unnecessary and injurious. If HER MAJESTY'S Representatives in the East were wanting in the performance of their duty, they ought to have been reminded of the fact long ago. To spur them to greater efforts in connection with the illegitimate activity real or supposed, of their foreign colleagues was at least injudicious. Put what construction we please on Lord ROSEBURY'S motives, there is no getting over the fact that the rumoured exercise of undue influence by Foreign Powers on behalf of their nationals' private interests was made by him the occasion to call upon the QUEEN'S Representatives in the East for a display of additional activity. He did not say, nor did he mean to say, "go thou and do likewise." But if his words are not construed in that sense by England's rivals, the world is more charitable than it gets the credit of being.

#### SOME FACTS ABOUT FREE-TRADE.

LORD PENANCE, in his remarkable analysis of "the Free-trade Idolatry," puts his finger upon some weak points in the armour of the Free-traders. The fundamental theory of Free-trade remains unimpaired by his lordship's remarks—indeed he does not seriously attempt to impair it. But the errors into which Free-trade enthusiasts have fallen are well exposed by his analysis. Vociferous disciples of the CORDEN School have always claimed that the great prosperity which England enjoyed after the abolition of the Corn Laws was the direct result of their abolition. One supposes that these persons must be constrained to admit a similar inference in the opposite direction with regard to the extraordinary development of American wealth under Protection. But they refuse to make any such admission. America, they say, has grown rich in spite of Protection, being in the fortunate possession of advantages which would confer wealth under any fiscal system, however faulty. This sort of argument defies refutation. We turn from it readily to the facts adduced by Lord PENANCE. It has always been held that the repeal of the Corn Laws conferred an incalculable benefit upon the British labouring classes by giving them cheap bread. Lord PENANCE shows that during the ten years which immediately followed the act of repeal, the average price of wheat underwent no change whatsoever. This, however, is an isolated circumstance. Much more important is what follows. Mr. MULHALL, in his book, "The Progress of the World," gives figures showing the rate of each country's commercial development during the past 50 years. From these figures we learn that,

whereas the average commercial development of the whole world was eight-fold, that of the United Kingdom was only sevenfold. In other words, the gradual prosperity of the only country practising Free-trade was below the average prosperity of countries practising Protection. Whatever conclusion we may be disposed to draw from this fact, it can scarcely be a conclusion welcome to Free-traders; unless indeed they claim that the adoption of Free-trade by England not only was the cause of the world's prosperity, but also conferred on Protectionist countries the lion's share of that prosperity. If, again, instead of considering the past half-century, we come down to more recent times, it still appears that, between 1870 and 1880, the industries of the whole world advanced by one-fourth, while those of England advanced by only one-fifth. In a nation of such high industrial organization as Great Britain, a development of twenty per cent. may mean as much as, or even more than, a development of twenty-five per cent. in another nation. But this line of reasoning reduces the benefits conferred by Free-trade from the certainty claimed by the Free-traders, to a mere hypothesis. Lord PENANCE deserves much credit for exposing errors which are well calculated to weaken the sound doctrine of Free-trade. That doctrine, in its essential form, is, we take it, beyond dispute. That each country should devote itself to the production of the things which it can produce best and cheapest, and should exchange its surplus productions without let or hindrance for the similarly produced staples of other countries—that is the incontrovertible basis of the Free-trade doctrine. That the law should compel buyers to pay more for an article than sellers are entitled to receive, seems monstrous and revolting. Lord PENANCE is plainly no opponent of these principles. He only seeks to substitute their discriminating application for the indiscriminate idolatry they too often receive. He argues, with perfect truth, that cheapness is the prime object of Free-trade, but he pertinently asks whether this applies also to labour. Cheapness purchased at the cost of low wages may be dear. The wholesale application of Free-trade involves the obviously false assumption that a market can always be found for labour. If a labourer, driven from one line of business by foreign competition, could always turn his hand to another, then his labour need never remain unsold, and no loss need be entailed on the community to which he belongs. But he cannot. He is prevented by Protection abroad, if by nothing else. And in the great majority of cases it is the rich classes that benefit by cheapness. The lower orders lose a part of their wages in order that the upper may procure the luxuries of life at a reduced cost. Lord PENANCE gives an arithmetical example. An article—say a piano—costs £30 to

make in England, but can be made elsewhere, and sold in England for £27. The gain conferred by Free-trade on the English purchaser of the piano is therefore £3. But the value of the labour expended in producing the piano is fully £13 or £14, and to that extent the market for English labour is reduced. Even though the wage-earning class were themselves the purchasers of the piano, and therefore reaped the benefit of its cheapness, they would have exchanged for £3 the chance of selling £13 or £14 worth of labour. Lord PENZANCE takes another case—that of wool—and here we will quote his own words:—

Some few years ago, a lady, struck with the great injury done to all classes interested in the production of British woollen goods by the import, free of duty, of French woollen fabrics, appealed to her countrywomen, in a pamphlet which she published, to be content with the fabrics of British wool and give up their preference for the corresponding class of French goods, which only differed in softness, I believe, and a less glossy appearance, and which it had become the fashion to wear. This fashion, she alleged, became established in 1874, and before that the British woollen goods had been extensively worn both here and abroad. The effect was to depress the value of British wool to an alarming extent; the farmers could hardly obtain one-half of what they used to get for their 'clip' of wool, and where 1,400*l.* used to be obtained by a large farmer for his yearly 'clip' of wool, he could not, after this fashion had set in, obtain for the same weight more than 600*l.* It is not necessary to follow the figures given in this printed appeal into detail. The entire loss to the farmers she asserted to be not less than six and a half millions per annum.

Now, if the nation were not bound in the fetters of the modern 'Free Trade' dogma, the question might have been discussed whether it was expedient to raise a small portion of the public revenue by laying a tax upon the import of these French goods. If it had been so proposed, let us see what might have been said against it, and what in its favour. The worst that could be said against it would have been that the price of the French goods would have been increased to the consumer by the amount of the duty. I purposely avoid here entering upon the question, which I find has been hotly disputed, whether in such a case the price would be raised to the whole amount of the duty. I assume that it would, and if so of course the consumer would have to pay it. The next result would be that some consumers might not be able to afford it, and would be obliged to go without the French article and put up with the English one—which is quite as good, I believe, in respect of warmth or wear, but lacks the charm to the eye of its foreign competitor. This would not be a very terrible misfortune, as it was the common lot of all before the period of the French invasion. Other ladies would, perhaps, continue to use the French goods, and upon them the self-imposed tax would fall. This, I believe, would be the sum of the injury done by the duty, if we add to it the loss of the profit of transit, which is probably effected in English steamers, and the profits of a trade operation.

On the other side we have to put the employment of many thousands of our countrymen, not only in raising but in working up the wool, and manufacturing the finished fabrics, the payment of hundreds of thousands of pounds in wages, and the lucrative employment of a capital of very considerable amount, if Lady Bective's figures have even an approach to exactitude. Can any one doubt upon which side the balance inclines, or deny that the interests of the community would be best served by imposing so reasonable a tax in aid of the public purse? But this, I shall be told, is downright rank 'Protection'—not a general system of 'Protection' it is true—but 'Protection' as applied to a specific article. I believe that it is 'Protection,' but I strongly suspect that it is common sense also. And if the terrible name is to condemn it, I should like to point out what 'Protection' of this character really amounts to. It is the withdrawing of foreign competition from the article in question, whilst leaving it exposed to the free and open competition of the 'home' grower and manufacturer. There is capital enough and enterprise enough in this country to secure to the consumer of any article of manufacture that it shall be sold at the lowest price at which it can be produced with fair profit at home. And there is no question, therefore, of hurtful monopoly or an

artificially supported industry. An industry which has been 'protected' from foreign competition by taxation stands precisely in the same position as any other industry which is also relieved from that competition by any other cause, such as the inability of the foreigner to compete. In both cases the industry is open to the competition of the 'home' market and none other; and if the one is enfeebled by shelter from the bracing air of foreign competition, so is the other. Are all trades and manufactures, then, in which for any reason whatever no competition with the foreigner is practically felt, weakly creatures, nourished and maintained in the sickly atmosphere of an exotic? If so, I fear there are not many sturdy ones in England, for the number of articles consumed in this country in respect of which the foreigner competes with us is comparatively very small—a fact particularly and constantly insisted upon in the Cobden Club pamphlets as a reason why it would not be worth while, if otherwise unobjectionable, to impose a duty on them.

This instance of wool is very pertinent, because it is plain that the labour employed in agricultural pursuits in England, if it were obliged by foreign competition to seek another channel of employment, might be greatly puzzled to find one. Lord PENZANCE's final conclusion is that, like every other doctrine appreciable by man's intelligence, Free-trade must not be indiscriminately applied. He would give to home labour the chance of profitably producing everything consumed by the wealthy classes. Provided always that care were taken not to increase the expenditure of the bulk of the people on the necessities of life, he would impose an import duty upon any article in which the foreigner competes with English industry. He would, in short, substitute an intelligent, for a fanatical, worship of Free-trade.

#### SIGNS OF RENEWED HEALTH IN ENGLISH POLITICS.

IT is refreshing to find that when a crisis occurs in the political life of England, her politicians speedily shake themselves free from the demoralizing effects of Party rivalries. Not long ago the pessimists were crying out that Patriotism was dead; that Party had dug its grave, and that the disintegration of the Empire was bound to follow. We never quite believed this, and our incredulity now receives pleasant confirmation. For it appears that, even before the late dissolution of Parliament, in constituencies contested by two Liberals of Unionist persuasion, agreements were made that, in the event of a Home Rule candidate entering the field, the Conservative vote should be cast solid for one of the Unionists, and that a corresponding course should be adopted by Liberals, under similar circumstances, to support Conservative candidature. The great danger was that the Home Rulers might win the day by a judicious use of the precept *divide et impera*. With a Unionist, a Conservative, and a Home Rule candidate in the field, the last might very well have been elected to represent a principle equally objectionable to the two first. In the face of this danger an agreement of the nature indicated above

was the sole means of safety. But who would have predicted the possibility of such an agreement six months ago? Here was the very opportunity for which the Conservatives had long been seeking—a split in the Liberal camp. In the every-day life of government by party, they would have been perfectly justified in taking advantage of it, if not actually constrained to do so. But when the split was caused by a question which seemed, truly or falsely, to concern the union of the Empire, we find that, instead of urging his followers to profit by an opportunity so rare, Lord SALISBURY counselled them to support the Unionist Liberals, thereby apparently sacrificing his own chance of recovering the power which seemed to have passed permanently into the hands of his rivals. And so readily did his Party respond to this patriotic advice, that even such a rabid anti-Liberal journal as the *Saturday Review* was induced to write:—"There is every reason to hope that Lord SALISBURY'S advice will be followed, not merely because of its plain advantageousness, but because the Conservative leaders know perfectly well that any other course of conduct would alienate thousands of their own voters. There are men, who have never given a Liberal vote in their lives, who would not only withhold their support from the Tory who should try to profit by the Liberal split, but would vote for Mr. CHAMBERLAIN and Mr. COLLINGS in preference." Like begets like. It is plain that the Liberals have not failed to rise as fully to the level of the occasion as the Conservatives. In constituencies where a Conservative candidate and a follower of Mr. GLADSTONE were pitted against one another, Liberal voters of Unionist persuasion have evidently cast their votes in the Conservative interest. There is no other way, so far as we can see, of accounting for the marked increase already noticeable in the number of Conservative members. In every shire, city, and borough there was unquestionably an appreciable contingent of anti-Home-Rulers, and these, whenever they did not go to the poll in the interests of a Unionist Liberal, plumped for a Conservative. Lord SALISBURY will not find himself in command of a purely Conservative majority of the whole House. That would be too much to expect. But he will find himself at the head of a Party quite strong enough to govern the country, and his return to power will be welcomed, even by Liberals like ourselves, for the sake of the evidences of wholesome patriotism by which it is accompanied.

## RAILWAY COMMUNICATION BETWEEN TŌKYO AND KYŌTO.

## ORDINANCE NO. XXIV. OF THE CABINET.

It is hereby notified that, whereas the Chief of the Railway Bureau has reported, as may be seen from the two documents hereto appended, that, on taking actual surveys of the middle portion of the Nakasendo Railway line, both ends of which have been constructed for a distance of many miles, it has been discovered that the line has to traverse an exceedingly mountainous and difficult country, making it thereby necessary not only to take a more circuitous route than in the case of the Tōkaido, which is on level ground, but also to expend a larger amount of money and to occupy a longer period of time to complete the work, it has been decided to discontinue the construction of the Nakasendo Railway and to commence works on the Tōkaido; and it is further notified, in accordance with this change, that the actually remaining portion of the funds raised by the Nakasendo Railway Public Loan Bonds, shall be expended on the construction of the Tōkaido Railway line.

(Signed) Count ITO Hirobumi,  
Minister President of State.

Dated the 19th day of the 7th month of the 19th year of Meiji.

## MEMORIAL NO. 1.

## RELATING TO THE NAKASENDO RAILWAY.

Upon the issue of the Notification announcing the construction of the Nakasendo Railway, a general plan of work was adopted, by which it was designed to proceed at once from both ends at Takasaki and Ogaki, and join these two portions in the middle. In pursuance of this plan, a line was extended to the port of Handa, in the Province of Owari, for the purpose of transporting materials by sea by way of Nagoya, while another line was started at Naoetsu, in the Province of Echigo. Advancing in this way, the work of construction progressed rapidly. Operations on the middle portion of the line being about to be commenced, an actual survey of the line has been made, and the route as represented on the drawing hereto appended, has been laid down. The line traverses precipitous and very difficult ground, necessitating works of extraordinary dimensions, such as the filling up of mountain ravines and the cutting of tunnels, many of the latter being several miles in length. Making no allowance for the effects of changes of weather in impeding the progress of the work, it will take seven or eight years more to complete the line, and a still greater number of years if such an allowance be made. And even after the completion of the whole line, the expenses of maintenance and repairs will be very great, on account of the exceptionally steep grades, the steepest being greater than one-thirtieth ( $\frac{1}{30}$ ), while ordinarily one-fortieth ( $\frac{1}{40}$ ) is regarded as the limit. The speed also will be very low; the estimate being that it will not exceed that of merchant steamers. Should this prove to be the case, the undertaking must be a very unprofitable one, opposed as it would be to all the ordinary considerations of railway business.

That the line in question would have to traverse a very mountainous region and that the work of construction would be very difficult, were, indeed, apparent from the outset. But that such extraordinary difficulties would be met, became apparent only since the completion of the survey. Restricting the grade to ordinary limits, an exceptionally long distance must be traversed. There may be various important reasons for the construction of the Nakasendo line, but the principal is the connection of Tōkyō with Kyōto and Osaka, while facilities of transportation would be afforded to regions on the line which have hitherto been secluded, and industries would be stimulated. But, referring to the actual results of the survey, it is seen that the line has to traverse either mountain sides or deep gorges; in a word,

the whole line may be regarded as one long tunnel. Moreover, the lands bordering on the line are bleak and barren, and are every where destitute of means of communication even between neighboring hamlets. The roughness of the country and the difficulty of the work are not so much objects of consideration. What is feared is that, after expending an enormous sum of money, the results will not only not repay the trouble taken, but will be actually detrimental to the line. Under these circumstances, it is not possible to estimate when communication between Tōkyō and Kyōto would be completed. In order, then, to accomplish this object, the line to be substituted must be that by way of the Tokaido. Assuming, therefore, that this course be taken, it will be important to make a brief statement as to the condition of the Tokaido. Basing my judgment upon the reports prepared some time ago by a foreign engineer in the employ of the Government, and those recently prepared by officials of this office under my direction, I have to report that the railway line has now reached on the west as far as Nagoya, and that the line connecting Tōkyō with that place will be about 20 miles shorter than the whole Nakasendo line. Excepting the Hakone Pass, and a few large rivers such as the Tenryū, Fuji, and Oi, the ground is, in general, level, and the work of construction will be far easier than in the case of the Nakasendo. With regard to expenses: while the Nakasendo line will require the further outlay of as much as yen 15,000,000, the Tokaido line may be completed for not more than yen 10,000,000, and it will be possible to finish the line within the limits of this relative estimate. The construction of the unfinished portion of the Nakasendo line—70 or 80 *ri* long—requires seven or eight years more with the expenditure of yen 15,000,000; and even after the completion of the line the extraordinary grades and curves will operate to make the speed of trains very low, probably requiring 20 hours between Tōkyō and Nagoya. On the other hand, the Tokaido line can be completed in less than half the above length of time, with the expenditure of a less amount of money. The line will be 100 *ri* in length, and as sufficient speed will be obtainable it will take less than 15 hours to travel from Tōkyō to Nagoya. The relative advantages of the two lines being so clear, one cannot but have considerable hesitation in recommending the Nakasendo line. If expenditure of time and money be no object, the work can be resolutely pushed forward, but is that a course of which clear-sighted people will approve? I fear not. Having incurred considerable expense during these two years and a half since the commencement of the construction of the Nakasendo line, and the work having now become fairly established, it gives me no small regret to give up the scheme at this moment. But as the effects of the work will be far reaching and important, I cannot but set down these considerations in order to request the decision of the Cabinet, for which purpose I have prepared for your information the following comparative statements as to the Nakasendo and the Tokaido lines.

From what has been stated, it will be possible to see at a glance that it is preferable to adopt the Tokaido line, but as it is not within the competency of this Office to make the decision, it has not been my object to attempt to do so. In making my report, however, upon the actual results of the Nakasendo line, the number of years required to complete the line, and the difficulty of the work being far beyond expectation, I could not choose but make allusions to the condition of the Nakasendo and the Tokaido lines for your information.

## MEMORIAL NO. 2.

RELATING TO THE ESTIMATED EXPENSE OF CONSTRUCTION.  
Yen 20,000,000.—Amount of the Nakasendo Railway Bonds.  
Yen 4,270,000.—Amount appropriated for the construction of the Ogaki-Handa, Takasaki-Yokogawa, and Naoetsu lines.

Yen 15,730,000.—Amount lying in the Treasury.  
Yen 5,770,000.—Amount to be further spent on the Ogaki-Handa, Ueda-Naoetsu, and Yokogawa lines.  
Yen 10,000,000.—Remainder: estimated amount of the cost of constructing the Tokaido line.

As above stated, yen 4,270,000 have been received from the Treasury for the construction of the Ogaki-Handa, Takasaki-Yokogawa, and Naoetsu lines. Subtracting this sum from the total amount of the funds, there remain yen 15,730,000. Of these lines, the Takasaki-Tokugawa line has already been completed, while that between Handa and Ogaki is nearly finished; so that the principal work now remaining is the line connecting Naoetsu with Yokogawa through Ueda. Estimating the expense for these unfinished lines at about yen 5,000,000, there is left about yen 10,000,000. Now, the completion of the Tokaido line will be possible with about yen 10,000,000, so that the remainder yen 5,770,000, will be sufficient for the prosecution of the work on the Ueda-Naoetsu and Yokogawa lines. Thus, dividing the whole amount, yen 20,000,000, into two equal portions, and applying yen 10,000,000 to the construction of the Tōkaido line, it will be beyond doubt possible to accomplish the object I direct attention to without raising new funds.

## FAREWELL DINNER TO CAPTAIN VAN SCHERMBECK.

A farewell dinner to Captain Van Schermbeek, of the Royal Dutch Engineers, was given by his special friends of the Tōkyō Club, at the Rokumeikan on Saturday evening. Covers were laid for thirty-four, and an excellent menu was provided by Mr. Murai. The large banquet hall of the Rokumeikan was thrown completely open; the Imperial Band performed in the grounds, which were hung with lanterns bearing Captain Schermbeek's initials; and the table was decorated with various types of floral fortifications. The Hon. P. Le Poer Trench presided, and facing him was Mr. Watanabe, President of the Tōkyō University and Mr. Trench's colleague as Vice-President of the Club.

The toast of the evening was proposed by Mr. Trench, who spoke as follows:—

GENTLEMEN,—I rise with mixed feelings of pleasure and of regret to propose the toast of the evening,—with feelings of pleasure in being able to join you in entertaining and honouring the old and much esteemed friend who, to the sorrow of all here present, is to leave us so shortly,—with feelings of regret when I think of the few times more I shall have the pleasure of dining in his company, and of seeing his familiar face in the Tōkyō Club. The number of Europeans and Americans who daily frequent the Club is now so small that we can ill afford to see it diminished, and still less can we afford to lose a member who, during his three years' residence in Japan, has made himself so universally popular, and who is so greatly and deservedly esteemed. It is true we have not seen much of him lately, owing I regret to say to the state of his health, which we are now rejoiced to see is thoroughly re-established, but till within the last couple of months we had the pleasure of meeting him nearly every afternoon and evening in the Club. He will be greatly and sadly missed not only by the foreign members of the Club but also by the Japanese, and as a proof of his popularity amongst the latter, our Vice-President, Mr. Watanabe, postponed his departure for the country in order to be present here this evening. In the billiard-room Captain Van was always to the fore, whether for the ordinary game of billiards, for black-ball pool, Spanish pool, English pool, or a game of pyramids; he was ready to join in any of them, and at all of those games, he could more than hold his own, which many of us know to our cost.—(Applause.) In the card room I shall miss him still more, for I never could desire a pleasanter and more agreeable partner or a more generous and affable adversary in a rubber of whist; and it was always a pleasure to play with one who under the most trying circumstances never lost his temper. I am glad to be able to add that he has always

scorned to resort to the demoralizing and ignoble mode of play lately introduced, commonly and vulgarly called leading "stinkers."—(Loud applause.)—Indeed just before dinner he said to me, "Trench, I may have been accused of stealing and even of committing murder, but thank God, no one can say I ever led a stinker."—(Applause.) Our friend was also long ago initiated into the mysteries of American whist, and became such an adept at it that it was rumoured some time back that he contemplated bringing out a book on that game. There was even a time when our old friends Lanciarez and Peyton Jaudon, whom we are sorry not to see here this evening, trembled and shuddered on hearing it reported that Captain Van was likely to become a ladies' man, and, knowing how popular he was with some ladies, I am sure had he entered the lists those gentlemen would have been obliged to take a back seat. But he was too generous to encroach on the preserves they considered as their special property. He left to them the field where Mr. Jaudon now reigns in undisputed and solitary grandeur.—(Applause.) Had Captain Van been remaining here, it was his intention to follow Mr. Stevens' good example and learn the exhilarating and healthy game of lawn tennis, and as he excels at all games and indeed in everything he undertakes, we should no doubt soon have numbered him amongst our best players. Many of the gentlemen present here this evening, being from Yokohama, are unaware I think of the debt of gratitude we owe to Captain Van for all that he has done for the Tōkyō Club.—(Applause.) He was for a long time on the Committee, and all his colleagues will agree with me that he did the lion's share of the work, and that as a member of the House Committee he rendered services to the Club which will not be soon forgotten.—(Hear, hear and cheers.) We are all of us sorry to part with our friend and boon companion and I am sure the Japanese Government will lose, with great regret, the services of one of the most eminent of Engineer officers, and will find it very difficult to fill his place.—(Loud applause.) We must seek consolation in the following lines which, as adapted, are rather appropriate to the occasion:

'Tis sweet as year by year we lose  
Friend after friend, in faith to muse  
How grows in Amsterdam the store.

I would here remark that I have received a letter from Mr. Gubbins asking me to express his sincere regret to Captain Van and other friends that he is not well enough to join us, to assure Captain Van that nothing but necessity keeps him away, and that he will not fail to drink his health about the time he thinks I shall be proposing it. And now, gentlemen, I think for one who from his early youth has been taught that speech is silvery and silence golden, I have spoken long enough. I therefore ask you to fill your glasses and drink the health of Captain Van Schermbeek, wishing him a most prosperous voyage and much pleasure and happiness on returning his native country.—(Loud applause.)

The toast was drunk with all the honours and much enthusiasm.

Captain VAN SCHERMBECK, who on rising to reply was received with ringing cheers, said:—

MR. PRESIDENT and GENTLEMEN,—When I heard, five minutes before dinner, that my "speech," such as it might be, would be printed in the *Japan Mail*, I experienced the same mixture of apprehensive and exultant feelings that may be presumed to agitate the bosom of the royal sire of a crown prince *in spe* on entering the bridal chamber of his beloved young queen.—(Applause.) I resolved at once to be as eloquent as I might, without forgetting the limits imposed by the rules of etiquette, which condemn me to remain always below the rhetorical level of the previous speaker, my friend the Honorable P. Le Poer Trench.—(Laughter and applause.) My best thanks to him for his heartily kind words, and not less for the eloquent manner of their delivery—eloquence,

gentlemen, worthy of his country, and especially grateful to me since it puts it wholly out of my power to outrage etiquette by soaring beyond him. Humbly, therefore, I reply in a few simple words, such as my lacerated feelings and my halting English permit. And I promise you that I shall at the same time be careful not to forget his bime-metallic hint that speech is silver and silence gold.—(Applause.) When I came to Japan three years ago, I was young in experience. For the first time I found myself beyond the boundaries of that little country to which I belong, and my knowledge of men and things was not more extensive than my travels had been. Thanks to you all, gentlemen, I return to my country a wiser and a better man. As I look round this board and observe your kind faces, I am visited by vivid recollections of the various lessons you have taught me. Gentlemen, in the austere presence of the Nestor of the whist-room, my friend Mr. Trench, I confess with shame that when I came to Japan, the name of Cavendish was strange to me. But I have learned, I hope, by observing your dutiful deference to his precepts, and by the shocks of Mr. Trench's brilliant coups, to regard with becoming reverence that great master of your noble game.—(Applause.) For that solace of my old age I shall always be grateful. Looking to Mr. Trench's left, I see Colonel Palmer. Under his severe tuition, gentlemen, I have been initiated into the awful mysteries of Black Pool. The science of winning hazards and losing dimes has found in me a humble student, and in him an inexorable master. Of practical lessons he was not sparing, and I have gratefully profited by the Spartan discipline.—(Applause.) Then there is Captain Brinkley. Since I became a subscriber to his paper, how shall I say how much I have learned. I well remember the first lesson I received from him in person. I had joined the Tōkyō Club where I was still a timid stranger. On the occasion of one of my first visits, that Irishman shouldered his cue and called for a game of pool. "How many players are there?" I hesitatingly enquired. "Four gentlemen and a Dutchman" he promptly replied.—(Laughter and applause.) Then there is my countryman and benefactor, Van der Heyden. To what arcana of the medical art has he not introduced me, seeking to furnish me with the *corpus sanum* for which you, gentlemen, were so kindly trying to provide the proverbial *mens sana*.—(Applause.) And at the far end of the table I observe that American coterie from whose company I have so often retired to my couch a sadder and a poorer man. I have contributed my mite to their researches into the recondite science of which they are prophets and elders. I have experienced the incipient "flush" of victory only to encounter a "sequence" of defeats, and commencing with "full hands," have seen my "pile" of hopes "razed" to the dimensions of a "pip" at their beck and "call."—(Laughter and applause.) And here beside me is my friend Captain Bougouin. What I have learned from him, gentlemen, I cannot tell you, but I shall always associate his teaching with the sound of soprano voices crying "*O ya-shi nasui*" and "*Iya des yo*."—(Laughter.) I might go round the board, gentlemen, detailing your several contributions to the knowledge which I shall carry away with me. But I will rather tell you what it is that you have all combined to teach me. This is the age of scepticism. The foundations of our old faiths are shaken and we know not what belief to call our own. But you, gentlemen, by your unvarying kindness and good fellowship have given to me a belief which I shall always hold by—a belief in the strength of friendship.—(Loud applause.) Gentlemen, for that I thank you heartily, and assure you that I shall guard precious the memory of the happy days I have spent among you, and of the crowning evidence of your good will which you have afforded this evening.—(Loud applause.)

Three times three were now given for Captain

Van Schermbeek, and speeches alluding to his high qualities of head and heart and expressing the universal regret which his approaching departure inspired, were made by President Watanabe, Baron Nagaoka, Messrs. Stevens, Lowder, and Von Hemert in English; by Major Berthaut and Mr. Van der Polder in French; by Dr. Baelz in German, and by Mr. Casati in Italian. The party broke up at a late hour, after an entertainment that would have been highly enjoyable but for the nature of the event it was intended to celebrate.

## REVIEW.

*The Volcanoes of Japan.* By JOHN MILNE. Transactions of the Seismological Society of Japan, Vol. IX. Part II.

THIS is a bulky volume, containing 182 pages with plates, and consisting entirely of a monograph by Mr. John Milne on the Volcanoes of Japan. In the presence of a work of this kind, and with the memory still fresh of Mr. Milne's innumerable papers and essays on other subjects, published in periodicals, transactions, and newspapers, we are at a loss whether to admire his industry or his originality the more. This, his last effort, is not indeed of quite recent compilation. Much of the matter it comprises has been already published, chiefly in the columns of the *Japan Gazette*. But it was necessary that so much valuable material should not be left in a scattered state. Mr. Milne has done well to collect it into a volume which will long remain the standard work on this subject. The material he places before us is the result of eight years' observation and investigation. He describes an immense number of volcanoes, some active, some extinct, giving us not only drawings and measurements made by himself, but also voluminous extracts from Japanese annals. He tells us that the number of mountains in Japan easily recognizable as being of volcanic origin is 129, and that of these 51 are still active. Two hundred and thirty-three eruptions are recorded. Speaking of these, he says:—"The greater number of eruptions have taken place in the months of February and April. Comparing the frequency of eruptions in the different seasons, the volcanoes of Japan appear to have followed the same law as the earthquakes; a greater number of eruptions having taken place during the cold months. This winter frequency may possibly be accounted for in the same manner that Dr. Knott accounted for the winter frequency of earthquakes. During the winter months the average barometric gradient across Japan is steeper than in summer. This, coupled with the piling up of snow in the northern regions, gives rise to long continued stresses, in consequence of which certain lines of weakness of the earth's crust are more prepared to give way during the winter months than they are in summer." Other general conclusions of much interest are given—as, for example, with regard to the lines of distribution of the volcanoes, the magnetic character of their lava and so forth. We will not, however, follow Mr. Milne into details, but will rather quote, as illustrating the style and nature of his work, the account he gives of the crater of Vries, visited by him in 1877:—

"It was not long before we reached the rim of the second crater, which we did to behold a sight of extraordinary grandeur. Instead of looking up at a crater, we were looking down at one. Standing on the rim of the crater, before us there was a short descent of loose, black ashes, somewhat steeper than that up which we had climbed, terminating suddenly in perpendicular cliffs, which formed an amphitheatre of rocks about half a mile in breadth, the walls of which, upon the opposite side, were about 300 feet in height. At the bottom of this pit, on the side nearer to us, a small cone, with an orifice of about 50 feet in diameter, was belching masses of molten lava to a height more than double that at which we were standing.

"The explosions, which varied in intensity, occurred about every 2 seconds, but sometimes there was a pause for 15 or 20 seconds. At the time a strong wind was blowing at our backs, which kept any of the lighter lapilli from driving in our direction. Coming, as we did, so suddenly upon the precipice-like edge of a huge black cauldron, roaring, shaking the ground, and ejecting a dense column of red-hot stones and ashes, the wild and dismal aspect of which was heightened by dark clouds, driving rain, and a heavy mist, produced at first a feeling of timidity, which was so strongly shown by our six so-called guides that it was with difficulty they were prevented from taking to precipitate flight.

"The cone at the bottom of the cauldron before us, together with a large quantity of lapilli and bombs scattered over the ground on which we stood, were the result of 16 days' activity. Three years ago, in the place where this new cone now stands, there was a deep hole, from which steam was issuing.

"The great interest in this eruption lay in the fact that we were able, on account of our position, to look down into the crater. In the intervals between the ejections the interior could be well seen, and it was observable that the sides had a slope of very nearly the same inclination as the exterior. Now and then large masses of these interior sides, which were black, would slide down towards the throat of the crater, and reveal a red-hot interior, showing that the cone itself was probably internally red hot throughout. One side of the cone had been blown away, leaving a breach, almost level with the plane from which it rose. The opening greatly facilitated our observations. Looking down into the crater on this side, molten lava, approximately level with the base of the cone, could be seen. At each explosion it rose in waves, and swayed about heavily like a huge basin of mercury, a little of it being apparently pushed forward through the breach to add to a small black-looking stream upon the outside. The explosions, which I have referred to several times as resembling outbursts of steam, might be compared to the escape of steam from a slowly-working non-condensing steam engine greatly magnified.

"On listening attentively, a rattling could sometimes be heard, reminding one of stones and pebbles on a beach driven forwards and drawn backwards by the advancing and retreating surge. This I think could hardly be due to the churning of stones in the mouth of the crater, which was not only short, but expanded upwards, forming a funnel-shaped opening. Nor was it in the throat of the crater; for, so far as I could see, that was filled with molten matter. It is, however, difficult to imagine it to be due to the contact of particles brought about outside the crater, which is the only place remaining to which the origin of the sound can be attributed.

"Each explosion, as I have said, produced a mountain-like column of red-hot ashes and volcanic bombs. The height to which they sometimes rose must have been nearly 1,000 feet. Many of them appeared to be of a feathery lightness. As they rose, their velocity became gradually less and less, until they seemed to pause and float in mid-air, before turning to descend, which they did with an augmenting speed. The large masses only rose to a comparatively small height. Many of the pieces fell upon the sides of the exterior of the cone from which they had been shot, where they at once created a small cloud of steam, and rolled a short distance down its side to form a natural slope. As the material, which approximately fell vertically, increased in quantity, the angle of this slope would naturally increase up to a certain point, because, where the slope is short, any material that might fall upon its side has sufficient momentum to roll to the base; but as the length of slope increases, an element of friction is brought into play, which prevents such action taking place. The direction in which the material was shot up was generally

vertical, but sometimes it had a little inclination in a direction opposite to that in which we were standing. Should the ejections from a volcano not be in an approximately vertical line, or during the time of its action winds should blow in one direction more than another, we might reasonably expect the resulting cone, which would be formed by the falling material, to have a less steep inclination upon the side where the greatest quantity of material had accumulated. Such action may perhaps give some explanation to the slight differences in slope which are so often to be observed in recent conically-shaped volcano mountains. This is of course presuming that the form of the mountain has not been materially altered by subsequent denudation. Many of the larger pieces often appeared to separate when in mid-air. This I do not think was due to any explosion which took place within them, but rather perhaps to some such cause as a sudden cooling.

"Looking at some of these bombs, which had fallen on the level where I was standing, they appeared to have been done so whilst in a pasty condition, because some of them showed a decided flattening, as if produced by impact. Both the bombs and lapilli were of a black colour, and pumitious texture. Although I believe each of those explosions to have been the result of a sudden bursting of steam through the molten lava, I did not see any aqueous vapour which I could recognize as having been evolved whilst I was standing near the crater. This may have been perhaps due to the intense heat keeping the vapour in an invisible state until it became hidden in the fog and murky atmosphere which enveloped us."

#### PRIVATE SANITARY SOCIETY.

##### YOKOHAMA BRANCH.

A meeting of the Yokohama Branch of the Private Sanitary Society was held on the 9th instant with a view to devise measures to check the rapid spread of cholera, and for the treatment of the poorer classes. It was resolved to open dispensaries in Otamachi, Nogemachi, Motomachi, and Naniwacho.

Governor OKI took the chair, and Mr. Nagayo Sensai, Director of the Sanitary Bureau, was also present. A Committee of 13, viz., Messrs. Hara Zenzaburo, Kondo Riokun, Mogi Sobei, Kondo Yoshiki, Ono Mitsukage, Miyajima Yoshinobu, Asada Matashichi, Iida Shinitsu, Totsuka Sentaro, Kumata Matazo, Kurusu Sobei, Ninomiya Chiusu and Nakayama Yasujiro, was elected.

Mr. NAGAYO explained to the meeting the preventive measures against the disease taken by the Government regardless of all expense; and urged the people to second the Government in their efforts. He recited to the meeting experiences in Europe and America as well as in the Fu and Ken of this Empire, pointing out the necessity for prompt and energetic action.

The following resolutions were put to the meeting and passed:—

1. Four dispensaries to be established: one for Honcho and 13 other streets; one for Nogi, Tebô, Ota, and Takashima-cho; one for Yoshidamachi, Bandai-cho, and Ishikawa-machi, and one for Motomachi, Kitagata, and the foreign settlement, all under the supervision of Messrs. Kurusu Sobei and Tsukuyama Saichiro.

2. A sub-committee, consisting of Messrs. Oku Morikata, Hara Zenzaburo, Mogi Sobei, Ono Mitsukage, Totsuka Sentaro, Asada Matashichi, and Nakayama Yasujiro, to be appointed to collect funds for the Yokohama Branch of the Society.

3. That places be appointed for the reception of the families of patients, under the superintendence of Asada Matashichi and Totsuka Sentaro.

4. That physicians be appointed by Drs. Kondo, Iiido, Miyajima, Iida, and Kumata to take charge of the dispensaries.

5. That the sum of yen 2,000 be appropriated for the expenditure of the dispensaries as follows: salaries of officers, yen 400; servant's wages, yen 100; coolie hire, yen 50; rent, yen 200; alterations, &c., yen 250; drugs, yen 750; sundries, yen 125; reserve, yen 125.

6. That regulations for the treatment of the sick be drawn up.

The following subscriptions for the benefit of the Yokohama branch of the society were reported:—

Yen.	Yen.
Hara Zenzaburo 500	Otani Kabei 300
Mogi Sobei 500	Soda Kinsaku 300
Hara Rokuro 500	Higuchi Tokujiro 300
Hiranuma Senzo 500	Ono Mitsukage 100
Miyajima Yoshinobu 500	Shibuya Kinsaku 100
Watanabe Fukuzaaburo 500	Asabiki Heiji 100
Asada Matashichi 300	Shiyeno Shobei 100
Nishimura Kisaburo 300	Masuda Masuzo 100
Wakao Ikuzo 300	

##### AMOUNT OF SUBSCRIPTIONS NOT YET DETERMINED.

Yanashita Zenjiro.	Tanaka Heihachi.
Kondo Rempo.	Takagi Saburo.
Totsuka Sentaro.	Umakoshi Kiohei.
Takashima Kaemon.	Saito Junzo.

#### TRANSLATIONS FROM NATIVE JOURNALS.

##### IMPROVEMENT OF THE STAGE.

(Translated from the *Fiji Shimpō*.)

In all civilized countries there are few towns that have not a play-house. The magnitude of the establishment, and the histrionic abilities of the actors may differ with different degrees of civilization and taste; but there is no doubt that the stage constitutes one of the most essential adornments of a city. In carrying out in Tōkyō the city improvement scheme, it will be important to pay attention to the localization of play-houses. When Napoleon III. introduced improvements in the city of Paris, he took care to place the theatres all in one locality. The same thing is observable in the case of London, where the play-houses seem to be located principally in the neighbourhood of the Strand. Whether this point has entered the minds of the projectors of the City of Tōkyō Improvement Scheme, or whether play-houses are to be scattered all over the new city as they are at present, we are not in a position to know. But, as a matter of fact, the progress of Japanese society will be accompanied by an influx of people of other nationalities, who will naturally be curious to see the dramatic performances of their new friends. Moreover, the opening of the Grand Asiatic Exhibition, and countless other circumstances, will greatly accelerate this natural inroad of foreigners, and our stage will become more and more the object of foreign observation and criticism. It will thus be apparent that it is of paramount importance to make improvements in the stage building, scenic representation, dramatic plays and performances, and also to improve the status of actors.

But improvement of every kind depends for its success upon money. If nothing be wanting in the way of capital, it will be an easy task to improve the stage, and add to the amusement of the citizens and to the beauty of the city. At present, however, there is little prospect of the needed capital being forthcoming, on account of the peculiar circumstances attending the condition of players and the management of theatres. Our actors are descended from the lowest class of people, called *Kawarabiki*, who used to support themselves by begging from house to house by means of itinerant performances; and gradually these beggars established themselves as actors, so that what we now call *shiai* (theatres) date from that time. Such being their history, as a class, it is no wonder that, under the feudal system, they were held in the utmost contempt. To-day their artistic status has been considerably elevated, but still they are as distinct as before from the rest of the community, and the influence of their former condition keeps them virtually uneducated. They accordingly hold a very low position in society, and, being low in social status, they do not recognise their true importance and

responsibility; and content themselves to remain chiefly as the instruments of the pleasures of disreputable women. As a whole, their social atmosphere is far from being pure and respectable, and no modest person likes to come in contact with them. Such being their social position, the most noticeable characteristic of their class is their utter disregard of economy; their extravagance while the pocket is full, and their poverty when it is empty. The managers of theatres are of a similar character, and are always involved in heavy debts which press on them the more heavily as they grow in years. When a new piece is to be played, it almost always happens that the manager finds it difficult to obtain the necessary capital at less than 20 or 30 per cent. interest for such a short period as only a month or so.

If the management of our theatres is permitted to continue in this condition, it will be absolutely impossible to effect the least improvement in theatrical matters, so as to enhance the attractions of the Imperial capital. While we perceive considerable improvement in the artistic quality of the players, and notice a few cases of improvement of personal character, the prevailing evil of stage management seems to have reached an incurable point. The first step toward the improvement of the stage seems to lie in thoroughly revolutionizing the mode of management. In doing this, it is not sufficient to merely improve upon the old basis, for such a mode of procedure will only cause confusion and inconvenience. The only way is to abandon the present methods of management, and then to start under an entirely new system, thereby sweeping away all the evils of the theatrical profession. Actors and managers should alike endeavour to conduct their business upon thoroughly business principles; for it is only in this way that true improvement can be effected in Japanese play-houses.

Will our actors and stage managers forsake their former customs and endeavour to start the theatrical profession on sound business principles, the one class reforming its modes of life and the other making use of capital, as we have already suggested? If they are disposed to make the attempt, we have no doubt that they will find some good method of procedure. Before going on to state our views on the mode of improvement, let us describe the principal features of the stage in Western countries. The dimensions of the building vary in different theatres, but it is usually four or five stories high. On the first floor is situated the stage, and opposite the latter rise four or five galleries in a semi-circular form, for the accommodation of the ordinary audience. Near the stage, on its right and left, are what are commonly called boxes, each box furnished with three or four chairs. The boxes are the dearest places, each costing from 15 to 20 yen. Just before the stage is located the orchestra, behind which are seats for the better class of spectators, and the rest of the floor corresponds to what is termed the *Oikomi* in this country; where seats are obtainable at comparatively cheap prices. Ordinary guests take seats in the second and third galleries; while those occupying the fourth and fifth galleries are of the lowest class, a seat there costing about twelve *sen*, and they are called the gods, because they occupy the highest seats just as the spectators in our theatres occupying seats outside of the iron railing in the second story are called *Koma* (bears). Commonly the play begins at about 7 in the evening and is finished before midnight, and there being, consequently, no necessity for taking meals in the house, Western play-houses are free from those appendages which necessarily accompany our theatres, such as *Chaya* (restaurants)—except a few bars where liquors, tea, cakes, coffee, etc. are served. According to the demands of guests, tea and cakes are served in the building by female waiters. In a word, the whole aspect of Western theatres bears ample proof of the refinement of society there. Our play-houses are, on the con-

trary, undesirable in every way. In the first place, the play lasts usually from 11 in the morning until 10 at night, and thus we are obliged to spend in the house thirteen or fourteen hours if we desire to see the whole play; and considering the extremely unsatisfactory mode of ventilation, it is no wonder that, sitting so long in the vitiated air, one often feels dizzy and fatigued. Moreover, the arrangements make it necessary to take meals in the play-house. In all Western theatres, the intervals between the acts are very short, but even then to prevent tediousness on the part of the guests, the orchestra in front of the stage keeps them in good humour by its capital music. In our play-houses, on the contrary, not only is the interval exceptionally long, but there is nothing to fill up the time. In these intervals, the guests, who are by the way seated so closely together that their feet intermingle, while their elbows connect the whole house in unbroken chains, take tea and cakes, drink *sake*, and in short the whole place looks like one vast scene of revelry. No sensible person can see this scene and not feel utterly disgusted with it. To say the least, a play-house may be taken as a good exhibition of our worst customs and manners. The places ministering to the requirements of the guests, such as the *shibai-jaya* (play-house restaurants), are very undesirable accessories, although at present they are indispensable so long as the play-hours are arranged as now. But the presence of these restaurants leads to the expenditure of much useless money on the part of the audience, so that even at present they are in reality nothing more than inconvenient accessories to theatres. Indeed they may be considered as the necessary parasites of improperly managed theatres. We are thus led to conclude that the first step toward the improvement of our stage is to shorten the duration of the hours. There would then no longer be any necessity for the maintenance of the restaurants, and the change would lessen much of the present unhealthy state in which theatres are. We hope that those who have any interest in the improvement of our stage will turn their attention towards shortening the duration of play-hours, and, together with several other reforms to be hereafter enumerated, will at least prevent our theatres from being places where our social blemishes are exhibited to the world's view, if it be not possible to give pleasure to foreign visitors by the civilized appearance of our stage.

Turning now to the actors themselves, we are sorry to find them in a condition not at all enviable. Among their *confirres* in Europe and America, these are not a few who are noted for their proficiency in learning and who make use of the principles of mental science and physiology in representing various emotions and feelings. Such actors or actresses are regarded by society with fully as much respect as artists and authors; and naturally their fellow players are as a general rule, admitted into the most respectable society. Theatres may fairly be said to be the meeting places of ladies and gentlemen, and although it may not be, in a direct sense, to show respect to players that all spectators, whether gentlemen or ladies, attire themselves in a decent manner, yet it shows the importance they attach to the stage as a whole, and the regard they have toward their fellow visitors. But here in Japan, actors hold an insignificant, or rather no, place in society; and their whole character as a class being anything but pure and decent, no respectable lady or gentleman allows them to be admitted into her or his society. They are universally regarded as belonging to the same class as jesters, singing girls, and prostitutes. Accordingly nobody censures any one for indecent behaviour in a theatre. Nor does any person of respectable character visiting a play-house bear anything like esteem expressed towards actors and the stage; the object of the spectator is simply to get amusement; he thinks that, actors being living

creatures, their performances will be more enjoyable than those of puppets. Beyond this his consideration does not go, and nobody but actors themselves are to blame, for it is their ignorance that has brought them to their present degraded position.

Dramatists are hardly less strange to ideas of improvement and civilization. They are ignorant and superficial, and, their minds being empty of all ideas other than those connected with the feudal system, all their dramas are constructed on the basis of the Confucian philosophy. Filial piety is represented by slaying a foe, while loyalty to the sovereign is shown by cutting oneself open with a dagger. The rest of the scenes are made up of the unhappy lot of the beautiful, the disappointment of the gifted, or the loss of some treasure through the rguery of a wicked vassal, and its restoration by a loyal subject after various dangers and hardships. Thus the whole play is made up of attributes of the feudal system, and is quite distasteful to civilized people. We cannot but regard with regret a dramatic piece which abounds in nothing but loss of life on the most trivial grounds—the appearance of ghosts, the miraculous intervention of the Buddhist god *Kompira*, or the lengthy remarks of a man who has just opened his bowels. We cannot think that players reproduce such scenes with anything like seriousness. These theatrical absurdities have, it is to be remembered, been noticed by some of our scholars for a long time. But in ages when people were in an ignorant condition, and their ideas were simple, it required the representation of various emotions in extremely exaggerated colours to awaken corresponding sympathies in the uncultivated mind; and it was thus necessary to produce such grotesque and ridiculous plays. But now the social condition of the people has undergone a vast change; ideas of Occidental civilization have taken hold of their minds, and their thoughts are daily becoming more and more complex. As a mere matter of course, then, the stage and the character of its plays ought to undergo considerable improvements, for it is against the natural order of things that the theatre alone should preserve its old aspect, while the quality of the spectators has so greatly changed. Not only are the miraculous intervention of *Kompira* and the unearthly deeds of ghosts to be abandoned, but the foolish and excessive loyalty to feudal chiefs should give way to sentiments of patriotism, while the indecent plays turning on love, death, or elopement must be replaced by others showing the ennobling influences of the true relations between the two sexes. In a word, plays should be adapted to the progressive tendency of the age. Not simply for the sake of society, but also for the honour of play-writers and of actors themselves, is this improvement to be earnestly desired.

It chiefly depends upon the skill of actors to move the sympathies of the spectators to such a high pitch as to make them believe that they are viewing actual occurrences; but the importance of scenic accessories must not be overlooked. It is important to arrange matters so as to represent natural objects in realistic proportions. A novelist in the West, desirous of giving as much effect as possible to his description of a mountain path along which one of his heroes was travelling unconsciously to a robber's den, personally explored the mountain and described in his novel various plants which he observed there, and when the book appeared, he scored a great success. In plays, too, it is important to take such cases. We are told by a friend of a wonderful story about a play which he saw in London some years ago. Under the deep shade of the trees, said he, a bridge was situated under which water rushed down foaming to whiteness; and where the view of the whole scene seemed to vanish away there rose a tower surrounded by thickly growing trees. A little beyond it there was a hill upon which lay

a deer quietly at rest. The whole effect of this scene is said to have been truly wonderful. But still more startling; the deer which the audience had supposed to be simply a lifeless representation on a picture, presently began to move in the direction of the spectators, and when, after travelling for some time, it appeared on the front of the stage, it was no less than a living animal trained for the purpose. In our theatres, all attention is bestowed upon the art of the actors, and little heed is paid to the scenic arrangement of the stage. The consequence is that the efforts of the actors suffer a great deal from the absence of proper scenic effect. We have thus far touched upon some of the more important features of stage management, and we are certain that there are many other methods of improvement. Whatever may be the mode of effecting this improvement, the first requisite is capital. If this be obtained, it is necessary to carry out a thorough reform of stage management and to start theatres on an entirely new basis. Are those directly concerned in the matter aware of this? If so, it need not be an insurmountable task to improve our stage and add to the beauty of the capital.

#### NAVY PUBLIC LOAN BONDS.

(Translated from the *Nichi Nichi Shimbun*.)

Considering the state of the market at this moment, we have to congratulate the Minister of Finance on the complete success which his issue of the first portion, *yen* 5,000,000, of the new Public Loan Bonds will most assuredly achieve. True to their principles of action, the *Hochi Shimbun*, the *Choya Shimbun*, and the *Mainichi Shimbun*, have shown more or less opposition to the new loan. The principal points of their arguments are as follows:—(1) taxes having been already increased for military and naval purposes, there is little necessity for raising a new loan for naval purposes (*Mainichi*). (2) For what purposes are the funds thus obtained to be used? (*Mainichi* and *Hochi*). (3) The effect of issuing the bonds will be injurious (*Hochi*, *Choya*, and *Mainichi*); and (5) why not resort to a foreign loan? (*Choya*). These arguments carry with them more or less weight, but we fear that they betray an ignorance of practical affairs on the part of the journals advocating them. First, with regard to the necessity of a loan. The *Mainichi Shimbun* bases its arguments on the fact that, at the end of 1882, about *yen* 8,000,000 were added to military and naval expenses by some modifications in taxation. But the error of this contention will be apparent when we show that, in point of fact, the actual increase of revenue fell far short of the contemplated amount. The modifications in taxation alluded to consisted of changes in the incidence of the taxes on *saké*, on rice, on stock exchanges, and on the sale of tobacco. Taking the lowest estimate, the Government fixed the increase of revenue for the 16th fiscal year at *yen* 7,500,000. But at that time the Treasury was energetically engaged in recalling the over-abundant paper currency, and the consequence of the reduction of the volume of currency and the gradual appreciation of paper in value, had a significant effect upon consumers. The amount of *saké* manufactured, which reached, in 1879, 5,000,000 *koku*, and kept between 4,500,000 and 4,000,000 *koku* in 1880-1882, gradually fell to only about 3,000,000 *koku* after 1882, and at present the amount is nearly the same as it was in 1875-76. With regard to taxes on various exchanges, the entire disappearance of the exchange trade in consequence of paper returning to par, and the insignificant fluctuations in the price of rice, have combined to very much lessen the amount of revenue arising from this source. Lastly, in spite of unabated vigilance on the part of the authorities to enforce the use of stamps on tobacco, the income from this quarter is as yet far under the amount

expected. To substantiate these remarks of ours, we here give figures showing the estimated increase and the actual increase for the years 1883, 1884, and 1885:—

YEAR.	ESTIMATED INCREASE.	ACTUAL INCREASE.
	YEN.	YEN.
1883.....	7,500,000	4,629,665
1884.....	7,500,000	4,271,927
1885.....	1,332,851	1,381,851

It will be seen from these figures that, instead of *yen* 7,500,000 as at first anticipated, the actual sum realized from the changes in taxation was on the average only about *yen* 4,250,000 yearly. Had the revenue been increased by the amount at first contemplated, there would of course have been no need of raising a new loan. The actual amount of increase having been only one half the expected total, the Government had either to abandon their first object of strengthening our defensive power, or to find some new means of raising taxes, or to resort to a loan. The first two courses being rejected, the Government had to adopt the last. In the next place, our contemporaries, the *Mainichi Shimbun* and the *Hochi Shimbun*, ask: For what purposes is the money to be used? What necessity is there for the outlay of such a vast sum? They say that Japan is enjoying undisturbed peace and tranquillity, and conclude that it is not important to increase the fighting capacities of the country. To us the fact that Japan enjoys peace carries no assurance of safety. No far-seeing politician will fail to observe that the Eastern skies are full of ominous and foreboding clouds, which are fast gathering together, to burst no one knows when. France is in Annam, England in Port Hamilton and in Burmah, and the difficulties as to the Carolines and New Guinea have been succeeded by that about the New Hebrides. All the aggrandizing Powers of Europe have centered their colonization policy in the group of islands in the Pacific and in the countries on its Asiatic coasts. Hitherto Japan has been free from the schemes of European ambition, on account of her favourable geographical position. But her entanglement is daily becoming more and more possible as well as probable. In the event of a war in the East, our interest will be best secured by observing neutrality; but when Japan's co-operation with either party is deemed sufficient to turn the scale of war, is it conceivable that either party will suffer us to maintain our neutral attitude? Even granting this, shall we be able to make the belligerents respect our neutrality, without a strong navy? Our countrymen are agitating their minds about the probable turn of Japanese political affairs after the establishment of the National Assembly in 1890. We do not find fault with them for this, but we fear that, before the arrival of that much expected event, Japan may find herself in an extraordinary situation in her foreign relations. The maintenance of independence is only possible by providing ourselves with sufficient military and naval forces and arms. These considerations will be enough to enable our contemporaries to understand the necessity of increasing our naval strength.

Our three contemporaries, the *Hochi*, *Mainichi*, and *Choya*, all agree in the complaint that the withdrawal of 17 million *yen* from the market will have the effect of nipping reviving industry in the bud. Indeed, this notion is shared by no considerable portion of the public. But considering the state of the country just at the present moment, we do not think that the raising of a loan of 17 million *yen* in three years will have such a striking effect upon our industry. By our calculations, the amount of the currency is about *yen* 220,000,000, consisting of Treasury paper money, bank notes, the Nippon Ginko's redeemable notes, and metallic money. Of this amount a certain proportion goes to the Treasury in the form of taxes, another to the Nippon Ginko, and other amounts in the form of deposits. But if the transactions between the Finance Department and the Nippon Ginko, and between the latter and the national banks are actively per-

formed, most of the money in their hands will be turned into use in discount or money-order business. Thus, if only trade were active, there would be no want of currency in the country. That there is an appearance of a deficiency of money in the market is attributable to the fact that the circulation is extremely sluggish. Now the point is this, that the issue of bonds to the amount of 5 or 6 million *yen* will only call out money from the vaults of banks, where it would continue to lie idle were it not for the issue of such bonds. This is exactly what we observe in the present case; the applicants for the recently announced loan being made up, for the most part, of bankers, whose money is sure to lie idle whether there be an issue of public bonds or not. We must not be understood to ignore the fundamental principles of economical science; we admit that naval expenses being unproductive capital, money withdrawn from the market for this purpose decreases, by just so much, the amount of the productive capital of the country. But it must be borne in mind that the effect of withdrawing a sum of 5 or 6 millions from will productive portion of the national capital be felt only in times of business activity, and little if at all in a period of depression. We are thus in a position to assure our contemporaries that their apprehensions are scarcely needed. The *Choya Shimbun's* objection, that the newly announced naval bonds will be mostly used in buying vessels and ammunition from abroad, thus transferring profits from native hands into those of foreigners, looks quite reasonable on the surface. But, in point of fact, the portion to be spent abroad will be comparatively small. The present object of the Government is to construct vessels as far as possible in Japan, and to buy only those materials from abroad which can not be obtained here. Accordingly, the amount of money that will be used in purchases abroad will be only about 6 or 7 million *yen*. It appears that the Government have decided to construct swift steaming wooden vessels and torpedo-boats, instead of costly ironclads, whose value has been rendered comparatively small by the wonderful progress made in the construction of torpedoes. Moreover, in the new naval fund are comprised expenses for construction of dockyards, erection of naval station buildings, and other items. Thus not less than 10 million *yen* will be used within the borders of the country.

Lastly, the *Choya Shimbun* asks: Why not have recourse to a foreign loan? Our contemporary asks this question, because it thinks that the withdrawal of 17 million *yen* will have a baneful influence upon reviving trade. We are not one of those who have an implacable dread of a foreign loan; on the contrary, under certain circumstances, we should think it necessary to resort to such a measure. But under present circumstances we see no reason why we ought to adopt such a step. First of all, as we have already stated, it is erroneous to apprehend any appreciable injury to trade from the raising of a loan of 17 millions in three years; in the second place, in raising a foreign loan we shall have to take it in gold, and consequently to pay interest and principal in the same metal, which circumstance is highly undesirable when, as at present, silver is constantly depreciating; and in the third place, there is, under certain contingencies, risk of inviting foreign interference on account of a foreign loan. It will thus be seen that none of the objections raised by our contemporaries has any good foundation. The truth is, our contemporaries do not see the reasons why it is important to strengthen our naval forces; they are blind to the relations between the European Powers and the East. The course of events in these regions of the globe seems to fulfill the prophetic saying of the late Lord Bunsenfeld, that Asiatic countries are the dependencies of Europe. Even in times of peace England floats in these waters no less than sixteen war vessels, France six, Germany four, Russia five, and the United States

of America seven; while our neighbour, China, has, besides two hundred and fifty vessels for transport, no less than eighty-five war vessels, including ten torpedo-boats. Turning to Japan, where is our navy? Including all sorts of vessels now in process of construction, our men-of-war amount to no more than thirty-two, of which only twenty are capable of fighting on the highseas. Who, then, can assert that our navy does not require strengthening?

#### KIM-YO-KUN'S LETTER TO LI HUNG-CHANG.

(Translated from the *Choya Shinbun*).

TO HIS EXCELLENCY LI CHUNG-TANG,—I, Kim-yo-kun, now a private Korean citizen, finding myself under impending danger at the outbreak of the disturbance in the winter of 1884, fled—for it was imperatively necessary to do so—to Yedo in Japan, for which I am indebted to the then Japanese Minister, Mr. Takezoe Shinichiro. Subsequently I received various news from my native country, informing me, among other things, that a party of nefarious persons had got power into their hands, and that they were using their influence to blacken my character, even charging me with the design of usurpation. Not satisfied with unscrupulous cruelty and vileness, they requested the Japanese Government to deliver me up to their revengeful hands. It was then extensively rumoured that in preferring this request they were acting as the puppets of your Excellency. A doubt arose in my mind as to this story, and I earnestly desired to write you on the matter, but all the means of safely sending the letter to Your Excellency being unavailable, I deeply regret to say that I have been obliged to defer it so long. Quite recently, however, a serious affair happened. A certain Chi-un-ei secretly arrived at Tokyo from my native country. I and a few of my trusted friends, having suspicions in regard to him, watched his movements for a month, sparing no pains nor trouble. As a result, I now have in my possession a document of commission and other writings of value as evidence, which have convinced me that the said Chi-un-ei had a murderous mission to effect upon me. In one of the writings just referred to, it is stated:—"Li Chung-tang of the Middle Kingdom has thrice communicated with the Japanese Government on the subject of the extradition of Kim-yo-kun; on the first two occasions the request was rejected on the ground of reason, but on the last the Japanese Government answered that, although they could not agree to extradition, they would not take any steps against any Korean who might choose to assassinate the refugee. Acting on this suggestion, Li Chung-tang instructed Mr. En to advise our Government to send over some suitable person, and they have accordingly appointed Chi-un-ei for the mission—" These statements have again aroused grave suspicion and doubt in my breast towards your Excellency. Your Excellency has the affairs of an empire in your hands; its safety and welfare are involved in the character of the schemes your Excellency may adopt. Moreover, your Excellency is paying great attention to affairs in Korea. Are you not then a self-appointed trustee of Eastern affairs? If so, your Excellency is the object of the hopes and attention of the world; and the weight of your responsibility may well be judged. Under these circumstances it is inconceivable that you should recommend such a murderous step. For my own part, I am inclined to believe that the childish plot originated with such young and ignorant people as En Sei-gai and the like, whose object is to display their power in Korea. What is your Excellency's impression about this affair? Should your Excellency be the true source of this heinous design, it is a disgrace to the whole of Eastern Asia, and in that case it would be needless for me to remonstrate with you.

Having taken Korean affairs on your shoulders, your Excellency ought to have put them in the hands of an experienced and intelligent official, giving him from time to time your mature counsels. But in point of fact, your Excellency seems to be in no serious mood about Korea, if we can infer from the appointment of such a childish person as En Sei-gai to Seoul. If your Excellency is to use Korea as a place for promoting selfish interests, serious damage will be done not only to the welfare of your own country, but also to that of the whole of Eastern Asia. Such, however, is not, let me hope, your Excellency's true object.

The late disturbance was caused by the secret intrigues of En Sei-gai and others who thoughtlessly fired on the Royal Palace. Anxious to cover up their own mistakes at the crisis, they imposed upon their royal master and shamelessly flung all the blame on me. They also took care to represent the matter to your Excellency in the same distorted light, with what success on your mind I do not know. The cause of your Excellency's resentment against me, I can rightly guess. It is my calling in the aid of Japanese troops, a step which was necessitated by the inevitable turn of events. I know enough of the world's affairs and enough of the intimate relationship between your country and mine, to prevent me from attempting anything likely to injure such relations. Since the disturbance of 1882, all profligate and intriguing people have attached themselves to En Sei-gai, and formed a political faction. Possessed of great influence, they had turned it to nefarious uses; they had darkened the sight of their King; resorted to oppression; prevented the carrying out of laws; and as a consequence the country was being daily hurried to the brink of ruin. At that time I was thinking of calling on your Excellency in person, in order to discuss the situation to my heart's content; but I was prevented from attaining my object by the intrigues of the gang. But the national affairs being in an extremely critical state, I could not look on with indifference, and I decided to adopt a radical remedy. Before, however, I was able to mature my plans, my object was defeated by the childishness of others. I trust that your Excellency's large mind will in some respects appreciate my disappointment and regret. I was unable to carry out my original intentions, but so far as was required of a servant of the King, I believe I did everything in my power to accomplish my object; and, for the future, it is my desire to spend the remainder of my life in obscurity, free from every care of the world. While my mind is in this mood, I have been brought face to face with such a disgraceful plan as that mentioned above, and I cannot help offering you a few words of advice. Your Excellency must be well informed as to the state of affairs in the peninsula; in what danger it is placed; in what an embarrassed condition its finances are; how poorly the administration is carried on; how miserably the people are suffering from destitution. In a word, Korea is like an egg suspended by a hair. It is surely not a small intellect or small capacity that can cure such malady. Is your Excellency sure of planning a successful scheme of remedy, by which you may shelter your fame from injury? The fate of Korea is closely connected with the welfare of Eastern Asia. It will be of little avail to cling to a nominal claim of bygone days and talk over matters as if in a dream. It would be indeed a fortunate thing, if your Excellency's own authority were a guarantee against all the possible difficulties and complications lying in wait for the peninsula. But your Excellency has only to reflect on the past conduct of your country, in order to acknowledge that such a guarantee can by no means be given. Why, then, do you not induce your Imperial Master to become the leader of the world in giving independence to Korea, thus placing it on a solid footing? Should your Excellency back up this policy with your experienced

counsels, and, cementing the bond of friendship between the two countries, carry out your grand policy for Eastern Asia, it will not be Korea alone but most probably China also which will be benefited. How does this policy recommend itself to your Excellency? Being an uncareful wanderer in the world, I do not like to discuss political matters; but, reflecting on my original motives, I have been unconsciously led to write at this length.

I am, &c., your Excellency's humble servant,

KIM-YO-KUN.

[White Seal].

#### KIM-YO-KUN.

(Translated from the *Nichi Nichi Shinbun*.)

The publication of Kim's memorial to the King of Korea and of his letter to Li Chung-tang, has attracted considerable public attention. Whether these documents are really Kim's own writing or not, we are not in a position to decide, but considering that, in spite of his touching anxiety for the welfare of his native country, which is visible in these documents, the statements made in regard to this country are in many instances wholly contrary to facts and to justice, we cannot pass them by without saying a few words. That the bloody measures of Kim were intensely offensive to the refined sentiments of civilization, we fully pointed out at the time. But remembering that, in Oriental countries, where the status of civilization is still very low, such atrocities are not of uncommon occurrence; that the removal of the Bin family—the greatest obstacle in the way of Korea's progress—necessitated the adoption of a violent course of action; that the King himself gave sanction to these measures; and that under the latter's supervision Kim organized a revolutionary government—remembering these circumstances, Japan recognised Kim as a political offender. In his memorial to the King, Kim excuses his reliance upon a foreign Power, by which he refers to the aid of the Japanese troops which he obtained by the King's autograph; and he seems to regard this circumstance as the cause of the resentment of Li Chung-tang towards him, as may be seen from his letter to the Chinese statesman. Before the conclusion of the Tientsin treaty last spring, that may have been the case, but since the meeting of Count Ito and Li Chung-tang no such suspicion can be justifiable. Our confidence in the Chinese statesman is too great to allow us to believe that he has stooped to adopt such an ignoble rôle as that of an instigator of assassination. In the same letter Kim declares himself to be indebted for his escape to the generosity of Mr. Takezoe; but this statement is highly misleading. In spite of all that has been rumoured about this matter in the three countries, it is plain enough that no such step was possible for Mr. Takezoe to take; for in the first place, his official character as Japanese Minister forbade his doing so; and in the second place, he had no opportunity of rendering such aid even if he had the intention of assisting Kim in his flight, being himself, with his guards, in very great danger. Perhaps what Kim refers to is the circumstance that Mr. Takezoe did not prevent him from embarking on board a steamship. If so, he has confounded that which was private with that which is public. In giving him asylum as a political offender, we only followed the acknowledged usage of international laws; but our refusal to comply with the request for extradition led both China and Korea to regard our country with suspicion, and this circumstance was the cause of their sending over an assassin. On this point Kim thinks that the plot of assassination originated with En Sei-gai and his friends, and takes pains to state that Li Chung-tang had nothing to do with it. On the other hand, he says with regard to our Government, that they at last replied to China that they would take no step against his assassination by a Korean, and then passes on without even adding

Original from

a word of qualification to the statement. That China made repeated requests for extradition may be so for true, but it is absolutely unjust to hold our Government capable of such ignominious conduct as that which Kim ascribes to them. That in this Kim has made an inexcusable allegation is plainly seen when we recollect what this country has done for him in the past. Notwithstanding that his revolutionary movements caused injury to our legation, our troops, our people, and our relations with Korea and China, our Government gave him a safe asylum and afforded him all the ordinary protection in their power, saving him from revengeful execution at the hands of his enemies, by stoutly rejecting all the requests for extradition. Is it conceivable that a Government which has done so much for him should have promised to take no steps against his assassin? Moreover, when our Government received the news of Chi-un-eh's suspected character, they at once telegraphed to the Korean Government for information on the point; and this led to the recall of the suspected Korean, which removed the cause of danger to Kim. Further, had the assassin been successful within the territories of this country, he would have incurred the due penalties of our law. Thus our Government have done everything in their power to protect the person of the Korean refugee, and have only been obliged to order him out of the country from considerations as to internal tranquillity, and peace in our foreign relations. What cause of grievance has Kim, in the face of these circumstances, and how can he pretend to believe that our Government would not take any steps against his assassin? Kim also tells us that it is folly to rely upon either China or Japan. Whatever may be said of his denunciation of the two Empires, he has struck the true chord so far as his own country's case is concerned. For, undoubtedly, one of the greatest dangers to the stability of Korean independence has been her reliance upon foreign Powers; and it is of paramount necessity that she should stand upon her own feet. But the statement that, while formerly Japan sedulously interfered in Korean affairs, she has entirely abandoned the Kingdom since the late disturbance, is a most unjustifiable declaration. Japan had no ambition in Korea, but sincerely tried to assist her in former years to consolidate her position as an independent state. Our presence there, however, aroused the suspicion of both Korea and China; and it being apprehended that the continuance of our friendly offices in the peninsula would lead to undesirable consequences, we at last withdrew ourselves, and have since treated Korea just as we treat an ordinary friendly Power. Thus even at present we have not forsaken her; the true reason why there is an apparent change in our attitude is the fact that, in days when to depend upon us was unwise for Korea, she persisted in depending, and when she ought to trust, she does just the contrary.

Kim then proceeds to say that the best thing for Korea would be to maintain friendly relations with Western nations, and to inaugurate internal reforms, political, social, industrial, and commercial; to relieve the people from the oppression of the *Jumpan* and official classes; to abolish the privileges of caste; to put the Tai-won Kun at the head of national affairs, and to recall his (Kim's) fellow exiles and use them in important political posts. As to his recommendation of his fellow exiles, we cannot say anything, being ignorant of their qualifications; but the rest of his advice deserves unqualified approval for its soundness. It ought, however, to be noticed that, excellent as his advice is, it is still only a general statement, and that in carrying it out in practice every part of it may lead to serious confusion. Kim himself knows from his personal experience that we are speaking the truth. Unless, then, there be firm handed and clear-sighted ministers to assist the King, as in the case of our Restoration, their advice will be of little value. In his letter to Li Chung-tang, Kim urges the Chinese statesman to give up China's nominal claim of sovereignty over Korea, and to assist that Kingdom to solidify her position as an independent State. It is an undeniable fact that China is trying to retain the peninsula under her sovereignty, in which attempt she is actuated (1) by her cherished claim of nominal sovereignty, and (2) by the dread of Korea falling into the hands of some other Power, in case her own influence is withdrawn. But China must remember that, were Korea a strong Power,—which she is not,—it would still be impossible for the Middle Kingdom to save her from the rapacity of any of the Great European Powers. China's interference being, to say the least, entirely unavailing, the best course would be to make Korea an independent Kingdom in name as well as fact. The Far East is now more and more attracting the atten-

tion of the world; and Korea to-day occupies a far different position from that in which she formerly was. The only chance for her safety is the maintenance of the balance of power, but this is not possible unless she retains her independence both in name and in fact. A statesman of Li Chung-tang's breadth of view will clearly see just what is needed, and will encourage the Koreans to rise up to maintain their country's honour. That China still pursues her policy of intervention, is owing to the tendency of the Korean people to rely upon other Powers. The first step is to remove this tendency. In spite, then, of many misleading allusions to this country, Kim's memorial and letter have nevertheless sound counsels. We may safely call Kim an enthusiastic politician, but hardly an experienced statesman.

### LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, June 5th.

A good deal of interest has been excited lately by the publication by Sir Henry Gordon of a life of his brother. In the letters written by Gordon from China in 1880 were either published in full, or a narrative was compiled from them. Amongst other curious statements, Gordon wrote that Li Hung-chang was, at that time, being encouraged by ourselves and others to overthrow the Government at Peking and himself seize the reins of power. The story is not quite clear; it may mean that Li was incited to rebel against his Sovereign, or merely to turn out the ministers. In either case the charge was a very grave one; certain distinct facts were stated, about which, coming from a man of Gordon's character, there could be no question whatever, and, I believe, there was even more incriminating matter in the original letters than Sir Henry Gordon published. Sir Thomas Wade replied in *The Times* that he never encouraged any such notion in Li's mind, nor did he believe the Viceroy ever entertained it. But no contradiction has come from any other foreign diplomat, although special efforts have been made to obtain one. Sir Thomas Wade, however, is so dissatisfied with Gordon's account of events in China in 1880 that he is about to publish a pamphlet containing his own views, and it he can bring himself to sit down with a clear view of what he wants to explain and will do so at once, and without undue prolixity, he will produce a most interesting work. But, unfortunately, it is very doubtful whether Sir Thomas Wade will do anything of the kind. Having to refer to the Kuldja question (as the whole matter arises out of the relations between Russia and China in 1880) he will probably explain all about Kuldja since the beginning of the world, and then tell us all about the relations between China and her dependencies from the most remote epoch, and when he has got so far he will stop altogether in despair of ever reaching Gordon and the year 1880, and his work will never see the light, and indeed never be in a condition to appear. As a man who knows him well said to me on this subject: "In Sir Thomas Wade's literary tree there are many branches, and, to his mind, each branch is as important as the parent stem." It does not require a voice from the grave to tell us this about the ex-Minister. His report on the Chefoo Convention was deferred for months and months, in spite of despatches and telegrams from the Foreign Office urging him to send it, and finally he returned to Europe accompanied by a member of the Consular Service to do it, and even then deferred it for weeks. Even the arrangement concluded last July by the Marquis Tseng with regard to opium had to be signed without the Foreign Office having the benefit of his advice. The draft agreement was sent to him to Torquay for his report, but he waited so long that the work had to go on without him. This is not due to negligence or indifference, but rather to the high literary standard which he puts before himself. He commences, corrects, re-corrects, and finally destroys altogether; then begins again and the same process is repeated, so that in the end he preserves, as an ideal only, his high standard, and nothing tangible is done. So probably it will be with his monograph on 1880. This incapacity for shaping means to meet ends is a very common cause of baffled endeavour and ill-success. A man wants to write a plain story of events in Peking and Tientsin in a certain year; he wanders over all Asia, through all time, and finally succeeds in doing nothing whatever except to burn his manuscript in disgust.

Lord Redesdale, the Chairman of Committees in the House of Lords, and one of the staunchest

of the old Tories, has died full of years and honour, and as he was never married, a considerable portion of his large property devolves upon Mr. A. B. Mitford, formerly Second Secretary of Legation in Japan, and the author of the "Tales of Old Japan." After his quarrel with Lord Augustus Loftus, Mr. Mitford left the Diplomatic Service, and succeeded in getting the appointment of Secretary to the Office of Works. It was believed that he owed this to the personal influence of the Prince of Wales, but the influence of his relative Lord Redesdale would have been quite sufficient to have obtained that or almost any other post. To whomsoever he owed it, the position is a tolerably fat one, and is, with one or two exceptions, the best in the Civil Service. He has now resigned it on account of the duties which his new position as a man of considerable fortune and large estates casts upon him, and every one wants to know who is the lucky man who is going to succeed him. Mr. Mitford has ever been a great authority in London Society on matters Japanese; he was consulted in the production of the *Mikado*, and is credited with saying that when he first saw the opening scene, he instinctively felt for his revolver, his little way of saying, no doubt, that it was very life-like.

During the past fortnight the Twiss case, which made a great noise in its day, has again come before the public. I forget now how many years it is since a solicitor named Chaffers was charged at the Marlborough Street Police Court with attempting to extort money from Sir Travers Twiss, the Queen's Advocate, by threatening to expose what he alleged was the past life of Lady Twiss. The latter went into the witness-box and was subjected to a cruel cross-examination for two days by Chaffers. The unfortunate lady asserted that the person who had committed the offences alleged by her assailant was her governess; but when the case came on for the third hearing, Lady Twiss, unable to stand the strain of the frightful ordeal any longer, had fled. The sitting magistrate, Mr. Flowers (a brother by the way of the last Consul at Hyogo) dismissed the case, telling Chaffers that he went out into the world with the contempt of all honest men. Sir Travers Twiss left the Bar and threw up all his appointments. Chaffers' business left him; no one would have any thing to do with him, and he spent several years in the Marylebone Workhouse, where he was either troublesome or persecuted, for he was frequently charged at the police courts with breaches of the rules, and was punished. How he got out of this establishment I do not know; but he appears to have got a little money somehow, and, having been unable to pay the annual fee for his certificate as solicitor he applied to be replaced on the rolls. But the late Sir George Jessel refused his application. He now lives almost in the Reading Room of the British Museum, where he is a well known figure. He is always dressed in black-cloth, and this with his snow white hair and beard, his amiable and gentle demeanour, make him look like a studious and harmless clergyman. His appearance and manner struck me with amazement when I first saw him; they were so utterly unlike all that we know of him. He is said to be obtaining a reputation as a genealogist. A few days ago he brought an action for libel against a newspaper which talked disrespectfully of him in connection with the Twiss case. Needless to say, the jury found against him. Sir Travers Twiss felt under the blow for a time, but he soon recovered himself. He has for years been the principal supporter of the Institution for the Reform and Codification of the Law of Nations, and has specially studied the subject of extra-territoriality in Oriental countries. He has written or edited many law books, and has barely had much to do in assisting the King of the Belgians to draw up a constitution for the Congo Free State. Some time ago, I ran across him in a friend's chambers in the Temple, and was glad to see him, although now an old man, looking vigorous, alert, and cheerful—"all there" as the phrase goes. He is now, and has been for years past, living quietly with his wife in a pretty house in Hamilton Terrace. Time is the great healer in the moral as well as the physical world; but Sir Travers must bear about with him a deep scar somewhere, and so no doubt does the kindly looking old gentleman who pores over Dugdale in the British Museum.

The sun of another great lawyer—a different being, indeed, as a man and as a lawyer, from Sir Travers Twiss—is setting in gloom. Sergeant Ballantine is lying very ill at his chambers in the Temple, where he is maintained by an allowance from his daughter-in-law, a barnard who married Sergeant Ballantine's son. Where the enormous income which Ballantine made for many years at the Bar has gone to, so that he is now penniless, is a question which perhaps he could not answer himself. When I first knew London fifteen years

Original from

ago, the theatrical attraction for light-minded folk like myself (*tempora mutantur, et mutamur nos in illis*) was Miss Kate Santley at the old Alhambra. That huge house was maintained for her by Ballantine out of his own pocket; and goodness knows how many other temporary stars he has maintained at various theatres at one time and another. Running a London theatre for the sake of a woman who has little or no dramatic ability is perhaps the most expensive luxury yet discovered by the children of men; so it is no wonder that the last days of the brilliant advocate are clouded by poverty, and worse still, by some loss of mental capacity.

In my last letter I referred to the approaching withdrawal of Gilbert and Sullivan's "Mikado" from the Savoy stage. A few days ago the play, in its original English dress, was produced in Berlin before a distinguished audience, and was, it appears, a brilliant success. Several of the songs had to be repeated again and again. This bold experiment of Mr. D'Oyley Carte's promises to be very successful. He has taken the theatre in which the piece was brought out for thirty nights, and proposes producing three of Gilbert and Sullivan's plays. The company is one which has been touring in America, and, as a matter of theatrical gossip, it is interesting to notice that the properties, dresses, &c., were conveyed from Liverpool packed in 137 boxes, weighing 1,300 cwt., and that this enormous baggage arrived in Berlin only the day before the play was produced. It is generally said that in all musical and theatrical matters the Berlin public is the most critical in Europe.

The great preceptor *Germanie*, and for that matter, *præceptor mundi*, Leopold von Ranke, is dead. For forty years he laboured for eight hours a day in the same house at Berlin. He described his method of work to be to commence at 10 and continue until 2. He then left off until 9, when he worked till about 1 in the morning. Midnight, he said, was his most congenial hour, and the time when he could produce most. Although over ninety at the time of his death, he was engaged on a Universal History, of which several volumes are published. Genius in his case appears to have been "infinite capacity for work," as Carlyle somewhere defines it.

Mr. Edwin Arnold, the author of the "Light of Asia," and many other works, also the editor of the *Daily Telegraph*, has just published a charming book called "India Revisited" (Trübner), describing a visit made a few months ago to India. He sees the country and its people with the sympathetic eye of the poet, and records his impressions with the hand of a literary artist.

### LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, July 16th.

#### THE ENGLISH ELECTIONS.

The members returned are:—Unionists, 74; Gladstonians, 180; Tories, 313; Parnellites, 82.

Later.

#### RESIGNATION OF THE CABINET.

It is understood that the Cabinet has decided to resign, and that a Coalition Ministry is improbable.

London, July 18th.

#### THE ENGLISH ELECTIONS.

The elections are finished, and the numbers are:—

Unionists .....	78
Gladstonians .....	191
Tories .....	316
Parnellites .....	85
	670

#### RETIREMENT OF EARL GRANVILLE.

Earl Granville retires into private life.

London, July 19th.

#### RESIGNATION OF THE MINISTRY.

An informal Cabinet Council was held on Saturday, when the Ministry resolved to tender their resignations immediately.

London, July 20th.

#### DEFEAT OF PARNELLITES.

An Unionist has defeated O'Brien for South Tyrone, and a Tory candidate has been returned in opposition to Healy in South Derry.

London, July 21st.

#### RESIGNATION OF THE MINISTRY.

The Ministry has resigned.

#### EXTRADITION TREATY.

An Extradition Treaty applicable to dynamiters has been signed by the Governments of England and the United States.

London, July 22nd.

#### THE MINISTRY.

The resignation of the Ministry has been accepted, and the Marquis of Salisbury has been summoned by the Queen.

[FROM THE "SAIGONNAIS."]

Paris, July 1st.

#### THE FRENCH PRETENDERS.

The Comte de Paris and Prince Philippe, Duc d'Orleans, his eldest son, have retired to England.

Prince Jerome Napoleon has left for Switzerland.

Prince Victor Napoleon is at Brussels.

#### THE NEW FRENCH MINISTER TO CHINA.

By decree of the President of the Republic, M. Constans has been appointed Minister Plenipotentiary to China.

Paris, July 1st.

[FROM THE "JOURNAL OFFICIEL."]

M. Constans will embark at Marseilles by the mail of the 18th July to take up his post.

### CHESS.

White to play, and mate in 3 moves.

Answer to Chess Problem of July 17th, 1886,

By Mr. J. MINCKWITZ.

White.

1.—Q. to Kt. sq.

2.—Mate.

Black.

1.—Anything.

Correct solution received from "TESA."

The following table shows the progress of cholera during the week ended the 18th instant:—

	CASES.	DEATHS.	DEATH RATE PER 100 CASES.
Osaka .....	1,111	900	81.00
Kyoto .....	109	93	85.32
Hyogo .....	213	219	102.82
Gleyoson .....	118	81	68.64
Hiroshima .....	307	200	65.14
Wakayama .....	47	31	65.96
Elime .....	182	114	62.64
Total .....	2,107	1,656	78.42

The above shows that the disease has decreased in Kyoto, Hyogo, and Wakayama compared with the preceding week, but has increased in Osaka, Okayama, Hiroshima, and Ehime. The total increase for the week under review was 89 cases and 115 deaths.—*Official Gazette*.

## CARGOES.

Per British steamer *Teheran*, for Hongkong via Kobe and Nagasaki:—Silk for France, 57 bales.

Per American steamer *San Pablo*, for San Francisco:—

	TRA.	NEW YORK.	OTHER CITIES.	TOTAL.
Shanghai	241	2,266	1,122	3,629
Hiogo	314	783	1,199	2,296
Yokohama	4,283	955	1,423	6,661
Hongkong	627	—	847	1,474
Total	5,465	6,004	4,591	14,060

	TRA.	NEW YORK.	OTHER CITIES.	TOTAL.
Shanghai	—	104	—	104
Hongkong	—	390	—	390
Yokohama	—	250	15	265
Total	—	744	15	759

The American steamer *San Pablo*, Captain E. C. Reed, reports:—Left Hongkong on the 13th July, at 4.16 p.m. and experienced strong S.W. monsoon to Turnabout; thence to port moderate to fine weather. Arrived at Yokohama on the 19th July, at 2.16 p.m.

The British steamer *Cardiganshire*, Captain N. R. Trollope, from Hongkong, reports fine weather throughout the passage.

## LATEST COMMERCIAL.

## IMPORTS.

The Market still continues buoyant, and a large business has again been done at steadily rising prices generally, though for some articles dealers seem disinclined to pay a further advance. Deliveries have also been very satisfactory, which is the best confirmation of a real improvement in the trade of the country.

**YARN.**—Sales for the week amount to 1,200 bales English and 900 bales Bombays. Prices are firmer for all kinds, and 25 cents higher in some special cases.

**COTTON PIECE GOODS.**—Sales consist of 2,500 pieces 9 lbs. Shirtings, 2,000 pieces 8½ lbs., 1,500 pieces 7 lbs. T. Cloths, 9,000 pieces Turkey Reds, 5,000 pieces Indigo Shirtings, 2,000 pieces Silesias, 2,000 pieces Twills, 2,000 pieces Prints, and 2,000 pieces Velvets.

**WOOLLENS.**—2,000 pieces Italian Cloth, and 2,100 pieces Silk Satins have been disposed of at rather higher prices; but in Mousseline de Laine scarcely any sales have been reported owing to the higher rates required by holders checking business since the previous very heavy sales were made.

## COTTON YARNS.

## METALS.

Very small business generally, and in Iron particularly transactions have fallen away to very small proportions. The trade in Bars, Rods, and Sheets for a month past is only estimated at 300 tons. Some little passing in Wire Nails, and a little done in Tin Plates, both at quotations given below.

	PER POUND.
Flat Bars, ½ inch	\$2.40 to 2.50
Flat Bars, ¾ inch	2.60 to 2.70
Round and square up to ½ inch	2.40 to 2.60
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	2.60 to 2.70
Wire Nails, assorted	4.00 to 5.00
Tin Plates, per box	4.75 to 5.00
Pig Iron, No. 3	1.15 to 1.17½

## KEROSENE.

No fresh transactions of any moment, dealers waiting for a reduction in price. On the other hand, holders report themselves firm; the Stock in Yokohama is 430,000 cases, and likely to be increased in a few days by the arrival of the *North American* with part of original cargo from Kobe.

Devon	Nom.	\$1.70 to 1.72
Comet	Nom.	1.65 to 1.67
Stella	Nom.	1.60 to 1.62

## SUGAR.

Nothing to report in Sugar.

	PER PICUL.
White, No. 1	\$7.25 to 7.30
White, No. 2	5.90 to 5.95
White, No. 3	5.50 to 5.75
White, No. 4	4.90 to 5.00
White, No. 5	4.10 to 4.15
Brown Formosa	4.50 to 4.60

## EXPORTS.

## RAW SILK.

Our last issue was of the 16th instant, since which date we have had a spurt for the *San Pablo* which left on Thursday. Settlements for the week are put at 220 piculs, divided thus:—*Hanks* 35 piculs, *Filatures* and *Re-reels* 180 piculs, and *Kakada* 5 piculs. Besides this, Direct Export has taken 40 piculs for the steamer, making the total transactions of the week 260 piculs.

As we predicted last week, dealers were able to get a substantial rise for Thursday's steamer. It remains to be seen whether buyers can go on paying up for every fresh parcel. Holders have already asked an advance, and will probably maintain an attitude of "armed neutrality" for the present, hoping that buyers will once more come in on sellers' terms when the shipping opportunity again approaches.

The interior Markets appear to be constantly rising, and speculation is rife among the native capitalists, some of whom are reported to be selling their bonds and other securities for the purpose of investing in Silk. Opinion seems divided among these speculative friends; some are of the opinion that 1886 will prove like 1876, and that we shall presently see Silk at over \$1,000 per picul; others think that, with a continued fall in the value of silver, foreign Markets will be able to pay shortly a much higher price for Japan Silk. Anyway, it seems likely that we may have a difficult Market here for at least some time to come.

Buying for Europe has practically ceased, and should adverse cables arrive from New York we may see a distinct pause all round with possibly a weakening next month. Supplies should now begin to come in freely, and accumulating stocks would doubtless make sellers a little more current in their ideas. Stock in Yokohama is 2,450 piculs, an increase of 250 piculs on the week. The old staple disappears slowly for use in the native looms.

There have been two departures during the interval, the P. and O. mail of 17th instant and the American mail on Thursday. The former (*Teheran*) had 57 bales for Europe, and the latter (*San Pablo*) 266 bales for the U.S. Markets. Total Export from 1st July to date is, therefore, 746 piculs; against 448 piculs last year, and 740 piculs at same date in 1884.

*Hanks*.—Dealers succeeded in obtaining their price for one or two parcels. Silk hailing from *Annaka-Takasaki* district, appears in the list at \$540.

*Filatures*.—Chief business has been in this class, buyers operating freely at a decided advance. Both *Shinshu* and *Keshu* sorts have had a turn, and the following prices have been made. *Kokkasha* \$730, *Gakosha* \$710, *Kuimeisha* \$685, *Shijunsha* \$685, *Takosha* \$665, *Shinshosha* \$660, *Kosansha* \$660, *Gomeisha* \$655. Dealers are already asking an advance of \$20 for the next deliveries of these and similar silks!

*Re-reels*.—Not much done; but the few lots noted have been at high prices. No crack chop is found in the list, but fair No. 1 *Joshu* have been done at

\$640 with 1½ at \$625, and No. 2 at \$610. There should be increasing arrivals from this date onwards.

*Kakada*.—One solitary parcel has come in, and gone forward "on consignment." Report speaks well of the quality from this district, but at present very little Silk is here.

Available supplies to date	3,220	3,340	2,350

## WASTE SILK.

Settlements for the week are 200 piculs, divided thus:—*Noshi* 147 piculs, *Kibiso* 45 piculs, *Mawata* 8 piculs.

The business done has been at rapidly advancing rates, and dealers are asking a further extravagant rise. A parcel of *Joshu Noshi*, bought on the 15th at \$80, could not now be got at \$110; and some holders have taken their produce off the market altogether until they can make up their minds how much to ask. Meantime, some small orders come in from Europe; but much trade cannot be done until prices settle down somewhere. The interior Markets are much above ours and still running away from us.

The P. & O. steamer *Teheran* took 10 bales new fine *Noshi* for Trieste, and one sample bale *Joshu Noshi* for London. Present Export is, therefore, 280 piculs, against 266 last year, and 69 piculs at 23rd July, 1884.

*Pierced Cocoons*.—No movement yet. Arrivals from *Joshu* continue, but quotations are purely nominal in the absence of business.

*Noshi*.—Some trade at rapidly advancing prices, \$95, \$100, \$105, and \$110 being paid for the same quality of goods. Holders now ask a further advance, not content with twenty per cent. rise in a few days. Other sorts held at prohibitive prices.

*Kibiso*.—A few small parcels *Hachioji* done at \$44, with old *Sanlanshu* at same figure. The only good-sized parcel of *Filature* is held off sale entirely.

* Raw Stock—1,600 piculs Old, 850 piculs New.		Waste Stock—900 piculs Old, 670 piculs New.		

## TEA.

The week's transactions aggregate 6,095 piculs, making a total of 148,390 piculs for the season, against 113,130 piculs last year. The total receipts for this year stand at 160,990 piculs, as compared with 121,760 piculs in 1885. The difference between the total receipts and the settlements makes about 12,000 piculs of Tea in store. Good Common to Medium represents the bulk of the week's settlements. Prices remain nominally unchanged. The ship *F. P. Stafford*, which sailed on the 10th instant, took 1,045,681 lbs. from Yokohama, as under:—80,281 lbs. for New York, 370,069 lbs. for Chicago, 8,950 lbs. for Kansas City, 3,147 lbs. for Omaha, 29,654 lbs. for St. Joseph, and 547,580 lbs. for Canada. The *Albany* took from Yokohama, on the 12th instant, 178,400 lbs. for New York, and 97,520 lbs. for Canada. The *City of Peking*, which left on the 13th, took 705,902 lbs. distributed as follows:—77,731 lbs. for New York, 11,270 lbs. for Boston, 12,816 lbs. for Buffalo, 299,911 lbs. for Chicago, 626 lbs. for St. Joseph, 921 lbs. for Kansas City, 807 lbs. for Omaha, 8,560 lbs. for St. Paul, 372,710 lbs. for San Francisco, and 10,850 lbs. for Canada. The bark *Mary A. Troop*, which left on the 13th instant, took 70,760 lbs. for New York, 1,980 lbs. for Buffalo, 206,051 lbs. for Chicago, 73,077 lbs. for St. Joseph, 121,000 lbs. for St. Paul, 27,860 lbs. for Kansas City, 28,424 lbs. for Omaha, 34,028 lbs. for Portland (Oregon), and 152,530 lbs. for Canada, aggregating 656,536 lbs. The *City of Peking* and the bark *Mary A. Troop* are from this port. The *San Pablo* sailed from Yokohama on the 22nd, taking 52,562 lbs. for New York, 70,766 lbs. for Chicago, 14,041 lbs. for San Francisco, and 3,608 lbs. for Canada, making a total of 149,917 lbs. from Kobe.

## THE GREATEST WONDER OF MODERN TIMES.

## HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

## HOLLOWAY'S OINTMENT

is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

"FAISCE QUE DOIS: ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 31ST, 1886.

### BIRTH.

At Tokio, on the 30th instant, the wife of FREDERICK S. MAXFIELD, Esq., Secretary of the United States Legation, of a Daughter.

### SUMMARY OF NEWS.

SIR RICHARD RENNIE is staying at Miyanoshita.

A METEOROLOGICAL observatory is to be erected at Kamikawa, in Hokkaido.

THE French Representative and Madame Sienkiewicz have gone to Nikko.

MR. NABESHIMA KAN, Senator, has been appointed Governor of Aomori Prefecture.

THE weather during the week has been seasonably warm, with occasional thunder-showers.

MR. GREATHOUSE, the new Consul-General for the United States, has arrived in Yokohama.

MARQUIS HACHISUKA, Minister to France, left his port for Japan towards the end of last month.

JUDGE YUFI, of the Yokohama Saiban-ko, has been appointed a Councillor to the Board of Appeal.

THE Hawaiian Representative, Mr. R. Irwin, has returned to Japan from America, and is staying at Yukao.

SILVER, to the amount of 300,000 ounces, has been received at the Imperial Mint from Tokyo, the greater part of which will be coined into 10 and 20 sen pieces. Work will be com-

menced on this subsidiary coinage after the summer vacation.

THE *Nichi Nichi Shimbun* states that a satisfactory basis of Treaty Revision has been arrived at.

AN elaborate Code of Local Government Regulations has been published by Imperial Ordinance.

THE term of service on the island of the troops detached to Okinawa Prefecture has been fixed at one year.

GENERAL COURT KURODA and party left Vladivostok on their journey across Siberia on the 11th instant.

THE organization of the Rice Exchange is to be altered shortly on the model of similar institutions in Europe.

THE Government is said to have granted the application for permission to construct a railway in Kiushu.

THE order of the police closing all places of public assemblage in Osaka was repealed on the 27th instant.

THE deposits in the various officials savings banks throughout Japan now aggregate twenty-two million yen.

DURING the month of June last, 257,812 rolls of silk stuff, worth yen 198,203, were sold in the Ashikaga market.

THE Naoetsu Railway will be opened on the 1st of August. It is 18 miles in length, and has half-a-dozen stations.

BUSINESS in Kyoto is reported to be looking up, and a corresponding improvement in the money market is the result.

M. VON HOLLESEN, H.I.G.M. Representative, has been decorated with the First Class Order of the Rising Sun.

THE graduation ceremony at the Tokyo Technical College, founded by Mr. Okuma, took place, the 26th instant.

IT is stated that a company for the export of goods to China is to be formed in Osaka with a capital of 300,000 yen.

MR. E. SATOW, H.B.M. Minister Resident at Bangkok, is staying at Nikko. Mr. Satow's health is nearly restored.

AN Imperial Ordinance has been issued, declaring the meridian of Greenwich to be the standard for this empire.

PRINCE LOUIS NAPOLEON arrived at Hakodate on the 26th instant, and will leave for Tokyo about the 10th of next month.

NUMEROUS attempts to pass damaged and ill-prepared tea are observed to be constantly frustrated and the stuff seized and burned. The officials of the Tea Examiners' Bureau are doing

their duty strictly, and producers are having some severe lessons that "honesty is the best policy."

AN Imperial Ordinance has appeared sanctioning the creation of the office of Vice-President in the Bureau of Construction.

FROM 40 to 60 cases of cholera occur daily in Tokyo, but the disease cannot be said to have yet assumed an epidemic form.

THE Spanish Representative, M. Delavat, is staying at Ashi-no-yu, and is said to be somewhat seriously indisposed.

THE compilation of a history of the currency of Japan has been completed in the Senate, and a draft copy submitted to the Cabinet.

THE Permanent Committee of the Tokyo Local Assembly has voted 35,442 yen for sanitary purposes in connection with cholera.

THE remains of three police constables who died of cholera were interred with considerable ceremony, during the week in Yokohama.

MR. MISHIMA, Police Inspector-General, has received the additional appointment of Vice-President of the Bureau of Construction.

THE cattle of the Japan Dairy have been purchased by the Hongkong Dairy Company, and were shipped for Hongkong, the 29th instant.

AN association of dealers in tea, lacquer, porcelain, bronze, textile fabrics, &c., is about to be formed in Tokyo, with a capital of one million yen.

THE Nippon Ginko has submitted a question to the Government as to whether it can receive, on deposit, shares of the Nippon Yusen Kaisha.

COUNT ITO AND GENERAL COUNT OYAMA have proceeded along with the Marquis Saionji to Tomioka, where they will spend several days.

MR. NIJIMA Jo, president of the Doshinsha in Kyoto, has applied to the authorities to exempt the graduates of the school from conscription.

THE Korean refugee, Kim-yo-kun, has been taken into custody, and is now lodged in a house at Noge specially prepared for his reception.

THE celebrated violinist, Remenyi, has arrived in Japan, and given concerts at Nagasaki and Kobe. He will appear in Yokohama on Tuesday night.

LAKE Biwa has fallen below its usual level, but the farmers all through the province of Omi are rejoicing at the prospect of an unusually plentiful harvest.

REMOURS are current in Kobe to the effect that the China Merchants' Navigation Company propose to again attempt the opening of a line to Japan.

IS bringing up the report of the Working Committee of the Municipal Council of Kobe, Mr. Lenz mentioned that not a single case of cholera

Original from

had occurred in the Foreign Settlement since the last meeting of the Council a month previously.

It is stated that the authorities propose to establish a Japanese Consulate in Singapore, as the number of Japanese residing there has considerably increased.

THE premium on silver in Kobe has fallen from *yen* one per \$1,000 to *sen* 60, as the pressure occasioned by the recent large deliveries of goods is nearly past.

LANDED property in the foreign settlement of Kobe has recently much improved in value. ■ small lot—49.4 *tsuba*—having been sold at auction for \$1,900.

THE Tōkyō Agricultural and Dendrological School (which is an amalgamation of the Imperial Agricultural College and the Dendrological School) has been located at Komaba.

GENERAL COUNT YAMAGATA will tour through Hokkaido about the middle of next month, and will inspect the port of Otaru, which place it is proposed to open to foreign trade.

AT an audience with the Hon. Sir Francis Plunkett, the Emperor announced his intention of presenting the Grand Cross of the Chrysanthemum to the Prince of Wales.

A SUM of \$934 has been subscribed, up to the present, by the foreign residents of Tōkyō and Yokohama, as a fund to relieve the families of sanitary officials attacked by cholera.

SOME changes were effected in the organization of the Tōkyō City Government on the 26th instant, in accordance with the new rules applicable to officials of local governments.

It is reported from Otsu that the water in the wells is unusually low, and that this is caused by the Osaka-Biwa Canal Works. The authorities are now engaged investigating the matter.

MR. KAWASAKI MASAZO, who now owns dockyards at Tsukiji, Tōkyō, and Higashidema-chi, Hyōgo, has repaid the loan he obtained from the Government when starting his business in 1876.

AT an extraordinary meeting of the Permanent Committee of the Tōkyō City Assembly, held on the 23rd instant, expenses for the prevention of cholera, to the amount of *yen* 35,442 were voted.

RETURNS of the profit and loss accounts of Japanese Banks and Companies, for the half-year ended June 30th, have been published. The dividends to shareholders range from 6 to 17 per cent.

THE Komaba Agricultural College and the Tōkyō Dendrological College have been abolished by Imperial Ordinance, and the Tōkyō College of Agriculture and Dendrology established in their stead.

THREE hundred and forty-five families will settle in Ewake and Shinouzu villages, in Ishigari, and various divisions of Nemuro, in the course of this year, in connection with the colonial military scheme.

SOME enterprising merchants at Nemuro have resolved on raising a fund for the construction of warehouses for the storage of marine produce. Operations are to be commenced soon. It is

generally expected that the work, if completed, will go far to regulate the prices of marine products.

KAWAI TSUNESHICHI, a tea merchant in Yokohama, has been excluded from the membership of a society of his fellow-merchants in the town in consequence of having sold spurious tea to a foreign merchant.

THE cholera has decreased to such an extent in the Lower Urban Division of Kyōto, that the magistrate of that district has recommended the authorities to cancel the prohibition of public gatherings.

AN American recently exported 10,000 lemonade bottles made at the Kihara Glass Works, at Osaka, and these have proved to be so much superior to those of foreign manufacture that further large orders have been received.

MR. OKAKURA, a graduate of the Literature Department of the Imperial University, and a first rank clerk of the Educational Department, will be despatched to Europe at an early date to investigate the arts of foreign countries.

THE sale of Japanese flannel, manufactured in the province of Kishiu, is rapidly increasing, the entire quantity to be produced during the next three months having been already contracted for by merchants of Osaka and Kyōto.

THE United States Minister has granted the application for another trial in the case of Fullert, who was recently condemned to six months' imprisonment and a fine of \$2,000 for aiding Paymaster Watkins, U.S.N., to desert.

JOHN GILLAM, a clerk in the employment of the Yokohama Drayage and Lighter Company, was sentenced yesterday, by Russell Robertson, Esq., Assistant-Judge, H.B.M. Court for Japan, to suffer six months' imprisonment for having embezzled \$245.50.

THE daughters of the nobility and officials of Kyōto are forming themselves into an association for the study of domestic economy, the treatment of children, and kindred subjects, lectures upon which will be delivered to the members by competent persons.

RECENT Hokkaido advices state that a coal mine has been discovered in the Reihenei mountains, in Teshio. The coal bed has been ascertained on a first survey to measure more than forty *ri* in one direction. The coal is stated to surpass the Poronai coal in quality.

MR. OSEKI, Governor of Okinawa, has come to Tōkyō with two natives of the prefecture, whom he intends to send to the Medical Department of the Imperial University. They are the first natives of Okinawa who have ever attempted to enter the Imperial University.

THE Kobe Shinshekai, which for some time past has been doing a considerable trade in Japanese goods by exporting them to Sydney, New South Wales, has been compelled to retire from that business on account of a duty of 50 per cent. *ad valorem* which will in future be levied.

IN the action by the master, owners, and crew of the American ship *Clarissa B. Carver* against the owners of the British steamer *Glamorganshire*, Mr. J. C. Hall, acting as Registrar in H.B.M. Court for Japan, has awarded \$66,917.27. The amount claimed as the value of the *Clarissa*

*B. Carver*, her stores and equipment, freight, and effects of master and crew, was \$95,417.41.

IN order more readily to recognise the numerous army of pickpockets who make their headquarters in Osaka, the police have determined to photograph those at present under observation, and others as they are captured. No less than 80 members of the fraternity recently "sat" in one day to the artist attached to the force, whose counterfeit presentments will forthwith adorn the rogue's gallery at the Central Station to form a "study" for the detectives of the Osaka Police.

FIRE broke out on the 21st instant in Kobe, and, owing to a strong breeze, was not subdued till forty houses had been burned, eight of which were large buildings. Through the active and untiring exertions of the police, however, very little movable property was destroyed, the constables being reported to have "maintained excellent order, and worked with a vigour and well-directed energy deserving the highest praise."

IN the Import Market, Manchester goods have been in fair general demand, though the amount of business done is not equal to that of several weeks past, which is accounted for by the fact that the recent large purchases have to some extent satisfied present requirements. Prices, however, for some time past have been on an ascending scale, and a factor in the diminution of trade for the past six days is the hardening rates demanded by sellers. Nevertheless, dealers are still prepared to pay the advance demanded to fill pressing orders, and in the matter of Yarns, prices close firm both for English and Bombay, and buyers are still in the Market. Cotton Piece-goods have been in good request, prices being fully maintained in some cases, and quotations advancing in others. Woollens and Fancies have had a moderate sale at previous rates. There is but little to report in either Metals, Kerosene, or Sugar, and quotations are almost nominal. The principal features of the Silk trade are a strong market and small business, buyers and sellers being to a certain extent at arms' length. How long the situation will remain thus is almost a matter of conjecture, but it is tolerably plain that at the moment holders have the upper hand. Native merchants are, consequently, jubilant, and scout the idea of concessions; while buyers are forced to be extremely cautious. The small business has increased the stock quite 500 piculs, which would have been largely augmented had the Silk up country which is ready for the market been brought down. In Waste Silk rather more has been done, but its position generally is very similar to that of Raw. Tea continues to come in large quantities, and sales are in proportion to the supply; prices, however, are down a dollar on all grades. Shipments go merrily on, notwithstanding prices at the places of consumption are four and five cents lower than at same time last year. Silver has again gone down slightly, and Exchange has been affected in proportion.

#### NOTES.

MR. KIM-YO-KUN's case furnished another pleasing illustration of the working of extraterritoriality. The Japanese Government decided that Mr. Kim must "move on." After allowing him to find asylum in this country for a year and a half, they came to the conclusion

Original from

that his presence was no longer consistent with the interests of the Empire's domestic tranquillity and foreign relations. But Mr. Kim very prudently took refuge in the Grand Hotel, Yokohama. How was he to be removed from that comfortable retreat? The Japanese police could not enter the Hotel without a warrant from the Consul of its proprietor's nationality, and such a warrant was not immediately forthcoming. So Kim was in a position to snap his fingers—and for aught we know to the contrary did actually snap his fingers—in the face of the Japanese Government. "Yes," we can fancy him saying, "I am living in your territories, and you consider me a political refugee of a dangerous character. But I am in one of those castles which belong to the great extra-territorial *imperium in imperio*, and so long as I remain here I defy you to touch me." As a new development of an old situation the incident was interesting. It admitted of only one interpretation; namely, that the extraterritorial privilege of exemption from the jurisdiction of Japanese tribunals carries with it the right of harbouring political refugees within Japanese territory.

THE leading Tōkyō journals notice the change of policy, in reference to railway construction, involved in the notification issued the other day by the Minister President of State. The *Nichi Nichi Shimbun* says:—The adoption of the Tōkaidō line in place of the Nakasendō, as made known by Ordinance No. XXIV. of the Cabinet, has been chiefly brought about by the representations of the Chief of the Railway Bureau, though, no doubt, in coming to their decision, the Cabinet were to a certain extent influenced by their own independent ideas. The connection of the capital with Kyōto and Osaka by railway lines has long been desired by the public, and the line generally preferred was that along the Tōkaidō. But some weighty considerations, whatever they may have been, led the Government to choose the Nakasendō. It now seems, however, that these considerations have been put aside, and that, looking solely to the advisability of speedily connecting the new with the old capital, the line along the Tōkaidō has been adopted. Whatever may be said of this change in the policy of the Government, we must give our approval to the new step, for we are ourselves desirous of seeing Tōkyō connected by rail with Kyōto and Osaka. The advantages of the Tōkaidō line, over the Nakasendō, are four, according to the Chief of the Railway Bureau; (1) The Tōkyō-Nagoya line is shorter than the Nakasendō line by about 20 miles; (2) traffic along the former line will occupy only 15 hours, while it will take 20 along the latter; (3) the former line can be constructed for *yen* 10,000,000, while the latter requires *yen* 15,000,000 in addition to what has already been spent; (4) the former line can be finished in the near future, while it will take at least 7 or 8 years more to complete the latter. Far from criticising the Government for choosing at the outset the Nakasendō instead of the Tōkaidō, we are rather pleased by their candour in acting upon the representations of the Chief of the Railway Bureau. We ought, however, to state that they were not altogether free from blame in having adopted a route, as in the case of the Nakasendō, without making sufficiently accurate preliminary surveys. Instances in which the course of a line, and frequently the whole plan, are changed on taking

construction surveys, are, we are told, by no means uncommon in other countries, so we do not intend to be severe upon our Government; but, remembering that it is too often the case in this country that an undertaking is commenced without thoroughly considering its probable success, it is of serious importance, for individual as well as for national interests, to be more cautious in action. The Tōkaidō line has been adopted, and we hope that it will be completed as speedily as possible. As to the Ueda-Naoetsu line, it will of course be important to take steps to extend the line to the distance contemplated; and, besides, as the reclamation of land and the encouragement of industries in the waste regions bordering on the Nakasendō demand the presence of a railway, the construction of the Nakasendō line at some future time must not be lost sight of.

The *Hochi Shimbun* says.—By Ordinance No. XXIV. of the Cabinet, the Government have intimated their resolve to discontinue the construction of the Nakasendō line, and to lay a line along the Tōkaidō. Among the reasons which led the Chief of the Railway Bureau to suggest this change in the scheme, may be mentioned:—(1) the extremely rough nature of the ground, (2) the extraordinary length of time required for the completion of the line, and the slow speed of trains, even if it were completed; and (3) the wild and utterly waste nature of the country bordering on the line, which makes the construction of a railway there practically useless. The alleged advantages of the newly adopted line are said to be four, namely:—(1) the short distance—shorter by about 20 miles—and the level nature of the ground; (2) the relative cheapness of construction, *yen* 10,000,000 being sufficient; (3) the greater speed of trains than in the case of the Nakasendō; and (4) the shorter length of time needed in construction. There may be some exaggeration in these statements, but there is no doubt as to their general trustworthiness. It was always our opinion that in every way the Tōkaidō is preferable to the Nakasendō line, and we are therefore pleased that the Minister President of State has at last adopted the Tōkaidō route, although it is to be regretted that the change was not made earlier. With regard to the Takasaki-Naoetsu line, the consideration that made it valuable in the public eyes was the circumstance that it was to form a part of the connecting line between Tōkyō and Kyōto, and naturally the stoppage of operations must cause considerable inconvenience to those people who had commenced undertakings in anticipation of the completion of that line. Such persons are, however, themselves to blame for their rashness in calculation; though it cannot be denied that the Government have more or less moral responsibility for the inconvenience caused. If the Government make wise use of the lesson they have received now, it will be productive of good results in the future; and this remark applies as well to every other affair of State. As to the completion of the Takasaki-Naoetsu line, no apprehension need be entertained, for, from the memorial of the Chief of the Railway Bureau, it is plain that it will be constructed throughout its entire distance. We sympathise with the Nippon Tetsudō Kaisha, for their object in constructing the Takasaki-Ueno line was to profit from the completion of the Nakasendō railway, and their

branch will now become comparatively unimportant.

The *Fiji Shimpō* says:—Count Ito has notified, by Ordinance No. XXIV. of the Cabinet, that the Tōkaidō line has been adopted in place of the Nakasendō. It gives us pleasure to know that the opinions we expressed in our issues of the 9th and 10th instant exactly coincide with those stated in the memorials of the Chief of the Railway Bureau. Leaving aside the fact that the Government have been blind for the last four years to the plain advantages of the Tōkaidō over the Nakasendō line, we not only congratulate the Ministry on their candour in correcting their mistakes, but we are also glad in the interests of railway construction to find that the importance of railways has now so far been recognized, and that they are no longer regarded as a species of toy. Judging from the spirit of the adoption of the Tōkaidō line, we observe a vital change in the railway policy of the Government. In our issues above alluded to, we took the ground that, in constructing railways, we must proceed first with those lines which are likely to be most useful, such as those connecting great and flourishing towns, and, after they have been completed, turn our attention to the less frequented routes. But the tendency of the Government has been in the past in the opposite direction. Something of their late policy may be understood by referring to the statements made by the Chief of the Railway Bureau, concerning the principal objects aimed at in constructing the Nakasendō line, one of these being that of giving facilities of transportation to the distant districts along the line and of stimulating industries. But as the Tōkaidō line has been adopted, it now appears that the Government have found out the error of their railway policy in the past, and will hereafter endeavour to afford facilities to the already flourishing routes of commerce and communication, in preference to those less important. We earnestly hope that, acting on this principle, the Government will connect the whole country from one end to another with railway lines as speedily as possible.

We cannot altogether sympathise with the *Hochi Shimbun's* view that "object of the Japan Railway Company in constructing the Takasaki-Ueno line was to profit from the completion of the Nakasendō Railway," and that "their branch will now become comparatively unimportant." It is true that the Tōkyō-Takasaki line was originally considered a section of the trunk road between the two capitals. But it was, at the same time, a line which offered special attractions for its own sake. Mr. Vicars Boyle, in his official report of 1876, wrote:—"The position and trade of Takasaki, and the comparatively easy nature of the works to be executed between it and Tōkyō, seem to point out this section naturally as the first extension of the existing line from Yokohama that could be undertaken with profit and advantage. The cost per mile should be much below anything that has yet been done elsewhere in Japan. \* \* \* \* Whether considered alone, or in connection with the open lines, there seems to be no other district in Japan where more remunerative traffic may be expected." The truth is that the Tōkyō-Maezashi road, if properly worked, ought to pay handsome dividends. The Japan Railway

Company has, in our opinion, very little to complain of. Whether it might not be wise on the part of the Government to seize the present opportunity of converting this line into State property, is a question which seems worth serious consideration.

THE community will learn with pleasure that Mr. J. J. Foster, the advance agent of M. Remenyi, has arrived in Yokohama, and announced that we are to have a visit from the famous Hungarian violinist, who will perform in the Public Hall on Tuesday next. All who have enjoyed the privilege of seeing this really great artist, and listening to his wonderful performances, are unanimous in their expressions of admiration. Remenyi has within recent times been touring through Australia (whither he had gone from the United States) and India, and his progress northwards from Singapore, Hongkong, &c., has been heralded by reports which all testify not less to his extraordinary powers than to the general homage paid to his genius. The following extract from a notice which appeared in an Indian journal will be of interest in view of the great musician's approaching visit:—"Remenyi does not, in the ordinary sense, play the violin—he does not fiddle; he makes music upon it. He himself is keenly alive to the witchery of sweet sounds, and therefore he goes straight to the poetic sense of his hearers. The charm of a fantasia is appreciable to the audience because it is first felt in all its force by the artist. In Schiller's words:—"Nur das empfundene wird empfunden"—what comes from the heart goes to the heart. In short, Remenyi is an enthusiast, and he is devoted to his art. Even in his programme the dominant idea was to be seen—the love of music in preference to mere violin exercises. All the pieces he played were marked by "colour" or character of some strong and peculiar kind. The weird strain of the "Huguenots," breaking through the swift-changing variations, and alternately swelling and dying away, seemed to reverberate as if in the echoing aisles of some old cathedral. The "Hungarian Melodies" were a series of brightly coloured pictures, instinct with the life and mirth of the gayest race in Europe. Chopin's Nocturne in E flat and the valse from Delibes' "Sylvia," both transcribed for the violin by the player, appealed more strongly to the audience than any of the other pieces, and that for artistic as well as sentimental reasons. They received more applause, and they deserved it, if for artistic reasons alone. They gave the artist the opportunity of displaying his skill in every form of musical expression, ranging from lyrical simplicity to the most daringly brilliant of rhapsodies. In the quick, lightning movements, the violin fireworks—as the showers of golden notes may well be called—the limit of perfect execution was reached."

ON Monday afternoon the interment took place of the remains of Mr. Tsukow Kawamata, a constable of the Bluff sub-station, connected with the Settlement Police Force, who succumbed to cholera the other day. The funeral cortege left the Buddhist Temple Zotokuin at four o'clock in the afternoon, and proceeded to Kuboyama. The coffin was preceded by red and white banners, sacred trees, flowers, garland offerings from H.E. the Governor of the Ken, the Chief Secretary, the Second Secretary, the Chief of Police and the Superintendent of the Settlement Force. Ten of the deceased's

comrades marched as an advance guard, followed by 5 Shinto priests, a white silk banner bearing the name of the deceased, an incense burner, and the usual vegetable, fish, and confectionery offerings. The pall was borne by four policemen, friends of the deceased, and the chief mourners were his brother and nephew. Following the coffin came two buglers, two inspectors, and twenty constables from the Settlement and Yokohama Police Stations. Mr. Taki, second secretary of the Local Government (on behalf of H.E. the Governor) and Mr. Den, Chief of Police, attended in carriages, and there were also present Messrs. Nosse, Superintendent, Settlement Police; Adachi, Chief of the Police Bureau; Harada, superintendent, Yokohama Police Station; and Ishikawa, inspector in charge of the Bluff sub-station. Six inspectors, the same number of assistant inspectors, and 150 police constables brought up the rear of the procession, the route of which lay through Motomachi, Honmura Road, Otamachi, Bashamichi, the Iron Bridge (Yoshidabashi), and Isezakicho, to Kuboyama. The deceased officer had been attached to the Bluff Station since June, 1881, and was recognised as one of the best men in the service. He was one of the first detachment that joined the Sanitary Corps, and was engaged in the discharge of his duties when he was seized by the dreadful disease. Mr. Kawamata leaves a young widow, who unfortunately is about to become a mother. From the provision made by Government, as well as the private subscriptions which have been collected for the purpose of assisting the families of such sufferers, the deceased's dependants will be maintained and the funeral expenses will be chiefly defrayed. The action taken by the authorities in reference to the interment of the deceased sufficiently indicates the high estimation in which he was held by his superiors.

MR. SONNEMVILLE, Chief of the Daily Press Department of the Western Union Telegraph Company, recently gave the public some interesting figures with regard to the growth of telegraphic communication within the United States and the reduction of prices consequent upon competition between the rival telegraph companies. Telegrams for newspapers, including the Associated Press service as well as special press dispatches, have reached the immense figure of a thousand million of words per annum. The growth of the special service, independent of that of the Associated Press, shows the keen rivalry that exists among the larger papers to be in advance of one another in supplying the public with the very latest news. In 1870-79, only 32 million words of special press despatches passed through the offices of the Western Union Telegraph Company, but in 1879-80, the figure reached was 55 millions, and the last business year of the Company showed that more than 120 millions of words had been sent in special despatches to the newspapers of the country. The growth of this special, as well as of the Associated Press service, and the inevitable competition between the various companies to secure the lion's share of this profitable traffic, have resulted in a great reduction of prices. In 1879, the average charge for one hundred words was \$1.87, but to-day it is only 57 cents. In Great Britain the average charge is still cheaper. Associated Press dispatches, however, are trans-

mitted at a rate averaging 14 cents per hundred words in America, and for such messages transmission is cheaper in the United States than in Great Britain. In 1879, the charge for one word sent to the Pacific coast was 10 cents, but to-day a word sent to San Francisco costs no higher than 1½ cents on the average, and the price of sending it to the remotest point of the coast does not exceed 2 cents. More than that is never charged. The old price ruling between New York and Chicago, 3 cents a word, has by competition been rapidly reduced to ½ cent, and the charge from New York to Washington, once 1 cent, is now but one-fourth of that price. Many daily papers, under these circumstances, prefer to rent a wire by the year and keep it continually at the disposal of their reporters, who in turn are urged by mutual rivalry to be as prompt and as alert as it is at all possible for human beings to be. As early as 1870, for instance, by the indefatigable efforts of the *New York Herald's* correspondent, the battle of Woerth or Reichshofen and its results were known in New York a considerable time before they were known to the citizens of Berlin, and some even claim the message to have been in New York before the official news had been wired to Berlin.

A JUDGEMENT delivered in H.B.M. Court for Japan, the 27th instant, strikes us as peculiarly hard. The plaintiff, a Japanese, had informed Messrs. Brett and Company that he purposed publishing a directory of Yokohama and Tôkyô, and on the strength of this representation had received an order for a full-page advertisement at the cost of 16 yen. This happened in July, 1884. There was no distinct agreement as to the time of the directory's publication, but an agreement would almost have been superfluous, as it must have been clearly understood that unless the book was placed in the hands of the public early in the year, its sale, and therefore its use as an advertising medium, would be virtually lost. There are already published in Yokohama two excellent directories—one by the *Japan Gazette* and one by Mr. Meiklejohn—and any directory seeking to compete with these must be not only thoroughly accurate but strictly punctual. The directory in question did not make its appearance until the end of June in the year to which it referred. Under these circumstances, all chance of its circulation was gone, and the advertisements it contained might as well have been pasted inside a chimney. Messrs. Brett & Co. naturally declined to pay 16 yen for the privilege of occupying a page in such a bundle of waste paper. But the publishers of the directory appear to have been more keen than fair. They sued for their money, and obtained judgment for the cost of the advertisement, the Bench being, of course, unable to look beyond the four corners of the agreement and finding nothing there with regard to date of issue. We should like to know how far the law would carry this amusing deference to the letter of a contract and indifference to the spirit of justice. The publication of the directory was six months late. Suppose that it had been eleven months late, what then? Would Messrs. Brett have still been ordered to pay for their full-page advertisement? If not, why not? If the law undertakes to discriminate at all, why should not its discrimination begin with a six-month, as well as with an eleven-month, delay? If it is wholly without discrimination, more's the pity.

"PUBLIC appreciation" is often an excellent *deus ex machina*, but we question whether the case of Mr. James O'Kelly and Mr. J. Chamberlain ought not to be submitted to a sterner tribunal. Mr. O'Kelly has not only circulated villainous stories about Mr. Chamberlain, but has also given the lie direct to the Radical leader, who, however, elects to place his reliance on "public appreciation." The following correspondence tells the whole story:—

40 Prince's-gardens, S.W., May 31, 1886.

SIR.—A correspondent has sent me a copy of a New York paper, in which there appears a letter signed, 'James O'Kelly,' and dated from the House of Commons Library, May 15. In this letter it is stated among other things that 'in a fashionable drawing room during the week Chamberlain described Gladstone publicly in language usually reserved to the special use of drunken rowdies, and which is unfit for publication.' In the same letter the following passage appears:—"It seems he (Mr. Chamberlain) goes about among Radical and Liberal members saying privately, 'Why should we concede Home Rule to Parnell?' The dynamiters are on his track, and sooner or latter they will kill him." Both these statements are absolutely and entirely untrue. I am not in the habit of using language unfit for publication either in drawing rooms or elsewhere, and I have never used such language about Mr. Gladstone or any one else. I know nothing about the proceedings of dynamiters, and I have never stated that they were on the track of Mr. Parnell, nor have I any information whatever which would justify such a statement. I now call upon you to give the authority for the assertions contained in your letter, and at the same time publicly to withdraw the statements you have been induced to make, with so much circumstantiality, and at the same time without the slightest real foundation. I reserve the right of publishing the correspondence.

I am yours obediently,

J. CHAMBERLAIN.

James O'Kelly, Esq., M.P., House of Commons.  
House of Commons Library, June 3, 1886.

SIR.—The statements quoted in your letter of May 31 were made to me by English members of the House of Commons and of the Liberal party, but they were not made for the purpose of publication. Therefore I alone am responsible for giving them to the public. At the earliest opportunity I shall publish your denial in the same manner as the original statements, but I decline to withdraw them, because confidential information in my possession convinces me that, notwithstanding your denial, it is a fact that you have used expressions in reference to Mr. Gladstone of the character imputed to you in my letter.

Yours obediently,

JAMES O'KELLY.

The Right Hon. J. Chamberlain.  
40, Prince's-gardens, S.W., June 4, 1886.

SIR.—I regret to learn from your letter of the 3rd inst. that you have published the slanders of which I have complained on information the authorship of which you are unable or unwilling to produce. I shall leave to the public the appreciation of these characteristic tactics.

Yours obediently,

J. CHAMBERLAIN.

James O'Kelly, Esq., M.P.

It would seem that the thin end of that wedge which diplomats, syndicates and journalists have been trying to insert in the armour of Chinese conservatism for so many years, is at length likely to find a chink for itself. A correspondent of the *North China Herald* writes from Tientsin:—"When H.I.H. Prince Ch'un was on his visit here, one of the improvements discussed between him and H.E. Li Hung-chang was the best way of introducing railroads into the Empire. It was at last agreed that, as there were already a few miles of rail laid down from Kaiping to Hsü Ko Chong, the best plan was to extend the line, and thus have a road worthy of its name without exciting the opposition of the anti-railroad men in Peking. The Prince left for the Capital, and, in an interview with Her Majesty the Empress Dowager, His Imperial Highness suggested the idea, to which the former assented. A scheme was therefore formed to raise the capital for the work, on a public share-holding basis. This has been going on for some time, and the concern is almost ripe, and, no doubt, at no distant date we

shall see the first railroad built in this country, constructed in the North, under Imperial sanction. I believe that as Kaiping is not an important place, the traffic on the road between that town and Lutai, a length of about twenty-six miles, at which it terminates, will not be great, and the new company will not reap a heavy percentage from the capital they invest, but its chief importance lies in its being a precedent, and the mother of railroads in the Empire. The hope is that a further "extension" will soon be made, which will join Kai-ping, Taku, and this place. Lutai is situated on the Pai Tung River, and steamers of moderate draft can easily come and go with cargoes of coal. Thus, by steam-carriages and steamships, Kai-ping will be connected with the world outside, and the C. E. and M. Company will be able to send their coals abroad at a much cheaper rate of transport. The cost is estimated at Tls. 250,000; the country through which it passes is level, and everything is plain sailing. Both Lutai and Kai-ping are places on the highway from this port to the famous pass in the Great Wall, between China Proper and Manchuria, called "San Hai Kwan," or "the Pass of Hill and Sea." Through this pass the Tartar re-enters his old homestead from the land of his conquest, as it was through this that he first entered China 300 years ago. It is stated that H.E. Li Hung-chang has in view, besides, that this line should run along the Northern, or rather the Southern, Coast of this province from here to San Hai Kwan, connecting all the forts, to strengthen and defend the capital of Peking from Russians or Japanese who may have views of paying that city a military visit."

Writing on the question of railway charges in this country, the *Yiji Shimpō* says:—"The benefits of railways increase concurrently with, though not in proportion to, their extension. When a line 10 *ri* long is extended to 100 *ri*, the increase in length is ten-fold, but the increase in benefit is more than ten-fold; is as high as twenty or thirty-fold. Supposing the benefits of a line 10 *ri* in length to be estimated at a million *yen*, the benefits attaching to a line 100 *ri* long will be twenty to thirty million *yen*. Surely, then, it is not mere idleness that prompts us to speak so earnestly of the necessity for the construction of railways. As it is hopeless, however, to expect any speedy extension of existing lines, at the present rate of progress, we shall restrict our remarks in the present case to the rates and charges on railways. Rates for passengers are nearly on the same level with the hire of a *jinrikisha* or the cost of travelling in a carriage, or by boat. Freight rates are even more exorbitant; and, accordingly, few commodities are transported on the railway, except small parcels carried by passengers and those articles which must be sent in great haste. Taking illustrations from the Tōkyō-Yokohama line, it is observed that, while the connection of these two places ought to put the markets in the capital in direct communication with the landing place at Yokohama, merchandise is usually brought here from the latter place by boats. It is also noticeable that the prices of articles, such as fish and vegetables, differ in the two places, though considering the facility of communication, no difference ought to exist. It is thus desirable to lower the rates both for passengers and for goods, and at the same time to increase the number of trains, making them start every 30

or 20, or even 15 minutes day and night. It will then be possible to send to Yokohama by railway such bulky freight as grain, liquor, manure, etc., while as to passengers, even labourers, grocers, artisans, etc., will be enabled to use the railway for their business purposes. This is what we daily observe on the Tōkyō-Yokohama line, but the same thing is constantly reported from the country, complaints being made of the costliness of the traffic on railways. The port of Tsuruga is connected with the Kyōto-Osaka-Kobe line, but goods are still sent from that port by ships round Shimonoseki, because it is cheaper to take that course. So long as the charges are not lowered, railways will remain only a matter of novelty, not available for commercial purposes. It may be urged in defence of the present state of things, that the lowering of charges will lessen the earnings of the lines; but this is a very false notion, for as already briefly hinted, the lowering of traffic rates will bring the railway within the reach of an increased number of passengers and goods. Moreover, every great undertaking requires the sinking of a large sum of money during the first years, and it is only after the lapse of some time that any real profit is to be expected. If the accounts of any large company be examined, it will be found that for the first few years there is little or no profit. Those connected with the management of our railways ought to bear this point in their minds, and go on in an enterprising spirit, even if the present earnings of their lines be not very remunerative. Let us illustrate how they ought to proceed. At present, the slower modes of traffic are carried on side by side with railway lines. In spite of the connection of Osaka with Kyōto by a railway line, boats are run up and down the Yodo-gawa as busily as ever, and the traffic by the Tokaido between Tōkyō and Kanagawa is still kept up. Now, if the permanent interests of railways are to be aimed at, nothing is more important than to lower the rates of charges to such a point as will entirely disable the old modes of traffic for purposes of competition. It will then be easy to get the monopoly of transportation into the hands of railway offices and companies. If the lowering of rates to such a point actually lessens the earnings, then they may again be raised after other modes of conveyance have been completely defeated. For instance, *jinrikisha* coolies are at present competing with the railway line between Osaka and Sakai. If the passenger rate be cut down to half the present (4 *sen* for 3rd class), the *jinrikisha* coolies can no longer use the road, which will consequently become desolate and over-grown with weeds. It will be then be safe to raise the traffic rates a little. Proceeding in this way, it will be possible to make the railway the means of monopolizing transportation all over the country.

The *Hochi Shimbun* writes as follows on national education:—"In all departments of public business, stability of purpose is of the first importance. Particularly is this true of educational affairs; for if every change of Cabinet were to lead to alterations in the principle of national education, the harmonious advancement of education would be rendered well nigh impossible, while the inconveniences and unnecessary expenses which students and pupils would thus be obliged to bear at every change of the prescribed courses and text-books, would be simply enormous."

Original from

mous. In Europe and America this circumstance seems to have received the due attention of statesmen. In such countries as Prussia, France, Austria, and Russia, the Minister of Education is allowed a seat in the Cabinet, but the tendency is to put educational affairs as much as possible out of the range of the effect of ministerial changes. In England, Spain, Portugal, Holland, and the United States of America, some differences are observed in the position accorded to the official in charge of educational affairs; in some cases he is a member of the Cabinet, while in others he is merely a subordinate official. But in every case, the isolation of educational matters from political affairs is freely recognised. Our statesmen must be aware of this circumstance, but still the fact that there is noticeable more or less change in the principle of national education at each change in the *personnel* of the Department of Education, points to the necessity of reforming the entire system of that Department. Our plan for the reconstruction is as follows: (1) Appoint more than ten scholars of admitted standing as councillors for a term of not less than five years on a footing like that accorded to the members of the *Gakushuin*, and let them settle all affairs relating to the aims and principles of national education, and the selection of courses and text-books; and (2) maintain the Educational Department with the proceeds realized from the sale of text-books for all kinds of Governmental and public institutions of education, thus securing the monopoly of trade in text-books. We do not mean, however, to say that the present Educational Department should be lowered in status and be classed with ordinary semi-independent bureaux. Our point is, while allowing the Minister of that Department a seat in the Cabinet, to lessen his share of responsibilities in educational affairs, the principal work being done by councillors. In this way, he, on his part, will be able to render a greater amount of assistance to the Minister President of State in general political affairs. And such an auxiliary Minister must be of great importance when the National Assembly shall have been opened: for, the Ministers of other Departments being occupied in attending to affairs within their own respective competency, the Minister President will have difficulty in obtaining sufficient co-operation from his colleagues. In England, certain officials having comparatively insignificant business to transact are admitted into the Cabinet, so as to render assistance to the Premier: such, for instance, as the Lord President of the Privy Council, and the Chancellor of the Duchy of Lancaster. This is, however, only an accidental advantage of lessening the weight of the responsibilities of the Minister of Education. Other advantages, which are more to our purpose, may be enumerated as follows:—(1) the independence of education from political control; (2) the founding of education on scientific principles, (3) the prevention of frequent changes of the educational system; and (4) the obviation of changes in school courses and text-books, which lead to unnecessary expense and obstruct the progress of students. Let us now consider the economical side of our proposal. There is no denying that it is not desirable for the Government to intrude into private business enterprise, and, moreover, we are fully aware that private scholars and booksellers will be deprived of much of their

present profits, if the Educational Department is to appropriate the monopoly of the text-book trade. But we are disposed to think that the assumption of the monopoly of trade in text-books by the Department of Education will be far preferable to the continuance of that monopoly in the hands of worthless and unscrupulous petty merchants. The Minister of Education seems to be fully aware of the existing evil; he has done much to remedy it, by prohibiting officials connected with his Department from compiling text-books, and by establishing regulations for the inspection of text-books. But we fear that these measures will not be sufficient to effect a remedy, for officials are still able, if they are unscrupulous enough, to publish their productions under assumed names. And further, there are plenty of means to influence the judgment of officials in charge of the inspection of text-books. Thus we see no reason why the assumption of the monopoly of the text-book trade by the Department of Education should not be productive of better results than the continuance of the present wretched system on which that trade is conducted. If a private scholar happens to produce an exceptionally good work, the Educational Department may buy up the manuscript and publish it. Now, supposing that in common schools alone, there are about 3,300,000 pupils, and that each of them will expend 50 *sen* yearly for text-books, the total proceeds amount to about *yen* 1,600,000. Calculating the profit at 30 per cent., the annual net income will be about *yen* 500,000. Besides the pupils, primary schools and middle schools will spend a considerable sum of money upon text-books. Thus, while on the one hand utilizing the proceeds of the sale of books, and on the other economizing the expenditure, the Educational Department will be able to support itself, if not from the first year, at least within a few years after the inauguration of the system we have recommended.

THIS is the season of the year when one's rest is specially broken by noises, partly because dogs, cats, and other vermin like to disport themselves in the cool air of midnight, and partly because one's blood being constantly at fever heat, a slight jar sets the nervous system vibrating. At this particular period, then, the following essay on noises, which we take from the *Boston Advertiser*, will be read with interest:—

Every good citizen is interested in knowing how much noise the law will compel him to endure at the hands of his neighbors with impunity, and many citizens who are not good will doubtless like to ascertain how much noise they can inflict upon their neighbors without fear of punishment. Several decisions bearing upon these points have lately been made by the courts. One broad principle well established in the law of noise, both in this country and England, curiously illustrates the serious bend of our Anglo-Saxon natures, and that is the sharp distinction drawn between money-making noises and those which are made in the pursuit of pleasure. The law is tender to an engine or a hammer, and will allow them to disturb a whole neighborhood with impunity, but it is severe upon a brass band or a game of skittles. The good citizen must be very wary about playing foals or skittles in populous places. The traditions order this matter differently and restrain blacksmiths, bell-makers, etc., within somewhat close limits as to time and place, whereas they allow musical merry-masques to make night hideous or beautiful, as the case may be, without any restraint whatever.

The dog in English and American jurisprudence stands upon the border line, because he may be considered in either respect as kept for use, when a watch dog, or for pleasure, when regarded merely as a companion or an ornament. Here, however, we run against another principle of the common law, according to which dogs are privileged persons. For instance, it is unlawful for a farmer to shoot another's dog who has eaten his sheep, provided it be the animal's first offence of that kind, for the dog who is young in the sin of sheep-killing may repent and lead a respectable life thereafter; but if he has already been convicted of the crime, then it is lawful to shoot him. In other words, as Lord Mansfield once said: "The law allows every dog in England one bite at a sheep."

It has, however, been held that "the noise produced by a dog barking in the night is a nuisance, and that a man may shoot the dog and abate the nuisance when on his own premises;" that is, we presume, when the dog is on his own, the shooter's premises, for it has never been lawful for a man to stand on his own premises and shoot a dog in his neighbor's yard. A great judge, Lord Kenyon, held that a dog barking at night is not a nuisance, but it is doubtful if this would be considered good law at the present day. According to the definition given by one writer, a noise is a nuisance when it is "unusual, ill-timed, or deafening." This is plainly incorrect, for the noise of a nightingale in the streets of Boston would be "unusual," but hardly a nuisance. Some very "ill-timed" noises are also, in the eye of the law, not nuisances. Thus it has been held in the case of *Pool* against Higginson and Daly that it is not a nuisance for the parent of an infant suffering from colic to trundle a baby carriage all night in a boarding-house over the head of a nervous bachelor editor. This noise may not have been unusual, and perhaps was not deafening, but it would be an abuse of language to say that it was not "ill-timed." Probably what saved the parent in this case was the fact that the noise was useful, for the evidence tended to show that the baby was relieved by the trundling. On the other hand, useless noises, "such as a concert (we quote from a decision of the Supreme Court of Massachusetts), although they disturb but a single person, constitute a nuisance." It has very properly been held that a "show having brass bands, when continued two weeks," is a nuisance. It is not likely that many people will quarrel with this decision.

A kindred subject is that of nuisance by vibration. If a man attempts to operate a steam hammer near a dwelling-house, the law will restrain him. One authority states the rule as follows:—"The vibration must such produce a condition of things as, in the judgment of reasonable men, is naturally productive of actual physical discomfort to persons of ordinary sensibilities and of ordinary tastes and habits." The words in italics seem to imply that some persons like more vibration than others, and are in the habit of "vibrating" themselves.

Residents in the Back Bay, who are accustomed to pile-drivers in their close vicinity, may be said to have acquired the habits of vibrating, but we doubt if they have "taste" for it. However, this may be, the sum of the matter is that in the interest of trade or manufactures you may vibrate or deafen your neighbor with few restrictions, but that for purposes of pleasure your faculty of noise-making must severely be repressed.

THE area of land yet capable of cultivation in the United States is steadily diminishing, and the number of acres which the Government can still give to the western immigrant eager for a home-stead is rapidly decreasing. In no less than eighteen States there no longer exists a single acre of public land, and what of such land may be found yet in Ohio, Illinois, and Indiana is very little, almost exclusively taken up by swamps, and, in consequence, unsuitable for settlement. But little more is to be found in Louisiana, Mississippi, Alabama, and Florida. In Arkansas and Missouri, however, the Government can yet dispose of a number of eighty-acre home-steads; very desirable farms can also be had in Minnesota and Iowa, while forest land belonging to the Government is to some extent still found in Wisconsin and Michigan. But by far the greatest portion of public land lies beyond the rooth degree of longitude up to and a little beyond the crest of the Rocky Mountains. As we approach the Pacific Coast, public land again diminishes in extent, Washington having most and California and Oregon least. Arizona has yet a vast tract of Government land, but it derives whatever value it possesses from its mineral rather than its agricultural possibilities. In view of these facts, the agricultural population has become somewhat restive, and seeing that the best land nearest to the railroads and markets has already been taken up while only the less desirable portions of the public domain remain, they have entered upon an agitation of the question and have found unexpected and determined allies in the "Knights of Labour," a workmen's organization numbering about 750,000 members, permeated to some extent by ideas similar to those expressed by Henry George in his "Progress and Poverty." Owing to this agitation, the Committee on Public Lands took the question into consideration, and Mr. Payson, of Illinois, submitted to Congress a bill and a report on the subject. According to him only five million acres of agricultural land remain yet

unappropriated, and another fifty million acres can become valuable only by means of more or less expensive irrigation appliances. The chief offenders against the interests of the people have been the large American corporations and some foreigners residing abroad. The Earl of Gifford and the Holland Company, for instance, are said to own millions of acres, and it is claimed that through these an odious and un-American system of landlords has been introduced. Mr. Payson's report contains a detailed appendix showing that more than twenty million acres have passed into foreign hands. The responsibility for this state of affairs rests upon the United States Government and its agents. Land has been granted to railway and other large corporations in the most profuse and reckless style, and the only remedy now remaining is to make strong efforts to reclaim all land thus granted from such corporations as have evaded the terms and conditions of their grants. Further, all laws allowing the acquisition of large areas are to be repealed, and every possible provision is to be made to prevent capitalists and corporations from taking advantage of the actual and *bona fide* settler. The bill wishes to give expression in its provisions to the will of the people with regard to the public domain; namely, that all agricultural lands should be held for the people, to be given, free and without cost, in small home-steads, to settlers who engage themselves to live upon and to improve the land actually taken up. It is very likely that Mr. Payson's Bill will become law, but whether it can at so late a date effect the purposes it contemplates, is a question admitting of considerable doubt. A severe construction of the provisions of the Bill may involve the Government in endless litigations with corporations which in America at least have always known how to take care of their interests. It cannot be denied, however, that the too liberal railway grants of the Washington Government, while they have stimulated railway enterprise to a degree nowhere paralleled, have seriously interfered with the growth of some western settlements, and have on the other hand opened the door to wild and most pernicious speculations in land. The evil effects of this policy in the past, it would seem, cannot be remedied by legislation, and the value of the Bill has therefore to be sought in what it will prevent rather than in what it will cure.

A story is current which shows that even Americans can be too confiding. The scene is laid in Vladivostok, whither an enterprising citizen of the United States made his way some months ago. At Vladivostok officialdom reigns supreme. Men must do exactly as they are ordered by the police, or accept the consequences, which are pleasantly uncertain. Nevertheless, there is room for enterprise. Those who manage to make themselves agreeable to the authorities do a roaring trade. One can understand that these conditions might tempt a speculative "foreigner" with some command of coin. And one can understand, also, that under these conditions the patronage of an official of note might appear extravagantly valuable. This explains how the American got there, and also how he came to wish that he had stayed away. He found there a certain Russian Prince who wanted money and had many prospects to offer in exchange for it. The Amur is still undeveloped. The Prince promised sundry conces-

sions in that region, and the American, leaving a partner behind him in Vladivostok, went home to procure seventy thousand dollars, which were sent out in hard cash, together with sundry vessels chartered for the "development." One thing more the Prince wanted—a somewhat difficult thing to procure, being nothing less than a steam launch capable of travelling 13 knots an hour. There could be no straining at trifles. The launch was ordered, and in due time shipped for its destination. Meanwhile, the Prince had suggested to the partner that direct inspection of the region to be developed might be desirable, and the latter, acquiescing, set out upon his travels. While he was absent, a Japanese steamer appeared upon the scene and the Prince shipped himself quietly away. Shortly after his disappearance, the original American arrived and would have been in consternation had he not in his possession sundry documents duly signed by the Prince. These were carried forthwith to the Governor, but alas! people that deal with Princes are in the vicinity of danger. His Highness' signature, though as an autograph very pretty and very distinguished, was for legal purposes quite valueless. It is not improbable that a thirteen-knot steam launch may be offered for sale in these markets ere long.

THE *Yiji Shimpō* is remarkable for originality. Its talented editor continues to produce theories with a degree of regularity which is almost mechanical. We sometimes doubt, indeed, whether Mr. Fukuzawa has yet developed the capacity of appreciating the practical issues of all his proposals. Take, for example, his last suggestion—that the railways should reduce their rates so as to stifle all competition on the part of jinrikisha, carriages, or other modes of conveyance, and then, when they have established a monopoly, raise their charges again to a fairly lucrative point. What would be the object of such a proceeding? It surely is not the function of a railway to stifle, at whatever cost, every other agent of traffic. Moreover, unless railways pay a fair percentage on the capital sunk in their construction, they become a means of taxing one part of the population for the benefit of another. The Government of Japan are now constructing lines with money borrowed at 7 per cent. Suppose that they adopted the policy recommended by the *Yiji Shimpō*, and reduced the rates on these lines without any reference to net receipts. The consequence would be that, while the nation paid a tax amounting to, say, 5 or 6 per cent. on the cost of the railways, the inhabitants of the districts through which the lines ran, would be getting their produce carried at nominal charges. Very good for the inhabitants, but scarcely fair to the nation.

Some time ago—it may have been two years, it may have been three—a journalist in the Far East delivered himself of the verdict that the foreign corps diplomatique in a certain capital were not competent to deal with "grave and pithy matters of State." Unless rumour was unusually baseless, this sententious critic had made his social *début* as a carpenter. He had risen, it is true, to a position considerably above the level of the anvil and the lathe, but in his endeavours to manipulate the Queen's English there were frequent traces of the ex-artisan. Yet it is doubtful whether he really intended to be amusing when he posed as a judge of statesmanship and diplomatic competence. There are no

limits to human credulity and he probably believed in himself. We observe that he has now a humble imitator in the person of a correspondent of the *North China Daily News*. This gentleman writes from Peking under date July 6th:—"The new British Minister," he says, "and family arrived here on the 13th of June. They came by the T'ung-chow canal to the East side gate and thence in chairs to the Legation. Several members of the Legations rode out to meet the party and welcome them to Peking. British interests may safely be entrusted to the care of the new Minister." How forcibly one is reminded of the "eternal unfitnes of things" when one reflects that even among folks so humble as newspaper correspondents, there are Nestors who can tell at a glance whether "British interests may safely be entrusted" to this or that Ambassador Plenipotentiary. That such blossoms should be wasting their sweetness on the dusty air of Peking while men of whose capacities they can judge in an instant are appointed to Legations and Embassies, is a bad parody on the methods of even-handed justice.

Writing on foreign policy, the *Hochi Shimbun* says:—"If it is important even in personal conduct to have a fixed principle of action, how much more so is it in the case of nations? And it is particularly important to pursue a fixed and unyielding line of foreign policy towards China and Korea. Both these countries are noted for their national trait of despising all the outside world, and it is extremely unwise to show toward them the least sign of weakness on our parts, as such a course will only help to swell their inborn pride. If our foreign policy be flexible and untrustworthy, both China and Korea will constantly attempt to thwart our objects. China is self-contented, and ignorant of the intercourse of civilized nations, while Korea, having been opened only recently, is still permeated with conservative elements; and they are both unworthy of being admitted into international comity on an equal footing with European and American countries. On the other hand, Japan has entered the path of progress, and her people are intelligent and active, well-fitting her to be the leading nation in the East. Occupying such relative situations, there is no reason why Japan should not be able to exact respect and esteem from China and Korea; and if, in point of fact, she be unable to maintain this position, we are almost sure that her foreign policy will be to blame. In some quarters it is intimated that the fault lies with the insufficiency of our military and naval forces, but we can hardly agree with such a narrow view. It is not force alone that makes a State respected by others; a great deal depends upon intellectual power. If we are to wait the day when our fighting strength will be absolutely greater than that of Korea and China, we may be disappointed altogether, for China has a far larger area of land and a far larger population than this country. Shall we, then, be forever unable to get ascendancy over China? Certainly not, for just as it is not mere physical strength but intellectual force which makes a man respected by his fellow-beings, so in the case of nations, the powers of the mind principally determine the status of a country. Let us pursue a well-considered line of policy, and act firmly and daringly in times of emergency, and then we shall be able to maintain the position we are entitled to in this part of the East. The peace

Original from

of the East demands that we should attain to such a position, and the only way to accomplish our object is to pursue a firm and consistent line of foreign policy, elevated above the reach of petty intrigues and childish artifices.

THE *Saturday Review* writes pretty strongly about that traditional obstacle to private enterprise—and therefore to solid progress—the Ordnance Department. Here is what the *Review* says:—"That department is, in fact, a huge job worked by a ring of interested officials, who, by means of a great expenditure of national money, crush competition, suppress inventors, keep the country years behind Continental nations in guns, powder, and projectiles, and saddle it with abortions which their makers themselves dare not put to fair tests. The badness of its own work is only a part of the mischief it does. The other part is the blighting effect it has upon all who could do good work. The Woolwich monopoly has driven private enterprise out of the gun trade. We have, indeed, firms who can turn out guns as good as can be found in the world, but we have not firms who give their thought and skill to the continuous development and improvement of artillery. The reason is obvious. It does not pay men to invent and improve unless they have customers, and Woolwich is determined, before all other things, that they shall have no custom. The only use that Woolwich ever makes of a new idea is to wait until it is superseded by one newer still, and then to pirate it and assure a deluded country that it has at last evolved all out of its own head the ultimate type of excellence. Now, continual improvements are being made in guns, gun-carriages, gunpowder, and projectiles. All these things have to be co-ordinated with the utmost nicety in order to make a thoroughly good weapon. The best gun at any given moment is an organic design produced by a man who is master of all the best ideas in these different departments. It may be imagined what the result is when, instead of men at the head of their profession constructing such designs, we have only an artillery officer appointed for five years, who goes about in the marine-store-shops of second hand ideas, picks up one here and the other there, as one enterprising vendor or another gets his ear, and tries to construct national defence by piecing them together. Alert and open-minded men might at least give us a judicious second-hand assortment, and keep us supplied, say, with last year's ideas. But those who know most about the ways of Woolwich know that folly, stupidity, and jealousy, much as they may account for, barely explain some of the perverse proceedings of the Ordnance Department."

THE result of the elections in England must have taken the Liberal Party greatly by surprise. The despondency naturally caused by the vote on the second reading of the Home Rule Bill appears to have been followed by a strongly sanguine mood. Mr. Gladstone's triumphant journey northwards, the enthusiastic reception he received in Scotland, and the sustained strength and effectiveness of his oratorical efforts, seem to have restored confidence in his ability to sway the people as of old and conduct the campaign with all his ancient power. Reports from the Midland Counties also indicated a prospect of successfully combatting the influence of Mr. Chamberlain there. The Parnellites

were, of course, full of hope. When did Irishmen lack buoyancy of spirits? But the Parnellites, laboured under a curious difficulty. It was feared that if the uncrowned king issued a manifesto in the Liberal interest, an awkward response would be suggested to the Conservatives in the form of a copy of his call, last winter, for the unanimous casting of Irish votes in favour of Conservative candidates. Two documents of such diametrically opposite purport, issued at an interval of only six months, would have presented a strange spectacle, not to be explained even by the supposed agreement with Lord Carnarvon and its subsequent violation by the Conservative party. But despite the absence of a Parnellite manifesto, and despite the more important impetuosity of the Gladstonian Liberals, their belief in the magical strength of their leader's name and eloquence seems to have grown steadily up to the very eve of the contest. The *Pall Mall Gazette* opened a fund which it called "the people's pence," but whether the results were helpful to the Gladstonians we do not yet know. On the whole, however, "hope told a flattering tale" so far as the Home Rulers were concerned, and the shock of signal defeat must have been proportionately demoralizing.

LORD HARTINGTON'S election speeches are said to have indicated a degree of adhesion to the principle of local government which his previous attitude in the House had not given the public cause to anticipate. In other quarters, also, evidences of a similar conversion are declared to have been detected. Such changes of sentiment, however, are likely to remain inoperative since the country has spoken so bluntly against Home Rule. It is interesting to observe that another "coolness" had sprung up, towards the end of June, between Lord Salisbury and Lord Randolph Churchill. The latter, who is evidently now persuaded that strong measures, and strong measures only, can restore peace and tranquillity in Ireland, appears to have rebelled against the qualifications of a coercion policy which Lord Salisbury thought it expedient to make. Under the influence of this "coolness" Lord Randolph absented himself from a conference of Conservative leaders held on the eve of Lord Salisbury's journey to Leeds. This incident, though eagerly observed at the time, evidently failed to produce anything like a serious split in the Tory ranks.

WRITING ON Hokkaido, the *Nichi Nichi Shinbun* says:—While it is universally admitted that the island of Hokkaido is destined to be the most important source of our national wealth, it is a notorious fact that almost all undertakings in that island have hitherto resulted in failure. The principal cause of this failure may be a want of elevated principle in the business enterprises in that part of the country. But still we are inclined to suspect that it may be ascribed to the improper measures adopted by the authorities there in other times. We presume that Mr. Iwamura, the present Chief of the Hokkaido Government, is desirous of pursuing an entirely new policy, constantly keeping in view practicability before everything else. That he is earnest in his intention may be seen from the fact that some time ago he procured the opinions of several eminent business men—Messrs. Shibusawa, Masuda, Okura, Haru, and others—on questions relating to the development of Hokkaido. We are now informed that Count Inouye

will start for that region on the 5th of August. If we are rightly informed, his tour is not one partaking of the nature of an ordinary summer visit, but is intended to be a means of forming schemes for the development of the island. Count Inouye will be accompanied by Messrs. Shibusawa and Masuda, the Count's object being to secure in this way all possible information both from official and private sources. In connection with the tours of high officials, it is too often the case that the sources of information consulted are restricted to Government circles. The importance of securing aid from private sources applies equally to all other cases. The want of harmony between the Government and the people arises from the scanty opportunities of contact between the two. It is, therefore, important that, on one side, private citizens who occupy important places in society should keep themselves acquainted with the affairs of the Government, and that, on the other, the officials who are at the head of the national affairs should inform themselves as to the doings and views of the people.

THE recent elections in Italy endorse the Government's policy. M. Depretis finds himself at the head of a majority sufficiently compact for all his purposes. In questions affecting the ministry, as such, a party majority of about 60 votes, against the pentarchist and radical opposition is certain; and hence Italy expects for the present to have few, if any, ministerial crises. The attitude of the Depretis Cabinet in its relations to the Triple Alliance, and its evident, and very natural hesitation to enter upon a campaign of revenge against the Sultan of Harar, were the main points of attack selected by the pentarchist opposition during the elections. Cairoli, their leader, also insisted on greater economy in carrying on the administration of the Government, but any retrenchment made should in his opinion not affect either army or navy. While in office and during the congress at Berlin, he was never at variance with the principles on which Italian unity had been accomplished, and through him Greece was able to secure a valuable rectification of her frontier. At present, however, he explained that matters were different; that there was great uncertainty, and that, if he did not desire to speak on Italy's alliances, it was because he did not know who were her real allies. In Africa, he declared, Italy, though powerful and strong, had been reduced to apparent impotence, and the Government's policy there had led the country into a position whence they could neither advance nor recede. These attacks of the opposition might possibly have been successful, if the pentarchists and their five leaders could have given the electors any guarantee that they would agree among themselves as to the internal and external policy was to be pursued. But the experiment that was once made in that direction did not prove successful, but led, rather, to a multiplication of Cabinet crises. There is, of course, much that appears to be unsatisfactory in Italy's present condition. The misery and the recent riots of the labourers in Southern Italy; the bitter discontent of the peasants in the Po valley; the high and continually increasing taxation; the occupation by France of Tunis; the ill-success of the Massowa expedition; the hostile attitude of Abyssinia, and the massacre of the Porro expedition, have had their effect

upon the popular mind, and although in colonial affairs, surely, the Cabinet have followed the voice of the nation as it was freely and strongly expressed at the time without distinction of party, it is only natural that but few should now be willing to assume and to acknowledge responsibility for an unsuccessful policy. The massacre of Count Porro and his followers will, not, according to Depretis, lead the Government into hasty and ill-considered undertakings in Africa in obedience to the momentarily excited national sentiment, but when the time for action comes Italy will not be found lacking in vigilance and energy.

THE idea of utilizing the vast forces of the Niagara Falls for the purposes of industry has often been suggested by enterprising minds, and, difficult as its realization must seem, the suggestion has in it nothing impossible or chimerical. It has, however, been reserved to very recent times seriously to consider such an undertaking. Lately a company was formed to take at least a preliminary step. Under the rather long-winded title of "Niagara River Hydraulic Funnel Power and Sewer Company of Niagara Falls," the new association proposes to press the foaming waters of the Falls into the service of man. The real originator of the plan is an engineer, Mr. Evershed, who proposes to build a subterranean funnel on the most approved principles of hydraulics. By means of this he expects to supply the necessary water power to the factories erected or about to be erected in the little town of Niagara. The Niagara River has the advantage of never freezing and is never inconveniently low or in flood. It is stated that some Connecticut manufacturers have already signified their intention to remove their establishments to Niagara town. The most prominent members of the company are Mr. Kingsley, Chas. Gaskill, Thomas Welch, Henry Ware, Thomas Evershed, and James Gluck. Mr. Welch is a member of the New York State Legislature, Mr. Gluck a celebrated member of the bar at Buffalo, and Mr. Evershed an engineer in the service of the Erie Canal Company. The capital needed for a beginning has been fixed at \$200,000, but the company has expressly reserved to itself the right of raising that amount to \$3,000,000. The projectors have secured from the Legislature at Albany a charter, and as there is thus no impediment in the way of a commencement, the work is to be undertaken at once.

OWING to the efforts of the Italian Consul-General at Nice, statistical materials as to the number of suicides at Monte Carlo has been collected and sent by an international committee at Nice to the various Governments of Europe, with a view to soliciting, in this rather unusual fashion, concerted diplomatic action on their part against the gambling hells licensed by Prince Charles III. of Monaco. The material collected shows that, between 1877 and 1885, no less than 1,820 men perished at Monte Carlo by their own hands, almost as many as Prince Charles has subjects residing within his Lilliputian dominion. Name, residence, and date of death of these suicides are given, and a collection of their letters is appended to the pamphlet, in nearly all of which they curse the hour when they first saw Monte Carlo. As to nationality, Italy, France, and Russia stand foremost in the line of the countries that have furnished their victims, while England and the United States

can boast of the best record among the nations represented at the little principality. Most of the victims were buried with little ceremony in a remote corner of the cemetery or else in the pauper's church yard. Whether this pamphlet will produce any effect in bringing about the much wished for diplomatic action is, of course, very doubtful in view of the fact that most of the European Governments seem to be of the opinion that France, as the nearest neighbour of the little principality, ought to be the Power to act in this matter by either forbidding gambling at Monte Carlo, or else by annexing Monaco, the Prince of which has already placed himself in a sort of dependence upon the French Government.

STRANGE tributes are paid in strange places to Mr. Gladstone's greatness. At the graduating exercises of the New York Deaf and Dumb Institute, June 22nd, one of the speechless children was asked "What public character most interests the world to-day?" The answer, written without a moment's hesitation, was "Gladstone."

A TELEGRAM from San Francisco to the *New York Herald*, published in that journal on the 22nd ult., says:—"Private advices received by the steamer *Rio Janeiro* state that the conference for the revision of the treaties between Japan and other Powers has held four sittings. The proceedings are secret. Great surprise is expressed that the United States has instructed its representative to participate with the Ministers of European Powers in joint deliberations, and in making a treaty in which neither the interests of Japan nor the United States will be so well protected as by independent negotiations."

FLAGS were displayed on Wednesday and Thursday by all the Chinese firms in town in honour of the birthday of Kwang-sü (the Continuation of Glory). Probably before another birthday comes round the young Emperor will have had a wife selected for him, a command having gone forth from the Empress Dowager that an eligible *parti* be found and brought to Peking to share the Dragon throne with the ninth descendant of the Ta-tsings.

ACCORDING to the *Choya Shimbun*, a large number of people gathered on the 26th instant at Kanagawa, their object being to attack the residence of a doctor attached to the Police Station, who it was rumoured had distributed cholera bacteria in the town. Eight of the leaders were arrested, after which the rest of the ignorant crowd saw fit to retire.

MR. KIM, who has been staying at the Grand Hotel in Yokohama, was attached on the 26th instant by the Kanagawa police officials. The French Consul, to whom the Japanese authorities applied for a warrant of arrest, referred to the French Minister on the subject, previously to issuing it, the case being exceptional. The Minister, after repeated communications with the Foreign Office, gave the necessary instructions to the Consul to issue the warrant.—*Nichi Nichi Shimbun*.

CERTAIN journalists in China recently indulged in strong criticisms with regard to the supposed manufacture of spurious matches by Japanese and their importation into Hongkong. The idea was that a Japanese firm in Kobe manu-

factured imitations of the so-called "Sable" matches, and sent them to Hongkong under a trade mark closely resembling that of the genuine article. The immorality of such a course was strongly and justly condemned. The only weak point of the case was that these imitations were not of Japanese manufacture at all. A complaint addressed to the Japanese Consul in Hongkong led to official enquiries in Japan, and these elicited the fact that the spurious matches were made by a Chinese firm at Kobe, over whom, under existing circumstances, the Japanese Government have no control in such matters.

THE following subscriptions to the fund for the relief of the families of sanitary officials, which were received at the Kencho up to yesterday evening, are acknowledged with many thanks:—

THE cholera returns for Yokohama on Saturday were:—New cases, 60; deaths, 45. Sunday, new cases, 70; deaths, 41. Monday, new cases, 61; deaths, 41. Tuesday, new cases, 56; deaths, 37. Wednesday, new cases, 65; deaths, 61. Thursday, new cases, 70; deaths, 49. Friday, new cases, 69; deaths, 47. Total, cases, 451; deaths, 321.

WE learn with much regret that Mr. T. Alexander, Professor of Engineering in the Imperial University, is about to leave Japan. Mr. Alexander's high abilities and kindly disposition have won the esteem and regard of a large circle of friends, both Japanese and foreign, and his loss will be severely felt in the University.

FROM Newchwang sailing vessels cannot find employment and steamers have accepted very low rates, viz., *Vortigeru* to Swatow 17 cents, completing at Chefoo at 10 cents, the *Vindobala* on the same terms, and the *Ashington* to Whampoa at 17 cents.

THE British steamer *Port Jackson* has been chartered to load at Nagasaki for this port at \$1 per ton; the *Euphrates* for Hongkong at \$1.15 per ton; quotations at that port and Shanghai \$1.20, wharf terms, Hongkong \$1.50, and Yokohama \$1.00, with but little doing.

THE *Nichi Nichi Shimbun* says that Mr. Mishima, Police Inspector-General, has obtained from the authorities a grant of one third of the original sum claimed by him, yen 500,000, as expenses for the prevention of cholera in Tokyo.

SEVERAL settlements of small vessels have been made for the voyage Puget Sound to Shanghai on the basis of 60¢ per 1,000 sup. feet lumber, viz., the barques *Tetnan* 437, *Bylgia* 333, *Anna Sieben* 609, and the *Norway* 657 tons.

WE note amongst the arrivals by the O. & O. steamer *Gaelic*, from San Francisco, Mr. R. W. Irwin, Hawaiian Minister; Mr. Greathouse, U.S. Consul-General; Admiral Schufeldt, and General Le Gendre.

## THE CHANGE OF RAILWAY ROUTES.

THE Minister President of State has not been at much pains to avoid misconstruction in his manner of announcing the change of plan with regard to the route of the Tôkyô-Kyôto railway. He speaks of the two ends of the road having been completed for a distance of several miles before the discovery was made that the central portion, if carried *via* the Nakasendô, would entail extravagant outlay and immense engineering difficulties, without conferring any corresponding advantages. The manifest interpretation of this to ordinary readers is that a large work was undertaken without due consideration; and that the extremities of the road, having been constructed before the practicability of uniting them was ascertained, are rendered virtually useless by an eleventh-hour resolve not to unite them. Now it is beyond dispute that in this matter of the Nakasendô railway the Government cannot claim much credit for economical prudence. Indeed, they never advanced any such claim. With their eyes open to the comparative feasibility of a line carried along the coast, they selected a route passing inland, through a mountainous and unproductive part of the empire. The relative advantages and disadvantages of the two routes were discussed at the time. So far as we know, there was no obscurity or uncertainty whatsoever. But the Cabinet ruled that neither engineering obstacles nor financial recommendations were to have paramount influence upon the decision. For strategical reasons they chose the inland line, and everybody recognised that in making this selection they exercised a discretion quite consistent with their function as guardians of the national safety. We think it very probable that neither Count ITO nor the leading members of the present Cabinet found the strategical argument conclusive, and that they are by no means reluctant to subserve it now to more practical considerations. Still their manner of announcing this alteration of plan is misleading. For, in point of fact, no parts of the lines already constructed lose their value by the change. To speak of them as the two extremities of a road uniting Tôkyô with Kyôto may be correct in the sense that their construction had reference to the project of such a road, but is not at all correct in the sense that, without the completion of such a road, their useful function is insignificant. This will be evident at once if we consider the sections of these lines in detail. The Tôkyô-Maebashi road is plainly one which must have been undertaken, under any circumstances, at a very early stage of railway development in Japan. It unites the centre of the silk producing district with the Eastern capital, and taps a thickly populated region of great wealth. Indeed, this road cannot properly be regarded as

forming a part of the Tôkyô-Kyôto system. All that can be said is that, had a line uniting the two capitals been constructed *via* the Nakasendô, it would have effected a junction with the Tôkyô-Maebashi road at Takasaki. We arrive then at this result—that the only portion of the Nakasendô line, properly so called, which has been constructed at the northern end, is the short section of 17 miles from Takasaki, *via* Annaka, to Yokokawa, near the foot of the Usui Pass. Had not the Nakasendô scheme been on the  *tapis*, the construction of this section would probably have been deferred. Sooner or later, however, it must have been undertaken. It stands, now, to the Tôkyô-Maebashi road in the relation of a feeder, stretching into the interior, facilitating travel from the north-west provinces to Tôkyô, and bringing a hitherto isolated region into connection with the coast. With regard to the lines which have been constructed, or are in process of construction, at the southern end, it need only be observed that they form a section common to both systems—that by the Nakasendô and that by the Tôkaidô. Their present terminus is Nagoya, which is also the objective point of the Tôkaidô section, now to be undertaken. We may mention here that the route selected for the Tôkaidô line is from Kanagawa to the neighbourhood of Odawara; thence by the Sakawa valley to the vicinity of Mishima; thence by Numazu and Shizuoka, along the coast to Nagoya. Instead, therefore, of saying that it has been resolved to abandon the central portion of a line of which the two ends have already been constructed through a distance of several miles, the Minister President's Notification might have simply announced a decision to connect the Northern and Southern railway systems of the Empire by a line following the Tôkaidô, instead of the Nakasendô, route. For the rest, there can be no question, we imagine, as to the wisdom of this change of plan. The Tôkaidô line will come into more direct competition with the mercantile marine than would have been the case with the Nakasendô road. That, however, is not a vital consideration; neither can it possibly outweigh the many powerful arguments in favour of the coastwise route. The Chief of the Railway Bureau states the facts very plainly in his memorial. The Nakasendô line would traverse a country scarcely capable of development, and offering such obstacles to traffic that the railway would be almost inaccessible for purposes of goods' transportation. As a means of communication between the two capitals, it would be very defective, since, owing to tunnels and steep gradients, trains could not be run at a respectable speed. Finally, by choosing the Tôkaidô route, a saving of 20 miles and five million *yen* will be effected. More cogent reasons could scarcely be advanced, and in view of them we are puzzled to understand the statement

of the Chief of the Bureau that, "having incurred considerable expense during these two years and a half since the commencement of the construction of the Nakasendô line, and the work having now become fairly established, it causes me no small regret to abandon the scheme at this moment." According to our reckoning, the only part of the Nakasendô line that has been constructed is the section of 17 miles from Takasaki to the Usui Pass, and this may very well be left to perform an independent function; while, on the other hand, these 17 miles will be compensated by a saving of 20 on the Tôkaidô route. We fail to appreciate the grounds of Mr. INOUE MASARU'S regret, unless indeed he refers to the fact that had the Tôkaidô line been commenced two and a half years ago, it would be within a twelvemonth of completion now.

## THE NAVY BONDS.

IT is justly regarded as a significant sign of the times in Japan that the Government has been able to place the first instalment of its Five per Cent. Navy Loan at prices ranging from 103 to 110. In commenting upon the prospects of this loan when its issue was first announced, we observed that the rate of interest procurable on money seemed to have become a matter of wholly secondary consideration in Japan; the prime object of capitalists being to find safe investments. The result of the loan has entirely justified our estimate. Applications amounting to over 16½ million *yen* were received at the Nippon Ginko and its agencies. Of this aggregate only 673,000 *yen* worth of bonds were applied for at par. Ten and a half millions might have been sold at a premium ranging from 0.5 to 2.99 per cent., and 5½ millions were tendered for at from 3 to 10 per cent. premium. So far, then, as this first instalment of the loan is concerned, the Government may be said to have obtained the use of the money without paying interest for the first year. Or, putting the case differently, the Treasury has placed its loan at a rate of 4.76 per cent. interest. Certainly few of us would have been disposed, three years ago, to predict such an incident. When the Nakasendô Seven per Cent. Bonds were issued in 1884, they sold, not over freely, at 90. Up to August of last year, they could be purchased at 92. Their market price now ranges from 117 to 120. If the value of such securities depended mainly—as in England and France—on the interest they carry, the Five per Cent. Bonds ought not to bring more than 84 or 85. But they bring from 104 to 110. Looking farther afield, we find the Six per Cent. Bonds Exchangeable for *Kinsatsu* quoted at 107 to 108, while Seven per Cent. and Six per Cent. Pension Bonds sell for the same price—107.5. In short, there is no relation whatsoever between the interest-bear-

ing quality of a bond and the price which it commands in the market. What conclusion is to be drawn from a state of affairs so unusual? A very simple conclusion in our opinion. These securities are regarded by the public, not as interest-bearing investments, but as commercial speculations. The use of money arises out of trade, and trade is still suffering from the paralysis caused by currency contraction and the resulting depreciation of values. Capitalists are naturally averse to letting their money lie idle. They seek investments which are handy, which are easily convertible, and which, by the fluctuations in their market prices, offer opportunities quite apart from the interest they carry. The Nakasendo Bonds, the Bonds Exchangeable for *kinsatsu*, and the new Navy Bonds are precisely such investments. Their currency is scarcely inferior to that of *kinsatsu*; they are procurable in large quantities, and they are perfectly secure. This last feature is interesting. On the face of the matter there is no apparent reason why the Nakasendo Bonds should be safer than the ordinary Pension Bonds. But if we look deeper we shall find a reason. The former are purchasable by foreigners; the latter are not. However excellent may be the credit which the Government of Japan enjoys among the Japanese, it is virtually an irresponsible Government, and its financial operations are beyond the reach of the public's control. There is, therefore, room for uncertainty in respect of its dealing with its own people. But where foreigners are admitted to the partnership, every element of doubt is eliminated. We do not mean to suggest that paramount importance attaches to this feature. But assuredly it has some importance. The fact that the Nakasendo Bonds, the *Kinsatsu* Bonds and the Navy Bonds can pass from hand to hand without any of the troublesome formalities—personal attendance in official quarters, re-registration of name, etc.—which must be observed in the case of ordinary Pension Bonds, and the fact that the former are always procurable at quoted rates, whereas the presence or absence of the latter in the market is not to be reckoned on—these facts doubtless count for a great deal. But the additional security which the Government's guarantee acquires when it is offered to foreigners, counts also for something.

Looking at the history of these Bonds from another aspect, we find unmistakable indications that there is no lack of floating capital in Japan. The Notification announcing the issue of Naval Bonds was published June 12th. By July 10th, or exactly four weeks afterwards, tenders to the amount of over 17 million *yen* (including the premia) had been received. This means that three millions sterling are procurable at short notice for any enterprise offering sound security and a moderate rate of interest. Whence all

this money comes is a secondary consideration. It may be that, as some persons claim, a considerable portion of it represents hoards which would never have emerged from their hiding places so long as a fiat currency was in the field. It may be that the Banks cannot place their deposits. There the money is, at all events, and we cannot but reflect with astonishment and regret on commercial and industrial conditions which offer no temptations to capital so readily accessible. It has hitherto been the habit to say that what Japan needs for her development is foreign capital. If for "capital" we substitute "enterprise and initiative," it seems that we shall be nearer the mark. Some years ago, when the effects of contact with the West were fresh and the public purse was open to speculative men, we used occasionally to hear of companies formed and projects inaugurated. But whatever spirit existed in those days appears to be now extinct. Capitalists rush to invest their money in public securities, and dabbling in bonds absorbs the attention of business men. For the moment there is an utter lack of intelligent initiative. How long will this unwholesome state of affairs last? Not much longer, we imagine. The Finance Minister's medicine is operating even more powerfully than he anticipated. The Loan Bonds' evil has been sufficiently sharp to develop its own cure. The nominal rate of interest has fallen, in less than a year, from  $7\frac{1}{2}$  to  $4\frac{1}{2}$  per cent., and millions of dollars are offered for investment at the latter figure, with the contingent chance of a rise in the value of the securities purchased. That chance is rapidly becoming less. What margin of appreciation remains to five per cent. Bonds for which 110 was paid at the outset? Certainly this morbid aversion to commercial and industrial enterprise cannot last much longer in the face of such conditions.

#### TREATY REVISION.

IN the *Nichi Nichi Shimbun* of the 24th instant, we find the following:—"In a former issue we stated that HIS IMPERIAL MAJESTY gave audience, the 16th instant, to the British Representative, the Honourable Sir FRANCIS PLUNKETT, and to Mr. VON HOLLEBEN, the German Representative. Information now reaches us that, on the occasion of the audience of the British Representative, the EMPEROR requested the latter to convey to the Prince of WALES, HIS MAJESTY'S wish to present the Grand Cross of the Chrysanthemum to HIS ROYAL HIGHNESS. In adopting this exceptional method of intimating his intention, the EMPEROR was inspired, it would seem, by the desire of acknowledging Great Britain's friendly attitude in the matter of Treaty Revision. For we learn that, in the Treaty Negotiations now in progress, the Representatives of both

England and Germany have shown a particularly amicable disposition, and that, in regard of the extraterritorial problem, they have been most zealous in their endeavours to elaborate some reasonable and practical scheme for gradually releasing Japan from the intolerable restraints to which she has hitherto been subjected in her legislative and judicial capacity. If our information upon these points be correct, it appears quite natural that HIS IMPERIAL MAJESTY should exhibit towards the Imperial Family of Great Britain a disposition so friendly as the above-mentioned action indicates. The same day, the German Minister, Mr. VON HOLLEBEN, was decorated by HIS MAJESTY with the Grand Cross of the Rising Sun. It is true that only a short period has elapsed since Mr. VON HOLLEBEN arrived at his post in Japan. Nevertheless, his energetic efforts on Japan's behalf in the matter of Treaty Revision have entitled him to this honour. The friendly influence of the Governments of Great Britain and Germany being now active among the Treaty Powers to solve the difficult problems which present themselves in connection with Revision, we desire, in common with the public generally, to express our gratification, and our hope that, ere long, we shall have the pleasure of witnessing the happy results which for so many years we have desired."

This news of the *Nichi Nichi Shimbun* is very welcome. The friendly relations that exist between Germany and England in Europe are happily reflected in their united attitude here. A less powerful combination could scarcely have produced any sensible effect on the obdurate problem of Treaty Revision. The foreign community is to be congratulated on the fortunate chance which brought simultaneously to Japan two diplomatists of the type of Sir FRANCIS PLUNKETT and Mr. VON HOLLEBEN. Their tact and liberality must be regarded as the proximate means of finding a practicable exit from the wretched deadlock of the past ten years. It seemed, at our time, that the residents at the Treaty Ports were to be interminably condemned to profitless and irksome isolation; that upon Japan was to be persistently fixed the stigma of semi-barbarism, and that the only outcome of endless negotiations was to be a rapid development of indignation and distrust between Japanese and foreigners. Assuredly these conditions did not present any feature which could induce a statesman to seek to prolong them. We can well appreciate the sentiment that inspired the EMPEROR'S expressions of satisfaction on the occasion of Sir FRANCIS PLUNKETT'S audience. It is true that the problem is not yet completely solved. The Conference, we know, is to meet again in October. But that a solution is in sight may be fairly assumed. The *Nichi Nichi Shimbun* speaks of Japan's "gradual release" from the res-

traints of semi-isolation. We may conclude, therefore, that the proposed scheme is of such a nature as to avoid all violence to the reasonable reluctance of foreigners in regard of abandoning the protection of their own legal and judicial systems. With that proviso, the removal of mediæval restrictions on trade, residence, and travel has always been an object of anxious desire to foreign residents. It would, of course, be mere affectation to disguise our satisfaction that Great Britain should at length take her proper place in the front rank of Japan's liberal friends. English interests had already suffered quite enough from a conservatism equally blind to the march of events and to the dictates of expediency. At the same time, we desire to remind the Japanese that, if the magnitude of England's interests has hitherto furnished a not inconsiderable justification of her caution, it ought now to heighten the significance of her liberality. If there be any risk involved in a departure from the traditional policy of the West towards the East, it is England that incurs the lion's share of that risk. We do not seek to claim for her any greater credit than she deserves. The Japanese have long recognised that until she moved, the Treaty problem must remain *in statu quo*. But we want them now to recognise, as the EMPEROR evidently recognises, that the merit of taking a new departure is proportionate to the difficulty of the step, and that the solution of this problem costs England an effort which ought to vouch for the sincerity of her friendship. And here it is just to note that the *Nichi Nichi Shimbun's* remarks have reference only to a particular incident of Treaty Revision. Did they assume the character of a general review, the kindly initiative taken years ago by the United States ought to occupy a prominent place. America's open friendship, though it could not immediately furnish an example to her Treaty confederates, must have exercised no little effect upon public opinion. If she does not figure conspicuously at this juncture, it is because her part was performed long ago.

MR. KIM-YO-KUN AND HIS FELLOW-REFUGEES PAINTED BY THEMSELVES.

WE observe that, in obedience to the request of Mr. KIM-YO-KUN's fellow-refugees, the *Japan Gazette* has published a letter addressed by those gentlemen to the *Nichi Nichi Shimbun*. The letter appears in the *Gazette's* issue of Thursday evening. It was handed to us also, for publication, by its writers on Tuesday morning, and we have ascertained that it reached the *Nichi Nichi Shimbun* also on the latter day. Plainly, therefore, our local contemporary, without pausing to discover whether or no the letter had been admitted to the columns of the *Nichi Nichi Shimbun*, placed it at once in the

hands of a translator, and published it as speedily as possible. It does not concern us to consider how far such a course accords with the ordinary principles of journalistic etiquette. A far more interesting question is the propriety of an English local journal placing its columns at the disposal of political intriguers who, for purely selfish purposes, endeavour to embarrass the foreign relations of this Empire. We are quite ready to believe that this aspect of the question did not present itself to the *Japan Gazette*. News, especially sensational news, is extremely scarce in Yokohama, and when the choice lies between the publication of an exceptionally curious item and a foreign journalist's obligation to consider the interests of the country whose hospitality he enjoys, it would perhaps be oversanguine to expect a result different from that now before us. And, on the whole, we are disposed to think that, by inserting the Korean gentlemen's letter, the *Gazette* has done good service. Not, assuredly, good service to the writers of the letter, but good service to the cause of truth. For, if any further materials were needed to construct a just estimate of the character of Mr. KIM and his associates, they are amply furnished by this letter. Let us see what it is that these Korean refugees demonstrate. Their story is very interesting. Had they applied themselves diligently to the task, it is doubtful whether they could have succeeded better in displaying their portrait to the public. Their avowed object is to refute a criticism which appeared in the *Nichi Nichi Shimbun*. KIM, in a memorial addressed to the KING of Korea, had asserted that he and his fellow refugees were saved by Mr. TAKEZOYE in the disturbance of 1884. The *Nichi Nichi Shimbun* took exception to this way of stating the case, and pointed out that, though Mr. TAKEZOYE might have connived at the escape, he did so in his private, not in his official, capacity. "Nothing of the sort," say the Korean refugees. "We are resolved, so far as in us lies, to fix the blame of a grave indiscretion upon this Minister to whose 'manly act we owe our lives.' Therefore we declare that when, in order to secure the safety of our Sovereign, it became expedient to hand him over to the Chinese troops, and when, in consequence, we were left helpless in the presence of certain death, Mr. TAKEZOYE counselled us to avail ourselves of the escort of his guards. They were only a handful, those guards of his, and they were confronted by an overwhelming force of Chinese. But we had been their friends, and they did not hesitate to help us despite their own great danger. We accompanied them to the Japanese Legation, and there, knowing that the city was in the hands of a bloodthirsty mob, and that our fate was sealed if we were recognised, a Japanese

helped us to cut off our hair and otherwise disguise ourselves. The next day, we joined in the retreat of our Japanese friends, and reaching Chemulpho, took refuge in the house of a Japanese merchant. That afternoon Mr. TAKEZOYE let us know privately that the *Chitose Maru* was about to sail, and that we had better get on board. We did so, being escorted to the ship in the dead of night by three Japanese constables. Thus our life became 'the gift of Mr. TAKEZOYE,' and 'our gratitude for his kindness was so great that we burst into tears.' To evince that gratitude we are now resolved to let the world know how indiscreetly he behaved. We decline altogether to entertain the idea that he acted from mere motives of humanity, and that, seeing several of his former friends and fellow-creatures in deadly peril and their own authorities powerless to protect them, pity made him remember to be a man and forget to be a Minister. This want of heartless caution has placed him in our power, and we shall spare no efforts to ruin him, unless his Government continues to support and protect the lives which he gave us. Nor is this all. In Seoul, Mr. TAKEZOYE and his escort did their utmost to guard us against the sanguinary and unjustifiable attack of our Chinese enemies. By the coöperation of Mr. TAKEZOYE and his escort, we nearly succeeded in accomplishing our patriotic purpose, achieving the independence of our country and launching her in the path of Western progress. Mr. TAKEZOYE and his escort came to the Palace at the written request of our Sovereign and we owe our lives to their protection. But we now declare that 'even had our Sovereign sent Mr. TAKEZOYE a thousand letters,' he had no business to come to the Palace, and that in doing so he 'violated the law of nations.' The reputation of Mr. TAKEZOYE, who saved our lives; the fair fame of the Japanese Government, who have afforded us an asylum ever since; the tranquillity of the foreign relations of the Japanese Empire, which, at the time of our *coup d'état*, stood to us in a relationship as close as that of 'the lips to the teeth'—all these things are nothing to us now. We *must* have the means of living comfortably and securely, and unless they are furnished, we mean to make it hot for the sometime saviour of our lives and for the Government that befriended us. We were once patriots, but the folly of that *rôle* is now apparent to us. No one ever particularly sympathised with our patriotism except Japan. We are well aware that without her coöperation we can never play the part of patriots again, or hope to achieve our country's independence. But we have no leisure for sentiment now. Our pressing wants are a furnished house, a good income, and a sense of security. If we can only obtain these things, we don't care two straws about alienating the sympathy and finally

renouncing the assistance of the partner of our patriotism."

Such is the character in which Mr. KIM and his fellow refugees now elect to figure before the public. We take them at their own estimate of themselves. Beyond the four corners of their memorials and letters we do not travel in search of evidence, for better and more conclusive evidence could not possibly be procured. And these are the grounds of our assertion that in publishing the letter of the Korean gentlemen, the *Japan Gazette* did them a heartless office, but rendered the cause of truth a considerable service.

### THE FITNESS OF THINGS.

FOR many years we have been talking, or hearing other talk, about the seventeen Powers who constitute Japan's *vis-à-vis* in the matter of Treaty Revision, and who have never yet been brought to the same way of thinking at the same moment. It has constantly been noted, also, in connection with this, that the interests of these Powers are very differently involved, and that the idea of allowing to each and every one of them an equal voice in the question of Japan's treatment is as extravagant as it is unjust. Our attention is recalled to the subject by a correspondent who has been delving into the statistics of this Empire's foreign trade during the past five years, and who is not unnaturally startled by the immense discrepancies which his investigations bring to light. He sends us the following figures, showing the aggregate value, and also the average annual value, of the trade of each country with Japan during the five years from 1881 to 1885, inclusive:—England and her dependencies, Australia and the East Indies make a showing of \$102,971,992.91, or an average of \$20,594,398.95, per year; England showing \$87,749,747.30, Australia \$1,602,014.75, and the East Indies \$13,619,630.86. Great Britain leads in the commerce of Japan. The United States shows a total of \$80,550,142.95, or a yearly average of \$16,110,028.59, and holds the second place in the commercial interests of the Empire. The next in importance is China, the volume of her trade being in bulk \$59,305,840.14, or an average of \$11,861,168.03. Fourth comes France with \$51,285,910.03, average \$10,257,182.01. Germany boasts of \$11,270,444.35, or an average of \$2,254,088.87. And then comes Italy with her total of \$1,710,742.84, yearly \$342,148.49. Next stands Switzerland with \$1,614,031.39, average \$322,806.28. Next in rank is Belgium with \$1,390,949.82, average \$279,899.64. Korea for two years only shows \$888,354.14, average \$444,177.07. Russia has \$811,624.00, average \$162,324.80; Austria shows \$373,671.31, or an average of \$74,734.26; Spain next, \$146,852.93, or an average of

\$29,370.58; Holland next, \$136,631.96 or an average of \$27,326.39; Denmark next, \$78,618.84 or an average of \$15,723.77. Turkey, not a Treaty Power, shows \$41,792.25, yearly \$8,358.45; Peru, a treaty factor, \$30,044.95, or yearly \$6,008.99; Hawaii has \$26,922.26, yearly \$5,384.45, Portugal has to struggle to protect a trade which makes a grand total of \$7,662.40, or a yearly average of \$1,532.44. Sweden and Norway combined take precedence of Portugal, inasmuch as the volume of their trade was \$10,050.91, or the gorgeous sum of \$2,010.18 yearly. All the world besides traded to the amount of \$812,474.17. Our correspondent further suggests that it might have a sedative effect upon certain ambitions, pretensions, and procacities if these figures were proclaimed by a herald at each session of the Conference on Treaty Revision; or better still, if they were embodied in a large chart and displayed conspicuously on the walls of the chamber of deliberation. They would assuredly have the effect of reminding the Representatives of certain Powers that the trade which their countries carry on with Japan is not equal to the business of a fifth-rate merchant. If the title to possess a voice in Treaty Revision rested strictly on the magnitude of commercial interests, the heads of some of the leading firms in Yokohama might with great propriety be invited to take the seats now occupied at the Conference board by several distinguished members of the Corps Diplomatique. It is unnecessary to explain, we trust, that reflections of this nature are not intended in a disparatory sense. We merely record facts and note the inevitable inferences they suggest. There has been much discussion about allowing Japan to exercise a right which every independent State possesses—the right of managing her own fiscal affairs—and we have yet to learn that opposition to this act of common justice is least obstinate on the part of Powers having the smallest interests at stake. Yet, as a pure question of arithmetic, the figures given above show that, in the case of seven out of the seventeen Treaty Powers, the raising of the tariff basis from 5 to 10 per cent. would only make a difference of from seventy-five to fifteen hundred dollars annually. "The eternal fitness of things" seems to be a little outraged when the guardian of a seventy-five dollar interest occupies virtually the same level on the platform of Treaty Revision as the Minister whose stake is a hundred thousand.

### CORRESPONDENCE.

Our readers must distinctly understand that we are in not sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.

### RAILWAY CHARGES.

TO THE EDITOR OF THE "JAPAN MAIL."  
SIR,—The "*Fiji*" or some other "*Shimpo*," had some remarks in its columns similar to those you reproduce in the *Japan Mail* of this morning, sometime ago, which, without intending any offence, I will observe only betray the ignorance of the writer of the articles in question. I have neither time nor inclination to enter upon the subject generally, but will allude to one point which was touched upon on the former occasion, as well as in the article you published to-day, viz:—the difference in prices of fish and vegetables in Tôkyô and Yokohama. This is a subject which appeals directly to my feelings, and I object to it as much as he marvels at it; but would he be surprised to learn that this is caused by cheap and rapid railway transport, and not for want of it? Formerly, large quantities of perishable produce could not be conveyed to Tôkyô (where a sale was always assured at a price of some kind), for want of cheap and expeditious transport, and had to be thrown upon the Yokohama market, much remaining unsold every day. This difficulty having been removed, the bulk of the fish and vegetables goes to Tôkyô, in which large city a sale is always certain, and Yokohama is only supplied to a limited extent.

This state of things exists all over the world, as well as in Tôkyô and Yokohama; and the writer in the *Fiji Shimpo* has yet much to learn on economic subjects.

I am, Sir, yours, &c.,

TSUJIN.

Yokohama, July 23rd, 1886.

### NOTES ON WARREN HASTINGS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have to thank you for a, not unfavourable notice of my "Notes on Warren Hastings" in your issue of the 20th instant, but there is one point on which you have been unwittingly unjust to me. You have supposed the slight reference in the introduction to be the only mention I make of Macaulay's unfair treatment of Impey. Had I been guilty of such perfunctoriness, your criticism was most just. But, on the contrary, the subject is fully discussed in the body of the Notes. All the important facts brought forward, first by Impey's son forty years ago, and again by Sir James Stephen only last year, which overthrow Macaulay's rash rhetoric, have been dealt with in order. I am sorry I cannot refer to page and line, being up here without any copy of the book. That Impey was only one of three judges at Nuncomar's trial; that forgery had been previously punished with death in Bengal; that Impey did not, by receiving the bribe of a lucrative situation under the Company become "rich, quiet, and infamous," that his journey up country to examine witnesses was not a piece of officiousness, adding "rankness" to his "infamy"; these and other facts, established fully, ought to be mentioned in any commentary on Macaulay's Essay worthy of the name; and I have certainly not omitted to mention them.

I am, yours, etc.,

J. M. DIXON.

Karuizawa, July 24th.

(Mr. Dixon is mistaken. We did not suppose the reference in the introduction to be the only mention of Macaulay's unfair treatment of Impey. But we supposed it to be the most marked reference.—ED. J. M.)

## NOTIFICATIONS.

## LOCAL GOVERNMENT REGULATIONS.

## IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the organization of the Local Government Service, and order it to be promulgated.

[His Imperial Majesty's Sign Manual]

[Privy Seal.]

Dated the 12th day of the 7th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUNI,  
Minister President of State.  
Count YAMAGATA ARITOMO,  
Minister of State for Home Affairs.

## IMPERIAL ORDINANCE No. LIV.

## ORGANIZATION OF THE LOCAL GOVERNMENT SERVICE.

## CITIES AND PREFECTURES.

Art. I.—In each City and Prefectural Government, there shall be the following officers:—

- One Governor.
- Secretaries.
- One Chief Tax-collector.
- Clerks.
- Tax-collectors.
- Governors of Prisons.
- Assistant Governors of Prisons.
- Clerks of Prisons.
- Chief Warders of Prisons.
- Assistant Chief Warders of Prisons.

Art. II.—The Governor shall be of either 2nd class, *chokunin* rank, or 1st class *sonin* rank, and shall carry out statutes and instructions, and superintend the administrative and police business of the territory over which his jurisdiction extends, under the direction and control of the Minister of State for Home Affairs. Should a particular matter fall within the competency of any other Department, he shall deal with it under the direction and control of the Minister of that Department. The Governor of Tokyo may be promoted to 1st class *chokunin* rank.

Art. III.—The Governor shall, by virtue of his functionary powers, or by virtue of powers specially delegated to him, issue, within the limits of statutes and instructions, City or Prefectural Ordinances either for the whole territory under his control or for a part of it, relating to administrative and police business.

Art. IV.—City and Prefectural Ordinances shall come into force after they shall have been promulgated through the columns of the *Official Gazette*, or in other methods which may be specially established.

Art. V.—When a City or Prefectural Ordinance is deemed by the Minister of State for Home Affairs, or by any other competent Minister, to be prejudicial to the public interest, or contrary to an existing law or regulation, or to overstep the limits of the legal power of the official issuing it, such Ordinance may be ordered to be suspended or rescinded.

Art. VI.—The Governor shall have control over all the officials attached to him. He should report on the conduct of officials of *sonin* rank to the Minister of State for Home Affairs, or to any other Minister within whose competency the matter falls. The appointment and dismissal of officials of *hannin* rank shall be entirely in the competency of the Governor.

Art. VII.—The Governor shall have the power of meting out to the officials under his control disciplinary punishment, in conformity with the rules laid down by statutes or instructions. In the case of officials of *sonin* rank, the matter must be laid before the Minister of State for Home Affairs; and in the case of officials of and below *hannin* rank, the Governor shall have full power to take action into his own hands.

Art. VIII.—When military force is rendered necessary in any case of extraordinary emergency, or military defence is advisable as a precautionary measure, the Governor shall have power to request the presence of troops by sending a despatch to the commander of the garrison (*schindai*) or of a detachment (*bun-ei*).

Art. IX.—The Governor shall determine the distribution, separation, and amalgamation of branch police offices in each urban and rural division.

Art. X.—The Governor shall have power to enact detailed rules for the conduct of business in his office.

Art. XI.—The Governor shall have power, ac-

cording to the requirements of the public business, to engage employes, but the salaries paid in his office must not exceed the amount estimated.

Art. XII.—The Governor shall have power, within the estimated amount of expenditure in his office, to reward, at the end of each year, such officials of and below *sonin* rank as may have distinguished themselves by special services. In the case of officials of *sonin* rank, the matter must be laid before the Minister of State for Home Affairs, and in the case of officials of and below *hannin* rank it will lie within the absolute power of the Governor.

Art. XIII.—The Governor shall have power, according to requirements, and within the estimated amount of salaries, to appoint an engineer in conformity to the Regulations as to the Official Rank and Salaries of Engineers (*Gijutsukan Kantō Hōkyō Rei*), subject to the approval of the Minister of State for Home Affairs. Should such appointment require to be made in connection with any work the cost of which is to be defrayed from the local taxes, the engineer may be hired as an employe, after the sanction of the Minister of State for Home Affairs has been obtained.

Art. XIV.—The Secretaries shall be two in number; shall be of or under 2nd class, *sonin* rank; shall, under the direction of the Governor, assume the position of Directors of Divisions, and shall manage the business of such Divisions. In the case of the inability of the Governor to transact business, the senior Secretary shall represent him in his functions.

Art. XV.—The Chief Tax-Collector shall be of or under 4th class, *sonin* rank, and shall have control, under the direction of the Governor, of affairs relating to the imposition and collection of taxes, and the expenses of such collection.

Art. XVI.—Clerks shall be of *hannin* rank, and shall engage, under the direction of their superiors, in the general business of book-keeping, &c.

Art. XVII.—Tax Collectors shall be of *hannin* rank; shall be attached to the Division of Taxation (*shuiei bu*); and shall engage, under the direction of the Chief Tax-Collector, in the business allotted to them.

Art. XVIII.—Governors of prisons shall be of either 1st or 2nd class, *hannin* rank; shall superintend, under the direction of either the Governor or the Director of the Section, all business connected with prisons; and shall have control over prison clerks, warders, and other officials under them.

Art. XIX.—Assistant Governors of prisons shall be of 3rd, 4th, or 5th class, *hannin* rank; shall assist the Governors generally; and in the case of their inability to transact business, shall represent them in their functions.

Art. XX.—Prison Clerks shall be of or under 6th class, *hannin* rank, and shall, under direction of the Governors of prisons, engage in the business allotted to them.

Art. XXI.—Chief Warders of prisons shall be of the 5th, 6th, or 7th class, *hannin* rank; shall, under the direction of the Governors, have supervision over prisons, and shall superintend the work of the warders.

Art. XXII.—Assistant Chief Warders shall be of or under 8th class, *hannin* rank, and shall assist the Chief Warders in discharging their duties.

Art. XXIII.—Rules relating to Prison Warders shall be established by special enactment.

Art. XXIV.—In order to distribute the business of the City or Prefectural Government among the different officials, Divisions No. I. and No. II., each subdivided into Sections, according to the convenience of the Division, shall be established under the Directorship of the Secretaries:—

## DIVISION No. I.

1. Affairs connected with the Local Assembly, the committee dealing with engineering works (hydraulic, etc.), and the town and district committees.
2. Affairs connected with local taxes, town and district rates, and the Agricultural Distress Relief Fund.
3. Affairs connected with foreigners.
4. Affairs connected with correspondence, and the keeping of official seals and City or Prefectural seals.
5. Affairs connected with agriculture, manufactures, and commerce.
6. Affairs not falling within the sphere of other Divisions.

## DIVISION No. II.

1. Affairs connected with engineering works.
2. Military affairs.
3. Affairs connected with education.
4. Affairs connected with prisons.

5. Affairs connected with sanitation.

6. Affairs connected with accounts and public bonds.

Art. XXV.—Besides these Divisions, there shall be, in each City and Prefectural Government, a Division of Taxation, which shall have control over all the business connected with the assessment and collection of taxes, and the expenses of such collection. The establishment of Sections in each Division shall be carried out according to the basis of Art. XXIV.

Art. XXVI.—In the case of temporary business, not specified in the foregoing Articles, the Governor shall have power to determine where and by whom it will be dealt with, according to the convenience of the case.

## POLICE OFFICIALS.

Art. XXVII.—In each City and Prefectural Government, there shall be the following police officials:—

- Chief Police Inspector.
- Police inspectors.
- Police sergeants.

Art. XXVIII.—The Chief Police Inspector shall be of the 5th, or a lower, class of *sonin* rank; and shall superintend the following business, under the direction and control of the Governor:—

1. Supervision of all higher police business in the territory of the local Government.
2. The arrangement of all business relating to police matters in such territory, and the expenses of the police force.
3. The direction of all police officials under him, and control of the whole force in case of emergency.
4. The distribution of the required police officials to all Police Offices and Branch Police Offices in the district.

Art. XXIX.—Police inspectors shall be of 1st to 7th class, *hannin* rank; and Police Sergeants shall be of 8th, or a lower, class of *hannin* rank. They shall superintend the police business under their special charge, and have direction and control over the policemen under them, subject to the direction and control of the Chief Police Inspector.

Art. XXX.—In each City and Prefectural Government there shall be established Police Headquarters, forming a separate Division in the City or Prefectural Government, in addition to those mentioned in Art. XXIV. This Division shall be under the Directorship of the Chief Police Inspector, and the business mentioned in Art. XXVIII. shall be transacted by establishing therein various Sections.

Art. XXXI.—In each urban or rural division of a City or Prefecture there shall be established a Police Office; and attached to each Police Office there shall be Branch Police Offices. The former shall be under the charge of a Police inspector, and the latter either under an inspector or a sergeant according to convenience. These shall have control over the higher administrative and judicial policing of the district under their charge, and shall superintend the carrying out of statutes and instructions. The business under their charge may be specified as follows:—

1. Affairs connected with trades, market-places, companies, manufactories, weight and measures; churches, religious associations, preaching, and worship.
2. Affairs connected with theatrical establishments, places of amusement, places for sport; resting places, medals, festivals, funerals, gambling, lotteries, and other matters relating to public conduct.
3. Affairs connected with shipping, embankments, river banks, roads, bridges, fords, railways, telegraphs, parks, vehicles, horses, buildings of all kinds, fields and forests, fishing and hunting, and the collection of sea-weed.
4. Affairs connected with injuries to human life, crowding of people, quarrels, fire-arms, gunpowder, explosives, spontaneously combustible substances, swords, floods, fires, ship-wrecks, articles lost and found, and substances which have been buried in the earth.
5. Affairs connected with contagious diseases, and their prevention, disinfection, and inspection; vaccination, liquors, food, drinking water, medical treatment, medicines, live stock, butchery establishments, graveyards, cremation yards, and all other matters relating to sanitation.
6. Affairs connected with the detection and apprehension of criminals of all kinds, the collection of evidence and the transmission of the latter to public prosecutors.
7. Affairs connected with deserters, lunatics, lost children, and persons under police supervision.
8. Affairs connected with political associations, political meetings, newspapers, magazines, books, and other matters relating to publication.

Art. XXXII.—Each police official shall discharge his duty, by virtue of functional powers, or by the orders of his superiors, or at the request of the director of the division of police, the chief tax-collector, the chief of the town or district office, the headman, or other executive official, or in matters connected with judicial policing, by the order of a public prosecutor.

Art. XXXIII.—In any and every case, when an executive or judicial official submits a request on his own responsibility, police officials will be obliged to comply with such request.

Art. XXXIV.—When correspondence between one local Government and another is necessary in connection with a police matter, it should pass through the Governor. But in cases when promptitude is required, the correspondence may be addressed directly to the Chief Police Inspector, or to the chief police official of the locality in which action is to be taken.

Art. XXXV.—Rules relating to policemen will be specially enacted.

Art. XXXVI.—Business relating to policing and prisons under the Government of the City of Tōkyō, shall be dealt with, according to Imperial Ordinance No. XLII., relating to the Organization of the Metropolitan Police; and, accordingly, such business does not come under the scope of any of the articles of this Ordinance.

#### RURAL AND URBAN DIVISIONS.

Art. XXXVII.—In each or several rural divisions there shall be a Chief of the District Office; and in each urban division, there shall be a Chief of the Municipal Office. In both, there shall be several clerks.

Art. XXXVIII.—The Chief of the District or Municipal Office shall be of or under 4th class, *sonin* rank; and Clerks shall be of or under 4th class, *hannin* rank.

Art. XXXIX.—The Chief of the District or Municipal Office shall carry out statutes and instructions in the district under him, and superintend the executive business of the district, according to the direction and under the control of the Governor.

Art. XL.—In cases, the power to deal with which is delegated to him by statutes or instructions, or by the special order of the Governor, the Chief of the District or Municipal Office shall have power to act, according to convenience, and shall afterwards report his action to the Governor.

Art. XLI.—The Chief of a District or Municipal Office shall have control over the headmen under him, in executive affairs; and in the case of district affairs, he shall superintend them.

Art. XLII.—The Chief of a District or Municipal Office shall report to the Governor on the appointment and dismissal of clerks.

Art. XLIII.—The Chief of a District or Municipal Office shall have power to issue Notifications applying to the district under him, on matters for which the power is delegated to him by statutes or instructions or by the Governor.

Art. XLIV.—The Chief of a District or Municipal Office shall have power to request a police official to effect the carrying out of administrative measures in the district.

Art. XLV.—The Clerks of a District or Municipal Office shall engage in general business, according to the orders of the Chief of such Office.

#### INSULAR LOCALITIES.

Art. XLVI.—In the Prefectures of Nagasaki and Kagoshima, and in other Cities and Prefectures to be determined, there shall be appointed a Director of Islands, who shall have power to manage the executive affairs of the locality; and in the case of matters for which the power is delegated to him by the Governor, he shall have authority to act according to the requirements of the case.

Art. XLVII.—Directors of Islands shall be of or under 3rd class, *sonin* rank.

#### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance, relating to the official ranks and salaries of Local Government officials.

[His Imperial Majesty's Sign-Manual]  
[Privy Seal.]

Dated the 12th day of the 7th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,  
Minister President of State.  
Count YAMAGATA ARITOMO,  
Minister of State for Home Affairs.

#### IMPERIAL ORDINANCE No. LV. OFFICIAL RANKS AND SALARIES OF THE OFFICIALS OF LOCAL GOVERNMENTS.

Art. I.—The annual salaries of Governors have been fixed as follows:—

##### SECOND CLASS, *Chokunin* RANK.

1st class salary	Yen. 4,500
2nd class salary	4,000

##### FIRST CLASS, *Sonin* RANK.

1st class salary	3,500
2nd class salary	3,000

Art. II.—The salary of a Governor cannot be increased in less than five years.

Art. III.—In case of the promotion of the Governor of Tōkyō to 1st class, *chokunin* rank, and in cases of special appointment and bestowal of rank upon Governors, Imperial Ordinance No. VI., relating to the official ranks and salaries of higher officials shall be applicable.

Art. IV.—The appointment of, and the bestowal of rank upon, the Secretaries, the Chief Police Inspector, the Chief Tax-Collector, and the Chief of a District or Municipal Office; their precedence, fixed numbers, and annual salaries and special promotion in rank, shall be regulated in the same manner as provided in the preceding Article.

Art. V.—With reference to the salaries, promotion, fixed number in each official class, and gratuity for those who die while in office, of Clerks, Governors of Prisons, Assistant Governors of Prisons, District Clerks, and Prison Clerks; Imperial Ordinance No. XXXVI., relating to the official rank and salaries of officials of *hannin* rank, shall be followed.

Art. VI.—The salaries of Police Inspectors, Police Sergeants, Prison Warders, Assistant Prison Warders, and Tax-Collectors, have been fixed as shown in the appended table. As to promotion, the fixed number of officials in each class, and the bestowal of gratuities on those who die while in office, the provisions of the preceding Article shall be applicable.

OFFICIALS OF HANNIN RANK. MONTHLY SALARIES IN YEN.										
Official 1st and 2nd class	3rd and 4th class	5th and 6th class	7th and 8th class	9th and 10th class	11th and 12th class	13th and 14th class	15th and 16th class	17th and 18th class	19th and 20th class	21st and 22nd class
Police Inspectors	45	40	36	32	28	24	21	18	15	12
Police Sergeants	35	30	26	22	18	15	12	10	8	6
Prison Warders	30	26	22	18	15	12	10	8	6	4
Tax Collectors	50	45	40	35	30	25	20	15	12	10

#### THE STANDARD MERIDIAN.

##### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the First Meridian, Calculations of Longitude, and Standard Time, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual]  
[Privy Seal.]

Dated the 12th day of the 7th month of the 19th year of Meiji.

Countersigned by Count ITO HIROBUMI,  
Minister President of State.  
Count YAMAGATA ARITOMO,  
Minister of State for Home Affairs.  
Count OYAMA IWAO,  
Minister of State for War.  
Count SAIGO YORIMICHI,  
Minister of State for the Navy.  
MORI ARISORI,  
Minister of State for Education.  
Count SAIGO YORINICHI,  
Minister of State for Agriculture and Commerce.  
ENOMOTO TAKEAKI,  
Minister of State for Communications.

##### IMPERIAL ORDINANCE No. LI.

1. The meridian passing through the Astronomical Observatory at Greenwich, in England, shall be considered as the first meridian from which to reckon longitude.  
2. Longitude will be calculated from the first meridian 180 degrees both to east and west.  
3. The time corresponding to 135 degrees east longitude shall be adopted as the standard time throughout the whole Empire, on and after the 1st day of the 1st month of the 21st year of Meiji.

#### THE BUREAU OF CONSTRUCTION.

##### IMPERIAL ORDINANCE.

We hereby give Our Sanction to the present Ordinance relating to the creation of the office of Vice President in the Bureau of Construction.

[His Imperial Majesty's Sign-Manual]  
[Privy Seal.]

Dated the 24th day of the 7th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,  
Minister President of State.

##### IMPERIAL ORDINANCE No. LIX.

In the Cabinet Notification No. XII, of February last, relating to the Bureau of Construction, the following clause shall be inserted next to the clause relating to the office of President:—  
Vice President, 1; *Chokunin* rank.

#### TOKYŌ AGRICULTURAL AND DENDROLOGICAL COLLEGE.

##### IMPERIAL ORDINANCE.

Whereas, We have abolished the Komaba Agricultural College and the Tōkyō Dendrological College, establishing in their place the Tōkyō College of Agriculture and Dendrology, We hereby give Our Sanction to the present Ordinance relating to the organization of the said College, and order it to be promulgated.

[His Imperial Majesty's Sign-Manual]  
[Privy Seal.]

Dated the 22nd day of the 7th month of the 19th year of Meiji.

(Countersigned) Count ITO HIROBUMI,  
Minister President of State.  
Count YAMADA ARITOMI,  
Minister of State for Agriculture and Commerce.

##### IMPERIAL ORDINANCE No. LVI.

#### ORGANIZATION OF THE TŌKYŌ COLLEGE OF AGRICULTURE AND DENDROLOGY.

Art. I.—The Tōkyō College of Agriculture and Dendrology will be under the control of the Minister of State for Agriculture and Commerce, and will be an institution in which instruction is given in the various sciences relating to Agriculture, Veterinary Medicine, and Forestry.

Art. II.—A certificate will be given to any one who has passed through the prescribed examination, after finishing any of the special courses in the Tōkyō College of Agriculture and Dendrology.

Art. III.—In the Tōkyō College of Agriculture and Dendrology, there will be the following functionaries:—

A Director ( <i>Kichō</i> ).	Practical Instructors ( <i>Kundō</i> ).
A Warden ( <i>Kanji</i> ).	Assistant Wardens ( <i>Shakan</i> ).
Professors ( <i>Kyōju</i> ).	Clerks ( <i>Shōji</i> ).
Assistant Professors ( <i>Yōkyōju</i> ).	
Sub-Assistant Professors ( <i>Yōkyōhō</i> ).	

Art. IV.—The Director will be of the 1st or a lower class, *sonin* rank, and will have control over the Tōkyō College of Agriculture and Dendrology, under the direction and supervision of the Minister of State for Agriculture and Commerce. The chief points of his duties will be as follow:—

1. The maintenance of order in the Tōkyō College of Agriculture and Dendrology.  
2. The superintendence of the Tōkyō College of Agriculture and Dendrology, and when any improvement is deemed necessary, the submission of such matter to the Minister of State for Agriculture and Commerce, together with a draft of the proposed improvement.

Art. V.—The Warden will be of *sonin* rank, either next to, or lower than the actual official class of the Director. He will manage the annual business of the institution, according to the directions of the Director; and in case of inability on the part of the Director to attend to his duties, he will represent him in his functions.

Art. VI.—Professors will be of *sonin* rank; and will be employed in giving instruction to the students.

The number of Professors will be specially fixed by the Minister of State for Agriculture and Commerce, according to the number of students and the course of instruction.

Art. VII.—The Assistant Professors will be of *hannin* rank, and will assist the Professors in the discharge of their duties.

Art. VIII.—The Sub-Assistant Professors will be of *hannin* rank, and will assist the Professors and Assistant Professors in the discharge of their duties.

Art. IX.—The Practical Instructors will be of *hannin* rank, and will give instruction in practical work.

Art. X.—The Assistant Wardens will be of *hannin* rank, and will attend, according to the directions of the Director or Warden, to business relating to students and the College buildings.

Art. XI.—Clerks will be of *hannin* rank, and will be employed in keeping accounts and managing general business, according to the directions of their superiors.

## REVIEWS.

*Geographical and Historical Changes in the Province of Musashi and the City of Tokyo in Ancient and Modern Times.*—*Musashi no kuni narabi ni Tokyo shokoku enshiki.* By OTORI KEISUKE, Senator. Tokyo: Maruya & Co.

MR. OTORI, whose historical and topographical knowledge is highly spoken of in Japan, gives us, in this volume, a most carefully compiled and valuable account of matters which have great interest for the geologist, historian, and antiquarian. The purpose of the work will be understood at once by reference to the maps that accompany it. Of these there are six, the whole being printed on one large sheet to facilitate comparison. The first map is a conjectural representation of the original conformation of the Bay of Edo. In this map the bay is shown as connecting directly with the Pacific at the northern portion of the province of Shimosa-Awa and Shimosa, which now form a promontory, thus become an island. Mr. Otori, discussing this map in his first chapter, says that he bases his delineation on geological indications; on the existence of extensive swamps, and ponds in Shimosa and Hinachi, and on tradition, which asserts that the Bay of Edo formerly extended far into the interior. He suggests the desirability of erecting a stone pillar in the Bay, for the purpose of ascertaining the rate of upheaval. The second map is supposed to have been made about eight centuries ago. It shows the sites of Asakusa and Ueno as on the sea-shore, the same being the case with Mukōjima. The third map is one of Edo, drawn in the middle of the 13th century; the fourth, a map of the same place, drawn in the period Kan'ei (1624-43); the fifth is a map of the province of Musashi in the Shōhō era (1644-47), and the sixth is a map of the Tokyo of day. In connection with these maps, the author gives a detailed account of the various changes that have taken place in Musashi and Tokyo. Originally this tract was in such a condition of wildness, and so completely severed by forests and swamps from the provinces on the north, that people who desired to visit those provinces were obliged to cross the sea from Sagami to Awa, and to proceed thence by a long detour. A road from Sagami to Shimosa, through the thick forests, was first constructed in the year 771. Communication in a southerly direction was facilitated by the opening of the Hakone Pass in the year 802, the Nakasendō having been constructed about a century before. Many minor changes in Musashi and Edo are noted by the author, and special attention is paid to the alterations which occurred from time to time in the courses of the Tonegawa and Arakawa. The forts at Shinagawa were constructed in the Kaei era (1848-1853). In this part of the work, we find an account of the various floods and tempests by which Musashi and Edo have been visited, the most destructive being that of September 2nd, 1728; that of August 13th, 1790; that of July 1786, and that of August 23th, 1846. This last flood was witnessed by the author, who remembers to have seen two junks of five or six hundred *koku* capacity, left lying on the embankment of the Hama Goten. Mr. Otori inclines to the opinion that these catastrophes occur periodically, at intervals of 10 or 15 years, and that September is their favourite month.

The author is quite distinct in his verdict that Musashi was originally peopled by Ainos. After the subjugation and expulsion of these, the present province of Musashi was divided into three—Chichibu, Musashi, and Mimasashi. When these three were united into one, has not been definitely fixed, but the event is generally referred to the reign of Seimu Tenno, about 1700 years ago. At first the province was included in the Tosandō Division, but ultimately it became a part of the Tokaidō. During the Keiki era (715-716) a large number of Koreans are said to have been settled in the province, and to their presence is ascribed the name *Korai-gori*, or the *Korai* district. The term "Edo" is first found in history in connection with a chieftain called Edo-tarō Shigenaga, who ruled over a district called Edo no Shō, in the Jishō era (1177-80). Subsequently the place remained in the possession of the Kamakura

Government for about 150 years. After the fall of that Government, Musashi became the scene of warlike operations, and a castle was built in Edo by Ōta Dōkan, in the year 1435. This castle fell into the hands of Hōjō Ujitsuna in 1521; and sixty-seven years later, Toyotomi Hideyoshi conquered the Hōjō House, and bestowed the eight provinces of the Kantō upon Tokugawa Ieyasu, who entered Edo Castle in August, 1590. During the long reign of the Tokugawa Regents, the city of Edo is said, by our author, to have attained its highest prosperity about the Tempō and Kōka eras (1830-1847). The number of streets and the population, in 1843, were 1731 and 500,257 respectively. From these figures, however, the districts occupied by the military classes and their population, as well as the sacerdotal and mendicant classes, are excluded. If these various elements be included—the numbers of the military classes being reckoned at 449,000—the total population must have been about eleven or twelve hundred thousand. But if the statistics for the year 1787 may be trusted, Tokyo was then even more extensive and populous. The following figures are given:—

Streets	2,770	Including newly settled districts and temple grounds.
Houses	208,000	(those opening on the streets being alone included.)
Population	1,367,885	Including every class except the military.

The entire population must, therefore, have amounted to eighteen hundred thousand or two millions, at that time. After 1801, the military classes began to move from the city into the country, and at the era of the Restoration the population had largely diminished. Subsequently, however, it increased again, the returns of August, 1885, showing:—

Streets	9,113
Population	934,310

This excellent work by Mr. Otori concludes with a chronological catalogue of the principal events that occurred in Tokyo from 1590 to 1885.

*A Captive of Love.* Founded upon Bakin's Japanese Romance, *Kuno no taema amayo no tsuki.* By ED. GREY, author of *The Golden Lotus*, *Young Americans in Japan*, &c. Boston: Lee and Shepard.

BAKIN was incomparably the greatest writer of romance that Japan ever possessed. To wonderful fertility of imagination he added dramatic instincts of the highest order. He produced novel after novel, and though he described himself as a pained scribbler, working under the pressure of "chill poverty," his writings offer no evidence of these disabling circumstances. We have sometimes thought, however, that in the story of his social trials is to be found the secret of his literary success. Conscious that he was endowed with exceptional talents, and unconscious of any wrong that ought to condemn him to misfortune, he probably learned to regard his poverty, and the hardships he suffered, as the consequence of some crime for which he was not personally responsible, but which he, in common with many others equally innocent, was doomed by some inscrutable law to expiate. On no other hypothesis is it easy to explain the persistent tendency of his mind to make all the events of life turn upon the hinge of fatality. Through the web of his wonderful romances there runs always a thread of uniform colour losing itself at last in an entanglement of catastrophes. In modern times there have been men whose faith in the doctrines of Christianity was strained even to rupture by the dogma of eternal punishment. But though there is something almost revoltingly incongruous in the notion that the wrong doing of a few short years is to entail everlasting torture, the doctrine has at any rate one redeeming feature—no man is condemned for sins that he has not committed. Associated with unerring justice the sternest code may yet be tolerable. But the Buddhist tenet of *inga* has no such compensatory characteristic. Its disciples hold that the law of cause and effect is not directed by any intelligent discrimination. Fate, once started on its round, traverses the whole circle, ruthlessly, undeviatingly, and with the impartiality ascribed to the rain of God, strikes down all that come, whether wittingly or unwittingly, within the range of its arm. This terrible and in many respects demoralizing belief furnishes the key to nearly every one of Bakin's romances. We see his characters drawn irresistibly within the circle of fate, there to atone for sins with which, in many cases, their contact was purely accidental. Such a story is "The Moon through a Rift in the Rain-clouds" (*Kuno no taema amayo no tsuki*), which was recently introduced to the American public by Mr. Edward Grey, under the title of "A Captive of Love." A hunter, Buhei, constantly violating the Buddhist commandment against taking life, at last slaughters a stag of peculiar beauty. The crime is ag-

gravated by the method of its commission. Buhei decoys the stag by the sound of one of the Sutras, the animal having a supernatural love for sacred literature. The hunter's gentle wife expires shortly after hearing of this wicked deed, and Buhei himself dies in a few years, penitent and exhorting his son to become a priest. The son follows the paternal injunction, takes holy orders under the name of Saikēi, and by piety and self-denial seems likely to expiate the sins of his father. But the continuity of the circle of fate is not to be thus solved. The spirit of the stag enters into a beautiful girl called Lotus-leaf, who conceives for the priest, and inspires him with an absorbing love. Kikei flies from the temple, and, prostituting his priestly calling to the commission of all sorts of crimes, becomes himself an instrument in the hands of the fate his father offended. Meanwhile, the skin of the stag has been performing its part in the vendetta. Its first purchaser hangs himself, leaving a son who prospers as an owner of oxen. The second purchaser of the skin is a Samurai. His sons, instead of dying loyally with their lord in battle, fly ignominiously, and become, one a falconer, the other a poor peasant. The lives of all these persons are woven into the web of a common destiny. The recalcitrant priest, Kikei, obtains one of the ox-owner's cattle under false pretences and sells it to the poor peasant. The consequences of the fraud fall on the latter's family. During his absence, his invalid wife dies in the hands of the police and his children are cruelly tortured. The peasant himself visits his brother the falconer, finds him married to Lotus-leaf, and, knowing the girl's former relations with the vagabond priest, conceives a bitter hatred of her. By and by, the priest, by a series of clever ruses, establishes himself in the neighbourhood, and is summoned to perform the funeral service at the accidental death of the falconer. While thus engaged, he is discovered by the younger brother, who attempts to kill him, but by mistake kills Lotus-leaf instead. Arrested for this, the peasant and ex-Samurai is condemned to disembowel himself. His children however, ultimately succeed in killing the priest, but not before the latter has worked the ruin of the ox-owner. These outlines, complicated enough in themselves, are filled in by Bakin with consummate skill, so that the whole history constitutes a thrilling romance. Mr. Grey tells it graphically and not without touches of local colouring which do credit to his research and show that he has studied Japanese literature to considerable purpose. He has already been the means of introducing the American public to many phases of Japanese life, his popular style rendering attractive much that would lose all interest in the hands of a less genial author. Yet we feel constrained to say of Mr. Grey's book what we had to say of M. Régamey's "Okoma," that Bakin's genius loses much of its beauty in the paraphrastic garb of foreign interpreters. Why cannot these gentlemen give us the works of the great Japanese novelist in a form as faithful as possible to the original? It will be many a day, we opine, before Bakin's graphic powers and sparkling style are surpassed by any of his renderers. Until that day arrives, the more becoming and appreciative plan will be to reproduce Bakin in his own form instead of transfiguring him by the lights of lesser men. An American or an Englishman taking the works of Dumas or Hugo and introducing them to the public in patchwork clothes of his own manufacture, would at least be called presumptuous. Is less fidelity due to a writer of Bakin's reputation? We think not. Yet Mr. Grey is to be thanked for showing us glimpses of Bakin. Perhaps he understands his public and knows that sketches "founded on" the Japanese novelist's creations are more likely to find favour than photographs of the original. Nevertheless, we wish that some one would try the latter experiment, for though M.M. Régamey and Grey have done well, very well, on lines of their own choosing, they might have done a great deal better, in our opinion, by following faithfully the lines of Bakin himself.

## THE SILK TRADE OF JAPAN.

The following is taken from Messrs. Griffin & Co.'s Half-yearly Silk Report:—

### RAW SILK.

Referring to our review of the first half of the season 1885-1886 (dated the 31st December last), we continue our remarks upon the balance of the season which closes to-day.

We ask your perusal of the customary Export and Quotation tables published herein. There has been a fair business done during the six months: in the first part of the period under review one or two intervals of the "boom" took place, but

since then a gradually falling Market, until in May we had once more got down to a very low range of prices. The last few days, business has been done in New Silk at a marked advance; and natives predict a roaring trade at high prices for the new campaign. As usual, the chief Export has been in the former half of the season—15,476 bales to 31st December, and 10,408 bales for the remainder of the year—about three-fifths and two-fifths respectively.

The total Export shows a decided advance, especially when the increased weight of the bale is taken into account. In fact we must apparently reckon in future with an average weight of at least one picul per bale; some shippers, indeed, show signs of adopting the style and weight of the Italian *ballot* for the packing of Filatures. The Export figures for the whole year give a total of 25,884 bales or 25,339 piculs, against 25,403 bales weighing only 23,790 piculs last year—an increase of 481 bales, but no less than 1,613 piculs. As regards the destination of the shipments, the tables are turned completely; the United States have been decidedly our best customers, and have taken 15,034 bales, while European centres figure for the balance of 10,850 bales.

The principal points for notice are the renewed activity and partial "boom" during the first three months of the year. On these occasions very high prices were paid for some considerable shipments. Since that date prices have fallen away; but the home trade has come to the rescue and broken the fall considerably. During the present month rumours of something wrong with the European crop gave a temporary excitement; but reliable information has now set this matter at rest.

The outlook appears more healthy than for some time past: Stocks of Japans in Europe are considerably run down; there seems a turn of fashion in favour of Silk material for dresses. Markets in all countries of production have opened at prices which manufacturers can well afford to pay, while at the same time the abnormal values of last year have been avoided. In a word, both producers and consumers look forward with cheerful hope to the new season upon which we are just entering. Indeed, some of our Japanese friends are inclined to be too sanguine; they think that we shall see a repetition of 1876, and that with very low foreign exchange exporters may be able to pay almost fabulous prices for Silk this year. We do not join in this anticipation, but imagine that a good all round trade should be done at values satisfactory alike to both seller and buyer. Undoubtedly the very low prices of a year ago have stimulated consumption; and if all concerned in the trade are not too greedy of gain, we should enter on a prosperous career all round.

**DIRECT SHIPMENTS.**—These again show a reduction: they amount to 3,933 bales, against 5,641 bales last year. The present season's Export is thus distributed:—to America 1,664 bales, and to Europe 2,269 bales. It is to be presumed that native merchants will not care to ship largely on their own account if they can sell readily at good prices for cash on the Market here.

**PRICES.**—The old year closed with practically nothing doing, both sides pausing for breath after the enormous transactions of November, and taking up a post of observation ready to act as events might dictate in the New Year. Total Settlements for the six months ending 31st December were 16,700 piculs, and the Stock in Yokohama on that date was 6,500 piculs.

**JANUARY.**—We were not long without business. Buyers soon "took hold," and Settlements for the first week were quite 500 piculs, with a tendency towards higher prices. The news from Europe reported the "Syndicate" strong and capable of holding things up for some time to come; and the chief demand was for Continental Europe. By the middle of the month we had a very active Market at a marked rise, cables arriving with good news from abroad. Business was also done between foreigners; the speculators unloading and realising what profits they could. Thence onward a continued upward movement with a highly sensitive and excited Market combined with large settlements; until in the last week of the month things calmed down to the size of about 50 piculs a day. Market closed quiet but firm, holders strong, and buyers engaged in packing their previous purchases. Settlements for the month of January were quite 4,300 piculs, and on the 31st the Stock-list gave 4,100 piculs.

**FEBRUARY** opened with a quiet feeling. Foreign Markets were quiescent, and buyers paused to consider well the situation. Things were looking decidedly weak until, on the 8th, better news came in from Europe and buying recommenced with some vigour. By the middle of the month, a strong Market once more; and some buyers, not being able to find the quality they required, began again to draw their supplies from the foreign specu-

lators. Steady Market with fair amount of business down to the end. Settlements for February were 1,100 piculs; Stock on the 28th, 4,300 piculs, presenting a very poor assortment.

**MARCH.**—The month commenced with small business: some Silk was bought, but rejections being very heavy, the net Settlements were insignificant. This state of things continued up to the 15th; there was a fair demand for decent Silk, of which there was no Stock, while dealers were disposed to be current with such grades as they had for sale; these, however, were not wanted. Altogether an uneasy undercurrent began to set in and speculators appeared anxious to move their second-hand holdings. Enquiry seemed to revive a little at one time, but a quiet Market prevailed down to the end of the month, with a decided tendency towards lower prices at the close. Settlements for March, 1,200 piculs; Stock on the 31st, 3,700 piculs.

**APRIL** opened with rather more general enquiry, but prices were not strong; in fact the common grades, which were plentiful, could be bought at a sensible reduction on the quotations ruling in March. Arrivals were scanty, and the home trade began to take considerable supplies from our Market, thereby reducing Stocks. The month dragged along; dealers being current sellers of such quality as they had to offer. Intelligence from abroad was not cheering; the foreign Markets appeared well supplied with raw material, and buyers resolved to wait the progress of the new crop. Settlements in April 1,000 piculs; Stock, 3,000 piculs.

**MAY.**—No improvement with the advent of this month, settlements for the first week being 75 piculs only. Nearly all quotations became nominal, and the Market was entirely supported by the home trade, which invested largely for use in the native manufacture of handkerchief-goods. The dullness intensified all through the month, and prices receded almost daily until at the close silk could be laid down abroad at about the prices current in October 1885—a considerable parcel of Shinshu fil. *Kaimisha* being done at \$70, or say a reduction of \$150 per picul from the highest point. Settlements for this month 550 piculs only. Stock on the 31st May, 2,250 piculs.

**JUNE** opened in the same dull, lethargic state, but there was a little more doing towards the middle of the month. News came of the opening of the Shanghai Market at a considerable advance over the first prices made last year. Rumours also were rife as to an expected deficit in the Italian crop, so that sellers plucked up heart, and the interior Markets for New Hanks opened high. The first New *Hachinji Hanks* came in on the 13th and were quickly sold at \$460, against \$347½ made for same grade a year ago. Of course there was a great reduction in Sterling exchange to set against this rise, but not more than seven per cent. could be accounted for in that manner. Koshu filatures appeared on the 17th and were sold at \$610, which is about the equivalent of last year's price (\$565) when we allow for the difference in silver exchange. By now prices have risen fully five per cent., although reliable news give the Italian crop at a decided increase on last year; dealers in the up-country Markets are paying long figures, and natives generally look forward to a rapidly advancing Market. Whether they are right or not, time alone can tell. Sales for the month are 600 piculs, making the grand total of the season 25,450 piculs. We carry over a stock of 1,900 piculs, of which not more than 200 piculs are New staple.

#### WASTE SILK.

In this department we have seen a large business and a great increase in settlements; so much so that the present six months have more than compensated for the small trade prior to 1st January. The total export for the season is greater than for the previous one, figures reading thus:—25,706 piculs to date, against 22,487 piculs at 30th June, 1885. The great increase has been in Waste proper, *Pierced Cocoons* giving a marked reduction of quite 500 piculs (1,735 piculs this year against 2,235 piculs for season 1884-1885).

On reference to the table, it will be seen that the statistics for the half-year ending to-day give an enormous increase in the business done, being nearly three times that of the corresponding half-year in 1885. The exact figures are 15,468 piculs, against 5,506 piculs.

The demand has been good for Japan Waste from all quarters, and the trade for United States Markets is slowly but surely developing. Shipments thence for the whole season are estimated at 3,035 piculs (*Waste* 2,379, *Cocoons* 656) against 1,200 piculs for the previous season.

The large business noted in December, 1885, continued after the New Year festivities were concluded; and it must be borne in mind that much of the present half-year's Export was really settled before the 31st December, although sorting, pack-

ing, and shipping were not completed until the present year was some weeks old.

**JANUARY.**—When dealers got fairly to work there was a good daily trade, with strong quotations, especially for the better grades. Holders professed themselves confident in spite of the large Stock of 7,000 piculs with which the year began. Business increased and prices hardened up to the 20th, from which date shippers held off; they were busily preparing for shipment their recent purchases, and did not propose to pay too eagerly a further advance. Settlements for the month reached 3,100 piculs, and we left off with a Stock of 6,500 piculs.

**FEBRUARY** opened with rather more business, and sellers managed to get a little turn on the better grades of *Noshi*. This continued for a couple of weeks, after which there was an increase in the volume of business done; and one week's Settlements were entered as 1,000 piculs, chiefly *Kibiso* and *Noshi*, with a special run upon *Mazala*. Arrivals light, Stocks reduced by returns to the interior, and a general good feeling all round, with good demand for best Wastes, brought us up to the end of the month. Sales during February:—3,200 piculs. Stock at closing was down to 4,500 piculs.

**MARCH** started in a languishing mood, buyers wanting a reduction in price, which sellers did not see their way clear to give. By the 15th there was decidedly more inclination for business, with a slight tendency to ease in favour of buyers. In the third week quite a revival with large business (950 piculs) for the time of year, arrivals light and prices for decent lots the turn higher. By the end of the month more quiet again, sales from 1st to 31st being reckoned at 2,100 piculs, leaving off with a stock reduced to 2,000 piculs.

**APRIL** commenced with more inclination for business, and a fair demand for all kinds of Waste. A small, spasmodic business to the 15th, thence onwards to the 30th in much the same style. Stocks were in some cases withdrawn from the market, and dealers tried to put about the idea that very little more Waste could possibly come in. Settlements this month 1,150 piculs. Stock on the 30th estimated at 1,200 piculs only.

**MAY.**—Stagnation the first week, but quite a small spurt before the 15th, with considerable enquiry for various kinds of Waste, which were not forthcoming, the stock being poorly assorted. Things continued on a fairly even keel up to the end of the month, with now and then a gentle rise or fall in the volume of business passing. Rather better feeling all round at the close. Settlements for the month 800 piculs only. Stock on the 31st, 900 piculs.

**JUNE.**—A very small dwindling business during this month in old Waste. Dealers talk of high prices for New staple, and indeed \$128 has been paid for a parcel of fine *Bushu Noshi*. Japanese expect rates to go very much higher, although it is hard to find out what basis they go upon. Some assert that the production of Waste will be limited this year; others speak of a great demand in foreign markets at a strong rise. However this may be, the future must decide. The settlements for June are put down as 400 piculs, and we carry a stock of Old Waste amounting to 850 piculs into the new season, which nominally commences to-morrow.

#### EXCHANGE.

**FOREIGN.**—This has surely and steadily worked with exporters; although the fluctuations have not been great, the general tendency has been towards ease, and the continued drop in Silver quotations has made exchange a favourable factor in the shipper's calculations. The Yokohama Specie Bank has again been a strong competitor for mercantile paper, and is undoubtedly doing its best to foster a large export trade in Japan's chief staples. *Credits.*—Four months' sight on London opened at 3/4½ and continued there or thereabouts through the month of January. February opened at 3/4½, gradually working down to 3/4½ at the close. March saw a slight rally at one time, but by the end of the month rates were called 3/4½ firm. In April and May the same state of things continued, and (either up town or down town) bills were negotiable at or about March rates. Through June much the same conditions existed with a distinct weakness at the close and a threatened drop at an early date. Credits to day are quoted weak at 3/4½ per dollar or silver yen.

**DOMESTIC.**—We may almost say that there is no such factor now in the Silk-man's calculations. It is practically eliminated from the account altogether; the Government is redeeming all its fiat notes in Silver; and *Kinsatsu* are always quoted nominally at par with Silver yen or Mexican dollars. Should the Government keep clear of all expensive complications there is no reason why *Kinsatsu* should not soon become things of the past—a matter of "ancient history."

## LETTER FROM SAN FRANCISCO.

(FROM OUR SPECIAL CORRESPONDENT.)

San Francisco, July 1st.

As in duty bound, Samuel J. Randall, Pennsylvania, has introduced his tariff bill. The national Democratic platform of 1884 pledged the Democracy to reform the tariff, and when thirty-five Democrats joined with the Republicans to defeat the Morrison bill, it devolved on their leader to show in what way his wing of the party proposed to fulfil the pledge. It is a curiosity in fiscal legislation. It proposes to readjust a few duties; to add to the free list, wool in various forms; and to maintain the most oppressive duties—the profits of which go into the pockets of Pennsylvania and Ohio manufacturers—in their most stringent shape. Thus, under it manufactures of iron would pay from \$13 a ton, which is the rate on iron or steel railway bars, to \$60 a ton, which is the rate on nails; clothing and combing wools would pay to cents a pound, and carpet wools 3 cents a pound; where they are washed or scoured, the duty is doubled and trebled; on manufactures of wool, the duty would range from 65 to 85 per cent. On the other hand, in order to satisfy the cry for a reduction of taxation, the internal revenue on tobacco is to be taken off. It is safe to say that this is the only civilized country in the world in which a leading statesman would propose to support the Government by taxing the poor man's blanket and letting cigars and tobacco go free. The bill has been referred, and Colonel Morrison proposes to report it, with amendments, to the House, instead of kicking it out of the Committee room. The trouble with the Democrats has ever been that they lack the courage of their convictions; they are so afraid of losing votes in Pennsylvania and Ohio—States which are hopelessly lost to them—that they have not the pluck to come out for radical free trade, and to force Randall and his followers into the Republican camp where they belong.

Revenue reformers have derived comfort from an incident which occurred at the White House. Shortly after the defeat of the Morrison bill, one of the ten New York Democrats who voted against the bill called on the President to ask some favour. Mr. Cleveland eyed him sternly and said: "You voted against the Morrison Bill?" "Yes," replied the quaking disciple of Tammany Hall. "And you call yourself a Democrat!" cried the President.

The simultaneous appearance of General Grant's second volume, and the bulky tome in which John A. Logan has kindly taken the public into his confidence, has set the world studying political literature. It is to be feared that these new books will share the fate of Wilson's Rise and Fall of the Slave Power, Greeley's American Conflict, and Jefferson Davis' Rise and Fall of the Confederate Government. They will find some secluded nook in libraries, where the dust of time will gather undisturbed on their bindings. General Grant's work is interesting, to those who knew the man. It was written for bread, at a time when the author, laden with sorrow, and stricken by a fatal disease, had his last hours embittered by the thought that his approaching death would leave those who were nearest and dearest to him destitute. A knowledge of the circumstances disarms criticism, and leaves the reader free to applaud the generous spirit, and the manly tone in which the work is written. It adds, too, one more source of information for the use of the future historian of the war.

General Logan's book is a very different performance. Like Blaine's Twenty Years in Congress, it is a political pamphlet composed for the purpose of promoting its author's political ambition. It makes no pretension to scholarship. Indeed, when a friendly critic explained that a certain phrase would have provoked the wrath of a certain person, the author frankly replied: "Let Lindley Murray, the author frankly replied: 'Let I didn't write it. Its statements of doctrine and its elucidation of principles are worthy of a schoolboy. General Logan never did acquire any mastery of political science. Before the war, and indeed until after it had commenced, he was an apologist for, and even an admirer of slavery; his attempts to reconcile his opinions of those days with the broader views which now prevail, and which he has found it necessary to adopt, are ludicrous. His endeavours to show that the opposition of the southern people to protective duties was due to their hostility to free labour, is on a par with the Rev. Burchard's famous alliteration of Rum, Romanism, and Rebellion. Logan possesses one quality which is good: he is honest; and one quality which may be good or bad according to the mind which directs it; he is positive. He divides mankind by an easy process into two classes—angels and devils; and ranges every one with whom he has to deal in one of these

classes. To his devils he allots no virtue; in his angels he admits no vice. This plan has the merit of simplifying history; it would be convenient if mankind were not composite. If the General were to achieve the object nearest his heart, and to win the Presidency, his administration would be uncompromising; Black Jack's friends would get all the plums, and Black Jack's enemies would be cast out into uttermost darkness. He would swear by his blunders, and class his prejudices among his virtues. But he could cheat nobody.

It is in this last particular that his book reveals him in such bright contrast to the portrait which James G. Blaine has drawn of himself in his Twenty Years. Intellectually, there is no comparison between the two. Blaine is a man of commanding intellect, clear head, wide information, and remarkably quick perception. He would have made a fortune at the bar as a special pleader. He seizes the point of every question with unerring eye, and his mind is stored with every argument that can be brought to bear on it. He is a good judge of character, and a generally accurate reader of motives. But he has no more principle than a boot-jack. Trojan or Tyrian are all one to him, if they bring grist to his mill. Between the lines of every page of his book, the most careless reader can detect the words: "I am the man for President." With admirable judgment he picks out the men whom he cannot by any chance hope to conciliate, and these he abuses; his other foes, who may by dexterity be won over to be his friends, he goes out of his way to praise. He is unsparing on Bayard and Schurz, but he has honeyed words for Conkling and Edmunds. He goes through his two volumes hat in hand to the public, mutely soliciting votes; like the lawyer in Little Dorrit who was affable to everybody for fear of throwing away a possible jurymen. He is ready to champion any delusion if he reckons that it will last into the Presidential election; he can make a special plea for any popular fallacy if it only promises to prevail for or year a two. He is so bright a man that it is almost certain he is a free-trader; but he vaunts the merits of protection as vociferously as the late Horace Greeley himself. On all the delicate questions—save this—which divide the American public, prohibition, the forfeiture of land grants, the subsidy question, the naturalization laws, his book is discreetly silent; but it expresses very decided opinions on the Chinese question, Chinamen having no votes and their opponents a good many.

The sporting season at the East is in full blast, and no day passes without a regatta or a race. The various crack yachts have been trying their paces with a view to select a competitor for the English *Galathea*, which is on the sea; in the first races the *Priscilla* was generally successful, but later trials have again brought the *Puritan* to the front. A general impression prevails that, either of the two could out sail the Englishman. This time last year, if you remember, the feeling in New York was that the *Genesta* would win the cup. We shall know all about it in a week or two. On the turf California has been covering herself with glory. Nearly all the races have been won by California horses. The latest contests have been between two California stables—that of Haggin and that of Baldwin, New York, and even Kentucky are nowhere. It is considered doubtful whether any country in the world contains faster horses than Ban Fox, Tyrant, Silver Cloud, and Troubadour. Recent events have had a tendency to stimulate a good deal of brag on this side of the continent; a propensity which as every one knows is entirely foreign to our habits.

The conference committee on the Post-office Appropriation bill have agreed to throw out the senate provision for a subsidy to ocean steamers, and therefore the prospect is that the Pacific Mail Company will carry no regular mail to China and Japan during the coming year. This puts the commercial community to inconvenience. Since the new year, fourteen steamers have left San Francisco for Yokohama and Hongkong. Of these only seven have carried regular mails. Through the courtesy of the agents of the Pacific Mail Company, I and others have been enabled to send letters, in Government stamped envelopes, by their ships, but letters to China have been somewhat uncertain in reaching their destination. For the conveyance of this letter I am indebted to the politeness of the purser of the *Rio de Janeiro*.

## IN H.B.M. COURT FOR JAPAN.

KANAGAWA, 29th July, 1886.

[IN ADMIRALTY.]

The Master, Owners and Crew of the American ship *Clarissa B. Carter*, plaintiffs; and the Owners of the British steamship *Glamorganshire*, Williams, master, defendants.

## REGISTRAR'S REPORT.

TO NICHOLAS J. HANNEN Esq., JUDGE OF HER MAJESTY'S COURT FOR JAPAN.

Whereas on the 12th day of June, 1885, an action was commenced in this Court by the above named plaintiffs against the above named defendants for the recovery of \$98,528.75 Mexican damages resulting from a collision which occurred between the two vessels near the port of Hyogo on the 7th of June, 1885; and whereas by the judgment of this Court, pronounced on the 12th October, 1885, the steamship *Glamorganshire* was found to be solely to blame for the collision, and this judgment was on appeal affirmed by the decision of the Supreme Court for China and Japan pronounced on the 10th of April, 1886; and whereas by an order of this Court, dated 22nd June last it was referred to the Registrar and two merchants to ascertain and assess the amount of damages sustained by the plaintiffs and payable by the defendants, except costs, under the judgment aforesaid; and whereas affidavits and proofs were filed on the 25th day of June last, with particulars of claim, by the plaintiffs' counsel, but no counter affidavits or proofs were filed by the defendants' counsel; and whereas the hearing of the reference took place on the 16th and 19th instant before myself sitting as Registrar assisted by Messrs. W. G. Bayne and E. F. Kilby, merchants appointed by the Court, at which hearing witnesses for both sides were called, examined, and cross-examined by the respective counsel; and whereas the several items, particulars, and details of the plaintiffs' claim were then and subsequently examined, investigated, and carefully considered by myself and the merchants in concert;

I have now, therefore, the honour to report the result of our investigation, together with the reasons therefor, under the several heads of claim, as follows:—

## I.—VALUE OF THE SHIP.

The amount claimed in the original petition was the equivalent at current rate of exchange of \$70,000 U.S. gold. On the reference, however, this amount was reduced (by counsel's advice) to \$60,000 U.S. gold, less \$1,900 Mexican, being the amount realised by the sale of the wreck; and \$82 Mexican, value of a boat belonging to the ship subsequently recovered and sold. The total claim for the *Clarissa B. Carter* was, therefore, as follows:—

U.S. Gold.	
Value of the ship at the time of collision	60,000.00
Less value of wreck	1,900
Less value of boat	82

Mexicans	1,982
At current rate of 76 cents	1,506.32

Net value claimed ..... \$58,493.68  
The actual value of the ship, as nearly as it could be ascertained from the very scanty evidence adduced, was found to be:—

Value of ship	\$41,264.24
Less value of wreck and boat	1,506.32

Net value allowed ..... \$39,757.92

## REASONS FOR THIS FINDING.

The most direct evidence afforded to us upon this point was the statement of Leroy Dow, master of, and owner of one-eighth share in, the *Clarissa B. Carter*, who had, with the exception of one voyage, been continuously in command of her from the time she was launched until the day of the collision. He was therefore well acquainted with the cost, history, and condition of the ship; his testimony was supported on several points by documentary evidence and was scarcely, if at all, shaken by the cross-examination.

The following facts were clearly established:—The *Clarissa B. Carter* was a sailing ship of 1,144 tons, built at Searsport, Maine, U.S.A., in 1876 by George B. Carter, master builder, and was owned as a "family ship" by members of the Carter family and other inhabitants of Searsport to the number of about twenty. Her frame was of hackmatack and rock maple; the scaling and outside planking were of Southern hard pine, all the materials having been seasoned before she was put together. She was fastened through and through by copper, iron, and locust; her deck was of white pine 4 inches square; her masts were built masts; her rigging was wire and her equipment

was in all respects complete. She was built not by contract, but by the day, and cost \$80,000 U.S. gold. She was coppered for the first time in Liverpool in November, 1876, and on three subsequent occasions, the last being in or about November, 1884, preparatory to starting on her last voyage to Japan, the cost of coppering, including docking and labour, being about \$3,000. She held two certificates of classification, one in the "Record" with class + A1 for fourteen years from July 1876; the other in the Bureau Veritas with the class + 3/3—L. I. for thirteen years from August, 1876; both these certificates bore endorsements for re-survey "class confirmed and continued," dated respectively in May, 1883, and November 1884. She had never been surveyed in Japan, and there was not sufficient evidence as to the amount for which she had been insured. At the time of her loss she was earning freight under a charter party for a voyage to New York.

The indemnification of the owners, therefore, according to the rule laid down by Sir R. Phillimore in the case of the *Northumbria*,<sup>1</sup> is to be calculated on the basis of the probable value of the ship at the end of her voyage, together with the freight she would have earned less the cost of earning it, and interest both on the value of the ship and on the net freight from the probable date of the termination of voyage.

The evidence brought before us as to her probable value at the end of the voyage was very meagre; a fact which, as it appeared to the merchants and myself, rendered it all the more incumbent on us to adhere closely to the rule laid down by Dr. Lushington in the case of the *Ironmaster*,<sup>2</sup> as to the order of importance in which the various kinds of evidence should be ranked. "The best evidence," said that learned judge of the Admiralty Court, "is, first, the opinion of competent persons who knew the ship shortly previous to the time it was lost." Leroy Dow, the master, was the sole witness of this kind examined before us; he swore that her value "if she had completed her last voyage as she then was would have been \$60,000 U.S. gold. She was as good as ever she was."

"The second best evidence," continued Dr. Phillimore, in the *Ironmaster* "is the opinion of persons conversant with shipping and the transfers thereof." Two witnesses of this kind were called on behalf of the defendants, neither of whom had ever seen the *Clarissa B. Carver* nor had any experience of the American shipping market. The more important of these experts was the Port Captain of the Nippon Yusen Kaisha, Captain J. W. Walker. All his experience in valuing ships had, he admitted, been acquired in Japan, and during the last four years, and he did not hold himself out as a public expert in such valuations. Judging from the very vague data given in evidence, and irrespective of the state of the market, this witness considered that a ship of the sort described, and costing, new, \$80,000, nine years ago, would now be worth on a very fair outside estimate, about \$35,000.

Captain Walker furthermore explained the mode in which he arrived at this amount. Such a ship, he considered, would be classed A 1 at Lloyd's for nine or ten years, and every year a percentage should be written off for depreciation; for the first third of that term the percentage, he considered, should be six per cent.; for the rest of the term from eight to eight and a half per cent.

Now, it appears to me that for a ship so well kept in repair as the *Clarissa B. Carver* was shown to have been, the percentage for depreciation taken by Captain Walker for the first few years was too high. And my opinion is confirmed by the only case I can find in the Admiralty Reports in which the value of a ship, as lessened by lapse of time and irrespective of market fluctuations, seems to have been proved to the satisfaction of the Court of Admiralty. In the case of the *Black Prince*,<sup>3</sup> decided by Dr. Lushington in 1862, it became necessary, in order to fix the rate of demurrage, to form an estimate of the value of the plaintiffs' ship, the steamer *Araxes*, and here is what the Judge said:—"I think it is clearly proved that the value of the *Araxes* was £25,000 or thereabouts. She had cost, when fitted for sea in 1886, rather over £30,000, and the presumption is she was kept in fair repair. I think, therefore, that at the expiration of five years, £5,000 was a fair deduction to make from her original value."

Now, the wear and tear of boilers and machinery being taken into account, it is reasonable to suppose that the rate of depreciation would not be greater or more rapid in the case of a well-built wooden sailing ship than in the case of a steamer; and it appeared to the Merchants and myself that the amount thus recognised by the Court of Admiralty was at once a more authoritative and fairer

rate to take than that given by Captain Walker. On the other hand, the principle of an augmented rate of depreciation for the subsequent years of the ship's term of efficiency seems to be sound and frequently acted upon in valuation estimates, and we saw no good reason for not accepting the higher subsequent rate named by that witness as proper, viz.—8 per cent per annum, deducted successively from the valuation of each preceding year. Accordingly, from the two data thus furnished, we calculated the value of the *Clarissa B. Carver* as follows:—

Original cost in 1876 .....	\$80,000.00
Less depreciation of one-sixth in five years, i.e., to July, 1881 .....	13,333.33
.....	66,666.66
Less 8 per cent., July, 1882 .....	5,333.33
.....	61,333.33
Less 8 per cent., July, 1883 .....	4,906.66
.....	56,426.66
Less 8 per cent., July, 1884 .....	4,514.13
.....	51,912.53
Less 8 per cent., July, 1885 .....	4,153.00
.....	47,759.53
November, 1885 (say for half a year) ..	1,910.38
.....	45,849.15

being the estimated value of the ship at the probable date of termination of voyage, namely the 28th of November, 1885.

Having thus arrived at an approximate valuation of the ship, as deductible from her first cost and subsequent depreciation, we had next to consider it as affected by the movements of the shipping market.

No evidence was brought before us as to the state of the American market for wooden sailing ships; but the second witness called for the defendants, Charles Wm. Pearson, a master of British ships for 23 years and in the employ of a ship-building firm, testified that within the last ten years shipping property generally has fallen in the English market about 50 per cent. in value, and the instance he quoted from personal knowledge bore out this estimate. But he had no acquaintance with the American trade, beyond the well-known fact that sailing ships retain a much more important place in it than in the English carrying trade; and it was given in evidence that to American owners American ships have this element of value over foreign ships that the latter are not allowed to engage in the American coasting trade. On the whole, we considered that ten per cent. would be a fair allowance to make for the fall in value of such ships since the date when the *Carver* was built. This gives \$41,264.24 as her value in New York at the close of 1885, the date of probable termination of her voyage.

#### II.—STORES AND SPARE EQUIPMENT.

Under this head the plaintiffs claimed \$1,156.12, value of provisions, and \$2,601.67 for spare sails, rope, canvas, and sundries which were on board when the ship went down.

The former of these items has been allowed in full; but as part of the equipment, estimated, say at one third, would most probably have been used in the course of so long a voyage, that proportion has been struck off; thus:—

\$1,156.11 provisions.	
2,601.67 equipment.	
Claimed .....	3,757.79
\$1,156.12 provisions.	
1,744.45 equipment.	
Allowed .....	2,890.57

but, as the provisions would be all or nearly all required for the maintenance of the crew on the voyage, their value is to be deducted from the following head of claim, namely:—

#### III.—FREIGHT.

The gross freight to be earned under the charter party with Messrs. Paul Heinemann & Co. was \$10,000 U.S. Gold; and the plaintiffs' deductions for the estimated cost of earning it amount to \$2,623.20. But the cost of the food of the crew has been omitted, and should be included amongst these deductions, and the value put by the plaintiffs themselves on the stock of provisions on board may be fairly taken as an approximate estimate of the amount, viz., \$1,156.12. Another omission we noticed is the Customs charges at Kobe. The charges allowed for at New York seemed very light as compared with the figures given in Stevens on Stowage for other American ports, but we had

no direct means of testing their accuracy. The freight account, therefore, should stand thus:—

Claimed .....	\$7,376.80
Deduct food of crew .....	1,156.12
Customs dues at Kobe .....	22.00
.....	1,178.12

Allowed .....

#### IV.—EFFECTS OF MASTER AND V.—EFFECTS OF CREW.

The charges made under these heads could not be considered excessive, and in the absence of any means of distinguishing between new articles and old we have followed the usual practice of deducting one third from the claim of each member of the crew, and also from the master's claim except as regards the slops, for which the full amount claimed is allowed, thus:—

#### MASTER'S CHARTS, BOOKS, CLOTHING, &c.

Claimed .....	\$1,208.65
Deduct $\frac{1}{3}$ .....	408.88
.....	805.77
Slops .....	251.94
Allowed .....	\$1,057.71

#### PRIVATE EFFECTS OF CREW.

	CLAIMED.	ALLOWED.
Wm. Laffin, chief mate .....	\$366.75	\$244.50
Amando Nary .....	90.40	60.27
S. Sjerson, carpenter .....	281.00	187.34
James Lawson .....	54.75	36.50
Martin Nielson .....	78.50	52.34
H. B. Walker, 2nd mate .....	222.75	148.50
John N. Arnoy .....	188.50	125.67
F. Gustafsen .....	81.25	54.17
H. Rosengren .....	91.00	60.66
Joe Bowers .....	93.50	62.32
August Patterson .....	73.50	49.00
Christian Sabots .....	74.00	49.33
William Benton .....	69.00	46.00
John M. Nilson .....	70.87	51.25
O. Hagenow .....	67.67	45.11
.....	1,879.44	1,252.96

Interest allowed on value of ship and freight from 28th November, 1885, date of probable end of the voyage, and on value of spare equipment and of effects of master and crew from 7th June, 1885, the date of the collision, at 8 per cent. per annum.

The parties should each bear their own costs of this reference, subject to the decision of the judge.

J. C. HALL,  
Acting as Registrar.

#### SCHEDULE.

	CLAIMED.	ALLOWED.
	(U. S. Gold.)	
1 Value of ship .....	\$58,493.08	\$39,757.92
2 Stores and equipment .....	3,757.79	2,890.57
3 Freight .....	7,376.80	6,189.68
4 Master's effects .....	1,400.59	1,057.71
.....	\$71,088.86	\$49,904.88
.....		(Mexican.)
At current rate of 76 equal to .....	\$93,537.97	\$65,664.31
5 Effects of crew .....	1,879.44	1,252.96
Total claimed .....	\$95,417.41	
Total allowed .....		\$66,917.27

Before RUSSELL ROBERTSON, Esq., Assist.-Judge.  
WEDNESDAY, July 28th, 1886.

#### CHARGE OF EMBEZZLEMENT.

J. Gillam was charged to-day with the embezzlement of two sums of \$120 and \$334.40, being monies paid for and on account of the Yokohama Drayage Company. The summons alleged that he, being a clerk in the employment of the Drayage Company, on the 23rd and 24th of this month, received the sums mentioned, for and in the name of the company, and embezzled them.

Austin Weston, an American citizen, deposed:—I am manager of the Yokohama Drayage and Lighter Company. The accused was in my employment, as a clerk. Some goods were to be passed for the Nippon Yusen Kaisha, and on the 23rd instant accused went to the office of the Nippon Yusen Kaisha and drew \$120 by getting a cheque from Mr. Johnstone, head of the stores department, which was afterwards cashed by the cashier. He did not pay the duty with it as he should have done. On the following day he drew another sum of \$334.40, also on account of duty, of which only \$10.40 were used for that purpose, I asked the delivery clerk at the Haioha how much duty had been paid, and I was shown only a re-

1. J. L. R. Ad. p. 6. 2. S. Ad. p. 441. 3. Lush. p. 576.

ceipt for \$10.40. On the 26th (Monday morning) I went to see Mr. Johnstone at the office, I asked him how much money had been paid to the accused and was told of the two payments. I then tried to find Mr. Gillam, and got him the following morning at 6 o'clock. I asked him what he had done with the money and he accounted for \$208.20, leaving \$245.50 unaccounted for. He had explained how he had spent \$60, but did not account for the remaining \$180. After finding him yesterday he went with me to our office at the Hatoba and showed me where there was \$198.50 in his desk. I applied to this Court for a summons yesterday morning, accused meanwhile remaining in his room at No. 98.

James Johnstone, manager of the stores department, Nippon Yusen Kaisha, deposed:—On Friday, the 23rd, accused called at my office to get a sum of money on account of duty for goods which had arrived by the steamer *Bengloe*. He asked for \$120 and I at once gave him an order on the cashier for that amount. Next day I was absent in Tokyo, and the order for the \$334.40 was granted by Mr. Curtis. I do not of my own knowledge know whether he paid the duties with the money or not. Mr. Weston came on Monday morning and said that Gillam had disappeared, and that the money advanced had not been paid into the Custom-house on account of the duty. He asked me to come to the Court and swear an information against the accused. I accompanied him here, but I did not possess sufficient knowledge of the matter to justify me in swearing then. I produce the receipts. We have got only a portion of the goods. The remainder has not been passed through the Custom-house, accused not having paid the duty.

Accused, in reply to the Court, said he would prefer to be dealt with summarily. He admitted having embezzled part of the money, and hoped the Court would be lenient with him. He took a small sum at first, he said, with the intention of returning it, but then he got reckless and on Sunday night he took a large sum out. It was dark at the time and he could not tell exactly how much he took on Sunday night, but he supposed there must have been about \$200. He had spent \$65, and the rest he must have lost on Sunday night or Monday morning between Honmoku and Takashima-cho.

Mr. Weston, in reply to the Court, said he wished to produce evidence to prove that accused had a large sum of money in his possession at Takashima-cho. Money was passed by him to his girl in Takashima-cho, and the girl placed this money in her obi. He could not say how much there was, but the witness he proposed to call said the notes were of the new silver issue with green backs and were probably yen 10 notes, and that there was a roll of them.

The case was adjourned for this evidence till 10 o'clock on the morning of the 30th instant.

FRIDAY, July 30th, 1886.

Utagawa Masa deposed—I live in Honjo, Tokyo, not in Yokohama. I have seen the accused I think on the 26th of this month, at Takashima-cho. I saw him about ten o'clock on the morning after he went there. I saw the woman now in Court with a bundle of blue *satsu* in her hand, how much I do not know. I did not see prisoner pass the notes. I did not see the prisoner with the notes at all.

To Mr. Weston—The woman I saw with the *satsu* is here in Court. The prisoner did not tell me he had given the notes to the girl.

Takahashi Hide deposed—I know the prisoner; I am in his service.

By Mr. Weston—I went to Takashima-cho on the morning of the 26th. I got to the room where the prisoner was after some trouble. He was lying down. I took no money from him, I tried to rouse him, but ineffectually, and at length asked him if he had any money. He said he did not know. He could not tell where his pocket book was, but I found it near him. It contained only a twenty *sen* piece, two 10 *sen* pieces, five *sen*, and two keys.

Mr. Weston said he had one other witness, but he saw no use of troubling the Court further. He stated, in reply to the Court that he wished to amend the charge to the effect of accusing the prisoner of embezzling \$245.50. He wished to state, if it was not too late, that the accused had no authority from him to collect this duty.

The Assistant-Judge remarked that that might have the effect of upsetting the whole charge of embezzlement.

Mr. Weston said if the money had been accounted for to him he would have passed it into his account and credited the Nippon Yusen Kaisha.

The charge was then amended, prisoner being now accused of embezzling \$120 on the 23rd instant, and \$245.50 on the 24th instant.

Accused pleaded guilty of taking the amount charged.

Sentence was passed of six months' imprisonment. Accused asked if he would be allowed to see the girl, Takahashi, to make arrangements as to his effects. He was informed by the Bench that under certain surveillance he could see the girl as to his belongings.

### LATEST TELEGRAMS.

### TIME TABLES AND STEAMERS.

#### YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 6.35, 8.00, 9.15, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Those marked with (\*) run through without stopping at Tsurumi, Kawasaki and Omori Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

#### TOKYO-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYO (Ueno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAYEBASHI at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 3.80; Second-class, yen 2.28; Third-class, yen 1.14.

#### TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

#### TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Ueno) at 9.25 a.m. and 4.50 p.m.; and UTSUNOMIYA at 9.30 and 4.55 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

#### SHIMBASHI, SHINAGAWA, AND AKABANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKABANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

#### KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

TRAINS LEAVE OTSU (down) at 5.45, 7.45, 9.45, and 11.45 a.m.; and 1.45, 3.45, 5.45, and 7.45 p.m.

TRAINS LEAVE KYOTO (down) at 6.45, 8.45, and 10.45 a.m.; and 12.45, 2.45, 4.45, 6.45, and 8.45 p.m.

TRAINS LEAVE OSAKA (down) at 6.25, 8.25, and 10.25 a.m.; and 12.25, 2.25, 4.25, 6.25, 8.25, and 10.25 p.m.

FARES—Kobe to Osaka: First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90. Kobe to Kyoto: First Single, yen 2.25; Second do., yen 1.40; First Return, yen 3.55; Second do., yen 2.10. Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

#### OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

FOR EUROPE—The P. & O. Company's steamer sails fortnightly on Saturday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Sunday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

FOR SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

FOR CHINA—The steamers of the Nippon Yusen Kaisha sail weekly (Wednesday) for Shanghai, calling at Kobe and Nagasaki. Steamers of this Company also run to Korea and Vladivostok, at intervals, their sailing notices appearing in the local papers.

#### YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.15 and 10.45 a.m., and 1.30 and 4.30 p.m.; and leave Shirahama (Yokosuka) at 6.30 and 10.50 a.m., and 1.45 and 4.15 p.m.—Fare, 20 *sen*.

## CARGOES.

Per American steamer *City of Sydney*, from Hongkong:—Freight, 354 tons; for San Francisco, 640 tons.

Per French steamer *Folga*, for Hongkong via Kobe:—Silk for France 26 bales.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports:—Treasure, \$455,000.00.

## REPORTS.

The American steamer *City of Rio de Janeiro*, Captain Wm. B. Cobb, reports:—Left San Francisco on the 1st July, at 2:51 p.m. and arrived at Honolulu on the 10th July, at 3:30 a.m.; left on the same day, at 8:30 p.m. and arrived at Yokohama on the 25th July, at 4:20 p.m.; experienced light variable winds and good weather throughout the whole passage. Time, 23 days and 8 hours.

The British steamer *Gaelic*, Captain Pearne, reports:—Left San Francisco on the 10th July, at 4:15 p.m., and experienced light variable winds and fine weather throughout the passage. Arrived at Yokohama on the 28th July, at 9 a.m. Time, 16 days, 23 hours, and 17 minutes.

The American steamer *City of Sydney*, Captain D. E. Friele, reports:—Left Hongkong on the 24th July, at 3 p.m. and experienced light baffling airs, smooth sea, and fine weather. Arrived at Yokohama on the 31st July, at 1:30 a.m.

## LATEST COMMERCIAL.

## IMPORTS.

There has been a fair general demand during the past week, but transactions have been on a smaller scale than for some of the preceding weeks, owing in a great measure to the higher prices required by sellers. Dealers are prepared to advance for pressing orders, but having bought largely on speculation at low prices, they are well pleased to see holders' quotations raised in consequence of the decline in sterling exchange.

**YARN.**—Sales for the week amount to 600 bales English and 1,000 bales Bombay. Prices have ruled rather higher for both, and quotations are very firm at the close.

**COTTON PIECE GOODS.**—Sales comprise 15,000 pieces 9 lbs. Shirtings at higher rates; 2,000 pieces 8½ lbs. Shirtings and 3,000 pieces 7 lbs. T.-Cloths at previous quotations; 2,500 pieces Indigo Shirtings, 1,500 pieces Turkey Reds, and 2,000 pieces Victoria Lawns at improved prices; 2,000 pieces Prints, 480 pieces Velvets, and 500 pieces Taffachelas.

**WOOLLENS.**—1,000 pieces Mousseline de Laine, 1,000 pieces Italian Cloth, 80 pieces Black Orleans, 60 pieces Lastings, and 300 pieces Silk Satins are reported amongst sales, with a further slight general firmness in the Market.

## EXPORTS.

## RAW SILK.

Our last report was dated the 23rd instant; since then we have had a strong Market with small business, the total net Settlements being 75 piculs only. In reality 111 piculs of *Filatures* and *Re-reels* have found buyers, but *Hanks* give a minus quantity of 36 piculs, thus reducing the net business to 75 piculs, as noted above. In addition, Direct Export has taken 25 piculs, making the total foreign business for six days 100 piculs.

Sellers have been able to get a rise in prices, and are now holding strong, expecting foreigners to operate freely as the departure of the *City of Sydney* draws near. Meanwhile, the majority of exporters find that they cannot pay these figures, in spite of the further decline in exchange. As to the outlook, it is hard to foresee anything; but in the ordinary course of trade an increasing Stock (with very small sales) would naturally bring us to lower prices in the near future. Native merchants are jubilant, however, and for the present ridicule the idea of lower values, and it is not at all certain that any amount of business could be done at our quotations.

Arrivals increase daily, and the Stock-list gives 500 piculs more than this time last week. Again there are no transactions to report for Europe, and the U.S. Market does not follow ours in its upward march.

There has been only one shipping opportunity since we last wrote, viz.—the M.M. steamship *Volga* on the 25th. She carried 26 bales for European points, of which only 11 were on foreign account. This brings the present season's Export up to 771 piculs, against 502 piculs last year, and 911 piculs to same date in 1884.

*Hanks*.—The two sales of *Annaka-Takasaki* noted a week ago have been cancelled and the goods returned. Holders are very strong and stand out for prices which no Exporter can pay.

*Filatures*.—Several parcels have found buyers at an advance on last quotations, and sellers are asking yet more, refusing to go on at same figures. Among the sales of the week are *Utsu-no-miya* (old) at \$750, *Tokushinsha* \$722½, *Hakusuru* \$705, *Meijusha* \$690, *Shijusha* \$685, *Kanayama* \$685. This latter figure is now refused for *Shinmeisha*, *Tokosha*, and similar silks. In *Koshu* sorts nothing done, but a fragment of *Bushu Fil.* *Hagiwara* is noted at \$700.

*Re-reels*.—Transactions amount to 30 piculs, consisting of the following:—*Shinshu* (Helmet chop) \$675, *Maibash* (Tortoise chop) \$660, and Five Girl chop at \$655.

*Kakeda*.—Nothing done, although supplies are beginning to come in from this district. Perhaps we may see a little business before the steamer goes.

Available supplies to date .....			

## WASTE SILK.

Rather more doing in this department, and sales for six days are reported to be 250 piculs divided between *Noshi* and *Kibiso*, the former 200 piculs, the latter 50 piculs.

The business done has been at a further advance, but without proceeding in such leaps and bounds as we had to chronicle last week. Still there is a firmness and hardness about holders which forbids large transactions in any section. Arrivals continue on a fair scale, and the Stock has increased fully 600 piculs on the week.

The M.M. steamer *Volga* took 21 bales of various Waste for Europe, including 5 bales old *Joshu Noshi* to London. Total Export to date is now 348 piculs, against 580 last year, and 122 piculs at end of July 1884.

*Pierced Cocoons*.—Supplies are coming in, and some buyers are reported to have made contracts, but without fixing the prices. Quotations must be considered nominal until some real business is done and the goods weighed up.

*Noshi*.—This has received the lion's share of attention, and some high figures have been paid. *Filature* \$160, *Bushu* \$157½, *Joshu* \$122½, are among the sales registered. Holders ask yet more, and the quotation for anything decent in Assorted *Joshu* must be advanced to \$120.

*Kibiso*.—Small business at high prices, *Joshu* \$60, *Hachoji* and *Gunnai* \$47½. A trace of *Filature* rumoured at \$140, but holders of good quality refuse to sell or name a figure at present.

## TEA.

The business of the past week reached 5,655 piculs, as compared with 6,895 piculs last year for the same period. The market has dropped fully one dollar per picul all around, and some very good selections of lower grade leaf have been obtained at quotations. It is not expected that prices will go much lower, as sellers, having obtained fair rates for their Teas since the opening of the season, appear to be able to hold their own. Teas are selling in America fully 4 and 5 cents per pound lower than last year, and the Market continues steadily on a downward course. The export from Japan to all parts of the United States and Canada for the season to date is 23,679,899 pounds, against 17,436,606 pounds in 1885, or 6,243,293 pounds in excess, these figures including the weekly export given below. Total settlements are 153,445 piculs, against 120,035 piculs in 1885. Receipts continue on a fair scale. The Tea shipments for the under-mentioned steamers, from Yokohama only, are as follows:—303,678 lbs. for New York and 96,694 lbs. for Canada, total 400,372 lbs., per steamship *Celtic Monarch*, sailed July 20th; the steamship *Glenfalloch*, sailing on the 20th instant, took 489,696 lbs. as follows:—318,454 lbs. for New York and 171,242 lbs. for Canada. The O. & O. steamer *San Pablo* carried from this port on the 22nd inst., 53,695 lbs. for New York, 82,800 lbs. for Chicago, 197,515 lbs. for San Francisco, and 14,430 lbs. for Canada.

Common .....	\$104 & under
Good Common .....	11 to 12

# THE GREATEST WONDER OF MODERN TIMES.

# HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

# HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and household goods were sold at a high price. A tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

# LIEBIG COMPANY'S

"Is a success and boon for which Nations should feel grateful."—See

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 7TH, 1886.

### BIRTH.

On July 31st, at No. 9, Tsukiji, Tôkyô, the wife of Rev. W. J. WHITE, of a Son.

### SUMMARY OF NEWS.

H.E. COUNT ITO has again gone to Tomioka for the sea bathing.

VISCOUNT NIWA CHOYOKU, fifth grade, second class, died last Friday week.

THE COUNTESS SAIGO will proceed with her children to Ikao the 5th inst.

PRINCE NASHIMOTO was one of this year's graduates at the Gakushuin.

THE Government proposes to establish a consulate at Amoy at an early date.

A SNOW-FALL is reported to have occurred at Abegori, Iga, on the 23rd ultimo.

H.E. COUNT MATSUGATA went to Tomioka for the sea bathing the 2nd instant.

COUNT OKI, President of the Genro-in, went to the Isobe hot springs the 2nd instant.

H.E. COUNT SAIGO has telegraphed from San Francisco news of his arrival there the 29th ult.

MR. ISHII, Director of Imperial Telegraphs, left the capital the 1st instant for Ikao hot springs, Joshu.

THE HON. SIR FRANCIS PLUNKET, K.C.M.G., has visited and inspected the copper mine at Ashio.

A COMPANY styled the Japan Flour Company has been established at Mmami Odawaracho,

Tôkyô, for the sale of wheat flour, the demand for which has considerably increased lately.

STOCKS of foreign goods, textile fabrics in particular, are very low in Kobe, and prices have appreciated.

PLACES of entertainment in Osaka, approved of by the sanitary authorities, have been permitted to be reopened.

PRINCE LOUIS NAPOLEON is still touring through Hokkaido. He will return to the capital about the 20th instant.

THE regulations as to the abbatoirs of Tôkyô received the sanction of the Government on the 29th instant.

DR. SANEYOSHI, a chief naval surgeon, has received the appointment of chief of the Cholera Hospital in Tôkyô.

THEIR EXCELLENCIES COUNTS INOUE AND YAMAGATA left the 5th instant, by the *Satsuma Maru*, for Hokkaido.

THE price paid by the Korean Government for the Nippon Yusen Kaisha steamer *Shima Maru* is said to be 100,000 yen.

THEIR IMPERIAL HIGHNESSES PRINCE AND PRINCESS ARISUGAWA, who had been staying at Ikao, proceeded to Nikko the 1st instant.

THE Agricultural Association of Japan will hold meetings to discuss agricultural questions from the 17th to the 19th of next month.

MR. NAKAMURA, Japanese Minister Resident in Holland, has received the additional appointment of Minister Resident in France.

HER BRITANNIC MAJESTY has been pleased to approve of the appointment, as Japanese Consul resident in Tasmania, of Mr. R. Beadon.

THE newly-appointed President of the Kobe Shishin Seibansho, Mr. Justice Mayatara, has proceeded to his post and taken up his duties.

THE question of improving the food supplied to the army was discussed at a meeting held in the Tôkyô Garrison the 2nd instant.

THE number of deposit receipts issued by the Tôkyô General Post Office in connection with the post offices savings banks averages 10,000 daily.

MR. NAGAI, president of the Druggists' Association, who went to Germany in the beginning of the year, returned to Tôkyô the 31st of last month.

REGULATIONS relating to the peerage and to decorations, to be substituted for the present rules for peers, have been completed in the Bureau of Jurisprudence.

THE people of Takai and Mizuchi, Nagano Prefecture, are much exercised by the continuous subterranean noises heard from the direction of the Shirane mountain, their apprehensions being grounded on the fact that the eruption of the

mountain some years ago was preceded by a similar phenomenon.

THE Custom-house authorities in Inehhôn have requested the Japanese *chargé d'affaires* to recommend to them competent Japanese for service in the Custom-house.

THEIR IMPERIAL HIGHNESSES PRINCE AND PRINCESS KOMATSU, who have been staying for some time at Nikko and Ikao, returned to the capital the 1st instant.

KAWAI TSUNEHICHI, a tea merchant in Yokohama, who is alleged to have sold spurious leaf to foreign firms, has been expelled for one year from the local tea association.

H.E. COUNT ITO, who has been staying at Tomioka for the sea bathing, returned to the capital on Friday last, and attended at the Cabinet Office the following day.

THE tea trade in Kobe began to decline somewhat in the last days of July, and, arrivals of leaf continuing, the stock has now reached nearly a million and a quarter *kin*.

ANOTHER railway has been surveyed, upon which work will soon be commenced. It will run from Iwami-zawa, in the province of Ishikari, Hokkaido, to the port of Muroran.

LAND in the vicinity of the track of the Tokaido Railway has largely increased in value, and owners are now asking for allotments ten times the price they wanted a few months ago.

LIEUTENANT-GENERAL OKU, lately commanding the 7th Army Corps, who has been promoted to the command of the 1st Army Corps (Imperial Bodyguards), arrived in Tôkyô last Saturday.

THE Shitaya district office in Tôkyô has started the distribution of free bath tickets among the lower classes in Mannencho, Fushimicho, Shinsakamotocho, Toyosumicho, Shitaya.

THE coining of gold has been resumed at the Imperial Mint, and about 20,000 yen are struck daily. The last order for silver yen, to the amount of a million, has just been completed.

THIRTY-FIVE timber merchants of Wakayama Prefecture have applied for permission to contribute, free of charge, the timber to be used in the construction of the new Parliament buildings.

THE method adopted for disinfecting purposes in Osaka gaol has hitherto been the burning of sulphur, the effects of which have confined the number of cholera cases to very narrow limits.

A TELEGRAM from San Francisco states that Prince Fushimi arrived in America from Europe the 25th of last month, and will in all probability leave for Japan the 11th instant, by the *City of Peking*.

THE gold mine at Osawa, Akita Prefecture, which was worked till about fifty years ago, has, on a recent examination, been found to produce gold and silver ore of the best quality in the

country. A large number of capitalists have already applied to the authorities for permission to work the mine.

THE temperature during the week in Yokohama has been high, over 90 Fahr. in the shade having been recorded daily, but a brisk breeze and comparatively cool nights have been the rule.

THE Society of Oriental Painters at Shimizu-cho, Yanaka, Tôkyô, is now preparing for the holding of an autumn exhibition at Demboin, Asakusa, Tôkyô, about the beginning of September next.

THE medals awarded to the Agricultural and Commercial Department for articles sent to the Inventions Exhibition in England and the Metal Works Exposition in Germany have arrived in Tôkyô.

THE representatives in Tôkyô of the promoters of the Nikko Railway have telegraphed to their constituents that the necessary permission for the construction of the line was granted by Government the 29th of last month.

ON the expiration of the term for which the Kyôto Club was originally established, the accounts were audited and the balance found to be on the right side. The institution is now considered to be on a firm foundation.

IN consequence of the prevalence of cholera in the interior of Korea, the Japanese Consul at Pusan has engaged Mr. Obata, of the Nagasaki Government Hospital, and three doctors for service at the Japanese settlement of Pusan.

THE people of Osaka appear to appreciate the value of a knowledge of the condition of their potable water, judged by the fact that several thousand applications have recently been sent in to the Laboratory for an analysis to be made.

BUSINESS in Kobe was much brisker during July than for some time past. Purchases from foreign merchants were on the average \$20,000 a day, and the necessity for this large quantity of specie has sent exchange to yen 1.10 per 1,000.

THE flannel woven at Kishu, Okayama Prefecture, has increased in demand, and as the cloth is held in high repute in China where it was largely imported last winter, the chief establishment in the prefecture is now increasing its staff of workmen.

REPORTS from many parts of the country say that the crops of all descriptions never looked better. In several districts, however, no rain has fallen since the last week in June; consequently the land is very dry, and rain now would be beneficial.

THE Mint authorities, having received an order from the Chinese Government to strike a quantity of brass coinage (about the same size as the 5 rin copper cash), specimen pieces were assayed on the 28th of last month, in presence of several Chinese officials.

THEIR EXCELLENCIES PRINCE AND PRINCESS SANJO, who have been staying at their country residence at Imado, Tôkyô, will leave, the 7th inst., on a holiday visit to Nikko and Isobe. They will be accompanied by Mr. Ishibashi, private secretary of the Prince.

IN all provinces of Hokkaido the number of bears and other wild animals has decreased

of late years, and they are now found only in the most secluded places. This is ascribed to the wholesale hunting of wild animals which took place during 1881 and 1882.

M. ENOARD REMENI, the celebrated Hungarian violinist, now on a visit to Japan, in conjunction with Signorina Marchetti, vocalist, and Mr. Isidore Luckstone, pianist, gave two very successful concerts during the week in the Yokohama Public Hall.

THE latest fashion in America is a red umbrella of Japanese manufacture, painted with figures of birds, flowers, &c. So great is the rage for this article that the New York branch of Morimura & Co., of Tôkyô, recently ordered 140,000 from a manufacturer in Osaka.

MR. KITAGAKI, Governor of Kyôto *Fu*, visited the local cholera hospitals recently, describing which a vernacular journal says—"He conversed with each patient, and was so kind and thoughtful that the doctors, nurses, and sufferers all shed tears of delight."

THE steady fall in the price of ice, and the large stocks on hand at this time when the summer is on the wane, indicate plainly that the people have in some measure paid attention to the directions issued for their guidance in the matter of what to eat, drink, and avoid, in order to prevent choleraic symptoms.

THE Government propose, it is said, to send Kim-yo-kun to the Bonin Islands, the Korean refugee being unable to raise money enough to pay his expenses to the United States, whither he wishes to go. The 5th instant was fixed for his departure, but as he has been slightly indisposed it is probable that his stay here will be prolonged beyond that date.

A REPORT from Osaka says:—"Just as business was showing symptoms of a revival after the lengthened depression, the cholera appeared and crushed out our hopes. However, no common obstacle seems to check the ordinary progress of events, for all branches of trade and industry now exhibit signs of recovering their former prosperity."

THE Minister of State for Communications notifies that an agreement has been entered into between Japan and Salvador, according to the Regulations of the International Postal Union, for the express delivery of mail matter between the two countries. In Salvador the delivery of such mail matter is limited for the present to the capital, San Salvador.

AN ingenious rogue recently went to an exchange shop and asked for 20 sen paper notes in return for four packages of 1 sen bronze coin, each package representing 50 sen. Having received the notes he went off, and shortly afterwards an examination of the packages disclosed that there were genuine coins at each end, but the intervening space was filled with lead, round which copper wire the thickness of a 1-sen coin had been wound.

LOSSES in business through the cholera epidemic in Japan will total a large sum. From a report to the Industrial Bureau of Osaka *Fu*, it has been found that the closing of the five theatres in Nanchi during one month (June) entailed a loss upon the owners of yen 3,152.00, upon agents employed in connection with these establishments, yen 6,190, and upon actors, yen 10,050. Frequent application has been made

to remove the restriction upon these theatres, but the authorities, having thoroughly investigated the matter and inspected the buildings, have decided that they must remain closed at present.

IN the Import Market trade has been active during the week. The last drop in silver has largely convinced buyers that price lists must be greatly revised, and considerable business has been done at a moderate advance in quotations. Yarns have been in fair demand, in one or two cases at a substantial increase; while in all respects previous rates have been fully maintained. Cotton Piece-goods have changed hands in large quantity at a slight advance, and transactions have taken place in Woollens at fully previous quotations. In sympathy with the fall in exchange, Metal prices have gone up, but though there is a tendency to meet sellers the business done has been small. In Kerosene, buyers are shy of settling at the prices asked, and the market is quiet. In Sugar there is little more than a retail trade. At Kobe and Osaka, as well as in Yokohama, dulness is the chief feature of the market. Arrivals continue and stocks are very large, one Chinese holder in Osaka having an accumulation of 3,000,000 *kin* for which there is no sale. In the Silk trade buyers and sellers are still unable to agree, and business has been restricted to transactions designed to meet immediate requirements on the eve of shipping departures. Foreign markets are still out of sympathy with the markets here, and as dealers are inclined to send prices up almost daily, buyers hold off. Better qualities are making their appearance, but the high figures reported as ruling up country restrict business in the meantime. The settlements of Raw Silk total 450 piculs, but supplies are coming in plentifully, and stocks show an increase of fully 450 piculs for the week. Stocks of Wastes are also accumulating. In Tea a large business has been done at easy prices, and good shipments have been made. Another fall in silver has taken place, but the business done in foreign Exchange has not been large.

#### NOTES.

WE observe that the Honorable Sir Francis Plunkett and Mr. E. Satow, H.B.M. Minister to Siam, paid a visit, a few days ago, to the Ashio copper mines. They were received by Messrs. Mutsu and Shibusawa, who had spared no pains to make preparations for the comfort of their visitors; cooks, table utensils, and so forth having been obtained from the Seiyôken in Tôkyô. The hill sides were illuminated with coloured lanterns by way of welcome to Sir Francis and his companion, and the effect is described as very happy. An interesting feature of the entertainment was a peculiar dance performed by the miners; a dance which is said to have been novel even to Mr. Satow. Sir Francis went all over the works, inspecting even the shafts which were farthest underground. The conduct of the enterprise at present is marked by great energy. About six thousand people are employed in the mine and at the smelting works. Among this large number there is not one foreigner, nor do the methods employed show any want of such assistance.

SPRINKLING recently to a leading Japanese merchant on the subject of the development of Ezo, we were surprised to hear him declare that with

every speculation concerning land in that part of Japan he was resolved to have nothing to do. "Good land," he said, "there may be in plenty; land fit for orchards, crops, or grazing. But the richest soil in the world is valueless without markets to take its produce." To this we urged in reply that a railway to Aomori was in process of construction, and that the Japan Mail Steamship Company has plenty of ships to carry produce if only there be produce to carry. But the merchant replied that neither railways nor steamships are of any real service in Japan under the present system of management. "Why," he continued, "look at the Tōkyō-Maebashi line. It might almost as well be laid at the bottom of the sea for all the merchandise it carries. Freights are absolutely prohibitive. People who take to farming in Ezo with the expectation of getting their produce carried to market by a railroad, will find that they reckoned without their host." This gentlemen's opinion appears to be pretty generally shared.

SINCE the subscription movement was first inaugurated for obtaining Japanese griffins for racing purposes, it is safe to say that not a single animal has been drawn which subsequently developed into a "crack," or indeed that might be rated as first class. Subscribers, who have hitherto been so much disappointed with the dead failures that have invariably fallen to their lot, will be interested to learn that a new source of supply has been tapped, which, if it can only be maintained, will continue to give sportsmen an opportunity of acquiring animals possessing racing shapes and breeding combined. We mentioned recently that the committee of the Kyōdo Keiba Kaisha had obtained a string of eight griffins from the Government breeding establishment at Shimosa, which would constitute the subscription ponies for the forthcoming meeting. These were drawn for on the 1st inst. at Shinobazu, and we note with pleasure that four were taken by foreigners, who, as well as the Japanese subscribers, all express themselves entirely satisfied with their luck, and declare that the horses are well worth the money paid for them. Six of the animals are three-quarter bred, and the other two half-bred; one of the latter, drawn by a foreigner, being a handsome and powerful chesnut, said to be by Bradley out of Miyazaka, a mare formerly well-known on the Negishi course; the other half-bred being a good-looking iron grey out of a Kagoshima mare with a great reputation. Amongst the three-quarter bred are several smart and racing-like colts, and all give promise of good sport, possessing as they do blood and substance. We are glad to be able to announce that these animals will run at Negishi this autumn, all the subscribers having agreed to enter in the two (if not more) races which the Committee of the Nippon Race Club have promised to give. We cannot but regard this attempt to procure subscription ponies of breeding as a step in the right direction, for, when such animals as those here referred to can be obtained at a reasonable price, we feel convinced that our oldest "sports" will willingly sacrifice what advantage they may have acquired by a superior knowledge of how to train that calf-like beast, the native pony, and give up such racing for the pleasure of owning and running animals which have the make, manners, and intelligence that a horse—as foreign countries know him—should

possess. When these subscription ponies have been seen by owners who have supported the griffin movement, we are convinced that there will be no lack of subscribers for future similar lots, and if the supply be equal to the demand, a great improvement in racing both here and at Tōkyō should be the result. The Autumn Meeting at Negishi bids fair to be the best for some years past.

MANY of the ladies of Japan are reported to be strongly in favour of exchanging their own costume for that of their European sisters. We set forth recently sundry reasons which, in our opinion, ought to make them hesitate. We have now another consideration to advance. It is a consideration suggested by certain items of news having reference to the toilettes of Mrs. President Cleveland and Miss Adèle Grant, soon to become—if indeed she does become—Countess Cairns. If the ladies of Japan will peruse these items, they may perhaps be disposed to think twice before adopting a style of dress which involve such barbaric display and insane extravagance.

President Cleveland's bride-to-day placed with her old dressmaker, Mrs. George Lee, of No. 729, Franklin street, an order for two new gowns. One will be an expensive black silk and the other a new and peculiar shade of brown. Both are to be made with adjustable trains. Several dress-makers have orders for toilets to be modelled after those worn by Mrs. Cleveland. The newspaper descriptions are to be their guide. The "genuine Folsom hat" is to be seen in milliners' windows.

*Galignani* to-day turns a description of the future Countess Cairns' trousseau, made here, and the wedding gift of her grandmother.

Each article is marked with a fac-simile of the bride's signature, her Christian name Adèle.

There are tea gowns, in pale blue and pale pink-rose and gauze, trimmed with lace, for summer wear; Peignoirs in pale blue and pale pink surah, with all the bands and ruffles of Valenciennes lace.

Those for winter wear are in crushed strawberry plush, lined with fur; in moss green plush, with frontage of pale pink watered silk, veiled in cream lace. There are summer dresses in cream and surah or fanciful muslin, with bonnets and hats matching every walking dress, and also dainty pieces of lingerie in fine batiste trimmed with Valenciennes lace.

Attention was first claimed by a dinner dress in cream watered silk skirt, veiled with overdress in cream lace, figured with roses and leaves painted by hand, the former in natural hues, the latter in delicate shades of wood color. The back of the skirt is adorned with two long, wide bands of mimosa green velvet, lined with pale pink watered silk. The lace dress was gathered in a flounce just below the waist in front, and upon the gathers is a series of bows in mimosa green velvet, lined with pink watered silk. The corsage, in white watered silk veiled with lace, had a revers of the velvet.

Another dress in cream crêpe was remarkable for the graceful cut of the corsage and overskirt, made in one piece, like a sleeveless polonaise, and bordered round the armholes and throat and down the front with fine gold embroidery, the effect being almost that of a Greek peplos. Also a costume in cream white cloth, made with a jacket corsage, covered transversely with a very wide sash laid in flat folds of gold yellow watered silk.

A walking dress was in black tulle dotted with large satin spots, made up over black satin and trimmed with wide black watered ribbons and fine cut massed jet. With this dress came a short wrap in black velvet, black lace and jet, hung with strings of large jet beads.

A dinner dress was in pale yellow faille, covered with white gauze, embroidered in a close pattern of leaves and tendrils in white silk. The panier draperies of white gauze met long floating folds of the same materials at the back. The half low corsage was trimmed with a flat ruffle, embroidered gauze and with rows of wide pale yellow ribbon.

A ball dress in white satin had a short skirt covered with white tulle, dotted with pearls and put plainly on the skirt, meeting a ruche of plain tulle round the hem. A very tasteful demi-toilette was in pale dove-colored faille, striped with minute lines of blue and brown and crimson in set groups. Over this was made the corsage and overskirt in cream embroidered gauze, the latter opening up the front and embroidered with narrow dove-colored watered ribbon.

Also a dinner dress in tea-rose faille skirt, cut in three wide bands in front. Underneath these bands set full Frau-Frau cream lace, held in place at the top by bows of black ribbon. A polonaise of tea-rose satin grounded embossed velvet, the pattern a small, close design of foliage in very pale gray, also trimmed with lace, and bows of black ribbon, formed the over dress.

The wedding dress had a corsage and long train in white embossed velvet, the latter full four yards long, and lined throughout with white satin. The corsage—cut princess at the back and all in one with the train—had square lapels in front, like a Louis XIII. corsage, and is *décroché* in a point in front and at the back, the opening filled with a guimpe of point lace. The sleeves are also in point lace and the underskirt of white satin, entirely veiled in draperies of point lace. The point lace veil is shawl shaped and is to be attached to the collar by a set of diamond stars.

The dress for departure is in pale blue coloré faille, embroidered down the front and back of the skirt and around the corsage with dead gold in a fine lace-like pattern. The cloak to be worn with this dress is a long redingote in

pale fawn colored cloth and pale electric blue satin, brocaded in stripes simulating straw lace. This brocade is laid in flat plaits at the back of the corsage so as to show the lace like stripes, only opening out in full folds in the skirt.

Should the weather prove stormy on the wedding day, it is held will be replaced by a dress in holi trepe blue-satin, trimmed with a profusion of wide watered ribbons in dark steel gray, and a very full "Mother Hubbard" cloak, made in large flat plaits, and with three short capes, composed of plain colored silk, and lined throughout with pale blue.

There is a ball dress of Ophelia lilac satin and tulle, embroidered in shaded, delicate, artistic pattern with silver, made with short round Empire corsage, and with a long girle in silver passementerie, each end finished with heavy fringes in silver.

A dinner dress in white satin, with a train of white brocade, wide sash of white satin, terminating in rich pearl fringes. A walking costume in peach kernel-colored cloth, piped with pale gray, and having large mother of pearl buttons, with designs in dark brown, the corsage being confined round the waist with a wide scarf *cinture* in pale blue. Also a *sortie de bal*, a long paletot in tea rose satin, figured with Easter lilies in their natural hues, in velvet, lined with pale blue satin, striped with watered silk bands in the same hue, and having ornaments in gold passementerie at the throat and on the sleeves.

Mrs. Grant's dress for the wedding is in pale green faille, trimmed with a profusion of fine Valenciennes lace, and with bands and bows of cream satin ribbon.

In his address delivered at Birmingham, June 19th, Mr. Chamberlain used significant language. "I am glad," he said, "to have at last an opportunity to meet the electors face to face. The last few months have been a time of great trial and anxiety. I have always been a Home Ruler, even when the bulk of the Liberals scouted the idea, but I would never agree to concede to Mr. Parnell an independent Parliament for Ireland, which meant the establishing of a new foreign country, thirty miles from our shores, animated at the outset by unfriendly intentions toward us. I have not altered my opinions since I last solicited your votes. It is for you to say whether I have forfeited your confidence by remaining faithful to the principles I professed. Mr. Gladstone in Edinburgh said the bill was dead. If that be so what are they fighting for? If there is a new plan why is it not produced? It is impossible to criticise a bill lacking clauses, preamble, or schedule. I hope it will still be possible to reunite the Liberal party and that they may find themselves agreed in the autumn upon some large measure of Home Rule and Local Government for Ireland, but I will not pledge myself blindly to accept and swallow whatever may be offered." More unlikely things have happened than a reunion of the Liberal Party on a Home Rule platform mid-way between the lines of Gladstone and Chamberlain.

A LEADING citizen of New York had an interesting experience recently at poker. He tells the story thus:—"Last spring I spent a good deal of time at Washington, engaged in looking after Congressional matters. On the night before I was to start for home I entered a game in which several prominent political leaders, a brewer, an actor, a conspicuous lawyer, and a popular theatrical manager were engaged. Anyone of the company could easily discount me in the matter of money, but I had four \$100 bills in my pocket and determined to take my chances. The limit was placed at \$25 in the ordinary game and \$50 in jack pots. Almost at the outset I began to lose. Evil luck followed me straight through the game. My \$400 disappeared like a fog before a July sun. From the gentleman who officiated as banker I obtained and soon afterward lost first \$400 and then \$300 more. To this another \$300 was presently added. Daylight had crept into the room and the perspiration poured off me in torrents. Finally, I concluded to leave the game after one more deal. It was a jack pot and everybody was in. As I afterward learned, my friend the brewer had an ace flush 'cold' and the theatrical

manager had a king flush, also, before the draw. One other player had two pairs—queens and sixes. When I picked up my own hand I nearly fainted. It contained four sevens and a jack. The raising began at once, \$50 at a whack, and the pot was soon overflowing with chips, only the two flushes and myself staying in. By the time the flush men were tired raising they knocked 'pat' I, also, declined to draw. After a while, I got thoroughly frightened and decided to call. My four sevens, of course, did the business. There was a little over \$1,400 in the pot, just \$20 above the sum I had lost in the game. I paid my indebtedness and got out as quick as my legs would carry me. It seemed to me like a miraculous deliverance, but it was a frightfully hot place and I don't want to fall into one like it again, and I won't if I can help it."

THE suggestive application of scripture made, on the night of the memorable division on Home Rule in the House of Commons, seems to have sent the public to their Bibles for guidance and inspiration in the great political contest. The tellers on the Tory side were Messrs. Brand and Caine, and when the result of the division was handed in by these gentlemen to the Clerk at the Table, an Irish member shouted out "The Brand of Cain." The phrase was eagerly seized by the House, and considering the part subsequently played by Mr. Caine, his sobriquet appears to be finally fixed. Mr. Chamberlain was the next to become the object of a scriptural comment. The Radical leader, his brother and their strong coadjutor Mr. Craine, member for Barrow-in-Furness, were all included in the following texts, for which Mr. T. Healy is responsible:—"Two of the Chamberlains were wroth and sought to lay hands on the king, and when inquisition was made of the matter they were both hanged on a tree."—Book of Esther II., xx. 23. "Woe unto them! for they have gone in the way of Cain and perished."—Jude ii. By way of set-off to these conceits, a Glasgow newspaper contained, one Saturday, the following advertisement, betraying a good deal of grim earnestness:—"Let us remember that tomorrow is the Lord's day, and pray to the Lord God of Heaven to over-rule that the Home Rule Irish Bill be defeated."

LORD RANDOLPH CHURCHILL is to be the Conservative leader in the House of Commons. His claims upon his party must be very great to justify such elevation. It has seldom happened in the English Parliament that a political leader is deposed without an honourable retreat being provided for him. Sir Stafford Northcote went to the Upper House when Sir Michael Hicks-Beach succeeded him. But Sir Michael remains in the Lower House while surrendering his place to Lord Randolph. An explanation, but not a reason, may perhaps be found in the paramount importance of Irish administration. Sir Michael becomes Chief Secretary for Ireland, and his duties in that office probably disqualify him for the position of leader. But it was not necessary that Sir Michael should become Chief Secretary. There is no lack of Conservative statesmen to take Mr. Morley's place. Evidently room was made for Lord Randolph at Sir Michael's expense. We believe that, however high an estimate be formed of Lord Randolph's abilities, history will rank adroit quarrels with his party among the steps by which he mounted the ladder. Before the

defeat of the Liberals on the Budget, last year, he had a difficulty with Lord Salisbury which the latter was almost constrained to compound by the gift of an exalted place in the Cabinet. So again, shortly before the recently concluded elections, Lord Randolph kicked over the traces with such vigour that the Conservative leader probably had to repurchase his allegiance at a high cost. Lord Randolph evidently appreciates his own value and knows how to extract appreciation from others also.

He will be confronted by Mr. Gladstone in the House. For although there is talk of Mr. Gladstone's retirement, such an event seems most unlikely. The aged statesman must have thoroughly foreseen what was before him when he entered the lists as the champion of Home Rule. He cannot possibly have expected immediate victory, any more than he can have purposed resigning himself to immediate defeat. The contest, too, is one which his own reputation as a patriot and statesman will not suffer him to abandon. For the issue at stake is not alone the good order and tranquillity of the realm, but also the triumph or discomfiture of the principles of government for which he has contended all his life. In a struggle so mighty, watched by all the world, the principal combatants cannot lay down their arms and retire to their tents. Mr. Gladstone must fight on, and not the least bitter feature of the battle will be that it pits him, at his ripe years and after a career of such unparalleled experience, against a political stripling like Lord Randolph. On the eve of this incongruous spectacle, it is interesting to read an analysis of the men's gifts by a critic who certainly does not favour Mr. Gladstone—the *Saturday Review*:—

The credit of Parliamentary eloquence and argument has been fairly maintained in the long debates on the Irish Government Bill which closed on Tuesday morning. Of course Mr. Gladstone remains, rhetorically speaking, *princeps Senatus* and *faciles principes*. Since Mr. Disraeli left the House of Commons, and Mr. Bright has ceased to be moved by the oratorical spirit, and has lapsed into the silence of the Quaker meeting, the Prime Minister has had neither rival nor second. Probably the House of Commons never possessed so consummate a master of the art of debate. It has had greater orators, though, with the exception of the late Lord Derby—whom Lord Russell used to bracket with Lord Plunkett as the greatest master of eloquence he had ever heard—no superior in the half-century which he has passed in it. In the sense in which the word orator is defined in Fielding's "Pleasures of the Town," Mr. Gladstone may indeed claim to rank as high as any of his predecessors. "Who is that?" "That is an orator, Master Punch." "An orator, what is that?" "Why an orator is—egad, I can't tell what; he is a man that nobody dares dispute with." Of course the definition is not literally true, and never was literally true, either of Mr. Gladstone or of anybody else. But it makes as near an approach to being true of Mr. Gladstone as it was, say, of Lord Chatham or of Mr. Pitt. The hot scorn of the father and the cold scorn of the son did not more impress their colleagues than Mr. Gladstone's judicious mixture of passion and argument—whether sound or sophistical is not now the question—of persuasion and overheating declamation. A more effective instrument of government and business was never forged. Mr. Gladstone is said to have described the House of Commons as the best school for temper that ever existed, and to have good-naturedly added that, if a conspicuous instance to the contrary may be cited, the exception would be a good deal more striking than it is but for the House of Commons. Whether the story be true or not, it might be true. But Mr. Gladstone's passion, though as genuine as any passion can be, is always kept in subordination to the purpose of debate. It is a part of the tactics of his rhetoric, and a fine natural gift reaches the perfection of art. Chatham had less of this power of management. "When my mind is full of a subject," he once said to Lord Shelburne, "I once get on my legs, it is sure to run over." This incapacity or self-restraint was probably what the elder Fox pointed to when he said, "Pitt is a better speaker than I am, but I have more judgment." With Mr. Gladstone only as much comes out as he deliberately allows to come out. In the art of public speaking Mr. Bright alone approaches him. But Mr. Bright is essentially a maker of set speeches. Though he has acquired in a high degree the faculty of debate, he is greater on the platform than in the House of Commons. A natural and generous feeling, no doubt, had a good deal to do with his resolution to reserve what he had to say on the Home Rule Bill for his constituents instead of delivering himself of it in Parliament. He shrank from direct conflict with the colleague and chief to whom he has been long bound by strong personal as well as political attachment. In comparing Mr. Gladstone and Mr. Bright, quantity as well as quality has to be taken into account. If Blanco White's sonnet on "Night" were

what Wordsworth pronounced it to be, and what it is not, the most perfect sonnet of our language, Wordsworth would still remain a greater writer of sonnets than Blanco White. The influence of Rubens counts for a great deal in his artistic fame. John's denunciation of Gray as a barren rascal can scarcely be considered a criticism; but it states with brutal bluntiness an element of judgment which cannot altogether be left out of account. Mr. Gladstone's speeches have been made night after night during half a century, as instruments of business, for the carrying of measures, and the swaying of divisions. Mr. Bright composes a speech in some degree for the speech's sake, as Tennyson writes an idyll. It is, in a measure, art for art's sake, though not so exclusively as to shut out distinct moral and political purpose.

Those who look with the severest disapproval on Mr. Gladstone's policy, on his tactics and political ethics, will not be disposed to dispute that he is supreme in all that makes the Parliamentary debater and rhetorician. His most formidable antagonist in the House of Commons is unquestionably to be found in Lord Randolph Churchill, than whom none is a greater master in the guerilla warfare of Parliament. Lord Randolph has lately given promise of adding to this faculty that of cogent argument and statesmanlike perception; and it would be impossible to point to any one more certain, if strength remains to him, to attain the highest place in council and debate.

THERE is a difference in methods of art criticism. Without attempting to express it in common adjectives, we may describe its extremes generally as English and American. Take some examples of the former. Mr. Watts paints a lucid allegory. "A girlish form, angular through grief, crouches blindfold on the globe of the world and strikes the one unbroken string of her lyre, pressing her ear close to catch its faint vibration." Then comes Mr. Macallum, who, with "a full insight into the jewelry of light, carries personality of outlook almost to excess." He is not strong in "balance of arrangement"; like the whole school of English landscape painters, he "sets forceful before balanced expression." What he does for "golden light in haze, Mr. Bartlett endeavours to do for the silveriness of clear weather." But Mr. Bartlett wants "truth in his half-tones." Turn next to a portrait by Mr. Stannon. "Its technique is thoroughly French—that is to say, it is, if possible, too *roulé*—but the sound English tradition peeps out in the dominance of the head. In colour the picture is a clever exercise in white, focussed by a touch of red." Then you have Mr. Anderson, who "reduces the character of a landscape to its elements and strips it of accidents"; Mr. Laidlay, whose pictures are distinguished by "air, atmosphere, and unconcern with line"; Mr. J. Lavery, who "dignifies the most trivial motive by art" and who "uses accidents of pose, colour, and light with much skill and insight"; and M. Fanin, whose "figures are modelled in three or four tones but in gradations as subtle as those of nature, so that they stand upon the canvas with a rotundity and an independence of their *fond* in which they are unequalled." That is the English method. You want time to think about it. Now take the American. Clinton Loveridge has painted some sheep passing along a road at sunset. "The loose and open character of the woods that spread along the distance, is skilfully delineated." S. S. Carr exhibits a picture of a little fisher girl. "Her curly hair and red cape are blown back by a breeze that comes ruffling across the ocean." D. J. Gue represents a girl in her chamber putting the finishing touches to a party dress. "The light falls through a window at the left, with flowers on the ledge of it, and shines on her pleasant face, blonde hair, corseted bust, and blue silk dress." J. R. Strickler is making a portrait of Bob Ingersoll. While painting the face he "has suspended a large apron from the canvas, so as to conceal the body of his subject, and the bald head and bare smiling face of the eminent atheist peer over the top of this appendage like the head of a well fed baby over its bib." That is the American method.

ACCORDING to recent publications of the Washington Bureau of Labour Statistics, the year 1885 was one of unusual depression for the labour market of the United States. During that year 5 per cent. of all factories, mines, and industrial establishments of the country were stopped altogether, and another 5 per cent. had to cease work for longer or shorter periods. In consequence of this, according to the calculations of the Bureau, 998,839 workmen could not productively employ their time, and were condemned to forced idleness. Adding to the above number those who were deprived of their earnings by the stoppage of railway building during that year, the sum total of unemployed labourers may safely be estimated at one million of men. The report then goes on to show in detail how the lack of employment on the part of so large a number reduces the power of the country in the line of consumption by at least \$1,000,000 a day, and that it must affect the internal commerce by more than \$300,000,000 a year. The loss sustained by so large a number of workmen is quite sufficient to cause business depression, and to lead to a general retrenchment of private expenditure, this in turn creating among all classes a feeling of uncertainty and distrust. The close of the report is more cheerful. Admitting that a general business depression had set in with the beginning of 1882, and that it had continued since then, the report points out that since March of the present year the effects of the long-felt depression have begun to disappear, and that there are many signs of a slow and gradual but sure improvement of the business situation. The report also touches upon a now much discussed subject—the proportion of native to immigrant labour. In 1880, when the general census was taken, there were found to be engaged in agricultural pursuits no less than 7,670,498 persons, and among these were 812,829 foreign born, or 10.5 per cent. Among the industrial classes the proportion was much more unfavourable. Of 3,837,112 persons engaged in factory work, there were no less than 1,225,737 foreign born, or 31.9 per cent. This shows that of late immigrants have in increasing numbers chosen to remain in the cities; the supply of labour has in consequence outgrown the demand, and reduction of wages, over production and under-consumption, have taken place. While immigration during the last fifty years brought to the shores of America, a most valuable addition to the country's industrial forces, the Commissioner thinks that phrases such as "America is the home of the oppressed of all lands," and "within the United States there is room for all" have now ceased to be applicable, and he is very much opposed to the further introduction of contract labour, especially such as has of late come from Hungary. There has, of course, been at all times opposition to immigration from abroad. But this opposition was always based on purely political grounds, and largely inspired by the fear that the country might by such an influx of foreign elements lose its national character and free institutions. The apprehensions of the people in this respect were perhaps best illustrated, in the earlier periods of American history, by the number of years of residence required before naturalization could take place. In 1790, that term was fixed at two years, in 1795, at five, and in 1798 at fourteen. But in 1802, the period of residence before admission to citizenship was again reduced to five years. Subsequent anti-immigration efforts were

largely based on religious and race antipathies, and culminated in the brief ascendancy of the Know-nothing Party. The present objections to immigration are of a purely economic and social character, and are not indiscriminately directed against a movement to which the United States undeniably owe their marvellous development in the past. The difficulty is to pass laws that will both cure the evils deplored, and at the same time secure the benefits of immigration. Any efforts in that direction may, to a greater or lesser extent, divert immigration itself to other parts of the world, and that certainly would not be the object of any legislative measure sanctioned by Congress. There is still room elsewhere for the immigrants of over-crowded Europe; and the United States certainly are not yet ready to close their ports against them to the advantage of less favoured but equally eager competitors.

AMONG the American supporters of Gladstone and Parnell is a certain Mr. James W. Weston. In the region where this patriot lives there is a society which calls itself the "Eastern District Parnell Parliamentary Fund Association," having chosen a name that exposes pretty plainly the purpose of its existence. Of late the Association has been busy with the good work of collecting subscriptions in aid of the Irish Home Rulers, and its efforts have been crowned with success to the tune of \$17, owing to the liberality of Messrs. Cumiskey, McCormick, McDermott, and Weston. The last named politician sets forth the motive of his munificence in the following epistle:—

JOHN KERWIN, Esq., President Parnell Association of Brooklyn, E. D.

DEAR SIR,—I inclose you five dollars as my contribution to the Parnell Fund and trust that thousands of others, citizens of this Republic, both native born and adopted, will come forward and aid in pushing on the cause of right and justice to Ireland. All honor to Parnell and Gladstone for their noble efforts in behalf of honest and liberal government for the Irish people. All just people are anxiously looking forward for the dawning of that glorious day when Great Britain shall release her iron grip of oppression from Ireland's throat and made atonement, if such a thing be possible, for the long centuries of cruelty and outrage that she has so mercilessly inflicted upon a brave, patriotic, and generous people.

Let England shake, for vengeance grasps  
Her worse than rotten throne,  
And bids her house of pirate lords  
Give Irishmen their own,  
A cry for justice fills the air,  
'Tis heard in every land—  
The people, gathering in their might,  
From kings their rights demand.  
Parnell and Gladstone lead the van,  
In Ireland's cause to fight.  
Oh! Sons of Erin, falter not,  
And God will crown the right.

I remain very sincerely your friend for the right  
JAMES W. WESTON.

If all Mr. Weston's associates were as frank as he with regard to England's "rotten throne," her "pirate lords" and her "iron grip of oppression," the British public would be greatly assisted in forming a decision on the Irish problem.

PRESIDENT CLEVELAND has created a little sensation. He has appeared before the public in a new light—that of a phrase-manufacturer. He claims to be the author of the phrase "innocuous desuetude." There is positive proof that the words occur in one of his despatches, and four reporters concur in asserting that he admits the soft impeachment of having invented their juxtaposition. But a shrewd writer in the *Chronicle* expresses doubts. He thinks that the author of such a phrase ought to have shown antecedent evidences of phraseological genius. Besides it is so easy for a speaker or a writer

"to appropriate and innocently offer as original an idea or form of expression which has impressed itself upon the gray matter of some one of his ganglia, unaccompanied by a memorandum giving credit to the real author." Now, in the ethical essays of the President's sister, Miss Rose Elizabeth Cleveland, there are abundant indications "of the exact angle in the crystallization of thought" that corresponds with such a gem as "innocuous desuetude." May not Miss Rose, suggests the *Chronicle*, be the real originator of the phrase? Then some of these indications are given, as follows:—

Predestined to cubical deliverance.  
The abyss of theological pedantry.  
The subtle equities of this silent reciprocity.  
The integral designation of this Trinity.  
A perverse profound of obliquity.  
The eternal irresponsibility.  
The distracting impotence of invalidism.  
Verdant with perennial resurrection.  
Luminous nuclei, raying illimitably.  
Momentary seeming arises to evanescent view.  
This same saturation of imagination.  
An especially refined exploitation of soul.  
Fruitful contemplation, grandly generic, of men.  
Capacious curiosity.  
Yawned with irreconcilable divergence.  
The thundrous vociferations.  
A shower of auspicious portents.  
Selfish segregations of the cliques.  
The vain folly of selfish subjectivity.  
The intrinsic, immutable, indestructible element evaporated.  
That excessive elaboration which is the inevitable precursor of corruption.  
A sensual sophistry emasculating ideal knight-hood.  
A matter of tenuous reciprocity.

OUR Korean correspondent, writing from Seoul, says that cholera has fairly established itself in the city, and is carrying off hundreds of the inhabitants daily. We can conceive no conditions more favourable to the spread of the disease than those which exist in a Korean city, with its universal and revolting filth and its utter lack of sanitation. No estimate is said to be possible of the number of deaths occurring in Seoul. The physicians at the Royal Hospital suggested that some steps to obtain statistics might be taken with advantage, but report says that the authorities could not be brought to appreciate the use of counting dead men. No doubt there is much alarm, among both official and non-official classes. But the result of the feeling is merely to prepare victims for the plague, not to inspire efforts to check its ravages.

THE *Hyogo News* renews its criticisms of our remarks with reference to the action recently taken by the United States Consul-General in the matter of Japanese Sanitary Regulations. The Consul-General, addressing his fellow-citizens, through the columns of a local newspaper, preferred a polite "request" that they would observe such Regulations. This we called a farce. Laws are not promulgated in the form of "requests." To put them into that garb is practical joking. The *Hyogo News*, however, takes exception to our opinion. Looking back to the archives of 1879, our contemporary finds that "the Washington Government then conveyed to the Japanese Government through Mr. Bingham that the United States claimed no right to interfere in the police regulations of Japan, and that not only American merchant ships, but all naval vessels and citizens should obey such regulations." Very well. Let us accept this view of the position—a view, by the way, which we have always maintained ourselves, except in so far as we doubted the propriety and practicality of including local sanitary regulations in the category contemplated by the Washington Government, unless the power of

enforcing such regulations be held to rest with the Japanese. So then American citizens in Japan are bound to obey Japanese local sanitary regulations, as well as all laws and regulations of the Central Government. But in that case what are we to say of the formula employed by the Consul-General? Could any legal obligation to obey, or any official authority to enforce, be inferred from that formula of "request"? Evidently some one is in the wrong. Perhaps the *Hyogo Ainos* will kindly fix the responsibility.

THE championship of the Glove Ring has probably been decided ere this. Mitchell the Englishman, and Sullivan, the American, were to meet July 5th. These men had never come together before, and rumours had long been circulated to the effect either that the former did not care to stake his growing reputation on a decisive contest, or that the latter had some superstitious dread of the British bruiser. Such a charge did not seem incredible in the case of Sullivan, who is mentally a very low type of humanity. It is said, however, that he recently repudiated it with more vigour than polish, declaring himself about as much afraid of Mitchell as of a four-year old boy. At all events there had been so much difficulty in bringing the men together, and the delay had been construed so unpleasantly for both, that when they met, they doubtless made the most of the opportunity to clear off old scores. Sullivan used to be a phenomenon in the matter of hitting, but of later years his rowdy and intemperate habits have told seriously on his physique, and nobody will have been much surprised if he suffered a defeat at the hands of Mitchell, who is always in splendid condition. It was expected that the gate-money taken at the contest of the 5th instant would amount to fully one hundred thousand dollars.

THE *Hochi Shimbun* says:—Diplomatic etiquette seems to have required Japan to evince some sympathy with the over-wrought apprehensions of her neighbours, China and Korea, concerning Mr. Kim. At any rate Japan ordered him to leave the country, and now, on the expiry of the period of grace granted at his request, our Government have arrested him at the Grand Hotel, Yokohama, and removed him to one of the residences of Mr. Mitsui, at Ota-machi, his attendant students sharing their master's fate. It thus appears that our Government have extended to him special treatment in detaining him under arrest, the only restriction upon his personal liberty being probably prohibition of intercourse with other persons. In this our Government have acted with justice. For, Mr. Kim being unable to leave the country at his own expense, the only alternative left to our Government was either to send him away in a Japanese vessel, or to detain him under arrest and thus prevent him from being any cause of anxiety as to our peace at home or abroad. But to take the first course would have been somewhat cruel as regards the fugitive; impolite to the country to which he might have been carried, and very difficult to accomplish, for our vessels do not sail to any country except Korea and China, and ships belonging to other nations would not consent to take on board any person placed under arrest by our Government. At present the balance of power is maintained tolerably well, but if one country comes to possess a predominant influence over the rest of the world, political re-

fugees from that country will meet with a hard fate wherever they go. If the right of giving shelter to a political fugitive is to be sacrificed by any State in consideration of its relations with such a strong and aggressive Power as we have supposed, all the rest of the weaker Powers would follow the same course for the same reasons. It will thus be evident why European and American countries seldom consent to order a political refugee out of their territory. Indeed, it is hardly consistent with the honour of a Government to avow that it is incapable of preventing a political fugitive from creating causes of apprehension as to its internal administration and foreign relations. Our Government are not so weak as to be unable to prevent Mr. Kim from attempting any movement contrary to our national interest; but being very solicitous to avoid even the smallest cause of apprehension, they ordered him to move out of the Empire, and now, this order not having been obeyed, it has become necessary to detain him under arrest. But this detention cannot last for ever. The primary cause of all these precautions on the side of our Government being apprehension of his making renewed attempts on Korea, the intention may be to detain him as long as there is any cause for such apprehension, and no longer. When will this cause be removed? Does our law permit such a detention as that to which Mr. Kim is subjected? These are questions worth considering. The treatment of Mr. Kim will more or less become a precedent in our foreign relations. As we believe that our Government are strong enough to prevent Mr. Kim from making any injurious attempts, we sincerely hope that, trusting in their own strength, they will adopt measures at once consistent with the dignity of this country and the safety of Mr. Kim.

SEVERAL other police officers have fallen victims to cholera, and already it seems as if the fund which is being so willingly subscribed for the relief of their families will be hardly adequate to meet the calls upon it. On the 30th ultimo, the remains of Mr. Senshi Kimura, a police interpreter attached to the Settlement Station, who had succumbed to the disease, were interred at Ota. The funeral procession, which included Messrs. T. Nosse, Superintendent of the Settlement Station; Y. Adachi, Chief of the Police Bureau; six inspectors and over sixty constables, started from the house of the deceased at Wakadale-cho and proceeded to the Buddhist temple Tofukuji, better known as Akamon, or the Red Gate, at Ota, where a Buddhist ceremony was performed. The usual offerings of white lanterns, incense, and flowers were made by the Superintendents of the Yokohama and Settlement Police Stations. Mr. Kimura, who was one of the youngest members of the force, had been connected with the Yokohama Station since April, 1883, but, proving an apt student of English, was, at the request of Mr. Nosse, transferred to the Settlement Station last month. Mr. Nosse started a subscription among the deceased's comrades and succeeded in raising funds enough to pay all the funeral expenses, and to enable him to provide in some degree for a younger sister of Mr. Kimura, his only relative. A similar step was also taken by Mr. Nosse in the case of the family of a police loanman named Wasuhiro Taka-ko, another victim of cholera. In this instance the wife of the deceased was left with five children, the youngest only five

months old. To keep the family from actual starvation a subscription was started among the police, and a sum sufficient for immediate needs was collected. As may be easily conceived, however, police constables have but little spare cash to invest for even benevolent objects. Should any of our readers, therefore, care to make a contribution, however small, toward this case—which does not fall within the scope of the fund being collected at the Kencho—Mr. Nosse will gladly receive and administer the money. Another constable connected with the Sanitary Corps, Mr. Isaburo Ishida, has died from cholera and will be buried with full honours.

FIRE broke out on Saturday last about two o'clock in the storehouse of a box-maker named Hagihara Kingoro, No. 14, Yoshida-cho, Nichome, in the district closely adjoining the Yokohama Police Station, and on the same side of the creek. The fire quickly spread and destroyed twenty houses—chiefly small dwellings—in the street where it had originated. A light southerly breeze blew the flames rapidly across in the direction of Isezakicho, on which side no less than twenty-three houses were destroyed, including the Tsutaza, the oldest and one of the most popular theatres in the district. The store in which the fire started is usually kept securely closed after the workmen leave it in the evening, and no suspicion is entertained of incendiarism. The police watchmen observed numbers of people playing with fire crackers near the store during the evening, and it is believed that a lighted fragment of one of these began the fire. The steamer from the Yokohama Police Station and other native engines were on the spot promptly on the alarm being given, and, the creek being full, no difficulty was experienced in getting water. The heat was so intense, however, that the firemen could barely get close enough to play their hose on the flames.

RIVAL managers of theatres in America have to be pretty smart folks. Two of these gentlemen, by name McCaull and Barton—of course the prefixes "General" and "Colonel" go without saying—are now engaged in an animated contest. The General is reputed to be a "stayer," but the Colonel gets the credit of being a man of expedients and a bitter foe. The trouble began when the gallant lessees resolved to produce different English versions of the French piece "*Serment d'Amour*" in theatres at opposite sides of the same street. The Colonel called his version the "Crowing Hen" and the General christened his the "Bridal Trap." Hostilities were commenced by the Colonel. He announced that the General had given away all the seats for the performance of the "Bridal Trap," and he followed the announcement by planting a colossal crowing hen made of wood before his theatre. Twelve hours later "General Barton had a big trap in front of the Bijou Opera House in which another crowing hen lay dead as a door nail. Then McCaull hired the whole of a building undergoing repairs next to the Bijou Opera House and covered the front with posters announcing the great success of the "Crowing Hen" and the dead failure of "The Bridal Trap." Barton retaliated on all the dead walls of the town, and then the Colonel stretched a banner across the street in front of his theatre, on which was a hen at least fifteen feet in height. Barton threw a magic lantern on the banner

and tried to obliterate it by an advertisement of his own theatre, but without success. Then he rigged a very powerful stereopticon on the roof of his building and threw various legends on the dead wall of Wallack's Theatre across the way. This was galling. Some of the legends read 'This is Wallack's Theatre, and it illustrates the difference between brains and brag.' 'The Crowing Hen' is a failure, but 'The Bridal Trap' across the street is a great success." This had not been going on for many minutes before the valiant McCaull had powerful calciums on the front of his building, throwing such a bright light that it almost obliterated the work of the stereopticon across the way. Then he placed a row of electric lights across the front of his building and thus blocked General Barton's stereopticon for good." The next move in the mighty game will, it is said, involve the distribution of caricatures of the rival managers themselves, and this will be immediately followed by the revolver epoch.

A TIENTSIN correspondent of the *North China Daily News* contributes the following interesting but ungrammatical intelligence:—"The tenders have been opened for the supply of rails for the Kai-ping extension railway, and the German firm of Krupp & Co. has obtained the contract. The French, as well as some English syndicates, also competed, but the Prussian offers were the lowest, so they were accepted. The terms of Krupp were so low that it has occasioned much surprise. It behoves the British merchant to work with great caution and care. The great monopoly of trade of the present day is very different from that of the olden time, and our German cousins are also seeing the importance, and taking mighty strides in the commerce of the "Far East," and unless steps are taken to secure some of the iron trade in the next undertaking, we fear that the future rail-roads of China will be built of other than English rails. The Chinese as a nation are excessively fond of running in beaten tracks, and attach much importance to precedents; this first contract, therefore, going to a German firm is a bad omen for Englishmen, especially as this was an open competition."

A GENERAL meeting of the shareholders of the Nippon Railway Company was held on the 30th ultimo, when a report of the working of the company for the first half of this year was submitted, and the estimate of expenditure for the latter half was discussed and approved of. According to the report in question, the work of constructing a temporary iron bridge across the Shinriugawa and the extension of the bridge over the Karasugawa were completed in the first division of the company's line during the half year under review. In the second division, the iron bridge over the Tone and the station at Kuribashi were completed. The Utsunomiya-Shirakawa line was finished as far as Yatajuku from the former place and trains run at present down to Kinu. In the third division, the survey of the Sendai-Fukushima line was completed, and that of Shirakawa-Fukushima was commenced. The total traffic receipts for the half year show an increase of 23 per cent. in passenger fares, and of 67 per cent. in freights, when compared with the preceding half year. The total number of passengers who travelled on the line was over 344,000, and the fares received aggregated yen 159,100. The goods transported amounted

to 36,929,600 lbs., and the freight to yen 69,600. The gross receipts of the company, comprising the above mentioned sums and miscellaneous items amounting to yen 32,900, leave a net profit of yen 147,517 after paying the working expenses, yen 118,800. The net profits, which bear a proportion of 4.5 per cent. to the company's capital, added to the fixed subsidy from the Government, represents 8.5 per cent. A dividend of 8 per cent. per annum has, therefore, been declared for the half-year in question.—*Jiji Shimpō*.

AFTER reproducing the *Nichi Nichi Shimbun's* news of the 24th ultimo, on the subject of the Emperor's audience to the Representatives of England and Germany, the *Jiji Shimpō* makes these comments:—"If our memory is correct, it was in 1879 that Italy proposed to abolish extraterritoriality in return for the complete opening of Japan to mixed residence. The scheme fell through. In 1882, our Government submitted to the Treaty Powers a proposal on similar lines. This also failed, owing to the opposition of Sir Harry Parkes and others. If the statements now made by the *Nichi Nichi Shimbun* be accurate, this year's Conference on Treaty Revision will conclude with the happy result of solving the knotty problem which has so long occupied public attention. For the Governments of Great Britain and Germany, our contemporary says, have elaborated a scheme for the gradual abolition of extraterritoriality by feasible steps, and the opening of the country to mixed residence, and this scheme has met with the approval of our Government. What the so-called 'feasible steps' may be, we do not pretend to assert. But were we called on to form a conjecture, we should interpret them to mean, amongst other things, the appointment of foreign judges in the principal law courts of the Empire, entrusting to them the joint administration of our laws, and the reform of these last."

THE world honours intrepid explorers, but has not yet determined how to treat intrepid experimentalists. It will have to make up its mind, however, if many specimens are about to appear of the genius of Colonel Hoblitzel, whose love of science recently took the following form:—"Colonel Hoblitzel, of Buckannon County, W. Va., expert iron and steel chemist, representative in Pittsburg of the Atlantic Iron Company of Wheeling, placed a charge of dynamite under a 10-ton iron anvil in a vacant lot opposite the Republican Iron Works, at a quarter past six a.m. on the 24th of May. He lit the fuse and retired. A moment later the whole country around, up and down and across the Monongahela River, echoed and re-echoed the mighty reverberations of a series of quickly succeeding sharp reports. Pieces of iron rose with velocity in a shower and descended through the roofs of houses, barely missing the forms of sleeping children and causing considerable damage. The whole block on Sydney-street between Twenty-fifth and Twenty-sixth streets, was covered with fragments of the anvil, and the excitement among the people of the neighbourhood for a time was intense. James Acton, who was standing in front of his stable-door, was struck on the leg by a twenty-five pound piece of iron, which varied in weight from 40 to 25 pounds, rose obliquely to a height sometimes of 150 ft. some falling on vacant lots and others striking against the roofs and sides of houses,

crushing through to the living apartments. Mrs. Cruikshank and her husband, who live on Edward-alley, were in the kitchen when the explosion occurred; she preparing the breakfast and he standing in the open doorway. Mrs. Cruikshank had just stepped from the stove to the coal-box for fuel when a piece of iron weighing 250 lb. crashed through a baking-oven, situated ten feet from the kitchen, knocked the side out of the kitchen, and landed in the middle of the floor. Two inches to the right and it would have struck Mrs. Cruikshank. Mr. Cruikshank was thrown by the concussion out upon the pavement, but was not seriously hurt. In the house of Joseph Lott, on Sydney-street, a babe lay asleep in the bed in the front upstairs room. A 120-lb. fragment of the anvil knocked a post from the bed on which the babe lay. The carpet was torn up and two chairs were reduced to splinters. At the residence of Mr. Emil Ertzwein, at Twenty-sixth and Sydney streets, a 75-lb. piece crashed straight through to the bed in which two boys were sleeping. The damage, which will reach several thousand dollars, will be paid by Colonel Hoblitzel.

WE have never seen any "Travelling Turks." There are such phenomena, however, if we may take as gospel the following story, which a newspaper correspondent sends to an American exchange from North Jackson:—"Early this week seven Turks, with a pack of trained bears, which were kept muzzled, were coming near the village. One morning a young woman—one of the party—with her four-weeks-old babe, was sent out to beg victuals for breakfast. Charity was cold and close, and the men, enraged at her ill success, snatched the babe from her arms and threw it to their unmuzzled bears. They devoured the infant instantly. The mother's screams brought some farmers to the camp. She stated what had occurred. The indignant farmers began to talk vengeance, when the men said that the baby was dead when it was fed to the bears. The story was not believed, as an hour before the child was seen alive. Later on in the day an effort was made to find the Turks, but they had fled."

READER, have you among your acquaintances, or does your daily experience suggest, any one whom this picture resembles:—"The ill-natured man puts a bridle in his mouth so that it shall not speak well of any one. To praise is weak; to snarl is manly. Diogenes, the most contemptible character in Greece, is the model to imitate. He was a wise man, who saw through imposture, and was never deceived by attempted virtue. He knew that every son of Adam has his weak spot; that was the spot to touch, till the victim writhed. He was not fool enough to give men credit for their good deeds, for he knew they had been done from a corrupt or selfish motive. He was never deluded by outward appearances of good behaviour; the worst rascal can wear the livery of heaven. It was always safe to assume that good men were hypocrites, pretending to virtue in order the better to hide their normal depravity. In Greece, we are told, the cynic made disciples among the base, heartless, unprincipled youth of Athens; and the school seems to flourish yet. We can all recall some acquaintance who never was known to speak well of a single individual; who is forever parading his superior acuteness by discovering faults in the

best members of society; whose opinion of human nature is summed up in the line—There's nothing level in our cursed natures but direct villainy."

WE understand that one of the best troupes of Japanese players, conjurers, acrobats, etc., ever taken abroad will leave on the *City of Sydney* for the United States under the charge of Mr. J. R. Marshall, who has been for the last seven years manager of Woodward's Gardens, San Francisco, and is indeed the pioneer of show business in California. The repertory of this company includes several feats and acts that are as yet unknown abroad, though they form a part of the best performances of first class artists here. Mr. Marshall has exercised a wise discretion and caution in selecting his troupe, and as the result is able to take away a band of as clever artists as have ever left Japan to tour in foreign countries. The Home Rule platform was too lofty for the British working man. He could not climb to such an elevation. Irishmen, as he knows them, are not precisely the sort of people to be entrusted with the duty of governing themselves. So that incalculable factor in British politics was true to his character. He deserted his allegiance; refused to contribute any support to the Gladstone electoral fund, and was even sufficiently unsympathising to abjure his favourite political device, a demonstration in Hyde Park. Messrs. Arch, Broadhurst, Leicester, and Company must have been disappointed to see Labour condemned to a negative rôle in the great contest.

A most mysterious event was the rescue of John Olstone, master of the Nova Scotian barque *Arklow*, who was picked up by the *Frank Pendleton*. Olstone was found in a little boat, delirious and with scarcely any clothing. His story was that the barque had been cut to the water's edge in a collision with some unknown ship; that he had put his wife, child and the crew of ten men into the life-boat and accompanied them himself in a gig; that the weather thickened, the boats became separated, and the gig, being capsized in a squall, was righted by him with great difficulty after many hours; that he subsisted for several days on three flying fish, and that he had lost all reckoning when picked up by the *Frank Pendleton*. Olstone was carried to Queenstown by his rescuers. He arrived there June 21st, and the next day he disappeared, leaving behind him a note to the effect that his story of the collision and of his own subsequent sufferings was all romance. "I left the vessel," he added, "for reasons which I will afterwards explain." They must have been very strong reasons.

THE Canadian Government have very materially modified their tone in respect of the fishery dispute. New instructions have been issued to collectors of customs, in accordance with which, instead of immediately seizing vessels found shipping men, or supplies, or trading within the limits defined in the convention of 1818, the collectors are merely to serve a notice to quit on trespassing fishers, and if this be not obeyed within 24 hours, they are put an officer on board the offending vessel, telegraph the facts to the Fishery Department at Ottawa, and await instructions. Moreover, this action is to be taken only in the case of fishing vessels trespassing within three marine miles of the shore. The Government, therefore, have abandoned not

only the very much wider claim originally advanced as to area, but also the contention that neither men nor supplies were to be shipped, or trading carried on within the limits. They have come down to the illegal fishing question, pure and simple, and the Cabinet at Washington will doubtless recognise the justice of their altered contention. The people of the United States are bound to respect Canadian rights in Canadian waters as fully as they require their own rights to be respected within their own waters. It is said that Canada's reasonable mood was induced by instructions from London, the English Government warning her that she had gone too far, and that unless she adopted a more rational tone, she must not count on British support. The fact is that the Canadians are not pleased because their offers of reciprocal trade with their big neighbour meet with no favourable response. They ask for mutual reductions of tariff, even for free trade, in all natural products, but the people of the United States, while they advocate the development of commerce with Mexicans or blacks, decline to do business with five millions of English speaking neighbours who are only too anxious to find markets for their coal, iron, lumber, and fish, and to see their large fields of enterprise shared by American business men and capitalists.

COMPLAINTS reach us that the last train from Yokohama to Tôkyô frequently leaves the former place one or two minutes before eleven o'clock, thus causing inconvenience to travellers who have timed their arrival at the station exactly. We need scarcely say that it would be far better to despatch this particular train ten minutes too late than one minute too soon. We learn also that on Sunday night a gentleman reached the station at Yokohama fully a minute and a half before eleven, and that, as he stepped from his *jimrikisha*, the door of the station was shut in his face. Incivility of this nature is entirely contrary to our own experience, and would, we are confident, be severely reprimanded by the Railway authorities did it come under their notice.

THE *Yiji Shimpô*, avowing its adherence to the principle that a secret should be kept secret from everybody, says:—In matters relating to commerce it may sometimes be necessary for the Government to keep strict secrecy, revealing its measures to nobody, however close may be his connection with official circles. But, in point of fact, it too frequently happens that those connected with Government quarters learn a secret sooner than others not so favourably situated, and the latter naturally suffer loss for want of accurate information. The Government has done well to prohibit its servants from engaging in commercial undertakings; but it would be equally necessary to shut up the channels through which important secrets constantly escape, to the great confusion and injury of trade in general. Recently, when the first portion of the Naval Loan was raised, the class of persons sending in applications and the amounts of the applications were, it seems, known to a considerable portion of the public; and it was even rumoured that certain merchants were in possession of a table showing the exact amounts of the applications, the names of the applicants, etc. It may be that such a table was manu-

mercial speculation so common among crafty merchants; but if the table did contain trustworthy figures, it would have been very easy for those who had access to it, to ascertain just at what price it would be possible to make a successful application. In fact, we are told that some persons made applications representing a large sum just before the expiration of the period fixed. It is of little use to complain of what is past, but we hope that, in raising the remaining portions of the loan, the authorities will use more discretion. As an example of the direction in which the process of raising a loan can be improved, it will be advisable to send in applications in sealed letters, writing on the envelope only the total amount of the application, and not to open the seal before the end of the period fixed for application.

IT is difficult to conceive the idea of letters of administration being duly taken out when the property in question consists only of an old tea and eleven cents. That was what happened in the case of Mr. John W. Clancy, of Long Island City. He died last April, and his brother Charles applied for letters of administration, swearing to the above schedule of the deceased's estate. The Surrogate granted the letters, and the petitioner with his attorney executed a joint bond for \$10, the coat being assessed at \$4.89. By and by comes another brother John, who applies that the letters be revoked on the ground of fraud and misrepresentation. For no sooner had Charles, representing himself as the sole heir to the five-dollar estate, obtained the position of administrator, than he procured from a Deposit Company in New York a box belonging to the dead man, in which were securities of the value of \$150,000. These he appropriated, ignoring the existence of his brother John, as well as of two nephews and a niece. Charles says that John lived in Ireland, and being, therefore, an alien, could have no claim on his brother's property, but it is thought that this plea does not dispose of the whole case.

THE great international sailing match is to be contested this year by the *Galatea*, on behalf of English yachts, and the *Puritan*, on behalf of American. We all know the *Puritan*, which beat the *Genesta* so handsomely last year. But the *Galatea* is comparatively a stranger. She is not the fastest of English yachts. On the contrary, shortly before her departure for the United States, she was well outailed by the *Irex*. The *Irex* is said to be the fastest sailing yacht in the world, of her size. Over a forty-five mile course, she beat the *Galatea* by 4m. 48s. actual time, or 5m. 52s. including her allowance of 1m. 8s. Why the *Galatea* crosses the Atlantic to represent England, under these circumstances, we cannot tell. If the *Puritan* beats her—as she probably will—the beating must be by at least a minute in every nine miles in order to make a record as good as that of the *Irex*. The *Puritan* herself lost her laurels temporarily in a match with the *Priscilla*, the *Atlantic*, and others, June 15th. The *Priscilla* crossed the line before the champion. But this unexpected result, caused by a pure accident of weather, was reversed a few days afterwards, and the *Puritan* remains at the head of American sailing yachts.

A CORRESPONDENT complains that the railway ticket clerks refuse to take Hongkong and Shanghai Bank notes. The complaint seems to

us scarcely just. The paper of the Hongkong and Shanghai Bank is issued without any sanction from the Government of this empire. Within the limits of the foreign settlements those who please to take such paper are, of course, quite free to do so, just as they are free to take one another's cheques or IOUs. But when there is question of these purely private notes being received at a public Japanese office, the case is very different. To receive them there would be virtually to give them the cachet of the Government; in other words, to admit that a foreign banking corporation is at liberty to issue notes in Japan without submitting to any of the conditions, *vis-à-vis* the Japanese, which are everywhere considered essential to the exercise of such a privilege. The Hongkong and Shanghai Bank has, of course, fulfilled these conditions to the entire satisfaction of the English Government. But this is Japan, not England. It is easy to see that any carelessness on the part of the Japanese Government in such matters might establish a dangerous precedent. As for the suggestion that the public should be advertised of the railway's unwillingness to receive these notes, there certainly is no obligation to adopt such a course, but at the same time the railway authorities might very well take the matter into consideration. Some sort of announcement to the effect that Japanese money alone will be taken could be easily contrived and would, perhaps, prevent inconvenience.

WE are requested to acknowledge with thanks the following contributions transmitted to Mr. Nosse, Superintendent of the Settlement Police Station, in aid of the families of those officers unattached to the Sanitary Corps, who have succumbed to the cholera epidemic:—

For the widow and family of the boatman Washitō Takaoka	
H. C. Mott & Co.	\$10
W. L. Merriman	5
Seiyōjin	10
X.	5
	\$30

For the family of Mr. Tsukow Kawamata—

Mrs. R. M. Varnum	\$5
For the families of persons attached to the Settlement Police Station who do not come within the scope of the Kencho fund—	
The American Trading Company	\$10
X.	5
Total	\$55

Of the \$25 above mentioned, a small sum has been handed to the boatman's widow to meet her most pressing needs, and the rest, with the other subscriptions that may be sent, will go towards making some provision for her. Two of the children will be sent to friends in the country.

THE good folks of Brooklyn have hit upon a most interesting invention. They confer decorations for popularity, as sovereigns do for valour or diplomatic triumphs. The first wearer of such a badge is Mr. I. H. Winters, President of the Night Owl Club. His order is "a beautiful silver badge valued at \$50." He received it at the annual picnic of the Club in June, when every visitor possessing a ticket of admission was asked to vote on the question of popularity. The idea is capable of development. There are many qualities besides popularity for which medals might be bestowed.

M. PAUL BERT has issued an order that all Tonquinese in the employ of French residents shall be registered. This is what the Japanese authorities have long sought to bring about in Yokohama. The expediency of such a measure is much greater here than in Tonquin. For here the police are denied access to a foreigner's compound unless they are armed with a

Consular warrant, whereas in Tonquin a French warrant runs everywhere. It is interesting to see that for purposes of police control and supervision the French find it necessary to take a step which we foreigners will on no account permit the Japanese to take in Japan. But this is only one incident of the municipal farce. When the comedy has become a thing of the past, people will permit themselves to laugh at it.

THE *Mainichi Shimbun* recently offered a prize for the best essay on mixed residence. So great is the interest taken in this subject that the offer brought one hundred and twenty-five essayists into the field. No less than one hundred and fifteen of them were in favour of mixed residence. As an expression of non-official opinion these essays are of great interest, and we hope that the *Mainichi Shimbun* will find space for the best of them in its columns.

A WALK-OVER is never a satisfactory performance, but it is probable that no one cared to try conclusions with The Bard for the Goodwood Cup, when the conditions are remembered, added to the fact that the son of Petrarch and Magdalene is the best of his year, except Ormonde. It is not often, however, that a rich weight-for-age race ends thus tamely, and it is rather surprising that some of the owners of the older horses— notable stayers—have not had a "cut in." We have previously given the pedigree and performances of The Bard, who is owned by Mr. Robert Peck.

THEIR Excellencies Count Inouye, Minister of State for Foreign Affairs, and Count Yamagata, Minister of State for Home Affairs, left Tōkyō on Thursday, and departed by the *Satsuma Maru* the same day for Hokkaidō. Countess Yamagata, who accompanies the party, will probably stay at Hakodate or Sapporo while the Ministers proceed on their tour of inspection. Mr. Oyama Tsunamasa, an official of the Agricultural and Commercial Department, also left for the north with their Excellencies.

WE regret to record the death from cholera of Mr. Arthur John Lee, a clerk in the employment of Messrs. Walsh, Hall & Co. Mr. Lee was seized very suddenly by illness on Monday evening and was at once taken to his residence, where he was subsequently attended by Dr. Van der Heyden. In spite of all that could be done, however, he died the next morning at half-past two o'clock. Mr. Lee was only twenty years of age, and of French extraction, and had not been long in Yokohama, whither he came from Hongkong.

WILL MITCHELL, a foreigner, whose nationality is doubtful, the keeper of "Bunker's Hill Saloon," died of cholera at 10 o'clock on Thursday. The body is to be cremated and rooms disinfected. Three Chinamen also caught cholera, and were removed to the Chinese Hospital at Nakamura. Cases of cholera yesterday in the Settlement are six all together, including two Japanese.

ON Saturday night or Sunday morning the house of Mr. George Hay, No. 52, Bluff, was entered by thieves, and a valuable gold watch and chain were stolen. The burglars had gained entrance to the house by cutting a lower slat in one of the outer shutters, by which means they were able to draw the bolt. A deliberate search, conducted with the utmost caution and stealthiness, had been made for money,

many things being disarranged, but the watch and chain are the only articles of value that have been missed. The matter has been reported to the police, who are now making enquiries.

REFERRING to the two additional Cabinet appointments, intelligence of which is conveyed in our Reuter's telegrams, the new Postmaster-General will be easily recognized, of course, as the Right Hon. H. C. Raikes, Deputy-Speaker in the House of Commons during the Earl of Beaconsfield's last administration. Mr. Henry Matthews is in all probability the gentleman of that name who contested the East Division of Warwick unsuccessfully in the end of 1885.

It may interest our readers to know that the Tariff Committee, upon whose enquiry, preferred through their President, Sir Francis Plunkett, to the Tōkyō Chamber of Commerce we comment in our leading columns, consisted of Mr. Aoki, Vice-Minister of State for Foreign Affairs; Mr. Van der Pot, Representative of Holland; and Mr. Zappe, Consul-General for Germany.

REMARKS have been current during the past few days to the effect that M. Delavat, the Spanish Representative, who is now on a visit to Miyano-shita, was seriously if not dangerously indisposed. We are happy to be able to state that M. Delavat is not suffering from anything more serious than the effects of unskilful chiropody.

THE cholera returns for Yokohama on Saturday were:—New cases, 87; deaths, 45. Sunday, new cases, 61; deaths, 40. Monday, new cases, 61; deaths, 41. Tuesday, new cases, 82; deaths, 62. Wednesday, new cases, 76; deaths, 58. Thursday, new cases, 74; deaths, 47. Friday, new cases, 75; deaths, 49. Total, cases, 516; deaths, 342.

THE following subscriptions to the fund for the relief of families of the sanitary officials which were received at the Kencho up to yesterday evening, are acknowledged with many thanks:—

NAME	AMOUNT	NAME	AMOUNT
Already acknowledged	634	Mr. A. H. D.	5
Mr. S. D. H.	5	Mr. L. J. Hallendale	5
Messrs. O. J. de la Roche	25	Anonymous	5

Mr. W. B. Mason	10	Total	1,179

THE *Mainichi Shimbun* has been ordered to contradict the statement published the other day in its columns to the effect that the Kanagawa Prefectural Government had paid the hotel bills incurred by Kim-yo-Kun and his friends in Yokohama.

THE *Mainichi Shimbun* states that the government have decided, on the suggestion of the French Consul, to pay the debts incurred by Kim-yo-kun and his party while staying in Yokohama and the necessary amounts have been handed over by the Kanagawa Local Government.

ACCORDING to the *Mainichi Shimbun*, the War Office authorities have found it necessary to issue an order commanding all military officers to abstain from the use of umbrellas, and to wear instead, in time of rain, capes attached to their great coats.

THE time-table of the Yokosuka boats was altered on Sunday, and will be found corrected in the next issue.

*THE CONSULAR TRADE REPORT  
FOR YOKOHAMA, 1885.*

MR. R. ROBERTSON'S Consular Trade Report for 1885 is, as usual, an interesting and exhaustive document. With true conservatism it is dated at Kanagawa, HER MAJESTY'S Government not yet having realized the fact that there has not been a British Consulate at that place for more than twenty years. We doubt whether anybody outside Japan knows where Kanagawa is, and we are certain that the apparition of such a name at the head of a trade report is enough to deter any reader not specially interested. It might be worth the while of those in authority to observe that the practice of placing the Yokohama Consulate at Kanagawa has nothing to recommend it except antiquity.

There is no denying that these Trade Reports lose much of their value by the tardiness of their publication. One has ceased to think of the trade of 1885 in June or July of 1886. To the Consuls, we imagine, it would make very little difference whether they sent in their Reports five months sooner or five months later, but to the public it would make all the difference in the world. On a previous occasion we expressed a very emphatic opinion as to the superfluity of Lord ROSEBURY'S commercial recommendations to HER MAJESTY'S Representatives and Consuls in the East, but just in this one point there seems to be room for more closely consulting the general convenience. If the Trade Reports were published—as they might easily be—in February instead of July, they would assume a character which they lack altogether at present.

It will at once strike the reader that the figures in this Report are rendered in sterling instead of in dollars as has hitherto been the custom. The change was doubtless dictated by the convenience of the Foreign Office, where returns in silver must be converted into gold before being included in any general statement of British commerce. Indeed, the process of conversion entails not only inconvenience but also embarrassment. For the Treasury has a ratio of its own for stating gold in terms of silver—a fictitious and grossly unjust ratio, by means of which HER MAJESTY'S Diplomatic and Consular officials are annually defrauded of a considerable amount of their salaries; are obliged to pay taxes upon an income which they do not receive, and are required to sign false declarations that so and so much sterling has been paid to them, whereas in truth they have been paid sums smaller by a considerable percentage. So long as the Treasury maintains this ratio in its own interests, it naturally desires, one may suppose, to avoid undertaking any arithmetical operations that demand a different ratio. Accordingly, it directs the returns from the East to be furnished in sterling, thus relieving itself not only of labour but also of the duty

of converting them into sterling at a rate quite different from that employed in converting the sterling salaries of HER MAJESTY'S officials into dollars. It is plain, however, that the value of the Reports, so far as their uses in the East are concerned, will not be enhanced by this new departure.

In connection with this, Mr. ROBERTSON mentions a fact worth noting—that the Japanese Customs, in converting sterling into dollars, use a fixed rate of 4.88: that is to say, they reckon the gold-price of the dollar at over 4s. 1d. By this process the dutiable value of imported goods is reduced nearly 25 per cent., as compared with what it would be if calculated at the rate actually ruling. It is well that importers should have enjoyed this advantage, whatever it may be worth, as a set-off against trade depression. We fear, however, that the Customs will hardly remain so accommodating in view of the present sterling price of the dollar. Meanwhile, Mr. ROBERTSON has wisely adopted the 4.88 rate in dealing with imports. To have employed the true rate would have caused palpable and misleading discrepancies. In dealing with exports, on the contrary, he has taken approximations to the market rates. These approximations are 3/8 for 1884 and 3/6 for 1885. They are not, so far as we can judge, average rates, but rather maximum rates, being almost the highest points touched by the dollar in the two years. The whole process is complicated and confusing, and the instructions upon which it is based were evidently inspired partly by the erroneous notion that silver has depreciated, and that by taking gold values the inconveniences of expressing statistics in a fluctuating medium would be avoided.

Turning, now, to the Report itself, we note the satisfactory circumstance that the trade of 1885 shows an increase of \$1,798,970 as compared with the trade of the preceding year. This increase is divided between exports and imports in the ratio of nearly two to one, the exports having increased by \$1,192,184, and the imports by \$606,786. The volume of the trade is still below that of 1883, but the fact that it shows any development at all is of much significance. For it must be remembered that 1885 was the year immediately preceding the resumption of specie payments, and therefore the year when the effects of currency contraction ought to have been felt most. It was also a year when all gold-using countries were suffering from severe depression, their statistics everywhere showing a considerable diminution in the volume of their trade. Why should Japan, though afflicted by an evil peculiar to herself, show a better record than Western nations? Simply because the wider and more persistent currency contraction—the growing scarcity of gold—which crippled them benefited her, in common with all silver-using countries, by stimulating her exports. The

same influence is happily at work now. The export merchant can afford to pay \$6½ for every sovereign's worth of goods he purchases, whereas he could only afford to pay \$6 a few months ago. And he has, moreover, the encouraging prospect that, when he disposes of the goods two months hence, the sovereign he gets for them will probably be worth \$7. Of course the same influence cuts the other way in the case of imports, and must inevitably be so felt in the long run, although local necessities may create a fitful demand.

Perhaps the most interesting parts of Mr. ROBERTSON'S Report are those which incidentally touch upon the circumstances of the competition between English and continental tradesmen. Much has been written lately concerning the perfunctoriness of British diplomatic and Consular officials and the indignant influence exercised by the Governments of rival Powers in behalf of the commerce of their nationals. Whatever justice there may be in complaints of this nature, it is plain from Mr. ROBERTSON'S Report that other causes operate against the British merchant, and that they are causes entirely within his own control. Thus, speaking of nail-roads, Mr. ROBERTSON says:—"The principal import has been from Belgium, where makers are, it would seem, able to compete favourably with English firms, both in quality and in price; they also pay more attention to the smaller sizes usually taken by this market." Then, again, with reference to quinine, he writes:—"The low prices ruling in Europe for quinine have tended greatly to increase the consumption here, and continental manufacturers by reason of competition have been bidding for the trade by coming into the market direct themselves to supply the demand. Leading French and German makers have their Agents here, and consequently prices that have been ruling during the year have not offered any inducement for resident business importers. English makers have not been so pushing, and their quinine is now almost unknown in this market."

The story told by these facts is very plain. English merchants so long enjoyed a virtual monopoly of trade in the East that they gradually became careless, and thus were themselves the means of creating opportunities by which their more active rivals are now profiting. The supposed perfunctoriness of British officials exists only in the imagination of disappointed traders, and the undue pressure exercised by competing Governments will assuredly eventuate in British favour. But the supineness of the individual Englishman is quite another matter. Unless that be mended, the instances of successful rivalry adduced by Mr. ROBERTSON will multiply steadily and surely.

## A WORD ABOUT CHOLERA.

## I.

**T**HERE appears to be a great deal of discontent with regard to the action taken by the authorities in causing the instant removal to hospital of all persons whose seem to be suffering from cholera symptoms. The intention of such action is excellent, and the zeal displayed by the police deserves all praise. Yet we cannot regard the system as quite satisfactory. Why should people be taken from their own homes? Doubtless they can be better treated, and the danger that they may become centres of infection can be more easily guarded against in hospital. But do these advantages counterbalance the very decided and palpable disadvantages of the method? We think not. In the first place, the demoralizing effect upon the poor patients is serious. Rightly or wrongly it has come to be an article of public faith that to go to the Cholera Hospital is to die. One of the most distressing features of cholera is prostration of the nervous system, caused by the action of some poison which the progress of the disease develops. Any moral shock is, consequently, a direct and powerful promoter of the malady. And few people, we imagine—especially the class of people whom cholera chiefly attacks—are so constituted that to be removed from their homes by the police, and carried, *notens volens*, into the midst of a number of plague-stricken sufferers, where they are in the very presence of death, and whither their family and friends can seldom visit them—few people are so constituted that such treatment can fail to induce horror and consternation. The very thought of the thing is harrowing. Then, too, there is the obvious difficulty of enforcing this system intelligently. Who is to say whether or no a case warrants removal to the hospital? In very many instances the decision is believed to rest with the police, who not only are without the necessary skill to diagnose symptoms at a moment's notice—or at an hour's notice, for the matter of that—but who, in the nature of things, are bound to err on the side of excessive caution. If constables find a man vomiting or purging, they cannot possibly be expected to stop and consider whether they are in the presence of an ordinary sickness, produced, it may be, by sun-stroke, *saké* or stale fish. Duty prompts them to be on the safe side, and the patient is run in forthwith. It is asserted that the dread of this torments the people perpetually, and that their absorbing desire is to conceal their illnesses. A faulty system makes them shrink in terror from the aid which they ought to embrace with joy and gratitude. Not a few stories relating to such accidents of the epidemic reach us. One of the saddest is now circulating. It tells of an *enciente* woman, whose condition induced sickness of the stomach. The

police found her thus suffering, in her husband's absence, and told her to prepare for removal to the Cholera Hospital. She begged for a respite until her husband's return. The constables, complying, waited outside her house, and in the interval she committed suicide. The story may be exaggerated; may even be groundless. We do not vouch for it in any way. But we do say that the circulation of such tales indicates an unwholesome condition of the public mind, and that that condition has been brought about by the system of taking people from their homes and friends, and placing them among a crowd of plague-stricken, moribund unfortunates. How enormously must the horrors of the epidemic be heightened by such a prospect! To be overtaken by the fell malady is bad enough, but to know that succour signifies separation, final separation, from family and home, and banishment to the very abode of suffering and death, must multiply apprehension a thousand-fold. Our earnest conviction is that much mischief has already been wrought. The people are growing more and more fearful, and strange rumours, such as those bruited abroad last year with reference to Nagasaki, are again making themselves audible. As we write a terrible tale reaches us of a woman who was actually carried to the cremation ground, in a state of collapse, and who avoided being burned alive by a mere accident. It is even asserted that she subsequently preferred a complaint, in person, to the police, and that her infuriated friends attempted the life of the physician who had pronounced her dead. There is evidently less truth than fiction in this recital. But it points the same moral as that indicated above. The people are disturbed. They lose faith in the efficacy and ability of the measures devised for their relief. In their ignorant perturbation they even go so far as to declare that the process of treatment employed at the hospital induces insensibility, and that this condition is frequently mistaken for death. A system which gives rise to such morbid reports cannot be quite right. We hesitate greatly to pronounce a decided opinion, desiring rather to enlist the attention of the authorities than to write anything which may appear inappreciative of their untiring care and charity. Science has pronounced cholera to be a non-contagious disease. The source of its propagation is confined to the excreta of the patient. If these and everything they have touched be duly disinfected, danger is at an end. There is, then, no absolute necessity to remove a sufferer from his home, if only medical attendance and nursing can be provided for him there. Surely the provision of these is not impossible. We are persuaded that a system could be elaborated and carried into practice which would serve the desired ends better than that now in operation.

## II.

In the above article we described opinions which prevail among the people with regard to measures officially adopted in cases of cholera, and stated our belief that considerable demoralization is caused among the lower classes by the idea that to be attacked by the disease means enforced removal to hospital and separation from family and friends. Since writing it we have received information which shows that the notions generally prevailing on this subject are in many respects erroneous, and that the inferences which we drew from them require to be largely modified.

In the first place, it appears that removal to hospital is not compulsory. Patients are allowed to receive treatment in their own houses provided that certain conditions can be satisfied. It is plain that such a course would be out of the question unless facilities were available on the spot for carrying out the prescribed measures of disinfection and precaution. A code of regulations has, accordingly, been prepared and printed for the guidance of the sanitary officials in this matter. It sets forth in detail the methods to be observed in the case of patients treated at home, and also the requirements essential to such treatment. The requirements are that the house must have at least three rooms; that it must be provided with a separate necessary; that the inmates must pay the cost of watches set by the Sanitary Board at the rate of 60 *sen* daily per watcher; that there must be a vacant space of ground for the deposit of excreta, and finally, that the opinion of a physician, officially delegated, must be favourable to the proposed course. These essentials satisfied, a printed copy of rules relating to the method of dealing with excreta and of managing other matters is supplied to the inmates, who are required to sign an engagement that they will abide by these rules, and that, in the event of any failure to observe them, the removal of the patient to hospital will not be opposed.

We are unable to say how many persons have availed themselves of the permission attached to these conditions. Probably very few. For it will be seen at once that only families of the better classes live in houses such as those contemplated by the regulations, and enjoy incomes capable of supporting the prescribed expense. Now, it is a feature of the present epidemic that its ravages have been confined almost entirely to the lower orders. For them, therefore, removal to hospital is, in fact, compulsory, and it is precisely upon such ignorant, impressionable natures as theirs that the demoralizing effects of this compulsion would be greatest. At the same time, the generally prevalent belief that in hospital a patient is entirely separated from his family and friends is mistaken. Visits are freely permitted, both by night and by day, the only condition being that the visitor must submit to the process of

disinfection before leaving the precincts of the hospital. Patients may even be nursed by a friend or relative, the nurse, in such cases, being placed on the same footing as an officially appointed attendant, the question of remuneration, of course, excepted.

Another point of notable error in the popular belief is that, in many cases, the duty devolves upon the police of deciding whether the symptoms of a malady warrant removal to the cholera hospital. We were ourselves under the impression that such was the practice. But we are assured that, in every instance, the decision of a medical expert is absolutely essential. The function of the police, at the outset, is simply to report. On receipt of a report, one of the responsible physicians is immediately despatched to perform an examination. Until his verdict is delivered, the police are not competent to take any further action. It is singular how much misapprehension exists upon this point. Even by leading foreign residents there have been circulated stories which charge the police with acting entirely upon their own judgment, and carrying off to hospital patients who are not suffering from cholera at all. It ought to be distinctly understood that the police have no discretion whatsoever, and that without the diagnosis of an expert the presence of cholera is never assumed. We may refer here to a story mentioned in our preceding article; namely, that the nausea of an *enciente* woman was mistaken for cholera by the police, and that the woman committed suicide to avoid removal to the cholera hospital. The truth is that an *enciente* woman was attacked by a disease which her own physician declared to be cholera; that the announcement threw her into hysterics, and that, even before the sanitary officials had visited her house, she attempted to take her own life. Here, also, it will be well to notice another rumour referred to above—a rumour not uncommon among the lower classes and recently ventilated in a vernacular newspaper, that the cremation of cholera patients sometimes takes place when they are in a state of collapse, before death has supervened. Strange, terrible stories have been founded upon this *canard*. The thing is wholly impossible. To carry out the arrangements prescribed with regard to the corpse of a cholera patient, an interval of twelve hours at least is required, and we need scarcely say that no mistake as to the patient's real condition can occur under such circumstances.

It comes, then, simply to this, that, the cholera hospital receives of necessity only persons of the lowest classes, whose families have not the means to nurse them at home, and whose residences do not permit essential measures of precaution and disinfection. Those who are familiar with the conditions of Japanese life in humble spheres assert that in such cases the choice lies between removing the patient to hos-

pital and leaving him to become an active factor of infection. The problem is full of difficulties. It has perplexed persons incomparably more competent to deal with it than we. Granting, however, that the authorities have elected the wisest course, the question arises whether some effective steps should not be taken to familiarize the people with the real attitude of officialdom. That many false impressions exist, and that they promote the ravages of the epidemic by suggesting concealment and perturbing people's minds, must, we think, be admitted. In proportion as the truth becomes better known, these impressions and their evil consequences will disappear. Might it not be prudent, then, to educate a fuller knowledge of the truth?

#### OUR KNOWLEDGE OF CHOLERA.

##### I.—THE COMMA BACILLUS.

(COMMUNICATED.)

THE prediction of last summer has been fulfilled. Cholera has reached Yokohama and Tôkyô, and from the records of this epidemic as it presented itself last year in Osaka and Nagasaki, we judge that its ravages will not be light. In the presence, then, of such a plague, the public will be interested in the results of the numerous investigations made in Europe since the cause of cholera was first said to have been discovered.

Every one remembers that ROBERT KOCH, already famous for the discovery of the bacillus of Tuberculosis, or Phthisis, and still more so for his excellent method of separating the various forms of bacteria with which the investigation of all phenomena concerning the putrefaction of organic matter has to deal, was so fortunate in his Egyptian and Indian researches as to be able to state that in the viscera of cholera corpses there was to be found only one constant form of bacteria, boring into the upper layers of the mucous membrane, and that it was quite different from the ordinary schizomycetes (as the whole of this class of fungous beings is called) which are always present even in healthy intestines. This bacteria he was able to cultivate quite separately from all others. He gave it the name of "Comma bacillus," thus opening the door to a great deal of cheap wit about colons, semi-colons, and notes of interrogation.

Of great importance was KOCH's observation that this bacillus quickly perishes in an acid fluid; that it thrives and propagates on wet cloth or linen and in water—even sea-water, as other investigators demonstrated—and that the temperature most favourable to it is from 16° to 35° centigrade.

Two points of great moment, as he himself knew better than anyone else, he was unfortunately unable to determine. He could not produce a kindred disease in animals by inoculation with these bacteria,

though the success of such inoculation was essential to strict proof. Neither could he detect the presence of that germ so well called *dauerspore* by the Germans—the lowest type of ovular or seed formation—which exists in nearly every other variety of schizomycete, and without which the latent vitality of the Comma bacillus, in the absence of all favourable conditions, is inexplicable. The question, therefore, remained open for discussion and investigation.

Do bacilli of this form occur in cholera excreta only? Or do they find themselves there by accident, so to speak, and not as the agents of a deadly poison?

Soon after KOCH had published the result of his investigations, bacilli curved and crooked like a comma, or rather twisted like a small spiral, were discovered by MILLER and LEWIS living in the mouths of the healthiest men. One variety of them was found in the caries of teeth also. BENEKE detected some similar forms in old cheese. LEWIS held that all these disproved KOCH's assertions. Here, however, he was wrong—he himself a famous investigator, who first detected the filaria sanguinis, the cause of elephantiasis—for they were afterwards shown to be different from the Comma bacillus, and distinguishable from it by their physiological behaviour—that is to say, by their conditions of life, and mode of propagating. For instance, some will not live on potatoes or wet linen, as the cholera bacillus does. Others again produce upon the nidus (gelatine meat extract) employed to sustain them an effect different from that produced by the bacillus of KOCH.

A more interesting discovery was soon recorded by two doctors of Bonn, FINKLER and PRIOR. There is a disease which occurs occasionally in Europe, and which, though not imported from India, so closely resembles Asiatic cholera that the two can only be distinguished by their issue. If the patient recovers, his malady was Cholera Nostras. If he dies, it was Cholera Asiatica. FINKLER and PRIOR, then, discovered that the Comma bacillus is present in cases of Cholera Nostras also.

This discovery is not a death-blow to KOCH's theory, as some at first supposed that it would be. On the contrary, there was good reason to expect that a kindred disease would be caused by a kindred parasite. The diagnosis of the disease now became, indeed, more difficult, but the value of KOCH's investigations was not destroyed. For the bacilli of Cholera Nostras were found to be larger and coarser than those of Cholera Asiatica. They also render the gelatine nidus more quickly fluid, and the difference of their appearance in this medium may be discerned with the naked eye. Nevertheless, the distinctions between the two varieties of bacillus are so few and unessential, that, with BÉCHNER, I am disposed to regard them as of the same genus. HUXLEY would perhaps

agree that the difference between them is not as great as that between men and monkeys. I believe, or rather I hope, that the discovery of the Bonn investigators will acquire immense value through the agency of preventive vaccination. Analogy pleads for the experiment of neutralizing a strong poison by opposing to it a mitigated form of itself, as vaccine is employed against variola.

But is the comma bacillus the true cause of cholera, and is it the only bacteria present? Dr. EMMERICH, of Munich, who made investigations in Naples soon after the recent epidemic had established itself there, found, not only in the intestines, but also in the liver and kidneys, another kind of schizomycete of a straight, short form—a real bacteria, whereas the bacillus of KOCH is better called a vibrio. To EMMERICH and his supporters the presence of this bacteria seemed to account more truly for the severity of the disease. Other investigators have not, however, confirmed EMMERICH'S results. His discovery, if true, may supply a valuable explanation of the secondary form of the malady—the so called cholera typhoid. We are already familiar with instances of the successive entry of different schizomycetes, with their different diseases, into the same organism: one prepares the way for the other. Thus diphtheritis seems to live only in a mucous membrane already diseased by severe catarrh. Again, in the ulcerations caused by diphtheritis there can live—and thence enter into the system—other forms, which may cause disease of distant organs, as the bones and the surfaces of articulation.

Of all the objections raised to KOCH'S discovery, there does not survive one in a serious form. For the pseudo-heroism of Dr. KLEIN, who swallowed a culture of Comma bacilli and did not die of cholera, proved only that the stomach of Herr KLEIN was as healthy as the stomach of a brave man ought to be. It contained hydrochloric acid in sufficient quantities to kill all the bacteria he ate for his dinner. In 1856, when two Polish physicians experimented on themselves with cholera excreta, theirs was an act of heroism, for in those days Prof. THIERSH asserted his ability to infect mice with the excreta of cholera patients. After KOCH'S publications, such an act as that of KLEIN was only an evidence that KOCH had not been read and understood.

It stands now as a fact that in true cholera there is always to be found one well defined specific organism, the common bacillus, or vibrio, and nothing but this, in the first stage of the disease at least. But is the inoculation of animals with these organisms followed by a disease similar to that of man? We have seen that the experiment failed in the hands of ROBERT KOCH. Shortly after the publication of his results, cholera appeared in Marseilles. Two Swiss physicians, RIETSCH and NICATI,

went there; found all the assertions of KOCH to be true, and, noting his statement that the bacillus perishes quickly in acid fluids, they wisely injected it into the duodenum of Cobaya, under the stomach. But in my opinion they made, at the same time, a great blunder. For they bound the ductus choledochus (the tube that brings the bile into the duodenum), thus making the contents of the intestines less alkaline—which was the more unpardonable since they themselves had found the bacteria living in that duct. They made their animals sick, but the result, according to their own admission, was not convincing. Nor is this surprising; since, wishing to exclude the hydrochloric acid of the stomach, they excluded also the bile, which is a most powerful agent in neutralizing that acid.

VAN ERMENGEM, a Belgian doctor, who also conducted cholera investigations in Marseilles, did better than his Swiss confrères, for he injected at once into the duodenum. Still his results failed to be convincing. Then KOCH himself resumed this necessary branch of the study. Imitating his predecessors, but improving their methods, he made the contents of the stomach alkaline by first administering carbonate of soda, and afterwards tincture of opium so as to paralyse the action of the bowels. He then caused the animals to swallow a culture of Comma bacillus, and the result clearly demonstrated that the bacteria found in the viscera of men suffering from cholera produce an analogous disease in animals.

This result was good. Still the reasoning was faulty, and this I call fortunate, for causes which will be presently understood. Dr. DOYEN, imitating the experiments of KOCH, showed that, not the influence of the opium in retarding the action of the bowels, but that of the alcohol in which the opium was dissolved, was responsible for the now assured result. And such is, or ought to be, the case. The *origo mali* was, not bacteria conducted safely across the acids of the stomach into contact with the normal mucous membrane of the intestines, but bacteria thus brought into contact with a mucous membrane rendered abnormal by the action of alcohol. All the investigations go to show that the bacillus is only one factor of the disease, the other and primary factor being alteration or death of the cells which constitute the organs. In other words, all the pathogenic bacteria are really but saprophytes; that is to say, they live only in organic matter that has ceased to live. This discovery I deem fortunate for theory and still more for practice; inasmuch as what we physicians have always done is to give opium, in the form of laudanum, at the commencement of every diarrhoea, even when we suspect the diarrhoea of true cholera, and what could we do better?

Had I occasion to make an experiment, I should employ a pure culture of cholera

Comma in a capsule of keratine—a stuff which, being made from horny organs, passes the stomach unchanged and is only dissolved in the small intestines. And, at the same time, I should employ fragments of glass to injure the coating of the intestines slightly. But even without further experiment, it is now to be considered certain that a particular kind of schizomycetes produces the specific disease—cholera morbus Asiatica.

Where do these vibrios remain when there is no epidemic of cholera? Dr. KOCH, as we have seen, could not answer this question. He could not detect any form of spore or germ. Yet there must be such a form, the bacillus not being able to live in a dry state more than 24 hours. If, again, the temperature is low, they are equally destroyed. At 66° they are killed, as is nearly every other organism with the exception of germ egg seeds. And what is more remarkable, they do not long survive in fæces, while the period of their existence in drains and in sewers is not more than 24 hours. They remain, however, living and vigorous in water, especially in sea water, or in ship's bilge water, for at least a month, and in fluids prepared for their culture they have been known to remain vigorous over 200 days.

Soon after the arrival of cholera in Marseilles and Toulon, Spain became infected, and then there appeared a man who for a short time shone as brightly as a comet, soon to disappear, however, below the horizon of research. Dr. FERRAN, who also had seen the cholera in Marseilles, was said to have discovered the formation of sporæ or germs. But his description of what he had seen was different from what was known of other bacteria, and he gave names to the germs suggesting the growth of much higher classes of plants. Thus, from the very beginning, his assertions were much mistrusted. What he had really seen was soon found by VAN ERMENGEM, by RAPTSCHERSKY, and by BABES, to be form-changes of diseased, exhausted, or dead bacteria; changes which are, nowadays, usually called products of involution. The best proof of this is that these forms, these pieces of organic matter, are not to be cultivated in fresh gelatine meat extract, as is always the case, of course, with real germs.

A short time ago, however, HUEPPE, in constantly observing living bacteria in a drop under the microscope, saw that when the nutritive elements of the fluid became exhausted, the Commas began to stretch, to become long spirillæ, and finally to fall into small pieces of a globular form, resembling the germs of other kinds. These pieces, introduced into a fresh drop of nourishing matter, resumed their former condition of Commas and began to propagate. It seems, thus, that true *dauersporen* have been discovered. So far, then, the whole history of these famous parasites has been written.

## II.—PATHOLOGY OF CHOLERA.

How is it that the bacillus does such cruel injury to the human body when once it finds its way into the alimentary canal? Investigations upon this point have not been so thorough as to furnish materials for a clear judgment. In the first place, the bacillus destroys the cell-coating of the mucous-membrane. This has been well observed by STRAUSS, a French investigator, who visited Egypt at the same time as KOCH. But this destruction of the cell-coating alone is not sufficient to explain the violence and suddenness of the disease. All living parasites, and bacteria especially, produce enormous chemical changes in the organic matter on which they feed. Before they can absorb, they must disintegrate, the highly complicated molecules which compose organic matter, and the consequence of this disintegration is the formation of many other chemical bodies, some of which have an irritant and perhaps strongly poisonous action on animal cells, or may even be noxious to the parasites themselves. One of the most familiar of these "fermentations," as they are called, is the formation of alcohol from sugar. Among the products of putrefaction—which is fermentation of nitrogenous matter—are the so-called alkaloids, formerly supposed to exist only in vegetables. Now, we all know that even very small quantities of these alkaloids may act as violent poisons, since the group includes strychnine, morphine, and conine—the fatal principle of the draught that killed SOCRATES. That minute doses can be so noxious, is due to the fact that the blood easily absorbs them, and that, since they act specially on different parts of the nervous system, a sudden paralysis of one of the most necessary functions of life may ensue—for example, the heart or the lungs may cease to do their duty.

It is very probable that alkaloids of this nature are formed by the cholera bacillus, as only such a process of poisoning explains the symptoms of the disease. When such an alkaloid is formed—and a French physician named VILLIERS claims to have detected one in the fluid in which cholera bacteria had been developed—it is likely to belong to the category of muscarine or pilocarpine. Unfortunately Dr. VILLIERS has not given precise details. But in other putrefactions—among various matters of different chemical constitution—BRIEGER has found muscarine to be the principal alkaloid. This is precisely the alkaloid which seems to best explain the symptoms of cholera poisoning. We shall soon, however, be able to speak with more certainty, for the investigation of this important point cannot present in the future as many difficulties as have attended it in the past.

Let us now see how far these facts, for the most part well proved, and reasonable suppositions justify deductions bearing upon the prevention or treatment of the terrible malady. First, let us consider one

of the factors of the disease; the factor which, formerly called "the disposition," is now—thanks to the labours of so many devoted scientists, amongst whom KOCH ranks first—expressible in terms which we can all comprehend.

## MEANS OF PREVENTION.—RECEPTIVITY OF BODY.

The Comma bacillus cannot possibly do harm if the stomach is healthy; and the stomach alone need be taken into consideration, since these bacteria cannot enter through the skin, or through wounds, or through the lungs, as many other pathogenic bacteria do. It is well to be as explicit as possible here. The bacteria may exist in the air—though they cannot live long in a dry state—and may be inhaled through the mouth and nose. But they have then to be swallowed with food or with the saliva. In most cases, therefore, the Comma will enter the body with uncooked food or with drinking water. We see at a glance what an enormous advantage this knowledge confers in combatting the malady. Let only due care be taken to keep the stomach healthy, and though millions of bacteria be swallowed, they will all find a grave there. For the stomach contains an acid fluid—so acid that even free hydrochloric acid can easily be detected in it—and this acid fluid is fatal to the bacillus. Danger from the air is thus provided against, while water and food can be purified much more easily than air. As for water, the most efficacious method is to filter it through plaster of Paris or unglazed porcelain—*les chandelles filtres de Chamberland*—which is the only certain process of freeing fluid from microbes or bacteria. All persons should be careful to drink only such water, and to wash their food well with it before cooking.

We have seen how difficult it is to give the cholera to animals. Equally is this the case with men. Against no other disease are they so well protected if they take the necessary care of themselves.

The case is entirely altered when one's stomach is not in a normal condition. A slight catarrh is sufficient to cause the greatest danger. In this affection, as every one who studies his own nose must be aware, there is a large overproduction of mucus; whereas, only a small quantity is normally produced—it would be a very bad mucous-membrane that did not produce at all. Now this mucus is alkaline, and neutralizes the acidity of the gastric juice. Further, it clings to the coatings of the stomach and prevents free secretions of hydrochloric acid into the cavity of the stomach-pouch. And what is still more pernicious is, that mucus, though secreted and rejected by our organs as refuse, is excellent food for schizomycetes: they enjoy it as a Chinaman does his bird's-nest soup. Unfortunately, the stomach of our Japanese friends is their weakest point. There are here so many sufferers from chronic diseases of

the stomach that one may almost call it a national calamity. Whatever may be the prime cause of this, there are certainly many; as for example, eating too large quantities of food at one time; drinking alcohol—many imbibe daily enormous quantities of *sake*—masticating lumps of ice; eating indigestible food; exposing the unprotected body to changes of temperature and so forth. The first object is to remedy this dangerous condition. In many cases this is not only possible but easy. Thus, rest may be given to the stomach, either by not eating solids at all, or by taking only small quantities of food for some days. Recourse may be had to drugs which dissolve mucus and carry it into the bowels—as sulphate of soda, and carbonate or sulphate of magnesia. Table salt (chlor. Natrium) may be more freely taken with the food; or, what is still easier, some diluted hydrochloric acid may be drunk after meals.

## PREVENTIVE INOCULATION.

So much for the first and simplest step. There remains still one point to be considered. Can we not combat the violent ravages of this virulent poison by gradually accustoming ourselves to it—for it is thus, in my opinion, that we may interpret the effect of preventive inoculation or vaccination. FERRAN'S experiments in Spain, though in themselves not at all absurd, as CHANVEAU has explained in a clever essay, failed in his hands. Nor is it easy to understand how a scientist who professed to have discovered the fructifications of the bacillus, could, by inoculations of matter such as FERRAN used, expect to produce a mitigated form which might protect against the graver type of the malady. The seed, spore, germ, or whatever we may choose to call the primary form of an organism, ought to be, and has been proved to be, more energetic, and therefore more dangerous and fatal, than the bacteria already fatigued by living and partially exhausted by the effort of producing armies of children, which generally can only do harm when they proceed to the assault in hordes. But FERRAN, as we have seen, did not detect the germs of cholera at all. What he inoculated was the dead bodies of bacteria; organic matter in a state of decay. Moreover, VAN ERMINGEN, who inoculated large quantities of fresh, lively cholera Commas into the subcutaneous tissue of Cobaya, previous to conveying bacteria into their bowels below the stomach, found that these animals were not in the least protected, or prepared to resist the disease, better than animals which had not been vaccinated. We learn from this two things. First, that cholera, in its early stages at least, is as truly a local disease of the mucous membrane of the intestines as, for example, ringworm is of the skin. Secondly, that blood-poisoning, distinguished by physicians as septicæmia and pyæmia, is due to specific bacteria; other-

wise, the numerous inoculations of FERRAN could not have been so innocent.

How different was the procedure of PASTEUR, the grand master, the creator of the whole of this branch of knowledge. He began by treating the bacteria by temperature and oxygen in such a way that they were unable to produce spores. These mitigated forms he injected, and found them just able to produce a slight disease, which conferred immunity against the severer type. I speak of his preventive inoculation against the *cholera des poules*, and the miltzbrand of sheep. Purposely I refrain from mentioning his latest and most spoken of inoculations against *rabies canina*. While the former processes were the result of methodical, scientific investigations, the latter, if trustworthy, were discovered by empirical experiments only. Of the *rabies canina* he did not even detect the bacteria—only lately discovered by FOL.

Whoever seeks to discover the process of preventive inoculation must study the Comma under different conditions of temperature, of oxygen, of pressure; or must experiment with it on different animals in different tissues. It may be, as I have already suggested, that the bacteria of *cholera nostras* will prove to be a mitigated form capable of preventing the invasion of the severer type. Or, quite a different and new method may be studied by examining the chemical products formed by the action of bacteria on the mucous membrane. If among those products there be really a poisonous alkaloid, such as VILLIERS claims to have found, the nerves might be accustomed to its noxious action by small repeated doses taken internally. This is possible, as we all know, with nearly every kind of poison, mineral or vegetable—for instance, nicotine, morphine, etc., etc.—provided that it be easily and quickly expelled from the body through the kidneys or other secretory organs. In the case of a poison which is not easily evacuated but accumulates in the body, such a method would of course be out of the question. The latter contingency is, however, very improbable.

### III.—ANNIHILATION OF BACTERIA.

We have now to consider the second factor: the pathogenic micro-organism. How can we prevent its visits to places where it is not originally present? How can we prevent its spreading; and if once present, how must we try to destroy it? By isolating a country completely from communication with the outer world, it is certainly possible to avoid the visit of all vegetation which is not autochthonous in that country; especially in the case of an island. But if intercourse is carried on with other parts of the world, as must necessarily be the case in our days, it becomes very difficult to repel the invasions of these microbes.

Quarantine, however strict, is so full of

incongruities, of absurdities even, and so uncertain, that it has been more and more condemned as inefficient. Here in Japan, although carried out in the most praiseworthy manner, it has never prevented the cholera from following the great mercantile routes of communication.

The first article of the resolutions adopted by the Quarantine Congress of Rome wisely insists, therefore, upon the improvement of the hygienic condition of the ports themselves, and on a thorough inspection of ships and their contents at the port of sailing rather than at the port of arrival, such inspection to be performed by physicians salaried by the Government and independent of the ship's owners. Special attention is to be paid by these officers to linen, if wet; to rags; to the bilge-water of the ship, and to the state of health of all on board. Japan had its own delegate at that congress, and he gave his adhesion to all the resolutions, proposed as they were by the first scientists of Europe, KOCH himself being of the number. It is permitted, then, to hope that all these things will be carried out, by and by, in Japan.

What must be done to prevent the spread of cholera when it has once established itself at a place?

The first step should be to clean the sewers, the drains, the cloacæ, the canals, which carry away the refuse of houses; taking special care to keep them thoroughly wet, by forcing water through them, to which might be added some vinegar or other cheap acid fluid. For, remembering that the Comma bacteria can live many days in sea water—at least in the salt water of ports—an effort should be made to destroy them before delivering them to the ocean.

Canals or moats should never be scoured—as was imprudently done in Tôkyô last year—by letting off the water first and then digging them out, leaving the mud to dry on the roads beside them. By this procedure the danger is greatly augmented. As long as living organisms are in water, they cannot possibly escape into the air. NÆGELI took the unnecessary trouble of proving this—unnecessary because it is a truism on which the whole of chemistry is based. How otherwise could we dissolve substances, crystallize them by evaporation, and yet find their weight exactly what it was at first? Nothing that does not assume the form of a gas can free itself from a fluid. Organised beings, as bacteria are, can never, of course, become gases. But, after the water has evaporated, and after the mud has dried, the bacteria may be carried away in the air as dust. KOCH showed that the cholera bacillus cannot live much longer than 24 hours in a dried state. But we must remember that since KOCH demonstrated this, HUEPPE has discovered the germ of the bacillus, and that certainly lives longer. Besides, in 24 hours the bacteria have ample opportunity to be

blown about by the wind and to infect the purest drinking water, the best aqueduct, as is known to have happened in Genoa two years ago, where one of the three aqueducts became infected in a night. There are also a great many other pathogenic bacteria which live in water, and are set free in the process of drying up the mud of canals and rivers. We had evidence of this last year when a form of typhoid fever quickly followed the imprudent action taken at the moats of Tôkyô. With cholera we are very favourably circumstanced in so far as we have only to deal with water. We are not obliged to use dangerous water since we can make it absolutely innocuous by filtering it through earthenware under pressure.

Another very important agent of the propagation of cholera is the human victim himself. For the peculiarity of infectious disease is that small organisms propagate in the diseased body, and that millions of bacteria may thus be born of a single patient. How have we to act so that this one person's disease may not become the means of poisoning a hundred others? This question also is much easier to answer since the remarkable discoveries of the past two years.

We know now with perfect certainty what had already been rendered highly probable by thousands of observations in former times; namely, that neither the breath, nor the skin, nor the perspiration contains the dangerous poison. The bacteria only exist in the excreta. In one word, cholera is not contagious; that is to say, a cholera patient does not infect other persons by contact. In fact, it is far more dangerous to sleep in the same room with a patient suffering from tuberculous lung disease, than to live and sleep among a hundred cholera patients. Knowing all these things, we recognise that it is quite unnecessary to remove cholera patients from their homes and to send them to a distance from the dwellings of their fellow creatures.

So long as we were ignorant of the exact cause of such a terrible disease, we could not question the right of communities to defend themselves by forcible acts, even though these entailed a certain measure of cruelty to the poor sufferers. With fuller knowledge, however, such acts become barbaric. And what is perhaps worse, they are exceedingly stupid; for, in the first place, you lessen the chances of the poor patient's recovery, and, in the second, you lose all control over the poison which comes from him. I think it not unnecessary to dwell upon these points. To isolate houses and whole wards by means of straw ropes is simply childish, and at the same time shows a total disregard of the rights of the subject. All that parents or nurses have to do is to take special care of the matter which is evacuated; to mix a 5 per mille carbolic acid solution with it; and to carefully wash their own hands in the

same solution should they have come in contact with the excreta.

A disease which attacks so suddenly and generally takes a course so quickly fatal, ought to receive immediate treatment and medical assistance. In order that these may be provided with certainty and regularity, it seems desirable to organize a service of physicians, much in the manner of a fire-brigade in some of the large towns of Europe. During the prevalence of an epidemic, two physicians ought to be detailed for every division of a street. They should alternately visit the houses in their district, even though not summoned, making themselves the friends of the inhabitants. The constable, the official armed with the stick of authority, the *monstrum baculi*, can never be regarded as a friend by the poor patients whom he comes to drag out of their homes, to tear away from their sorrowing families. The physician, on the other hand, will give kindly advice. He will tell people how to behave in such anxious days; will specially look after the disinfection of excreta, and will be at the sick man's side as soon as the disease overtakes him. Being there, however, the great question for him is what to do; what steps to take; what medicine to administer. Up to this very day it must be confessed that not one assured system of treatment exists. Not one specific remedy has been found. Most of the methods adopted, including even those most lately recommended, are irrational and illogical. For instance, physicians have suggested inhalations of sulphurous acid or nitrous acid vapour—both irrespirable gases; that is to say, gases which irritate the glottis to such an extent that it closes, thereby effectually opposing the passage of these vapours to the lungs. Somewhat better is the injection of salt water (water containing  $\text{Cl Na}$  in the proportion of 6 per mil.) into the veins to replace the great loss of serum caused by the disease. But this, after all, only deals with one of the symptoms. Are we, then, to remain thus helpless against such a frightful disease? I believe not; and I live in hopes which I should be sorry to abandon.

#### IV.—TREATMENT.

Let us consider what we have to do. First we must try to kill the bacteria, the Comma, or at least to hinder their propagation. If we had to do with the skin or with a wound, we might apply one of the many disinfectants; so called because they destroy the schizomycetes which are the cause of all infection. We have to deal, however, with inner organs, which are themselves easily injured by most of these drugs. There are, indeed, only a very few drugs which, when administered in doses sufficiently large to act as bactericides, do not prove noxious to the body. But fortunately, though few, such drugs do exist within our knowledge. The list is headed by Bichloride of Mercury, which, in

the proportion of one to 100,000, is said by many investigators to impede the growth of all fungi. If, now, all the serum of the blood be secreted by the bowels, there will not be much more than 5 litres of fluid to be dealt with. On that hypothesis, 0.05 gram. of the drug—a quantity which is less than one-fourth of the fatal dose—ought to be efficacious. Further, and this is of great importance, during the progress of cholera nothing is absorbed by the mucous membrane, so that we undoubtedly may hazard larger doses than those administered when the bowels are in a normal condition.

Much less dangerous to the body cells is Iodine. In the form of Iodine of Soda, we may administer this to the extent of nearly 3.0 gram., without apprehension. Experiments go to show that this drug acts as a bactericide when taken in the proportion of one to 5,000; so that one gram. ought to be sufficient for an adult. All other disinfectants have to be given in too large doses to be admissible.

Another difficulty is how to administer either of these two remedies. I myself have often injected Iodine into the blood; but with cholera, on account of the thickening of the blood by the great loss of fluid, injection becomes very difficult and sometimes impossible. It would be better, perhaps, to give the drug in keratine capsules. These, if the bowels be capable of dissolving them, ought to serve the purpose. But if the bowels refuse to perform this function, the only remaining plan is to inject the drug through the walls of the abdomen with a needle syringe directly into the intestines.

But, in the second place, we have to deal with a poison formed by the bacteria; a poison which is the very probable cause of the paralysis of the vasomotor nerves in the intestines, and which is consequently the origin of a dangerous disturbance of the whole circulation. This poison we have seen is likely to be an alkaloid of the group of muscarine.

Now against such a poison we possess a certain antidote; namely, atropine. As long as four years ago, I injected atropine, and saw in many cases the pulse of the radialis rise. If we inject atropine solution directly into the abdomen, and follow it by injections of cocaine, we shall at all events have a contraction of the blood-vessels of the mucous membrane. That, in itself, would be of great benefit.

Thirdly, we ought to stimulate the central nerve system. Paralysis of one nerve, or a system of nerves, may be counteracted by stimulating a centre of the central nerves. Thus, for instance, caffeine, by stimulating these higher organs, may combat the deadening effects of curare, which paralyzes the nerves at their attachments to the muscles, without being therefore, a real antidote. The same effect may be obtained with different salts of ammonia, champagne, camphor, etc. And this also explains the well known and important

influence exercised by the energy of individual will, or by the degree of confidence and hope entertained by the patient in medical assistance or supernatural aid. The effect of mind upon body is, indeed, too well appreciated to need comment.

In this context may be noted the injurious effect caused by mental depression, fear, apprehension of violent treatment, of being carried away under a burning sun and thrown pell-mell amongst a number of already dying men, each on one mat. Surely, we all know that fear of itself is able to bring on *das Kanonen fieber*. How delightful for the Comma bacteria to find their way so happily prepared for them!

Fourthly, we must try to bring the circulation back from the intestines to the skin, as there exists a well proved antagonism between these two circulations. The remedies mentioned already under the second and third heads may effect this. But it will be better if we assist their action by wrapping the patient in a garment damped with cold water, and covering him with woollen blankets.

These are the methods of treatment which present themselves as most rational according to the knowledge we possess now-a-days of the cause and consequences of cholera. It is true that we have not yet entirely emerged from the region of hypothesis, and that thorough and scientific experiments have still to be conducted. But we know enough to be justified in saying that we have entered the right path, if only we can pursue it successfully to the end.

W. VAN DER HEYDEN.

#### BRITISH CONSULAR TRADE REPORT FOR KANAGAWA FOR 1885.

BRITISH CONSULATE, KANAGAWA,  
MAY 28TH, 1886.

SIR,—I have the honour to enclose Returns of the Trade and Shipping of this Port for the year ended December 31st, 1885, and I proceed to review the trade of the past year commencing with the following comparative table:—

	1885.	1884.
Exports.....	£4,178,282	£3,933,982
Imports.....	£3,764,475	£3,663,344
	£7,942,757	£7,597,326

showing an increase in trade of three hundred and forty-five thousand, four hundred and thirty-one pounds.

In 1884 the value of steamers sold to the Japanese was three hundred and eighteen thousand nine hundred and two pounds; in the year under review it was one hundred and thirty thousand five hundred and nine pounds. Adding these amounts to those above, the total Import and Export figures are:—

	1885.	1884.
	£8,073,266	£7,916,228

leaving a balance of one hundred and fifty-seven thousand and thirty-eight pounds in favour of last year's trade.

Cotton Manufactures exhibit on the total figures a slight increase; in Grey Shirtings, the increase is, however, very marked, the import value in 1885 being

£173,145.	against.....	£109,607 in 1884.
-----------	--------------	-------------------

In Yams there is, on the other hand, some decrease, the figures for the past year being as follows:—six hundred and twelve thousand seven

hundred and forty-eight pounds; whereas the Import value in 1884 was six hundred and seventy-eight thousand three hundred and thirty-nine pounds.

T.-Cloths, Turkey Reds, and Velvets all show in excess of the previous year's importations.

In Woollen and Mixed Cotton and Woollen manufactures the figures are very much on a par with those of 1884, so far as the total import is concerned. Italian Cloths show, however, a very great increase; there is, on the other hand, a considerable drop in Mousselines. The import of the first mentioned was one hundred and twenty-four thousand nine hundred and twenty-seven pounds; in 1884 it was fifty-nine thousand six hundred and eight pounds. Mousselines in 1885 figured for one hundred and eight thousand seven hundred and eight pounds, the import in 1884 having been one hundred and seventy-six thousand two hundred and eighty pounds.

The import of Flannels in the past year has doubled that of the preceding, the figures being, respectively, forty-three thousand seven hundred and ninety-nine pounds and twenty-two thousand and ninety-four pounds. The imports of cloth, under which heading come Pilots, Presidents, and Unions, exhibit little variation on the returns of 1884.

It is interesting to turn to the deliveries given in the Chamber of Commerce returns, which constitute a better test of the actual business done than do the tables of imports and exports. The deliveries I find to have been as follows:—

	1885.	1884.
Grey Shirtings .....	£141,951	£163,268
Yarns .....	586,320	785,557
Italian Cloths .....	74,484	124,433
Cloth .....	31,304	33,195
Mousselines .....	101,573	143,460

It will be seen that there is a marked decrease in the deliveries of Yarns, in sympathy, though not in a corresponding ratio, with the decrease in the import of that staple.

The business in Italian Cloths would seem to have been much overdone, for, while the deliveries in 1885 amounted to seventy-four thousand four hundred and eighty-four pounds, the import value attained one hundred and twenty-four thousand nine hundred and twenty-seven pounds. The deliveries of Mousselines are below those of the preceding year, the import of this article in 1885 being also considerably below that of 1884.

Turning to METALS, the Import in 1885 was three hundred and forty-eight thousand four hundred and fourteen pounds, against two hundred and fifty-eight thousand six hundred and forty-two pounds in 1884, an increase of eighty-nine thousand seven hundred and seventy-two pounds. One of the principal features in the Metal trade of this Port for the year 1885 has been the importation in large parcels, direct from Middlesboro, of North Country Bars and Plates and Pig Iron, throwing large quantities on the Market, at one time, putting a considerable strain on dealers to move cargoes, and depressing prices to a point that may possibly show some margin on iron so shipped at special rates, but, on the other hand, offering little inducement to importers relying on usual freight opportunities via London. The low prices at which this North Country iron has been sold have almost entirely prevented importation of the commoner sorts of Belgian iron, and the cheap values of iron in England have thrown the demand on a slightly higher standard of Marked Bars than has hitherto been demanded by local dealers. Prices of Bar and Plate Iron have ruled uniformly low during the year.

Sheet Iron, principally in thin sheets, has been taken to a fair extent at not unfavourable prices, the demand being stimulated by local regulations for fire prevention, as these thin sheets coated with tar to resist the action of the weather, have been found available for roofing purposes.

Pig Iron.—The Prices ruling up to the end of July for No. 3 quality were such as possibly to induce shipments so as to give freight to steamers, where wanted, but scarcely to show a merchant's profit; and although in the latter half of the year there was an advance, this was

followed by a drop and the year closed with low prices.

Nail-rods have been more in favour during the year. The principal import has been from Belgium, where makers are, it would seem, able to compete favourably with English firms, both in quality and in price; they also pay more attention to the smaller sizes usually taken by this market.

Tin Plates have exhibited a fair business during the year, with steady prices; a fair proportion of the import has been on foreign, not on Japanese, account, and has been used for canisters for the American Tea Trade, the plates being worked up here by machinery.

Wire Nails.—This is an important branch of the Metal Trade, but the business has been unsatisfactory throughout the year. Stocks, at the close of the year 1884, it is true, were low, but the Japanese dealers largely overbought; and early in January the market was glutted with heavy shipments which took a long time to work off. Japanese were able to obtain large concessions in respect of any slight difference in quality or because of late arrivals, but notwithstanding such concessions, delivery dates were in many cases ignored by purchasers and even sold goods had to be held a long time before clearance, whilst new sales were out of the question. With falling prices on the Continent, holders here had to realise at considerable concession on cost, and some forced sales by creditors tended to keep down prices. Towards the end of August the market rallied somewhat, and suitable assortments found buyers at better prices, and at the close of the year the business looked more satisfactory. It is worthy of note that this large business is almost entirely in the hands of Continental Manufacturers, as English firms, with whom it has never been a specialty, appear quite unable to compete either in quality or in cost.

Other Metals, such as Lead, Spelter, Zinc, Steel, Yellow Metal, Sheathing, &c., present no special features, and the business done has been on but a moderate scale. The deliveries of metals during 1885, taken from the Chamber of Commerce Returns, which include Iron (nail-rod, bar, flat, round and square, plate and sheet, pig and galvanised), Wire Nails and Tin Plates, amounted to one hundred and seven thousand and forty five pounds; in 1884, the figures were eighty-nine thousand and eighty-one pounds.

KEROSENE.—The Import of Kerosene in 1885 is valued at one hundred and eighty-eight thousand four hundred and twenty-seven pounds, against one hundred and sixty-one thousand six hundred and seventy-five pounds in the preceding year, being an increase of twenty-six thousand seven hundred and fifty-two pounds; the deliveries were two hundred and eighty-two thousand, four hundred and forty-two pounds and two hundred and seventy-two thousand one hundred and forty-seven pounds, for the years 1885 and 1884 respectively. The business has, on the whole, been a very bad one for importers. It is worth noting that a Japanese Mineral Oil Company exists at Sora, in the Shidzuoka Prefecture, where sixty-nine wells are in operation.

SUGARS.—The value of the import of Sugars, Brown, White, and Candy, was in 1885, six hundred and sixty-one thousand seven hundred and fifty-six pounds, while in 1884 in these same kinds of sugars it amounted to eight hundred and eighteen thousand one hundred and fifteen pounds. These figures are arrived at by converting the dollar values for the two years into sterling at four dollars eighty-eight cents to the pound, this being the fixed rate at the Custom House for converting into dollars all invoices of imports made out in sterling, and as regards the majority of the imports the actual invoice value will be arrived at by this process of conversion. With Sugars, however, the case is somewhat different; these are invoiced in dollars, coming as they do from Formosa and Hongkong, and more accurate figures will be obtained by converting the dollar values of the sugar imports, for the past year, into sterling at three shillings and six pence and, for the year preceding, into sterling at three shillings and eightpence. The values so calculated will be therefore five hundred

and sixty-five thousand one hundred and forty pounds and seven hundred and thirty five thousand nine hundred and forty pounds for the years 1885 and 1884, respectively, instead of six hundred and sixty-one thousand seven hundred and fifty-six pounds, and eight hundred and eighteen thousand one hundred and fifteen pounds, as given above. The deliveries in 1885 amounted to five hundred and seventy-three thousand one hundred and eleven pounds, whilst those in 1884 were five hundred and ninety-seven thousand, seven hundred and twenty-eight pounds.

The Sugar trade is likely to suffer from the Government Tax of five per cent. imposed on the manufacture of confectionery in Japan on the 1st July last, and the annual license fees imposed in addition to the tax; these fees are as follows:—

Where ten men and upwards are employed .....	£3.10.0
Six men .....	2.12.6
Three men .....	1.15.0
Two men .....	17.6
One man .....	3.6

The above license fees apply to manufacturers, in addition to which both wholesale and retail dealers in confectionery or sweetmeats have to pay annual license fees as follows:—

For wholesale dealers where ten men and upwards are employed .....	£3.10.0
Six to nine men .....	2.12.6
Three to five men .....	1.15.0
Two men .....	17.6
One man .....	3.6
Retail Dealers, where three men and upwards are employed .....	1.4.6
Two men .....	10.6
One man .....	3.6

and in addition a small annual license fee of from four to eight pence by each retailer before the article actually passes into consumption.

DRUGS AND CHEMICALS.—There has been a steady trade in Drugs and Chemicals during the year, and some few articles have shown an increased consumption, particularly heavy chemicals used for manufacturing purposes. Most pharmaceutical preparations such as extracts, tinctures, scale preparations, and the smaller lines are now made in the country and their importation is thus practically at an end. In my Report for 1883 reference was made to the Manufactory of Pharmaceutical Chemicals then started in Tôkyô; this has now been in operation for two years and the preparations produced are said to be of very good quality. Financially speaking, the affair has not been a success, at least no dividend has been declared to my knowledge, and this notwithstanding that half the capital was subscribed by the Government, on which I believe no interest is paid.

Attention is not wanting on the part of the Government to the increased requirements of the country in the matter of medical science, and the Central Sanitary Bureau of the Commercial Department has been doing good work in that direction, more particularly in the production of a Pharmacopœia on the basis of the Pharmacopœia Germanica. This has been in course of preparation for many years, and is, I am informed, now ready for publication. Medical science in Japan has indeed made great progress, and the trade that accompanies it is being likewise gradually adapted to the altered circumstances which the substitution of the Western school of medicine for that known as the Chinese school must necessarily bring about. The number of practising physicians in the country is said to be thirty-nine thousand seven hundred and sixty, of whom about ten thousand are educated in the foreign school of medicine.

Regulations have recently been issued to govern the trade in drugs, the principal object being to distinguish, what has rarely been hitherto done, between the merchant or dealer and the apothecary who dispenses. The latter will now have to be a duly qualified pharmacist, and the merchant will be left to his legitimate business.

The decline in the consumption of Santonine which was noted in my last report still continues. Caustic Soda maintains the increase which was

chronicled in 1884, and the business in it has been, on the whole, a profitable one to importers.

The demand for Iodide of Potassium has been checked somewhat by the increased cost of the article owing to the combination of makers in Europe, and it was only towards the end of the year that dealers made up their minds to pay a proportionate advance. The low prices ruling in Europe for Quinine have tended greatly to increase the consumption here, and continental manufacturers by reason of competition have been bidding for the trade by coming into the market direct themselves to supply the demand. Leading French and German makers have their Agents here, and consequently prices that have been ruling during the year have not offered any inducement for resident business importers. English makers have not been so pushing, and their Quinine is now almost unknown in this market.

The trade in Dye-stuffs has felt to the full the generally depressed state of affairs and the demand for all kinds has fallen off. English Manufacturers share in this Trade to a very small extent, but it is one worth cultivating. The principal dyes, such as Extract of Log-wood and Anilines, are supplied entirely, the one by French makers and the other by German.

#### EXPORTS.

The amount of Silk (raw) exported in 1885 was three million two hundred and seventy-six thousand two hundred and sixty-seven pounds, valued at two million two hundred and eighty thousand nine hundred and twenty-eight pounds; against two million seven hundred and ninety-seven thousand four hundred and sixty-seven pounds, valued at two million seventeen thousand seven hundred and seven pounds in 1884. The total value of all silk exported in 1885, including Tama, Noshi, and waste, also Floss and Floss waste amounted to two million four hundred and eighty-nine thousand seven hundred and seventy-four pounds; in 1884 it amounted to two millions three hundred and sixty-nine thousand five hundred and twenty pounds. The Chamber of Commerce figures show the total value of the Export of Silk for 1885 to be two million two hundred and fifty-five thousand eight hundred and thirty-three pounds.

The year opened with heavy stocks, eight hundred and ninety-three thousand three hundred and thirty-three pounds, against five hundred and seventy-three thousand three hundred and thirty-three pounds at the same time in 1884, but holders were nevertheless in a very strong position, being backed up by a good demand from all foreign markets, where trade was showing signs of improvement about the turn of the year. They were further largely benefited by a rapid fall in the exchange price of paper money which had taken place during the last week of December, the disturbance in currency being due to events in Corea which threatened to interrupt friendly relations between this country (Japan) and China. Large settlements were effected in January amounting to no less than three thousand one hundred bales (a bale contains one hundred and twenty-two and two-third pounds). The market closed firm, business being checked by the higher prices demanded, and also owing to the scarcity of good filatures, which were in strong request.

**FEBRUARY.**—During the first half of the month the market was decidedly quieter and several holders being anxious to avail themselves of the favourable rate of exchange made concessions on prices which again induced buyers to come forward and important transactions resulted, namely, two thousand three hundred bales during the month.

**MARCH.**—Business continued active, sellers being fairly current until the marked restrictions in stocks made buyers indifferent as to further purchases, there being little desirable silk left, and thus caused settlements to rapidly fall off. Purchases during this month were one thousand eight hundred bales. Prices had now advanced somewhat, but this feature was counterbalanced by a decline on the foreign exchange.

**APRIL.**—From this time until the end of June, when the season closed, a period of almost un-

precedented dullness prevailed, the settlements for the three months only reaching thirteen hundred bales. Early in April the Lyons market became demoralized by the resignation of the French Ministry, and the threatening political outlook in Europe checked all demand from that quarter. America still continued buying, but timidly, being influenced by the great depression of prices in Europe. In May and June, to add to the general discomfiture, crop accounts from France and Italy were good, and from China estimates were telegraphed home that sixty-five thousand bales would be available for export. It was not to be wondered at that the home markets declined rapidly from prospects of large supply; meanwhile, during all this time Japanese holders remained indifferent.

By the end of June, when the result of the European crop was definitely known, it was proved to be twenty per cent. below that of 1884, yet in spite of this producers had parted with their cocoons at the lowest prices ever known, below the actual cost of production. At the close of the season here in June there still remained a large stock of silk on hand, the largest, indeed, known for many years. The season's export was considerably below that both of 1884 and 1883, and the reason for this reduced export is to be found in the largely increased consumption of raw silk in the country, during the latter part of 1884 and the spring of 1885. What the actual consumption of raw silk is, there are no statistics to show, but the production of fourteen prefectures in the South which furnish hardly any silk for export, was annually six thousand two hundred and eighty-six bales; besides this fully the same quantity is drawn from the Oshiu and Hachioji districts for home use, and a good deal was taken off this market for the same purpose.

**JULY.**—Silk dealers finding themselves burthened with heavy stocks, and there being an utter absence of demand, refrained from buying the new silk, allowing producers to bring it to market themselves, and watching with intense interest the opening prices it would bring. For America there was some demand for good filatures, but holders of hanks suddenly raised their pretensions without any apparent cause and business in these sorts became quite impossible. A slight improvement had for a moment taken place in European raws, of which the Japanese may have become aware, but it was of very short duration, and the lower prices went in Europe the more consumption abandoned the use of silk goods. This state of things lasted until the end of October, there being absolutely nothing doing for Europe and only a moderate demand for filatures for each outgoing steamer to America. The Japanese, nothing daunted, held bravely on to their silk, and refused point blank to sell hanks, reverting to direct shipments rather than sell to exporters.

The stock on the 30th October was ten thousand two hundred bales and the export only five thousand four hundred bales, as compared with ten thousand one hundred bales for the same period in 1884. Japanese holders were in despair, their Banks, so long out of advances, were on the point of forcing customers to sell and threats were heard from all sides that the stock would be exported bodily by the Japanese themselves; relief however was close at hand and came suddenly from quite an unexpected quarter. A few influential merchants and bankers having their head-quarters in Milan, fearing that the silk industry of Italy was upon the point of extinction, had quietly formed a Syndicate for buying up Italian raw and thrown silk, with a view of raising prices from the unprecedented low level to which they had fallen. They operated suddenly during the first days of November on all the markets of Europe buying up large quantities of silk. This caused considerable excitement, consumers who had been caught with little or no stock were obliged to buy; consumption increased; general confidence was restored, and an advance in price had taken place of fifteen to twenty per cent. on European silk within one week of the receipt of this news. From the 7th

to 14th November five thousand bales of silk were settled here, and a considerable advance in prices was established. From the 14th November to the 12th December business fell off; the majority of buyers not having confidence in the stability of the movement, prices receded somewhat. This calm was followed by another rush, purchases reaching three thousand one hundred bales during the last fortnight of the year and prices were again pushed up. Though, at first, this action on the part of the Italian Syndicate was viewed with mistrust, it is now acknowledged by all that this speculative movement has done great service to the silk industry. It has taught producers and reelers in Europe that courage and patience are likely to be more profitable in the long run than attempts to force silk into consumption, and it has taught consumers a lesson, not likely to be soon forgotten, that the system of buying from hand to mouth is not always a success. The outlook, moreover, is hopeful and by no one is it expected that any early return to the previous state of depression and unheard of low prices is possible. As regards the crop of 1885-1886 the yield is expected to turn out an average one, although some damage was caused in the latter end of May by cold weather, but confined to the province of Joshii. The export to America has again increased to a remarkable degree and, for the season ending June 30th, 1886, will probably reach fifteen thousand bales, whilst the total export to all Europe will only be about ten thousand bales. The Japanese have acted most judiciously in applying themselves to the reeling of silk most suited to the wants of America, now their best customer. Holders during the long continued depression were greatly supported by American buyers, who though operating sparingly paid the quotations of the day which were throughout ten per cent. higher than buyers for Europe could afford to operate at. The direct shipments of silk by Japanese Merchants have fallen off in a marked degree, being two thousand one hundred bales during the half-year ended 31st December, as compared with four thousand three hundred bales for the same period in 1884, and these shipments were for the greater part made at the time when sales were almost impossible here. Since good prices became obtainable they have preferred to sell on the spot to shipping either to Europe or America. Towards the close of the year the domestic consumption of raw silk seems to have been in a very unsatisfactory state, for large quantities of coarse sized silks were being sent up from the south for sale on this market and were being offered at low prices; recent changes in the Government and the dismissal of a large number of officials are said to be the cause of this depression. The Yokohama Specie Bank, a Japanese concern to which reference has been made in previous reports, has again competed strongly with the Foreign Banks by giving such facilities to shippers of produce, especially silk, as to draw the bulk of this business into its hands and has compelled the Foreign Banks to ship off to China and India the greater portion of their silver ordinarily required for the payment of exports. According to the report of the Japanese Bank laid before the shareholders on the 31st December last, the Yokohama Specie Bank held Bills payable abroad drawn against produce for the sum of one million six hundred and sixty-two thousand five hundred pounds; large figures when the total export figures from Yokohama for the year come to be considered. Japanese assert that the depressed state of the silk trade, particularly during the past three years, has checked farmers increasing the area of land under mulberry cultivation, but that the recent improvement in prices will again stimulate farmers to enlarge their plantations. There are said to be in Japan eleven hundred and eighty-five silk manufactories.

**TEA.**—The export of Tea leaf of all kinds amounted in 1885 to twenty-three million seven hundred and eighty-six thousand three hundred and sixty-seven pounds, valued at seven hundred and fifty-one thousand six hundred and sixty-six pounds; that in 1884 figured to twenty million two hundred and thirteen thousand eight

hundred and sixty-seven pounds, valued at six hundred and sixty-two thousand three hundred and sixty-six pounds. The Chamber of Commerce puts the export for the past year at twenty-three million three hundred and ninety thousand three hundred and thirty-six pounds, valued at seven hundred and nineteen thousand seven hundred and eighty-eight pounds. It will be noticed that there is a marked increase in the export of this staple, but exporters cannot congratulate themselves on a successful year. The new season's tea came on the market towards the close of April. The absence of low grade teas in the early part of the season was particularly marked, very little grading below fine coming on to the market. Between the 4th and 17th June, however, a fair proportion of medium and good medium grades were offering, but, owing to the demand for these not being satisfied, prices advanced, the quotations for higher grades remaining stationary, though a falling off in quantity of these latter was apparent. In the middle of July I notice that settlements were about on a par with those of even date in the preceding season. In August there was a large business doing, easing off, however, in the commencement of the following month, with again an increasing demand at its close. An active business was continued throughout October. In November common teas were scarce and only procurable at very high prices. The closing business of the year presents no particular features. In May last a series of rules, sixteen in number were published, defining the mode in which business was to be transacted by certain Japanese Tea Merchants of Yokohama, who had formed themselves into a combination to regulate business in teas consigned to them by producers, for sale to foreigners. This combination must not be confounded with the tea guilds, or, to use a better title, the Tea Industry Associations to which I referred in my last report. These associations have for their object the rectification of abuses such as, impure leaf and bad packing and firing. The combination now mentioned is one amongst dealers who have laid down rules for the guidance of their business in the matter of their sales on consignment from producers in the interior, and these rules deal with the repayment of advances, commissions on sales, storage charges, and other matters arising out of their dealings either with foreigners or with their own countrymen. It is interesting to note with regard to the Tea Industry Associations referred to above that the Yokohama Branch numbers one hundred and ninety members, while in the rural divisions of this Prefecture the number is two thousand four hundred and fifty-four. Following on the formation of these Associations throughout the tea growing or tea dealing centres of Japan, the Government has, I believe, given effect to a previously expressed intention of sending inspectors to the tea districts with the object of suggesting improvements, both in the growth and preparation of tea, not omitting strong admonitions against adulteration.

Whatever criticism may be evoked by Government interference in such matters there can, I think, be no question of the main principle which guides the Departments, and that is to foster the staple industries of this country, as far as is possible, by enjoining careful attention to growth, manipulation, and manufacture, so that Tea, Silk, and other articles professing to be what they seem, may be creditable products of this country and maintain her fair name for what she is capable of producing.

**TOBACCO.**—As will be seen from the accompanying tables, the export of Tobacco in 1885 was thirty thousand and fifty-eight pounds, while in 1884 it amounted to twenty-three thousand eight hundred and thirty-six pounds; a considerable increase is thus exhibited. The latest figures I have as to the annual production of tobacco in Japan are those made for the year 1883, when, according to Japanese accounts, the country produced annually forty-six million seven hundred and nineteen thousand five hundred and seventy one pounds. Deducting what is exported to foreign countries, the consumption of tobacco in Japan would show an average

of about one pound three ounces per head of population.

Peppermint Oil has been an article that has attracted much attention in the past year because of its increasing importance as an article of export. The production has been steadily increasing for the past three years, and the latest crop has greatly exceeded those of previous years. This is principally due to the demand for crystals, a product of the liquid oil and which are now largely used in pharmacy as a specific for neuralgia and other complaints. Japanese peppermint oil is distilled from a species of mint (*Mentha Arvensis*) cultivated largely in the northern part of the main island of Japan. Like the English mint (*Mentha piperita*), there are several varieties of the Japanese plant, one only of which produces an article of good quality. The sudden and increased demand from abroad for the peppermint crystals has led to new plantations being formed, and these have, I am told, been for the most part laid out with inferior plants. The produce of these new plantations has been sold at very low prices and the oil thus obtained is not likely to be of good quality. If this is sent to a foreign market it will perhaps cause the Japan oil to be regarded with less favour and thus damage the prospects of an otherwise promising export.

The production of Cod Liver Oil in the island of Yesso, which in 1884 gave promise of increase, has fallen off. A good field here presents itself for a thriving industry if facilities existed for its establishment upon a proper basis with sufficient capital and experience. The production was stimulated when the short catch in Norway caused extreme prices to rule in Europe a couple of years ago, but, this spurt over, the Japanese have not been able to make headway with their somewhat crude attempts. The present range of prices ruling prevents them from competing any longer in the matter of price with Norwegian Oil. Japanese Cod Liver Oil is produced from the Japanese cod (*Gadus brandii*); the quality of the oil will bear comparison with the best produced in any other part of the world, and will no doubt yet develop into a thriving business. This year's catch will turn out from eight thousand to ten thousand gallons and will be required principally for domestic consumption.

Under the heading Sundries in the Export list there are some articles which should be especially signalled out for mention, although the export figures just now may not amount to much.

Strawbraid bids fair to become an important industry, and what is sent from here goes mostly to the United States. A leading Japanese newspaper referred recently to the revival of the sale of this article and pointed out that its over supply in the course of last year caused by the unusually high price set on it in the year preceding had considerably lowered prices. It went on to say that the decrease in the number of manufacturers and the increased skill of those now carrying on the work had considerably enhanced the value and quality of the braid.

**JINRIKISHA.**—Two thousand two hundred and forty-five of these now almost universally known little carriages (*Jinrikisha*) drawn by hand, were exported from Yokohama in 1885. They appear, mostly, to go to China, where they are largely used in the Foreign Settlements at the Treaty Ports; equally as they are here; many have been sent to the Straits and to India. They are made for export at about two pounds sixteen shillings each carriage.

**SHIPPING.**—The returns of Japanese shipping being steamers and sailing vessels of foreign build are now included in the one table with those of foreign shipping generally.

I have depended on the Custom House figures for shipping, though taking care to check these by the records of the different Consulates and by the returns appearing in the Chamber of Commerce Report. The tonnage is in all cases net and not gross, a matter to be considered when comparing British shipping with that of 1884, where the figures given represent gross tonnage.

British shipping exhibits an increase numerically and in tonnage under both entries and

clearances. In American shipping there is an increase in numbers but a falling off in tonnage. I record with regret the loss in June last in these waters of the steamship *City of Tokio*, one of the finest vessels of the Pacific Mail Steamship Company's fleet. In French shipping there is a slight but not very appreciable decrease; the Messageries' boats now call regularly at Kobe both on the upward and downward voyage from and to Hongkong in the ordinary prosecution of the mail service. They do not, however, as is the case with the Peninsular and Oriental Steam Navigation Company, embrace Nagasaki as a port of call.

German shipping exhibits a considerable tonnage increase made up entirely on the entries and clearances of steamers, which are much in excess of those of 1884. Interest has naturally been excited by the passing in Germany last year of the steamer subsidy bill, under which a regular mail service to the East with branch lines is in course of being established, and in fact is to commence work on the 1st July next. The steamers will start from Bremerhaven, touch at Antwerp and then by way of Suez, Colombo, and Singapore to Hongkong and Shanghai, the terminal port of the main line to the East. A branch line will then connect Hongkong direct with Yokohama, the steamers taking Hyogo, Nagasaki, and perhaps a Korean port on the return journey from here to Hongkong.

Russian tonnage at this port is made up, as noted in my last Trade Report, of the visits of one steamer which trades from this on the coast and to the neighbouring Russian possessions. The tonnage figures fall below those of 1884, owing to the circumstance that this vessel has been four times in and out of port instead of ten times as in the previous year.

To revert to British shipping, an interesting feature of last year has been the departure of two sailing vessels for Tacoma in Washington Territory, from where there is now direct railway communication with the Northern Pacific Railway; both vessels were tea laden. The completion of the Canadian Pacific Railway has, however, a still greater interest for British Commerce and the day is perhaps not far distant when the Pacific terminus of the railway will connect with Hongkong by a line of steamers having Yokohama for an intermediate port of call; the matter has already engaged public attention in England, but somewhat misleading figures have been put forward as to the time in which mails could be carried by that route as from London to Hongkong. The fact seems in some cases to have been lost sight of that mails have been delivered from Hongkong in London by way of the Suez Canal in twenty-eight days, and that with the impending competition of German steamers a greatly accelerated rate of speed by the boats of the Peninsular and Oriental and Messageries steamers may be looked for. I merely mention this because I have seen it stated that letters from England sent by the Canadian Pacific Railway and thence by steamer to Hongkong would be delivered there several days under the time occupied in transmission to the same destination via Suez Canal.

Japanese shipping merits special attention in a report of the trade of last year in consequence of the amalgamation of the two Japanese lines known respectively as the Mitsui Bishi and the Kyodo Unyu Companies.

The formation of the latter company was referred to in my report of the trade of 1883 under its English equivalent the Union Navigation Company. It was not ostensibly intended as a rival of the older company, the Mitsui Bishi, but circumstances soon brought the two lines into active competition and rates of freight and passenger fares were quickly shaded down to ruinously low figures. Rumours of amalgamation long preceded its actual accomplishment, and on the first of October of last year it was notified that the Nippon Yusen Kwaisha, or Japan Mail Ship Company, had taken over the business of the two companies; indeed, the new company was formed for that very purpose, and the combined fleets of the two lines with cer-

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

tain plant and stock went to build up the fresh undertaking. Simultaneously with the appearance of the announcement that the new company had taken over the business of the Mitsu Bishi and Union Navigation Companies, appeared notices from each that their business had been transferred to the new venture, the leading features of which I proceed to give; they are taken from the published constitution of the company, the agreement with the Government and the detailed instructions issuing from the Ministry of Commerce, and are as follows:—The Japan Mail Ship Company is established by special permission of the Government and the term of its existence is fixed at thirty years, subject to any decision on the expiration of that period as to its continuance. The capital of the Company is fixed at one million nine hundred and twenty-five thousand pounds in two hundred and twenty thousand shares of eight pounds fifteen shillings per share. The Government takes up fifty-two thousand shares, representing four hundred and fifty-five thousand pounds and one hundred and sixty-eight thousand being the equivalent of one million four hundred and seventy thousand pounds are held by the public. Interest is guaranteed by the Government at the rate of eight per cent. for a period of fifteen years during which the Government exercises the right of appointing President, Vice President, and Directors. I have, however, seen it stated elsewhere that this power of appointment is limited to eight years; one half of the profits exceeding eight per cent. is, it is said, to go to the Government. Seven per cent. of the total value of the company's vessels is to be set aside annually for insurance, ten per cent. for repairs, and five per cent. for a depreciation fund. The Government has power to employ the company's vessels on ordinary or extraordinary occasions, paying as per tonnage scale certain fixed rates.

On the formation of the company the value of the properties of the two older companies was assessed as follows:—The Mitsu Bishi at nine hundred and seventy thousand and ninety-eight pounds, the Union Navigation Company at one million one hundred and forty-two thousand, one hundred and ten pounds. Of the former amount eight hundred and seventy-five thousand pounds was converted into one hundred thousand shares; of the latter one million and fifty thousand pounds into one hundred and twenty thousand shares each of eight pounds fifteen shillings, thus leaving a liability with the new company of nine hundred and seventy thousand and ninety-eight pounds to the Mitsu Bishi, and one million and fifty thousand pounds to the Union Navigation. Payment of these sums is guaranteed in from five to ten years, with interest at the rate of seven per cent. per annum. Detailed instructions comprising eighteen articles have been issued by the Japanese Post-Master General for the conveyance of mails by the Company's vessels, and penalties not to exceed eighty-eight pounds are laid down in respect of their infringement. The company's fleet numbers sixty ocean-going steamers, twelve sailing ships, six hulks, twenty-three steam launches and tugs, and six barges.

The conditions under which the present line has been formed have, of course, not escaped criticism, from the point of view that it bids fair to constitute a monopoly such as existed practically for many years under the Mitsu Bishi Company. Curiously enough, not long after the establishment of the Japan Mail Ship Company competition was threatened from China, the China Merchants' Steam Navigation Company having run a few steamers from Shanghai to this via Nagasaki and Kobe; the competition however is not regarded as serious.

Turning to general matters connected with Japanese shipping, I have to notice the issue of an important Government Notification, bearing date the 8th July, 1885, prohibiting the construction after the 1st January, 1887, of Japanese vessels of more than seventy-five tons burthen. What is here meant is of course what are popularly known as junks, a type of vessel, so far as those of comparatively large tonnage

is concerned, gradually disappearing from these waters. Their number, that is of seventy-five tons and over, is now indeed very few, amounting I am informed, only to about twelve hundred, of which two hundred and eighty are registered at Osaka, one hundred and two in the Nichi Prefecture, and the rest mostly in the Prefectures of Hyogo, Niigata, Shizuoka, Toyama, Ehime, and Hiroshima.

In concluding my remarks on shipping I have to touch on the subject of the crews of British vessels that frequent this port. I have frequently discussed with the masters of British ships the merits of the men who serve under them, comprising, as they do, men of so many different nationalities, the percentage of whom, in the case of some vessels, ranges very high. A preference seems to be entertained for Scandinavian and German sailors; they not only make good seamen, but are more tractable, submit more readily to discipline, and, perhaps, what is more to the point, work for lower wages than do our own men. Many masters, however, tell me that they soon yield to bad example, and, in the long run, leave but little to choose as between them and British, American, or other foreign seamen. By common consent masters of steamships experience the greatest difficulty with firemen, but this is not matter for surprise when their occupation is considered, and it is, perhaps too much to expect a high standard of conduct from men engaged day and night in the stoke-hole of an average canal steamer, trading from European ports to this at all times of the year. On some of the leading local lines Asiatics are employed as firemen, to whom this particular occupation is not so congenial; and, indeed, comparing the condition of things here with what takes place in many English and European ports, I think, viewing the temptations that exist, that the seafaring class contribute less to the criminal element of this port than perhaps might generally be expected or may be popularly supposed. I may add that the master of a British steamer which trades regularly from England to this has tried the experiment of manning the ship with Japanese entirely, both as firemen and deck hands; some three or four voyages have been made and the master speaks highly of the men, both as excellent seamen, and firemen and as being singularly amenable to discipline.

**RAILWAYS.**—The traffic on the Yokohama-Tokyo line, eighteen miles, during the past year was as follows:—

	1885.	1884.
Passengers, Number	1,691,088	2,076,246
Goods, Tons	47,104	30,220
RECEIPTS.—1885.	1884.	
Passengers	£79,588	£87,499
Goods	8,109	8,225

The passenger traffic exhibits a somewhat marked decrease, to be ascribed, I believe, solely to the general trade depression that has existed throughout the country. The fact that the goods traffic has not equally decreased is due, probably, to the conveyance by rail from this of a considerable portion of the permanent way material of the Japan Railway Company's lines still in course of construction. I have to note the introduction of season tickets on the Yokohama-Tokyo line, a want long felt. It dates from the first of this year and the tickets are granted for periods of one, three, six, and twelve months.

As regards railway progress in or near to this Consulate district, the Government has carried on the Nakasendo line from Takasaki, the limit in that direction of the Japan Railway Company's undertaking, to Yokokawa, a distance of eighteen miles; this station is about two miles from Sakamoto; from here the Usui Pass commences, the difficult features of which were touched on in my last report, and the engineers of the line have not as yet, I believe, finally decided on the manner in which these difficulties are to be overcome.

The Utsunomiya line in another direction has been completed as far as that town, a distance of sixty-five and three quarter miles from Tokyo, and was opened for traffic on the 16th July. Extensive construction beyond this point and to the north is contemplated, but as yet only a few miles are laid from Utsunomiya, for the material

or ballast engines to run over. The scope of the proposed work is as follows:—to push on the line from Utsunomiya to Shirakawa, and thence to Fukushima through Sendai. The route between the first two mentioned places has been surveyed, the first section terminating at a point about thirty-two miles from Utsunomiya; so far it presents a level surface, the maximum gradient being one in a hundred, but the work will be of a somewhat difficult character; one river will have to be crossed at no less than seven or eight different bends, and some sixteen miles of mountainous country will have to be overcome.

At present there is a break in the continuity of the line from Tokyo to Utsunomiya in that the Tonegawa (river) has not yet been completely bridged. When finished the bridge will consist of nine spans of one hundred feet all now in place, and three spans of two hundred feet making in all fifteen hundred feet. I referred in my last report to the loop line from Shinagawa, which was opened for traffic on the 1st March, 1885; it is popularly known as the Shinagawa line, and I now give the traffic receipts from that date up to the 31st December, 1885.

Passengers, 66,364	£1,230
Goods and Parcels, 154 tons	£ 560
Total	£1,790

**TELEGRAMS.**—The business transacted at the Yokohama Telegraph office during the past year was as follows:—

Number of Japanese telegrams forwarded	114,571
Number of Japanese telegrams received	93,885
Number of local European telegrams forwarded	8,121
Number of local European telegrams received	7,272
Number of International telegrams forwarded	10,236
Number of International telegrams received	10,417
Total	244,502

In July last an alteration was made in the Japanese domestic rates by the adoption of a tariff of about four-pence a word for telegrams in a foreign language, with a minimum charge of about one shilling and eight pence; this rate being with slight exceptions applicable throughout the whole country. The influence of this enhanced rate on the local European telegrams passing through the Yokohama office has, I think, been marked, as will be seen by a comparison of the figures of 1884 with those of the year under review. In the former, nine thousand one hundred and twenty-three European local messages were forwarded, and in the latter eight thousand one hundred and twenty-one; the number received in 1884 was eight thousand four hundred and fifty; in the past year it had fallen to seven thousand two hundred and seventy-two. Before the new tariff came into force a message of twenty words in a foreign language could be sent from this to the capital, a distance of eighteen miles for about eleven-pence, the same number of words now costs some seven shillings to transmit. The Acting Director General of Telegraphs has been addressed by the Yokohama General Chamber of Commerce with a view to a reduction of the rates more particularly as between this and Tokyo and between Kobe and Osaka, but the Director General seeks to justify the enhanced rate on the grounds that in introducing an uniform rate nearer points must necessarily suffer while points more remote will appreciably gain; that the Tokyo-Yokohama traffic in foreign telegrams is rather of a social or private than of a commercial nature; and further that clerks have to be specially educated for the transmission of foreign telegrams at an expense five times greater than is required for the preparation of ordinary Japanese work. It is promised, however, that the traffic will be carefully watched for a certain time, and that if circumstances require it, the matter will receive consideration. I am informed that telegraph lines can now be laid in Japan at an average expense of about two pounds sixteen shillings a mile, against five pounds eighteen shillings which, in former times, was the cost per mile. This is

due to the decrease in the price of timber, and to the manufacture in Japan of many articles connected with telegraphy. Women are now finding employment in the telegraph offices in Japan; the wives of some sixty operators having recently passed the examination for assistant operator. Of these, however, only twenty-one have actually found employment at small places in the country, where man and wife are sufficient for the work of the office.

**PUBLIC HEALTH.**—Cholera showed itself in Nagasaki in August, and rapidly spread throughout the whole island of Kinsiu. The seaboard of the Inland Sea soon became infected, and the disease reached both Kobe and Osaka, which, together with Nagasaki, were declared infected ports. Quarantine Regulations were imposed at Yokohama on all arrivals from those ports; and steps were taken here to cope with the disease, sporadic cases of which were of frequent occurrence in and about the port. The efforts of the authorities were successfully rewarded in that the disease was kept fairly under control in this district, and an epidemic was averted. It was never claimed by the Japanese Government that measures of such precaution could be taken as to effectually keep the disease from the place; the steps taken had rather for their object the stamping out of the disease by active measures wherever it might show itself locally, and further to prevent its wholesale importation. The Japanese Infectious Diseases Hospital was put in order for the reception of patients, and its arrangements were of such a character as to admit of the reception of cases should any occur amongst the foreign community. The Quarantine station at Nagaura, about ten miles distant from this to the southward, and in close proximity to the entrance of the bay, was got ready in every detail, and additional accommodation provided in view of possible contingencies. The arrangements at the station were very complete, the disinfecting apparatus and bathing facilities were adapted to all probable demands and appeared to be excellent of their kind. Regulations having for their object the prevention of the spread of cholera to this Prefecture were issued by the Japanese Government at the end of August; those directed against arrivals from Nagasaki were upheld early in November, and those directed against arrivals from Kobe and Osaka on or about the 1st December. The Quarantine Regulations were exercised in such a way as to impose but little inconvenience on shipping. The detention at Nagaura was in no case made to exceed two days, and although, having regard to the short distance of Kobe and Osaka from this, it was necessary in some cases to approach this limit so as to allow a safe interval to elapse between departure from either of those ports and arrival at Yokohama, in most cases a sufficient interval of time had passed which lessened materially the time of detention at Nagaura. Whatever difference of opinion there may be on the merits of preventive measures against cholera and the merits of the particular measures adopted by the Japanese, there can be but one opinion that the authorities were actuated by an earnest desire for the welfare of the people of this country and that their measures were so carried out as to impose the least possible hardship on foreign commerce and shipping.

The total number of cholera cases amongst Japanese in this the Kanagawa Prefecture, from the date when it first showed itself here in Yokohama on the 16th September to the middle of December, when the disease had disappeared, was two hundred and fifty-two; of which number one hundred and eighty-five terminated fatally. In Yokohama the number was one hundred and ninety-eight, the deaths being one hundred and forty-six. The total number of cases in the whole country was about twelve thousand; the deaths about seven thousand one hundred. Japanese delegates attended the recent conference at Rome, and this country will, therefore, it is hoped, have the benefit of any enlightened views as to quarantine and the control of epidemics that may be the outcome of that conference.

**PUBLIC WORKS.**—It is with much satisfaction that I am able to note the commencement of the Waterworks, on the completion of which an unlimited supply of pure drinking water will be at the disposal of the population, Japanese and foreign, at this port. The Intake is at the Sagami River, about twenty-seven miles distant from this, and was selected on the double ground, I believe, of the purity of the water and of the locality being within the immediate jurisdiction of this Prefecture; no questions of divided jurisdiction would therefore arise which would perhaps have presented themselves, had some other river been selected as the source of supply. The works are divided into three sections, and are being rapidly prosecuted throughout. The original estimated cost was one hundred and seventy-five thousand pounds, and this amount has been sanctioned by the Treasury. Colonel Palmer, R.E., under whose supervision the works are being carried out, hopes to complete them within the estimates, a somewhat difficult task with both Japanese and foreign exchanges operating adversely. Exceptional care and attention is being devoted to the construction of the reservoir situated on Noge Hill, in the immediate neighbourhood of Yokohama, which will hold a three days' supply for the full population of the town. The Japanese will, of course, be rated for the supply, and will, possibly, have no choice but to take the water from the works, as an order will, doubtless, in due course, issue, by which all the wells in the Japanese town will be closed.

The wells in the foreign Settlement of Yokohama have, for the most part, been reported unfavourably upon for drinking purposes; this does not apply, however, to the wells on the Bluff Settlement, upon which the residents there will have to depend for some time to come, as it is not contemplated to extend the waterworks supply to that locality.

**CUSTOM-HOUSE.**—A want long felt has been met by the erection of a new Custom House in immediate proximity to the wharves. The building was commenced on the 22nd of May, 1884, and completed on the 31st of November, 1885, and was erected at a cost of eleven thousand seven hundred and sixty pounds. Its opening to the public was celebrated with considerable *éclat* by a banquet and ball on the evening of the 6th of February, and the hospitalities of the occasion were kindly extended by the Superintendent of Customs to almost the entire foreign community. The internal arrangements and accommodation of the building leave little to be desired; but there are still complaints in respect of the limited wharf accommodation, which does not seem to keep pace with the increasing demands of the port.

**STATISTICAL.**—The latest population returns give the numbers for this Prefecture as follows:—eight hundred and seventy-six thousand three hundred and two; of whom four hundred and forty-three thousand eight hundred and thirty-three are males and four hundred and thirty-two thousand four hundred and sixty-nine are females.

In Yokohama the population is eighty-four thousand eight hundred and nineteen, of whom forty-five thousand six hundred and twenty-three are males, and thirty-nine thousand one hundred and ninety-six are females.

The estimated local expenses of this Prefecture for the current year, as submitted to the Prefectural Assembly, amounted to thirty-seven thousand two hundred and twelve pounds, distributed as follows:—

Police	£15,733
Police station repairs	131
Public works	2,534
Sanitary and hospital expenses	103
Education	1,381
Notifications, placards, &c.	684
Repairs to Prefecture office	1,157
Prison expenses	15,042
Repairs to prisons	300
Sundries	136
Total	£37,212

This amount was, however, subsequently reduced to thirty-four thousand eight hundred

and forty-four pounds; of which three thousand six hundred and sixty pounds were granted by the Treasury. The above expenditure includes only that which falls upon the rates, and exhibits some increase on that of the previous year, mainly under the heading of prison expenses, and public works, which would include repairs to roads and bridges.

**EXPORT AND IMPORT OF TREASURE.**—To avoid multiplicity of Tables, I embody in this Report the Treasure Returns of the past year, which were as follows:—

Exported	£408,463
Imported	£449,953
Total	£748,416

and I have also to note that the Customs duties collected at Yokohama in 1885 amounted to £318,640, made up of Export and Import duties, Storage fees, Entrance and Clearance fees of foreign vessels, and a few Miscellaneous charges.

**DEVELOPMENT OF BRITISH TRADE.**—In conclusion I have to add a few words on the means which may be suggested for the development of British Trade at this Port, but I confess that I find it difficult to make any suggestions under this heading, having regard to the existing conditions under which Trade is carried on in this country. There is a large body of resident British Merchants at Yokohama whose exertions are constantly directed to the improvement of British Trade, and who both seek and take advantage of every opportunity that may offer for pressing new lines of goods on the attention of Japanese, and who are also always on the look-out for a market for everything produced in Japan that may commend itself to the attention of Foreign Customers in all parts of the world.

British merchants here are in daily telegraphic communication with all active commercial centres, and every probable or possible field of commerce in this country has been actively exploited.

I am, of course, only dealing with existing conditions of Trade, as limited to a few open Ports; what it might be under other conditions opens up too wide a field of conjecture, nor can I here treat of a subject which may, possibly, revolutionize the foreign and domestic trade of Japan. I might in writing of what would, perhaps, follow on the opening up of the country, be raising hopes that would ultimately be disappointed, or, on the other hand, assist in checking enterprise that might otherwise lead to success.

There are, of course, cases of individual British enterprise at this port, under which particular industries have been stimulated, and the area of Commerce widened, but they are by no means numerous; and if competition on the spot results, as it often does, in disastrous loss, how much greater would the loss be to those who attempted to compete from a distance, and without the local knowledge which is indispensable to success.

Letters are constantly addressed to me by business men, not only from the United Kingdom, India, and the Colonies, but from other parts of the world, who are eager to open a business connection with Japan. The course I generally pursue with such communications is to place them in the hands of British Merchants here, and communicate to the writer the name of the firm or individual merchant in whose hands I have placed his letter. In some cases, I pass the letter on to the Japanese Chamber of Commerce through the good offices of the Prefect. In no one single instance has anything like a business been promoted in either way; and the reason is not far to seek. The wants of Japanese Consumers are, on the one hand, easily met by those Foreign Merchants engaged in Trade on the spot; and, as regards Exports, Foreign Merchants here know very well what to place on markets abroad that may result in any profit, however small, and their numbers quite suffice for the Export Trade that is done here, not to mention what is done by the Japanese themselves on their own account.

Speaking of Trade generally, I do not think British Merchants have anything to fear from

competition where the usual conditions of Trade rule, and where Consumers are free to purchase as they please. With Government Departmental contracts it is another matter; public opinion in this country does not influence such contracts, nor do considerations of cheapness or excellence necessarily govern them. Business of this nature has lately been divided among competing foreign merchants more than formerly, but there is no reason to conclude that a fair share of such business may not continue to fall to British firms, who could scarcely expect to be free in Japan from that competition which is facing them in the neighbouring country of China, and in many other lands.

I have the honour to be,

Sir,

Your most obedient, humble Servant,  
**RUSSELL ROBERTSON,**  
 Consul.

The Hon. Sir FRANCIS PLUNKETT, K.C.M.G.,  
 &c., &c., &c.,

H.B.M.'s Envoy Extraordinary and Minister  
 Plenipotentiary, Tokyo.

N.B.—Export values for the year 1884 and 1885 have been calculated at the rate of 3/8 and 3/6 to the dollar respectively. Import values for both years have been calculated at the rate of \$4.88 to the £1 sterling, that being the rate of conversion at the Custom House of sterling or gold-expressed invoices into dollars.

#### REMYNY AT THE PUBLIC HALL.

Naturally the advent of a musician of the calibre of M. Remyeny caused a considerable flutter in musical circles in this community, and notwithstanding that it was "mail night" on the occasion of his first appearance in Yokohama, a large audience assembled in the Public Hall. Probably very few present ever heard M. Remyeny before, but a number of amateurs were there who, being acquainted with the great violinist's career, knew what to expect, and it is safe to say that in no instance were these expectations disappointed. In looking through the Hongkong and Shanghai papers containing notices of M. Remyeny's performances, we have never yet come across a line of criticism. This, perhaps, is not surprising; but there is no reason, so far as we can see, why the intelligence of readers should be insulted by the transparent device, adopted by sundry printers, of palming off on the public an *alla podrida* of superlative adjectives and words culled from a dictionary of musical terms—a hollow pretence served up as musical criticism, but which, one would imagine, the smallest amount of reflection on the part of these writers would have at once exhibited as altogether "quite too thin."

We, at all events, intend to steer clear of that pitfall; nor, indeed, shall we attempt to criticise the performance of one of the greatest violinists living. The reason is not far to seek, and may be found in the answer, slightly altered, given by Dr. Johnson to a lady of an enquiring turn of mind—"Sheer incompetence, Madam; sheer incompetence." M. Remenyi has doubtless discovered what kind of music goes down best with the general public, and it is to be noted in this connection that, with the exception of Paganini's "Capriccio," the pieces set down for performance consisted entirely of transcriptions and arrangements by the great artist himself, whereas amateurs no doubt expected to see, in the first programme at least, some such work as—say Bach's Chaconne or the same composer's Fugue. It was apparent to the initiated, however, in five minutes after Remenyi's appearance on the stage that a violinist of marvellous power stood before the audience. Indeed, calling to mind Joachim, Wilhelmj, Sivori, and Ludwig Straus, we were soon convinced that Remenyi's name deserves to be inscribed in a prominent position amongst these—a list of stars who have illumined the musical firmament during the past quarter of a century—acknowledged leaders of that army of artists who have made the violin a life study. The house, as indicated above, was a good one, and the applause immense, and taken altogether the concert was without doubt the greatest musical treat ever listened to in this Settlement. The programme opened with the overture (piano) to "William Tell," by Mr. Luckstone, arranged by himself. Mr. Luckstone is a brilliant pianist, a quality which soon became evident, but unfortunately, before he was half through with Rossini's overture, he broke a C hammer, and, as usual in such accidents, it occurred in the worst possible place. Signorina Marchetti, who has previously been heard in Yokohama, and was cordially greeted on appearing, then sang the well-known aria and rondo from "Sonnambula." As an exponent of the pure Italian style, Signorina Marchetti is a decided success, and appeared to much greater advantage than on the occasion of her previous visit, when she sang in a building totally unfitted for the purpose. Mr. Remenyi, who was very warmly received, then played a fantasia of his own on themes from "Les Huguenots." The performance was entirely beyond criticism, and it is only necessary to add that it elicited from the audience such continuous and emphatic applause as was never before heard within the walls of the Public Hall. The great artist returned to the footlights and gave as an encore Schubert's "Ave Maria," retiring amidst long-continued plaudits. Number four brought out Signorina Marchetti, who was equally happy in her rendering of "Caro nome che il mio cor," receiving quite an ovation from the audience, and the first part of the programme concluded with Remenyi's "Hungarian Melodies," which was so persistently applauded that the great master returned and played "The Last Rose of Summer." Part two was opened by Mr. Luckstone with a composition of Liszt's—Rhapsodie (No. 6), in which he gave further evidence of the excellence of his execution, and received a flattering and unanimous recognition from the house. Verdi's popular cavatina from "Ernani" exceedingly well rendered by Signorina Marchetti, followed, and then came a transcription by Remenyi of Chopin's Nocturne in E flat and a valse of Delibes, both of which gave intense delight, the latter being decidedly the gem of the evening. M. Remenyi responding to a vociferous encore by bowing his acknowledgements. A brindisi of Massé's from "Galathée," sung in Spanish by Signorina Marchetti, was the ninth item on the programme, and the concert closed with a caprice of Paganini's played by M. Remenyi, who, being recalled, gave the "Marseillaise" in a manner which again stirred the audience to enthusiasm. We are not aware how long we are to have M. Remenyi amongst us, but those who miss the opportunity of hearing him will never, we feel convinced, have another chance whilst in Yokohama of listening to so great a master of the greatest of all instruments.

## CORRESPONDENCE.

## THE RAILWAYS AND THE PUBLIC.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Amongst other inconveniences to travellers is the refusal of the railway ticket clerks to take Hongkong and Shanghai Bank notes. Their excuse is that all monies have to be sent to Tokyo, but it would appear that, even if there were no banks in that city, as the station is close to the Nippon Ginko, it would not entail a vast waste of time to exchange daily whatever amount might have accumulated, at all events until the public had been fully apprized by advertisements, and thus save those ignorant of this new rule much trouble.

Yours truly,

Yokohama, August 3rd, 1886.

E. A.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If the General Post Office in Dublin refuses to accept a Bank of England note because it might prejudice the circulation of Bank of Ireland notes, why should "E. A." expect the Japanese Government Offices to accept utterly foreign paper to the prejudice of Japanese Currency?

I am, Sir, &amp;c.,

"PUT YOURSELF IN HIS PLACE."  
Yokohama, August 5th, 1886.

## LETTER FROM CHINA.

(FROM OUR CORRESPONDENT.)

Tientsin, July 15th.

Our Settlement has been enlivened by several distinguished visitors. First came Colonel Denby, on his return from a three months' tour of the ports, greatly pleased with the reception he met with everywhere from Hankow to Canton, but no less pleased that the function was over, and the terminus of his journey almost within sight. To Colonel Denby the Tientsin community owes a useful innovation on the practice of itinerant diplomats. They have heretofore left the residents to find out their presence here and to call or not as they pleased. Colonel Denby adopted the sensible course of issuing a circular to say where he was to be found and inviting visitors.

The German Minister came down from Peking and stayed over a week, which was occupied very actively but not exclusively in his own business. Indeed, the arrival of M. von Brandt from Peking in company with the head of the German Syndicate, who had gone to Peking to induce the Minister to come down, gave rise to some speculation as to the objects of the mission, and as the time for receiving tenders for steel rails for the 20-mile extension of the Kaiping Railway was approaching, the conjunction of forces was associated in people's minds with that event. Possibly it served to screen the real objects of the expedition.

Then we had M. Kraetzer, the Chargé d'Affaires of France, who rested here a few days on his way to the Capital.

You know the routine of these diplomatic visits. First the Minister visits the Viceroy in his Yamén and talks two hours. The same day, or at latest the next, the Viceroy returns the visit, coming in his chair down to the Settlement, accompanied by a considerable retinue of officials and guards. It is a god-send when several foreigners have to be visited at once, as one journey does for all. The next performance is a big dinner at the new building called the Admiralty, where a number of foreign guests interpersed with Taotais and interpreters sit down to a copious and by no means contemptible repast in the foreign style, but picked out with Chinese delicacies both in the solid and fluid shape. The Chinese have an excellent habit of retiring early, and this prevents such entertainments from becoming a bore. The usual hour for dinner is 6, and the company breaks up soon after 9. The conversation naturally takes the form of amiable platitudes or of gross flattery, but occasionally an attempt is made to utilize the occasion for the advancement of material interests. The other day a foreign minister created a slight sensation after dinner by taking a chair and planting it firmly in front of the Viceroy, and appointing another for his interpreter, saying in a voice he heard by all the guests, "Now let us come to business." Such episodes are not frequent, or the institution of vice-regal dinners would soon come to an end.

The position of Li Hung-chang here is unique. He, rather than the Ministers of the Tsungli Yamén, discharges the functions of Minister of Foreign Affairs. The Yamén revise and check him,

but are always glad to shift the responsibility of action to his shoulders. The Representatives of Foreign States in Peking resent this state of things in theory, but they are all glad of an opportunity of discussing business with the Viceroy, for it is only from him they get any practical sense. It is always more satisfactory to deal with a single individual who has a mind of his own than with a board which is without any personal attributes, whose members all speak at once and usually without any knowledge of what they speak about. Whatever be the reason the Foreign Ministers when in Tientsin are like school-boys in their holidays, and the unaccustomed honour of dining with a mandarin never fails to elate their spirits. Each in turn fancies himself the favourite of the great man, and, as the Viceroy is by no means devoid of a sense of humour, he must derive great amusement from seeing them dance to his piping. The adulation he receives from foreign officials would turn the head of a stronger man than Li Hung-chang, but it is productive of more serious evils, in that it degrades the foreign name in the estimation of the Chinese. This natural result of the constant *Ko to* of the Foreign Representatives has become more painfully conspicuous since so many of the ministers have lowered themselves to mere commercial touts. It is far from pleasing to hear the way Chinese officials speak among themselves of the tactics of these modern diplomats, contrasting their tone with the dignified attitude maintained by the older school. It is true the Chinese recognise distinctions, and it is satisfactory to know that the Diplomatic and Consular Representatives of England are excepted from their general low estimate of the character of foreign ministers. Perhaps they think they are only a little deeper and that their price is higher.

The commercial traveller is a necessary factor in the great movement of modern affairs, but it cannot be said there is any dignity in the position. When, therefore, we see the whole diplomacy of three of the great Powers reduced to soliciting orders for iron, and the Representatives of these Powers dipping their hands into all the dirty water that surrounds the Yamén, the *bona fide* commercial traveller may at least congratulate himself that he is not a merchant-diplomatist.

The progress of the great Syndicates has not as yet been conspicuous. The French, headed by M. Thévenet and dry-nursed by the French Consul, have been exceedingly active; but the only piece of work so far "booked" is a contract to build an iron bridge over the Canal in front of the Viceroy's Yamén. The cost is to be 11,000 or 13,000 Taels, which is understood to leave a loss to the contractors, and the job is therefore regarded somewhat in the light of the proverbial sprat. The mackerel was to have been the Harbour Works at Port Arthur, over which the Taotais, whose personal revenues benefit by the economical erection of the bridge, exercise control. The French engineers who represent the Syndicate of iron manufacturers and machine-makers, managed to persuade these lever officials that the German Engineer who was carrying on the works at Port Arthur was not the right man, and that M. Thévenet was much better, and those deluded heathen were on the point of signing a contract handing over the whole work to the French *entrepreneurs* who were to have no supervision! The apparent temptation was a great diminution of cost below that estimated by the Chinese Government Engineer, but when the officials came to their senses they saw that the specifications were entirely insufficient and that the works would in the end have cost more under M. Thévenet's estimate than under their own Engineer's. So that big Million-Tael job collapsed, and in a way to raise considerable doubts as to the economy of future French estimates. The bridge, however, goes on.

The substantial success of the German Syndicate is limited to the sale of 1,500 tons of steel rails at 24.17.6 per ton, delivered in the Peiho river. Mr. Krupp is the fortunate vendor of this little *bonne bouche*, and those who are wise in such matters make out that this is also of the nature of a sprat. Reported advances of considerable amounts of money to certain Chinese officials at very low rates of interest are also looked upon as sprats, though of a rather large growth and a little out of proportion to the expected mackerel.

There has, altogether, been too great eagerness shown to tempt the Chinese. There is very little sentiment about this people, according to Colonel Tcheng K'otung, and their imagination is fatigued by the attempt to realize pure philanthropy, carried out at great expense and at a great distance from home, and with the active support of Diplomatic Representatives. You cannot persuade these practical people that there is not some ulterior motive in so much and such aggressive benevolence. We have high Oriental authority for saying that the fowler in vain sets the snare in the sight of the bird. These Chinese birds are pretty old. Chaff

will not fetch them, and it is even doubtful whether gold watches and pearls and diamonds will do it if they are too ostentatiously scattered about the streets. When I was very young I amused myself with sea fishing from a rock in very clear water. My hooks were sumptuously baited with the viscera of crabs of bright alluring colours. No fish could resist it. But they were wonderfully wary, and would bring their noses up to the luscious morsel and delicately nibble it off, their tail fins wriggling the while with ecstasy, and they would leave the hook in all its naked deformity. I cannot help seeing a kind of allegory in this. There will be many bare hooks hereabouts before long.

### LETTER FROM LONDON.

(FROM OUR SPECIAL CORRESPONDENT.)

London, June 19th.

The defeat of the Home Rule Bill by a majority of 30 will be ancient history to your readers by the time this letter sees the light, and they will then be getting the results of the election. What these will be no man can foretell. On the one side there are the vast influence of Mr. Gladstone, and the confidence which is reposed in him by the people of Scotland and Wales, as well as of a large part of England; on the same side we have the desire to get rid of the Irish question somehow, and if only for a time, in order that other legislation may advance; and then there is the genuine belief on the part of many that Home Rule is the best solution of the difficulty. These, coupled with the strong Irish vote in many constituencies in England and Scotland, are great forces; but on the other side we have, beside the Conservatives, all the Whigs such as Lord Hartington and Sir Henry James, and the large number of Radicals who follow Mr. Chamberlain, and who believe in local government and decentralization as the cure of the ills not of Ireland only, but also of England and Scotland. Now, if your readers will turn to any paper at their hands, or will consult the telegrams via America appearing in your own columns, they will, I have no doubt, find a vast amount of speculation on the relative strength of the forces I have here indicated, and therefore for once I hope I may leave Irish politics alone. They are an incubus on these poor little letters of mine, even as they are on the British Empire; the difference is that I can avoid Ireland, while the unfortunate British Empire cannot, and hence no one here talks of anything else but Ireland, except those wonderful people who talk of nothing but the favourite at the next race.

The negotiations between the Vatican and the Chinese Government, which have for their object the withdrawal of the Roman Catholic Missionaries in China and their converts from under the French protection, are practically concluded. I learn on good authority that we are shortly likely to see a Chinese mandarin accredited to the Pope, or a Roman ecclesiastic accredited to the Emperor of China, or (and this is the most likely) both. The French Government offered a strenuous opposition at the Vatican, and made more than one proposal with a view to buying off the Pope; the latter on his side endeavoured to mollify the French by offering, amongst other things, to appoint a Frenchman, to be approved by President Grévy, the first Legate. Not long since there was a report that the French had so far prevailed with the Pope as to get him to confine the Legate's interference to purely ecclesiastical matters; the French Minister, as now looking after the secular affairs of the missionaries. But this was precisely what the Chinese wanted to prevent, and they promptly made it known that they would make no agreement and receive no Legate on such terms. And now, if my information be as correct as I believe it to be, we shall shortly see the curious spectacle of the greatest Pagan Empire of the world, the greatest perhaps that the world has ever seen, represented by an envoy to the Pope of Rome. The peculiarity of this French protection is that it extends to all nationalities; Italian, South German, Belgian, Spanish, and other Roman Catholic missionaries are "protected" by the French Minister at Peking, although the Italian and German ministers are quite able to look after their own countrymen. Moreover (and here's the rub for the Chinese) it extends to Christian converts, or those who say they are converted, to the detriment of all native authority. Hence other Powers, especially Germany and Italy, have taken the keenest interest in the negotiations, and are understood to have given the Chinese a helping hand at the Vatican. It would be idle to deny that the negotiations were intended to be a blow at French political influence, or, shall we rather say, powers of disturbance, in China. It was never a legitimate influence, such as France must possess wherever she chooses to

be represented; it was ruinous to the success of the labours of the missionaries, demoralising to the Chinese, and, from the popular odium it excited, injurious to Western interests in China generally.

In my humble way, I have endeavoured in one of these letters to commemorate the enterprise and glory of Mr. Tannaker Buhicoran, the owner of the Japanese Village at Knightsbridge; but his resources are inexhaustible. He has a little theatrical and juggling performance there daily, and in virtue of this he has succeeded in getting the great London papers to admit him to the coveted column just above the leading articles, which is devoted solely to theatres. His show appears there now amongst the plays of Irving, Wilson Barrett, Toole, and others, and the "Theatre Nippon" has a place as regularly and prominently as the Lyceum, The Princess's, or the St. James's. I am sorry to add that he has had some trouble with his employees; one of them got drunk lately, and on his return to the village declared that everything about it was dirty (which was not true) and forthwith proceeded to smash all and sundry—the result was ten shillings or three days' imprisonment. Two more of them have been charged with embezzlement, in that they did not duly account for sums received for the purchase of goods sold at their shops. "The troubles of the just in number many be," says the old epitaph, and even Mr. Tannaker in his triumphant progress is beset by them; black care ever rides behind the horseman.

A curious case, which does not appear to have been much noticed by the newspapers, came lately before Sir James Hannen in the Court of Probate. It shows the abiding nature of popular superstition in England, as elsewhere. The question arose on the validity of a will; certain relatives of the testator, a substantial Devonshire yeoman, contesting it on the usual grounds of undue influence, unsound mind, &c. He had married twice, the second time late in life, and a difference arose between the children of the first marriage and the second wife, the father taking the part of the latter. In March, 1883, when he was 78 years of age, eczema developed itself in one of his hands, and he conceived the idea that this cutaneous disorder was a manifestation of the power of witchcraft, and had been caused by his children, or some of them, "overlooking" him. It was stated in evidence that in parts of Devonshire there is a belief that the high priests of witchcraft in that county are a white witch and a black witch. The testator sent a messenger to Exeter to consult the white witch as to the appearance of his hand. This mystic authority, having invoked the oracle, pronounced that the appearance was caused by the testator having been "overlooked" first by a woman who lived near him, and recently by a member of his own family; that one of the persons who had "overlooked" him was a "crab;" and the other would be discovered in the woman who should come three times running to his house. Subsequently the testator said that the "crab" here referred to was his daughter Ellen, who was deformed, and that the other was his daughter Maria, for she had come running into his house. He was so impressed with this that he repeated it to several witnesses, one of them being a medical man to whom he showed his hand, saying, "See how they are tormenting me." The doctor replied "What nonsense! Why that is ordinary eczema!" on which the testator cried out "Eczema be—! It is Ellen and Maria." He remained under the belief that he was the victim of witchcraft up to the time of his death. There was evidence by two solicitors, who had known him for 40 and 27 years respectively, a bank manager, and others, that the testator was a shrewd and clever man of business. Sir James Hannen found that the general capacity of the testator to make a will was sufficiently proved, but the case ended in a compromise between the parties to the suit. And these things took place, not in the twelfth century, or in the dominions of the King of Bunny, or amongst the worshippers of Mumbo-Jumbo, but in the year of grace 1883-4 in a wealthy yeoman's family in the neighbourhood of Barmstaple, in the county of Devon!

Talking of these occult matters reminds me to mention that Mr. Laurence Oliphant has just published a new novel called "Masollam—a problem of the period," dealing with those so-called psychometrical questions which engage the attention of spiritualists, esoteric Buddhists, and the Society for Psychical Research. The characters are Druses from Lebanon in English garb who, in the first part of the story, move about in English society and considerably astonish the natives, a few young members of Parliament, a North of England manufacturer, and sundry others. In the second part of the story we are taken to homes of the Druses in Lebanon, and there introduced to their chiefs, villages, habits, beliefs, &c. There are two or three surprises, various long discussions

on "telepathy" and other matters, a brace of marriages, and all ends happily. It is, however, very striking and suggestive book, and if your readers want a good new novel I can strongly recommend it.

Mr. Swinburne too has brought out a new book in which he pulverises Shelley to his own satisfaction. He uses many long and hard words about the unfortunate writer—poet, it appears, he can no longer be called. Possibly Shelley may survive even the sesquipedalian diatribes of Swinburne, with whom everything is as bright as the effulgent sun, God-given, or as black as the nethermost pit and nurtured on Satanic exaltations. There is no mean between this gentleman's two impossible extremes. Strong opinions and strong language are about the only strong points in most of our modern poets. Their ballads, chants royal, kyrielles, rondeaux, triolets, vilanelles, and the rest of their productions lend themselves to the neat pen of Calverley. Was it not one of the late Dame Gabriel Rossetti's effusions in which the same refrain appeared in every verse that C.S.C. parodied in the lines:—

The farmer's daughter hath ripe red lips  
(Butter and eggs and a pound of cheese)  
If you try to approach her, away she dips  
Over chairs and tables with apparent ease.  
The farmer's daughter hath soft brown eyes  
(Butter and eggs and a pound of cheese)  
And I met with a ballad, I can't say where  
Which wholly consisted of lines like these.

To turn from the muses to extra-territorialists, (one has the privilege in these letters of skipping from subject to subject with apparent ease like the farmer's daughter above mentioned), Mr. Justice Scott, one of the judges of the International Court in Egypt, lately presented a report to the Khedive on the proposed fusion of the International and Native Courts in Egypt, strongly opposing that measure. One suggestion which he makes may be of special interest in Japan. He thinks that the Native Courts should for the present be strengthened by the nomination of more European judges, but the appointments should be made by Egypt, not by the European Powers in any way, and Egypt, he says, should not bind herself to any particular proportion of Europeans. "Their gradual elimination should be the final aim, in order to have at last a real native system, which would work well enough to justify the withdrawal of the Mixed Tribunals and the abolition of the Capitulations." The extra territorial system anywhere is a makeshift, an inconvenient and at times intolerable makeshift, but, in my judgment, it is infinitely preferable to any system of International Tribunals, meaning thereby not tribunals where there are judges of mixed nationalities (if this were "international" the administration of Japan, of China and of every country in which foreigners are employed for special purposes would be "international"), but tribunals where the judges are appointed, or their appointments controlled, in the smallest degree, by Governments other than the national one. That Palladium of liberty, the mixed Court at Shanghai, shows us to what depths the international administration of justice sinks.

The *Overland Mail* is, I believe, read in the Far East; at least it has a special issue for China, hence some of your readers may be presumed to have some interest in it. Its editor was, for some years, Mr. Egmont Hake, a writer in the *Saturday Review*, the author of a recent very popular life of Gordon, and of other works, but he has now left it, and founded the *State*, a weekly Conservative paper, which is ably written. His place on the *Overland Mail* has been taken by Mr. Edward Jenkins, formerly Radical member for Dundee, and late Conservative candidate for the same place, but better known wherever the English language is read as the author of "Ginx's Baby." The change of editors will probably make no change in the paper; but I am sorry to think that Mr. Hake's new venture can hardly be a great success. What with Society papers, technical papers, cheap weekly papers, and the *Spectator*, *Economist*, *Statist*, and *Saturday Review*, there is hardly room for another weekly. Then all the well to do, who alone can afford six pence for a weekly paper, are Conservatives, or something very like it, and they are already amply supplied. I hope my forecast of the future of the *State* may be wrong, for Mr. Hake is a clear writer, the paper is well written, and deserves to live; but then in this world there is generally a great gulf fixed between deserving and obtaining.

Although I have forsworn Irish politics in this letter, there is no reason why I should not refer to the Irish question in another aspect. Before this parliamentary contest began, I thought that it would be a battle of the giants, and ventured to remind your readers that we were now living through events which, whatever the issue, would make men's ears tingle in the years to come. The prophecy was right so far as we have gone, for the parliamentary light, any way we look at it, has been the greatest

during this century. The speeches of a score of leading men were pitched in an unusually high key, and were really great efforts. Mr. Chamberlain's speech on the second reading is acknowledged by friends and foes to be the greatest effort he has yet made; Mr. Sexton, in reply, proved himself one of the first three or four debaters in the House, and so for the others. But Mr. Gladstone showed himself, now as ever, to be far beyond all these, and to move in a loftier region of eloquence and power. Of his four speeches, the third, in moving the second reading, was a spiritless performance, but the speech in which he closed the debate last week was a wonderful oration. I am certain that for generations the conclusion of that speech will be quoted and printed in all books of extracts or specimens of English eloquence, as we now quote Burke's description of the devastation of the Carnatic from the speech on the Nabob of Arcot's debts, or the great peroration to his speech on Conciliation with America in 1775. It is said by men who, like Mr. Gladstone himself, are old Parliamentary hands, that nothing like it has been heard in Parliament in this generation. The vote followed the speech immediately, and it is strong evidence of the dislike with which the principle of the Bill is regarded, that with the Premier's words ringing in their ears, a majority of 30 was got to vote against him.

## LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, July 30th.

## THE NEW CABINET.

Mr. Henry Matthews has been appointed Secretary of State for the Home Department, and the Right Hon. Henry Cecil Raikes, Postmaster-General.

Kobe to Otsu: First Single, yen 2.85; Second do., yen 1.70; First Return, yen 4.30; Second do., yen 2.55.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

For EUROPE—The P. & O. Company's steamer sails fortnightly on Saturday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Sunday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

For SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

For CHINA—The steamers of the Nippon Yusen Kaisha sail weekly (Wednesday) for Shanghai, calling at Kobe and Nagasaki. Steamers of this Company also run to Korea and Vladivostok, at intervals, their sailing notices appearing in the local papers.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 p.m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—*Fare, 20 sen*.

Shanghai	—	91	—	91
Hongkong	—	400	—	400
Yokohama	—	264	—	264
Total	—	755	—	755

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Treasure, yen 1,832.04.

## REPORTS.

The *Tanis* reports having left Hongkong on 25th ult., and experienced a strong breeze in the Formosa Channel from the N.E., arriving at Kobe on the 26th at 8 p.m. Left Kobe next morning at 10.30 a.m., and had fine weather and fair wind to Yokohama, making the voyage in 26 hours.

The Japanese steamer *Omi Maru*, Captain Swain, from Kobe, reports strong winds and high sea.

## LATEST COMMERCIAL.

## IMPORTS.

The Market has again shown considerable activity and the appetites of the country dealers seem insatiable, in spite of the willingness displayed by sellers to accommodate them at a moderate advance in prices until the last smart drop in Silver to 3 6 per oz. has about "put the pipe out" and necessitated a new table of laid down cost for Importers.

YARN.—Sales for the week amount to 900 bales English, and include a good deal drawn from the Hongkong and Shanghai Markets; prices show a considerable advance especially in 28's. Of Bombays, sales amount to close on 1,300 bales at fully previous rates.

COTTON PIECE GOODS.—Sales consist of 10,000 pieces 6lb Shirtings at a further slight advance; 200 pieces T. Cloths, 3,500 pieces Prints, 500 pieces Silesias, 1,000 pieces Taftachelas, as well as some trifling lots of Velvets and Turkey Reds.

WOOLLENS.—Italian Cloths have been sold to the extent of 3,500 pieces at full rates; 2,000 pieces Mousseline de Laine, 850 pieces Silk Satins, and 1,500 pairs Blankets have also been reported.

## COTTON YARNS.

	PER CENT.

Nos. 10 14, Bombay	23.50	to 25 00

## METALS.

Quotations generally are higher in accordance with the fall in foreign exchange; buyers begin to recognise the fact that imported goods must of necessity cost then dearer in the future. Still there is very little business doing at present.

IRON.—Nail-roads neglected and weak at quotations. Bars: some demand for favorite assortments at values noted below. Pig: dull and inanimate.

WIRE NAIL.—Large nails weak but a few parcels good assorted, small, of well known brands, could be placed at good figures.

TIN PLATES.—These are dearer and stock of desirable kinds appears to be small.

	PER CWT.	
Flat Bars, 1 inch	\$2.50	to 2.60
Flat Bars, 1 inch	2.60	to 2.75
Round and square up to 1 inch	2.50	to 2.70
Nailrod, assorted	2.40	to 2.50
Nailrod, small size	2.60	to 2.70
Wire Nails, assorted	4.25	to 5.50
Tin Plates, per box	5.00	to 5.50
Pig Iron, No. 3	1.15	to 1.17 1/2

## KEROSENE.

Still no business, the views of sellers and buyers being too divergent. We leave quotations unchanged but quite nominal; at present holders demand \$1.50 for Devoe while the highest bid hitherto has been \$1.72 1/2. Perhaps they may meet at some intermediate figure when the market opens again. Stocks ample and further arrivals will soon be in sight.

## SUGAR.

With but little more than a retail trade, arrivals continue, and stocks are very large. Prices are entirely nominal.

## EXPORTS.

## RAW SILK.

Our last issue was of the 29th ultimo, since which date we have had the usual spurt for the American steamer, beyond which but little has been done. Settlements for the eight days are 330 piculs, divided thus:—Hanks 60 piculs, Filatures and Re-reels 250 piculs, and *Kakoda* 20 piculs. In addition to these figures Japanese Exporters have bought 120 piculs making the total foreign trade 450 piculs.

Most of the business was done during the few days immediately preceding the departure of the *City of Sydney*; that vessel having gone, quietude is more the order of the day. Sellers, however, appear quite at their ease, and boast that they will again obtain their own terms when buyers have to fill their requirements for next outward mail. It would seem that foreign Markets are still far from being on a level with prices current here, and the majority of buyers are disinclined to operate, especially as dealers try to force values up almost daily. Supplies come in continually, and the Stock-list shows an increase of quite 450 piculs on the week. Better quality is now apparent, but dealers report very high prices ruling in the up-country marts; and they assert that business must of necessity remain curtailed until buyers are in a position to raise their limits.

There have been two shipping opportunities during the interval:—The English mail of 31st July and the U.S. mail of 4th instant. The former (*Thibet*) took 8 bales only, the latter (*City of Sydney*) carried 350 bales for the New York Market, of which no less than 113 were "Direct" shipments by the native *Kaisha*. These vessels bring the present season's Export up to 1,144 piculs, against 302 piculs last year, and 1,659 piculs to same date in 1884.

**Hanks.**—One or two buyers have had another dive at these, and about 60 piculs have been taken into godown. Whether all will be ultimately weighed-up is a problem at present. Prices in this department are very high and must be considered all more or less nominal in the present temper of holders. In the list we find the following:—*Chichibu* \$565, *Annaka-Takasaki* \$555, *Hachioji* \$530.

**Filatures.**—Considerable business in *Shinshu* sorts, but the top qualities have hung fire, holders asking too much. Latterly there has also been a little doing in fine sizes for Europe, viz:—*Utsunomiya* (old) at \$750, *Inase* \$740, *Eishu* \$625. In kinds suitable for America we notice *Kameisha* \$705, *Shijushu* \$665, *Shimeisha* \$600, *Tokushu* \$685, with a cluster of small unknown *Sewa* chops at about \$680. For crack silk, big prices are wanted:—*Rokkoshu* \$770, *Gakushu* \$710, *Hakuzuru* \$720, are among the present offerings.

**Re-reels.**—A fair amount of business in this section at good prices, both *Shinshu* and *Joshu* sorts participating. In the former, *Helmet* brought \$685 and *Mitsuyesha* \$672. Silks from Maibashi district were done on the following terms:—*Tortoise* \$665, *Five Girl* \$655, *Takasaki* \$640. One parcel *Oshu* Silk, *Miharu*, taken into godown at \$640.

**Kakada.**—Some few supplies from this district have made their appearance; and about 20 piculs have found purchasers on basis of \$705 for *White Horse* head chop and \$690 for *Shishu*. At these figures the silk seems dear as compared with filatures.

Available supplies to date	4,740	4,500	3,880

#### WASTE SILK.

A very feeble business in this branch of the trade until the 4th instant, when some buyers appeared able to increase their offers and a fair day's business was done. Settlements for the week are 200 piculs, nearly all entered in the list on one day as noted above. In addition to this, the *Boyeisha* has bought and shipped about 30 piculs for Europe. There is not very much rise to notice during the week, but prices are apparently getting more firmly established on the basis proposed by holders. In some cases, however, they are still inclined to keep their goods off sale altogether, in spite of large arrivals and rapidly increasing stocks.

The P. and O. steamship *Thibet* (31st July) took 5 bales for London and to bales for Marseilles, bringing present Export up to 303 piculs, against 280 piculs last year and 122 piculs to 6th August, 1884.

**Noshi.**—Settlements 130 piculs chiefly ordinary assorted *Joshu* at a shade under \$115. A little *Shinshu Noshi* mentioned at \$150, but stock of this commodity is practically nil at present. **Filature**

*Noshi* promise to be scarce this year, the reeler threatening to throw all their waste into *Kibiso*.

**Kibiso.**—But a small business comparatively. Best *Filature* kinds are still held off the Market entirely, and some little trade has been done in other sorts, viz., *Mino* \$95, and *Joshu* \$65 to \$45 according to quality.

**Matata.**—A small parcel done at \$230.

**Sundries.**—\$17½ uncleaned has been made for a few piculs *Neri*, and \$235 for *Oshu Doppioni*, both old staple.

TEA.

A large business in Tea has been done during the interval at easy prices, amounting to 5,005 piculs, making a total of 158,750 piculs for the season, as compared with 126,530 piculs last year. Kobe settlements up to the 3rd instant for the season are 89,800 piculs, against 70,000 piculs last year. Settlements for both ports combined aggregate 248,550 piculs, as compared with 197,430 piculs for 1885. Tea in Stock is about 11,800 piculs, against 6,200 piculs in 1885. The bark *Elen* took 113,860 lbs. of Tea from Kobe, and the same vessel took 271,228 lbs. from Yokohama. The brigantine *Catherine Sudden* took 153,631 lbs. from Kobe, and 271,215 lbs. from Yokohama. The vessels left this port on the 27th and 31st ultimo respectively, for San Francisco. The bark *Zoraya* took from Kobe on the 27th instant 44,183 lbs. for New York and 265,474 lbs. for Chicago. The Yokohama shipment by same vessel are not given yet.

## NOW READY,

In 3 Parts, Demy 16mo, limp.

**A ROMANIZED JAPANESE READER;** consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION and NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Tokyo; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, 82.50.

The *Hingo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the *Japan Mail* office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c.; Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" should be of great benefit to all persons engaged in study of the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

London: TRUBNER & Co. YOKOHAMA: KELLY & WALSH, Limited.

Yokohama, June 4th, 1886.

## NOW READY,

Demy 16 mo., limp.

**"SOME JAPANESE VERBS,"** being a short but valuable Treatise on the use of JAPANESE VERBS of SAYING, SPEAKING, TELLING, &c., with their related NOTES.

PRICE FIFTY CENTS.

To be obtained at the Office of the *Japan Mail*, or of KELLY & WALSH, Limited.

Yokohama, July 30th, 1886.

## NOW READY,

PRICE ONE DOLLAR.

**A PAMPHLET** containing the recent Correspondence published in the "JAPAN MAIL" on the relative merits of English and American Railway Bridges, entitled "AMERICAN VERSUS ENGLISH BRIDGE DESIGNING."

To be obtained at the Office of the "Japan Mail."

Yokohama, April 7th, 1886.

Original from

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

Palace, before the Emperor and Empress, and on the same evening he gave a performance at the Rokumei-kan.

MR. IWASAKI YANOSUKE and his family have been staying at Ikao for some time. The widow of the late Mr. Iwasaki Yataro left Tôkyô to join them, the 10th instant.

THE Imperial Palace at Kyôto is being renovated, in order, it is stated, to be ready for the reception of the Emperor, who contemplates a visit to the ancient capital early next year.

THE Imperial residence at Hakone has been so far completed that all the fittings and decorations are in their places, and the officials employed in the work have returned to the capital.

It is stated that the Department of Education intend to open a Fine Art School in the enclosure of the Botanical Garden attached to the Imperial University, at Koishikawa, Tôkyô.

THE price of cotton stuff has increased by about 30 per cent. in consequence of the stock having been much reduced. A similar increase has taken place in the quotation for silk textures.

It is reported that Mr. Watanabe, President of the Imperial University, will leave shortly on an official visit to England, Germany, France, the United States, and other countries.

THE night of the 8th instant, a number of thieves broke into the 43rd National Bank at Osaka, and carried off yen 2,000, killing five watchmen who were in charge of the bank.

THE police in Tôkyô have instructed all second-hand clothes dealers to be particular in ascertaining that any clothing they may purchase will not be likely to be the means of spreading cholera.

THE censorship in reference to newspaper articles, which has hitherto been exercised by local governments, will now, so far as matter relating to Treaty Revision is concerned, rest with the Foreign Office.

JUDGE OZAKI TADAHARU has been appointed Chief Judge of the *Daishin-in*, Tôkyô, in place of the late Chief Judge Tamano Seiri. Judge Nishi Shigenori, of the *Daishi-in*, will succeed Judge Ozaki as President of the Court of Appeal.

THE construction of the Naoetsu-Sekiyama branch of the Shin-Etsu Railway having been completed, traffic will be commenced the 15th instant, and the Railway Bureau has issued time-tables, &c., for the line.

THE Minister of State for Agriculture and Commerce has submitted to the Cabinet Office a draft of the preliminary arrangements in connection with the great Asiatic Exposition which will be held in 1890. No decision will be arrived at on the subject until after Count Yamagata's return from the north.

THE Educational Department reports that the total number of visitors to the Tôkyô Library during last month was 3,391, of whom 4 were special visitors; showing a daily average of 113. The number of books read by visitors was 19,959 vols. of Japanese, 480 vols. of Chinese, and 1,420 vols. of foreign works.

BUSINESS in Imports has generally declined, a natural result, so far as Manchester goods are

concerned, of the extensive dealings of the past month. A fair amount of Yarn has been sold, but in Cotton Piece-goods and Woollens only limited transactions have taken place. Sellers, however, are cheerful with regard to future prospects, and the autumn trade is expected to bring a revival. The Metal trade has been dull in most departments, but some enquiry has been made for favourite assortments of Wire Nails, and Tin Plates are in request at quotations. Opinions differ as to the value of Kerosene, buyers and sellers being far apart; stocks are more than adequate, and fresh arrivals are near at hand. Sugar is heavy; and difficult to move. Of Exports, Silk has been sparingly dealt in, buyers acting with great caution. Sellers are very independent, and, having succeeded in obtaining their demands from purchasers during the past week, present a very bold front in regard to future operations. In Waste Silk there has been a large business, but holders are strong and get whatever prices they choose to ask. Notwithstanding large sales, free arrivals have raised the stock to 4,000 piculs, and sellers, who propose to wait on developments, aver that top prices have not yet been reached. Large transactions continue in Tea, and the supply has not been quite so full, consequently prices are firmer, though without quotable change, and shipments have been heavy. Exchange has not seen any further decline, and at the close is firm.

#### NOTES.

A CORRESPONDENT reminds us that the question of railway rates in Japan is not so simple as many people seem disposed to assume. "Four or five years ago," he says, "a general reduction was made in the rates of freight on Government lines, but I am inclined to think that, even to this day, the sacrifice remains uncompensated by any corresponding development of traffic. Whether the rates are high or low, *quoad* railway charges, does not appear to me to be the point so much as the ratio they bear to the cost of transport prior to the introduction of railroads into Japan. If the cost of transport by railway is less now than was formerly the cost by road or otherwise, then there must be a gain to the public, and enterprises which could exist under the former state of affairs, ought to be coining money under the reign of railways. As to the notion of cutting down rates, take an example: Jinrikisha carry passengers between Takasaki and Maebashi for 3 *sen*. If the taste and needs of the Japanese be such that they prefer riding by jinrikisha at 3 *sen* to travelling by train at 9 *sen*, then railways are here before their time. If you reduce the railway fare to 2 *sen* and drive the jinrikisha men off the road, who will feed them? Have you other bread-earning employment to offer them? Has the editor of the *Fiji Shimpô* any suggestion to make as to their support?"

\* \* \*

All this may be very true, but it is only a part of the truth. So far as the jinrikisha men are concerned, it will not, we presume, be seriously argued that the danger of interfering with their means of livelihood is to weigh against the general advantage of cheap carriage. Such a line of reasoning would apply with equal force against the introduction of all labour-saving contrivances. The very case adduced by our correspondent illustrates our view of the matter.

It is absurd that the cost of travelling by rail from Maebashi to Takasaki should be three times the cost of travelling by jinrikisha. Three to one is an extravagant ratio. If the railway folks cannot offer better attractions to the travelling public, railways deserve to be neglected. Six *sen* is not far from what a labourer earns in half a day in the country districts, and if he can save that amount in a journey of less than half a day by taking a jinrikisha instead of buying a railway ticket, he naturally adopts the former course. Our correspondent appears to substitute the question whether Japan has benefited at all by railways for the very different question whether she has benefited, or is benefiting, as much as she might. Unquestionably some enterprises are much more favourably circumstanced now, owing to cheaper and more facile transport, than they were a few years ago. But even this record must be taken with caution. We need only look at the Tôkyô-Maebashi line to see how perfunctory has been the attempt to attract goods' traffic. There is a railway running through one of the most populous and productive districts in Japan, yet its receipts are derived almost entirely from passenger traffic, and it barely nets 5 per cent. on its capital. Facts are eloquent. No one can be surprised that with such results before him the Japanese merchant does not over-estimate the value of railway facilities.

THE leading journal of Shanghai somewhat angrily attributes the depreciation of Hongkong and Shanghai Bank shares to the operation of local "bears," and asks whether the directors of the Bank cannot take some steps to arrest this "unprincipled gambling." The leading journal of Hongkong ridicules the idea that operations on "Change are alone or chiefly responsible, and refers the depreciation to the panic caused by the fall in exchange," and to the fact that "in order to pay its half-yearly dividend, the Bank will have to withdraw over a lakh of dollars from the fund for the equalization of dividends, owing to losses by exchange and mercantile failures." For our own part, we can scarcely believe that the fall in the value of the Bank's shares has taken the public by surprise. A bank is simply a commercial institution, differing, however, from ordinary commercial institutions in this—that its prosperity is, or ought to be, a measure of that enjoyed by the mercantile world in general. Even in the most depressed times a particular firm may, by skilful management or happy chance, carry on a successful business. But a bank is differently situated. It can only make sound profits when the majority of its constituents are engaged in a healthy business. Hitherto the Hongkong and Shanghai Bank has been exceptionally fortunate. It seems to have stood above the depression from which trade generally suffers. But this state of affairs could not continue always. The Bank must take its share of rain and sunshine. Moreover, a circumstance which has hitherto told in its favour is now perceptibly prejudicing the public against its shares. We allude to the appreciation of gold. While Eastern banks with capitals in sterling were laboriously setting aside large sums to cover their annual losses by exchange, the Hongkong and Shanghai Bank, with its silver capital, was relieved from any such onerous duty. But since the beginning of this year the gold value of all

silver securities has fallen fully eleven per cent., and the suddenness and sharpness of the movement has startled the public. A thousand sovereigns invested in Hongkong and Shanghai Bank shares last January are only worth eight hundred and ninety sovereigns to-day, apart, of course, from fluctuations in the market price of the shares. It would be strange if people did not begin to look askance at securities which are so liable to be affected by causes quite unconnected with the course of business.

\* \* \*

It is thus that we are everywhere confronted by evidences of the disastrous consequences of the monometallic bigotry. How things will fare with banks which, having gold capitals, are carrying on business in silver, one does not care to think. Already these institutions see eleven per cent. of their profits for the current year cast into the bottomless abyss of gold appreciation. We trust that the Chambers of Commerce in Hongkong, Shanghai, and Yokohama will strengthen the hands of the Bimetallic League by addressing to it strong protests against the ruinous policy of attempting to carry on the commerce of the world with a steadily contracting currency. It is true that the good folks in England are beginning to wake up, but they want a great deal more rousing. The *Financial News* speaks thus of the English cotton-manufacturer in regard of trade with India:—

His business is to manufacture cotton goods for the East, which he is paid for in rupees. In the East, notably in our Indian Empire, there are cotton factories turning out goods like his and selling them also for rupees. They are his competitors, and he has no objection to fair competition with them; but this silver question has destroyed fair competition in all rupee-using markets. The rupee in the East has virtually maintained its value all the time that it has been depreciating in this country. To the Bombay or Calcutta manufacturer it is worth to-day 2s., the same as it was eight years ago, because its purchasing power is the same; but to the Lancashire manufacturer it is worth only 1s. 5d. or 1s. 6d., because he has to convert it into sovereigns at that ruinous rate of exchange and pay all his debts in sovereigns. This is a very grave question, but it is one of trade rather than of currency. The currency-mongers have thrown no light on it whatever, and never will while they look at it only from the currency point of view. It has to be handled as a trade question, and that is what the Manchester bi-metallists are now doing.

We do not pretend to know what the *Financial News* means by "currency mongers," or by what process of reasoning it removes this question from the region of currency to that of trade. It is because of its manifestly vital influence on trade that the silver problem has begun to attract so much attention, and, for our own part, we long ago pointed out the growth of the very embarrassments by which English cotton-manufacturers, and indeed all manufacturers who look to Eastern markets, now find themselves confronted. There are unfortunately many persons in the world who cannot understand that certain causes will produce certain results, until they find themselves actually face to face with those results.

M. REMENYI played to a large, and we need not say highly appreciative, audience in the Rokumeikan Tuesday evening. The two spacious salons on the upper floor of the building were completely filled, many being obliged to stand. The great violinist probably found the number of his hearers insignificant, yet it would have been difficult for Tôkyô to pay him a higher tribute, for in truth it is not easy to conceive where all the people came from. The capital is exceptionally empty at present. The great heat—heat such as has not been experienced since 1871—assisted by the cholera, has driven every

one away. Not one Minister of State is at his post. Count Ito, who had returned from Tomoka to attend at the Palace when M. Remenyi played before the Emperor, was obliged to leave in the afternoon and Marquis Nabeshima, who heard M. Remenyi at the Palace, was unable to attend the Concert, being in mourning. Of the Imperial Family Prince Komatsu alone is in Tôkyô. His Imperial Highness was present at the Concert, and was accompanied by the Prince and Princess Iwakura. Quite a number of Japanese ladies graced the occasion; the Chinese Legation furnished its contingent, and in one corner of the room sat His Majesty the Emperor's eleven chief musicians, listening with admiration. Of the playing it would be superfluous to speak. M. Remenyi seemed to be absolutely unfatigued by his long performance at the Palace. His wonderful powers never appeared more admirable, and he left his audience waiting, at the end, with suspended breath, in obvious ignorance that the programme and the loudly demanded repetitions had been played through.

We do not quite follow the reasoning of the *Fiji Shimpô* with regard to Kim-yo-kun. Our Tôkyô contemporary opines that some change of policy has taken place because Kim, instead of being sent out of the country, has merely been moved from one part of the Empire to another. So far as concerns the ignorant resentment which Korea entertains because Kim finds an asylum here, the *Fiji* does not see that it will be allayed by changing his asylum from Yokohama to Ogasawara; and so far as concerns any danger which this country's internal tranquillity incurs from Kim's presence, the *Fiji* is disposed to be contemptuous. This is certainly an easy method of settling the whole affair. In the first place, it seems strange that the *Fiji Shimpô* should, even indirectly, suspect the Government of yielding to Korea's uncivilized notions about the privilege of asylum. That, of course, has nothing whatsoever to do with the action taken towards Kim. If the politicians in Sôul choose to feel annoyed with a neighbouring country for granting a privilege which international law recognises as within the competence of all independent States, so much the worse for the politicians in Sôul. With regard to domestic tranquillity, if Kim's presence in Tôkyô, or any other easily accessible part of the country, seemed likely to suggest plots to unruly spirits, his removal to the Bonin Islands will terminate that apprehension, at all events. But the main difficulty—the difficulty which the *Fiji Shimpô* altogether ignores—was what to do with Kim. Granting that he had to be sent somewhere, where was he to be sent? So soon as he resolved not to go anywhere voluntarily, the choice of destination was confined to places visited by ships over which the Japanese Government could exercise control. There are only four such places outside the Japanese empire—Korean ports of course excluded. They are Shanghai, Chefoo, Tientsin, and Vladivostok. To send him to any one of the three first would have been practically to hand him over to Korea, for the Chinese authorities would not have lost a moment in seizing him. To send him to the last would have gravely offended China for reasons too obvious to need recapitulation. What, then, was to be done? It appears to us that no other course than that taken was reasonably possible. In Ogasawara Kim is out of the reach of dangerous

collusion from the Japanese side, and is also not accessible to Koreans who may seek to plot his return. Japan would scarcely have been justified in handing him over to China or Korea, much as those Powers wanted to get him. Certainly she was not under any obligation to do so. But neither did the principles of amity permit her to ignore the representations of her neighbours that Kim's presence in her capital encouraged rebellious designs in Sôul. "If you will not extradite him, at least take care that he does not become the means of setting us all once more by the ears," China and Korea may be supposed to have urged. Japan, we think, was bound to listen to such a plea. Her best and safest plan was to make Kim "move on" to some other country. But since he declined to move, and since force could not be employed to send him to any place where he would not have either been immediately seized or become an active centre of complications, we do not see what better could be done than to provide him with an island home beyond the reach of every contingency which made his sojourn in Tôkyô or Yokohama inconvenient.

The following is the last portion of Mr. Gladstone's great speech in closing the debate on the Home Rule Bill: a speech which is said to "stand unequalled and unapproached by anything that has been heard in the House for many a long years":—

Let my hon. friend recollect that this is the earliest moment in our Parliamentary history when we have the voice of Ireland authentically expressed in our hearing.—(Cheers.) Majorities of Home Rulers there may have been upon other occasions; a practical majority of Irish members never has been brought together for such a purpose. Now first we can understand her; now first we are able to deal with her; we are able to learn authentically what she wants and wishes, what she offers and will do; and as we ourselves enter into the strongest moral and honourable obligations by the steps we take in this House, so we have before us practically an Ireland under the representative system able to give us equally authentic information, able morally to convey to us the assurance that a breach and rupture would cover Ireland with disgrace. There is another reason, but not a very important one. It is this, I feel that any attempt to palter with the demands of Ireland so conveyed in forms known to the Constitution and any rejection of the conciliatory policy might have an effect that none of us could wish to strengthen—that party of disorder which is behind the back of the Irish representatives (cheers), which skulks in America, which skulks in Ireland (hear, hear), which I trust is losing ground and is losing force, and will lose ground and will lose force in proportion as our policy is carried out, and which I cannot altogether dismiss from consideration when I take into view the consequences that might follow upon its rejection. (Hear, hear.) What is the case of Ireland at this moment? Have gentlemen considered that they are coming into conflict with a nation? Can anything stop a nation's demand except its being proved to be immoderate and unsafe? But here are multitudes and I believe millions upon millions out of doors who feel this demand to be neither immoderate nor unsafe. In our opinion there is but one question before us about this demand. It is as to the time and circumstance of granting it. (Cheers.) There is no question in our minds that it will be granted. (Cheers.) We wish it to be granted in the mode prescribed by Mr. Burke. Mr. Burke said in his first speech at Bristol:—

"I was true to my old-standing invariable principle that all things which came from Great Britain should issue as a gift of her bounty and beneficence rather than as claims recovered against struggling litigants, or at least if your beneficence obtained no credit in your concessions, yet that they should appear the salutary provisions of your wisdom and foresight—not as things wrung from you with your blood by the cruel gripe of a rigid necessity." (Cheers.) The difference between giving with freedom and dignity on the one side, and giving under compulsion—giving with disgrace, giving with resentment dogging you at every step of your path—this difference is, in our eyes, fundamental, and this is the main reason, not only why we have acted but why we have acted now. (Cheers.) This, if I understand it, is one of the golden moments of our history—one of those opportunities which may come and may go, but which rarely return, or, if they return, return at long intervals, and under circumstances

which no man can forecast. There have been such golden moments even in the tragic history of Ireland, as her poet says:—

"One time the harp of Innisfail  
"Was tuned to notes of gladness."

And then he goes on to say—

"But yet did oftener tell a tale,  
"Of more prevailing sadness."

But there was such a golden moment—it was in 1795—it was on the mission of Lord Fitzwilliam. At that moment it is historically clear that the Parliament of Grattan was on the point of solving the Irish problem. The two great knots of that problem were—in the first place, Roman Catholic emancipation; and, in the second place, the reform of Parliament. The cup was at her lips and she was ready to drink it when the hand of England rudely and ruthlessly dashed it to the ground in obedience to the wild and dangerous intimations of an Irish faction. (Cheers.)

"Ex illo fluere ac retro sublapsa referri  
"Spes Danaüm."

There has been no great day of hope for Ireland, no day when you might hope completely and definitely to end the controversy till now—more than 90 years. The long periodic time has at last run out and the star has again mounted into the heavens. What Ireland was doing for herself in 1795 we at length have done. The Roman Catholics have been emancipated—emancipated after a woful disregard of solemn promises through 29 years, emancipated slowly—sullenly, not from good will, but from abject terror with all the fruits and consequences which will always follow that method of legislation. (Cheers.) The second problem has been also solved and the representation of Ireland has been thoroughly reformed and I am thankful to say that the franchise was given to Ireland on the readjustment of last year with a free heart (cheers), with an open hand, and the gift of that franchise was the last act required to make the success of Ireland in her final effort absolutely sure. (Loud cheers.) We have given Ireland a voice; we must all listen for a moment to what she says. We must all listen—both sides, both parties, I mean as they are, divided on this question—divided, I am afraid, by an almost immeasurable gap. We do not undervalue or despise the forces opposed to us. I have described them as the forces of class and its dependants, and that as a general description—as a slight and rude outline of a description—is, I believe, perfectly true. I do not deny that many are against us whom we should have expected to be for us. I do not deny that some whom we see against us have caused us by their conscientious action the bitterest disappointment. But you have power, you have wealth, you have rank, you have station, you have organization, you have the place of power. What have we? We think that we have the people's heart (cheers); we believe and we know we have the promise of the harvest of the future. (Loud cheers.) As to the people's heart, you may dispute it and dispute it with perfect sincerity. Let that matter make its own proof. (Cheers.) As to the harvest of the future, I doubt if you have so much confidence, and I believe that there is in the breast of many a man who means to vote against us to-night a profound misgiving, approaching even to a deep conviction (cheers and cries of "No") that the end will be as we foresee and not as you—that the ebbing tide is with you and the flowing tide is with us. (Cheers.) Ireland stands at your bar expectant, hopeful, almost suppliant. Her words are the words of truth and soberness—"('Oh oh,' from the Opposition benches.) She asks a blessed oblivion of the past, and in that oblivion our interest is deeper than even hers. My right hon. friend the member for East Edinburgh asks us to-night to abide by the traditions of which we are the heirs. What traditions? (Hear, hear.) By the Irish tradition? Go into the length and breadth of the world, ransack the literature of all countries, find, if you can, a single voice, single book, find, I would almost say, as much as a single newspaper article, unless the product of the day, in which the conduct of England towards Ireland is anywhere treated except with profound and bitter condemnation. (Loud Cheers.) Are these the traditions by which we are exhorted to stand? No, they are a sad exception to the glory of our country. They are a broad and black blot upon the pages of its history, and what we want to do is to stand by the traditions in which we are the heirs in all matters except our relations to Ireland, and to make our relations to Ireland conform to the other traditions of our country. So I have the demand of Ireland for what I call blessed oblivion of the past. She asks also a boon for the future; and that boon for the future, unless we are much mistaken, will be a boon to us in respect of honour no less than a boon to her in respect of happiness, prosperity, and peace. Such, Sir, is her prayer. Think, I beseech you, think well, think wisely, think not for a moment but for the years that are to come before you reject this Bill. (Loud and prolonged cheers.)

THE *Official Gazette* publishes the following report as to the sale of the Naval Loan Bonds which has been presented to the Minister President of State by the Minister of State for Finance:—Since the approximate account of the sale of the Naval Loan Bonds was forwarded on 17th ult., several reports have been received

from various localities giving fresh particulars as to the amounts applied for. According to the detailed account prepared by the Nippon Ginko, the amount applied for at a premium reached yen 15,971,400, and adding to this some yen 670,900 (amount applied for at par), the total amount is yen 16,642,300, exceeding the face value of the bonds issued by yen 11,642,000. Of this total amount, those applications received at and above premium of yen 3.06 were accepted, and thus the actual amount received is yen 5,187,834,236, the average premium being yen 3.756. The detailed account is given in a separate document accompanying this.

The detailed account here referred to enumerates the amount of applications according to the premium offered, the total number of this class of applications being 131 carrying from premiums of yen .001 to yen 10. The amount applied for at the latter figure is yen 400. Coming down to a premium of yen 6.10, we first meet with a sum of yen 10,000. The first considerable sum is, however, offered at a premium of yen 5.20, the amount being yen 100,000. By far the greatest number of premiums are offered between yen 3 and yen 4, there being as many as 80 applications of this kind. Of those applications which have been accepted, yen 202,000 were applied for by Government offices (the number of applications being 8); yen 2,679,100 by banks (number of applications 46); yen 2,118,900 by private individuals (number of applications 280). Calculating the total amount of applications, yen 547,600 were applied for by Government offices (19 applications); yen 9,186,000 by banks and companies (304 applications); yen 3,000 by a hospital (1 application); yen 400 by a temple (1 application); and yen 6,905,300 by private individuals (1,350 applications).

THE congress of Chambers of Commerce of the British Empire which was to meet in London last month with a view to promoting by its deliberations the industrial and political interests of the Empire had a varied and interesting programme for its discussions. The subjects for consideration and action were:—1. Emigration, considered especially from the point of view of diverting the stream of emigration to British colonies rather than to countries where the consumption of Anglo-Colonial produce is interfered with by fiscal arrangements. 2. Postal and Telegraphic Reform, with a special view to the possibility of an Anglo-Colonial Penny Postage Union. Under this head are also to be discussed neutralization of cables and the further extension of telegraphic communication. 3. Imperial Federation, and how best to bring about a practical working scheme. 4. Codification and Assimilation of commercial law and usages of the Empire. 5. State Guarantee of war risks, as affecting the security of Anglo-Colonial Trade and of vessels and cargoes under the British flag in time of war. 6. The Silver Question. 7. Bill of Lading Reform. There is not one of these questions that is not of the greatest importance to the development of the Queen's Empire, and the information that will be given and discussed and the resolutions passed by this congress will in the nature of the case prove of the greatest value to the statesmen of the United Kingdom. The question of Imperial Federation, practically including many of the other problems awaiting solution, appears to be considered of

paramount importance; but it is for that reason also the most difficult to solve, affecting, as it does, almost every interest of an immense empire with the most varied and most delicate political and commercial organization that has ever existed on the face of the earth. There is ground for the hope that by a gradual process of political and industrial evolution the strong and firm basis on which to rest so large and imposing a structure may yet be created, and that by an irresistible law of nature, as it were, all the interests of a mighty but complicated empire will be made to revolve around one common centre of attraction. Such a result would carry with it the solution of the Irish problem and would probably make an Anglo-Saxon Alliance, with the United States included, a simple necessity. But as yet the centrifugal forces in the Empire are strong, and an endeavour to bring about Imperial Federation by resorting to more or less pressure upon its intended members might be the shortest road to disintegration. Only the wisest and most fortunate statesman could succeed in so great an undertaking, and even then India and South Africa would probably still remain sources of anxiety to the Imperial Parliament. Nothing, however, will better familiarize the public with the question than open and free discussion of its possibility, and a due recognition of the difficulties in the way of an Imperial Federation will be the first step to its realization.

THE *Nichi Nichi Shimbun* contains the following interesting note:—"In our issue of the 24th ultimo, we stated that His Imperial Majesty the Emperor gave audience, the 16th of the same month, to the Honourable Sir Francis Plunkett, and requested him to convey to H.R.H. the Prince of Wales His Majesty's wish to present the Grand Cross of the Chrysantheum to His Royal Highness. Information now reaches us that the Emperor, on the same occasion, intimated his intention of commissioning H.I.H. Prince Komatsu to convey the Order to England and present it to the Prince of Wales. We also learn that the Prince of Wales has replied, expressing his pleasure at becoming the recipient of the highest honour Japan has to bestow, and also his satisfaction that it should be placed in his hands by such a distinguished Envoy as Prince Komatsu.

An accident of a very serious nature occurred last week in connection with the work of breaking up the wreck of the *City of Tokio*, which steamer, it will be remembered ran on shore near Cape Sagami some months back. Considerable quantities of dynamite are employed to assist in reducing to moveable dimensions the massive framework, &c., of the sunken vessel; and it appears that one day last week while, as it is stated, work was being carried on as usual, a quantity of dynamite exploded accidentally. The result naturally was disastrous. The boat or lighter on which the explosion took place was smashed to fragments and of the men on board at the time four were killed outright—and bodies in most cases being shockingly mutilated—and about twice as many more were seriously injured.

THE American ship *Snow and Burgess*, from Philadelphia for Hyogo, passed New Anjer on the 12th July, and is now due. The *Mabel Taylor* passed on the 15th for same destination.

change must necessarily be a change for the better. The Republican form of Government has, however, far greater vitality still than its enemies are willing to give it credit for; and its interests having in the course of the last fifteen years become intricately interwoven with those of the people, it will in the hour of France's need find many and resolute defenders throughout the country.

SCOTCH statistics for 1885 show that the most virtuous part of the kingdom was Ross and Cromarty and the most abandoned, Banff. In the former, out of every hundred children born, 4.7 were illegitimate, and in the latter the percentage was 17.1. In five out of the ten counties the percentage ranged from 4.7 to 6.1, and in the remaining five, from 14.8 to 17.1. The meaning of the figures for Banff is that in every group of six persons there is one known bastard. The *Pall Mall Budget* carries this calculation a little farther. Assuming that the immorality of Banff has remained nearly the same for three generations, it appears that, since into the three couples formed out of a group of six persons one bastard must enter, the chances are that of every three children born either the father or the mother is illegitimate. Going back yet another generation, it will be seen that two out of every three children have a bastard grandfather or grandmother; and if another step be taken, it results that every child in Banff has a stain in its genealogy within three generations. The undoubted fact that in many families immorality is unknown only multiplies the chances of illegitimacy for those without the pale. "Taking Scotland as a whole, with its 8.46 per cent. of illegitimate children born last year—that being under the average of the last thirty years—it means that one out of every twelve of the whole population is registered by its father or mother as illegitimate. Recollect that this shocking proportion is the lowest possible amount, for had any of the people who registered an illegitimate child's birth merely said its parents were married, it would have been registered as legitimate."

WE recommend people who use Japanese stamps to be very particular not to mutilate them in any way. A letter recently reached us carrying a two-sen stamp of which a fragment had been accidentally torn off either in the act of affixing the stamp or in separating it from its fellows. The missing portion was very insignificant. It did not extend to the oval belt in the body of the stamp or even to the whole of the figure at one corner. In short such a tiny fragment could never have carried a postmark. Nevertheless we were obliged to pay a fine of 4 sen on account of the defaced stamp. The Post Office folks have their rules, and are doubtless right to enforce them rigidly. But the public may just as well know that to use a stamp with a jagged edge entails a fine equal to double the amount of the stamp.

NUMEROUS as falling stars are, we had never heard of a man being struck by one until the following communication appeared in *The Times* of June 17th:—"As a gentleman, a well-known public official, was passing from St. James's Park into Pall-mall by the garden wall of Marlborough House on Saturday last, at a quarter to seven in the afternoon, he suddenly received on the right shoulder a violent blow, accompanied by a loud crackling noise, which caused him

great pain and to stumble forward as he walked. On recovering his footing, and turning round to see who had so unceremoniously struck him, he found that there was no one on the pavement but himself and the policeman on duty at the park end of it. On reaching home the shoulder was submitted to examination, but nothing was at first discovered to account for the pain in it. But in a little while the servant who had taken away the coat to brush brought it back to point out that over the right shoulder the nap was pressed down flat in a long, straight line, exactly as if a hot wire had been sharply drawn across the cloth. The accident is, therefore, explained as having been caused by the explosion of a minute falling star or meteor. It is an unprecedented and most interesting occurrence, and deserves, I think, to be placed on public record."

The editor of the *United Irishman*, whom the *St. James's Budget* calls a "crazy coward," who "has succeeded in palming himself off as an honest dynamiter (on some of the more credulous members of the Irish-American murder conspiracies, and thus undoubtedly at times knows something of the secrets of able and bolder ruffians than himself," declares that the rejection of Mr. Gladstone's Bill has been accepted by the Clan-na-Gael Brotherhood as an end of "the truce with England." This so-called "truce with England" is said to have been concluded a year ago at the prayer of the Parnellites, who pleaded that the Fenians should leave them free for twelve months in which interval they undertook to win a parliament for Ireland. The days of grace have expired; the parliament has not been won; the warfare is now to be renewed. If it is renewed, Ireland's chance of Home Rule will be reduced to a vanishing point. Lord Hartington says in his manifesto that if Ireland is to have Home Rule because the presence of her members in Westminster and the support they receive from a section of the English and Scotch representatives render legislation impossible, then "it is not a question of argument or negotiation, but of surrender." So, too, if Ireland is to be given Home Rule because without it arson and outrage cannot be restrained, then equally is it a question of surrender. But the people of England are not strong on surrender. It is not a favourite alternative of theirs.

THAT the practical element predominates in John Chinaman's character was never better demonstrated than at a recent trial in the Kandy District Court. A Chinaman sued a Singalese young lady for breach of promise of marriage. There was no romance at all about the matter. The lady had adopted foreign costume and contracted somewhat expensive habits. The Chinaman was a shoemaker. No love letters or cognate frivolities passed between the pair. It was simply a question of certain monies and goods delivered by the shoemaker to his inamorata "upon agreement that she should use the same in furtherance of her promise to marry him." She neglected the promise but "froze on" to the monies and goods, of which the schedule ran thus:—"In May last two runs of five rupees each; and again, on the 24th of the same month, twelve yards of velvet of the value of Rs. 25; six yards of lining of the value of Rs. 15; six yards of binding of the value of Rs. 15; and eighteen turtens of the value of Rs. 15; and Rs. 6 to pay the tailor for making

up a dress. Subsequently, on the 26th May, the plaintiff paid to the defendant the sum of Rs. 11." As for his lacerated feelings and impaired reputation, the Chinaman valued them at 190 Rupees, but he particularly desired that the lady should be compelled to restore the amount of the monies and goods. The decision of the Court is not yet known, but we trust that the Singalese Belle was not allowed to play fast and loose with poor John's belongings.

It is claimed by the *Révue Scientifique* that not to M. Pasteur or to any of his contemporaries is due the credit of discovering that zymotic diseases are produced by germs. The real discoverer was a certain Dr. Gouffon, who died at Lyons more than a century and a half ago. He recorded his opinion in these words:—"Minute insects or worms alone can explain these diseases. It is true they are not visible; but it does not therefore follow that they are non-existent. It is only that our microscopes are not at present powerful enough to show them. We can easily imagine the existence of creatures which bear the same proportion to mites that mites bear to elephants. No other hypothesis can explain the facts. Neither the malign influence of the stars, nor terrestrial exhalations, nor miasmata, nor atoms, whether biting or burning, acid or bitter, could regain their vitality once they had lost it. If, on the other hand, we admit the existence of minute living creatures, we understand how infection can be conveyed in a latent condition from one place to break out afresh in another." It is said that this opinion attracted considerable attention at the time. But the French Schools of medicine ignored Dr. Gouffon, and thus condemned the world to a century and a half of ignorance.

Writing under the head of "Russian designs in Korea," the *Nichi Nichi Shimbun* says:—"Our correspondent has sent us an important letter from Ninsen, Korea. Russia is reported to be fairly in earnest in demanding from the Government of Sôul a grant of land on the coast of Kankyôdô for the purposes of a naval dépôt. Rumours of similar nature had reached our ears several months ago, but until we received this letter we hesitated to give serious consideration to the matter. It now appears that these rumours were not entirely groundless. From the fact that Russian war-vessels visited the coast of Pak-chon twice in June last, on the last occasion carefully sounding the bay, and from the conversation that passed between the Russian commander and the Governor of Pok-chon, our correspondent concludes that the land coveted by Russia is situated on the coast of Pok-chon. The latter district is situated in about north latitude 40° and east longitude 128°, and is opposite to the promontory of Kinjôzan in Kôgendô, from which it is separated by a large bay in the form of a horse-shoe. On the coast of Pok-chon, the port of Chen-chimpo is said to be especially desirable, and it may be the object of Russian demands at present. But it is also reported that Russia desires Topy-onpo, which is situated opposite to Gensan, and it may yet be too early to decide which she really wants. It appears tolerably certain, however, that Russia intends to obtain a naval port on the coast of Kankyôdô. The arrival of twelve Russian men-of-war at the port of Gensan probably refers to the visit of the Russian Naval Minister. He started from Hongkong by the *Moscow* on

July 5th for Vladivostock, and it was said that on his way he would call at Port Hamilton and Gensan. It appears that in paying his visit to Korea, he had a more or less distinct object in view. Not only to Korea, but also to China and Japan, is the Russian occupation of a Korean port extremely inconvenient; but from a Russian point of view, this step is only natural, especially when we remember that England has furnished Russia with a tolerably good excuse by her occupation of Port Hamilton. About a month ago the boundary complication between China and Russia was reported to have assumed a serious aspect, but the declaration of the Russian *Official Gazette* has put an end to all apprehensions in that quarter, for the present at least. It is universally expected, however, that sooner or later England and Russia will come to blows. Recently the proclamation of the Russian Emperor to the Black Sea fleet on the occasion of the launching of ironclads at Sebastopol, attracted the attention of Europe. The *Times* commented on it, and remarked that the Czar meant it as a rebuke to Prince Alexander of Bulgaria, as a warning to the Porte, and a defiance to England. Thus, both for defensive and offensive purposes in the East and West, Russia has special reasons at present for desiring to possess a good naval port in Korea. In all probability we will soon be in position to judge whether the report of Russia's determination to take such a step is well founded or not.

TELEGRAMS received at the American Consulate-General report the loss on Kunashiri, one of the largest islands of the Kurile group, of the *Dacota* (Albert Nelson, master) owned by A. R. Falson & Co., while on a voyage from San Francisco, to Nicolajefski, in Russia. The crew were all saved uninjured, and brought in a Japanese vessel named the *Zinsoku Maru* to Nenuro, the 7th instant, whence they were despatched the following morning in the *Gembu Maru* to Hakodate. This is probably the vessel of the name that appears in the shipping list as a schooner of 335 tons, owned in San Francisco. The casualty took place on the 19th of last month, the ship striking a reef off Alôya. The crew appear to have been compelled to remain on the island for over a fortnight, but they could hardly want for food or shelter, the settlement of Shishiki being situated on the east coast, while another settlement, Tomari, lies at the southern extremity of the island, almost within sight of Nenuro. Kunashiri is separated from Yezo by a channel, which is about nine miles wide in the narrowest part, and the end of Yezo forming a deep bay, the south-eastern part of Kunashiri advances very far into it, so far indeed, that Cape Noyshaf, the eastern extremity of Yezo entirely hides the strait, and from this cause Yezo and Kunashiri have often been mistaken for one island.

THE Sanitary Office which, as already reported, has been established in connection with the Settlement Police Station, has now its share of cholera cases to deal with, and it may not be amiss to point out to the public the propriety of immediately reporting to that office the occurrence of cholera cases in the Settlement. Under the charge of Chief Inspector Nosse, a complete staff of medical men (including Drs. Wheeler, Eldridge, and Van der Heyden) sanitary officers, &c., has been organized, and is ready at any moment to deal with cases that

may be reported. Not only is it necessary to give immediate notice in the event of a cholera attack: the public should note the extreme danger which must attend any unauthorised removal of a patient or of infected matter or objects. By promptly reporting to the office any seizure accompanied by cholera symptoms, such as vomiting, not merely will the instant attendance of skilled physicians be secured; but in addition, all that human science can do will be done to prevent the disease spreading. It is hardly possible to insist too strongly on the urgency of the duty which is laid on private persons in this respect.

In Mexico there is a religious sect called "Penitents." They are Christian, but as to the particular tenets of their faith, no information is forthcoming. The sect comprises men only, and these during Eastern Week undergo a penance of the most terrible nature. A correspondent of the *Spectator* sends the following account, having himself lived in Mexico and been an eye-witness of the scenes which he describes:—

The only outward sign of the order is the torture endured on Wednesday, Thursday, and Friday in Holy Week. The pressure which has been brought to bear upon the self-appointed victims, has driven the devout little band that still holds out, to perform their penance in as quiet and unostentatious a way as possible. In days gone by, the procession used to be formed in the main streets of the towns, and move slowly—to the sound of music, and labouring under the burden of heavy crosses which strained the heart sometimes even to bursting—to the holy symbol before which the penitents were to imitate the suffering of their Master. Here the bearing of heavy crosses, and scourging are the only two tortures now used; but further south the path is strewn with cactus, and the penitents are tied to, and left to hang upon, the cross for hours. Many and many a time death has been the result. There is, close here, a mud house in the shape of a coffin, that used to be the scene of the scourging. One devotee lay down in the doorway, and begged every one to step on his already mutilated body in passing in and out. In the night he was carried away for burial. Now, in each Mexican settlement here, a little leg but plastered with mud is the unpretending building which shelters the sufferers in the intervals of prayer which fill up the holy days. Good Friday is, of course, the last and greatest of the three. This year, the sky was gloomy from early morning, and became darker as the hour of the solemn rites approached. It was not till late in the afternoon that we reached the scene, which has made a deep impression on my mind. We rode from the town to the settlement, some two miles away, through a heavy rain, which made everything look doubly gloomy. Just as we reached the top of a little hill which overlooks the spot, the solemn procession issued from its humble church, and passed through the line of burden-crosses stacked by the side of the path. The scene was impressive in the extreme. The clouds were now black as night, the thunder rolled incessantly, and the lightning flashed over the great cross, set on the barren slope of a still more barren hill-side, towards which the penitents were moving. As we watched, the unhappy penitents, masked and wearing nothing except their white drawers, their backs already streaming with blood, moved very slowly through the cold, drenching rain. Every one was attended by two men, who continued a ceaseless, low and solemn chant. At each alternate step, the penitent swung over his shoulder a heavy scourge of cactus and cutting grass, which fell, each time, with a sharp report that we could hear far off, making the blood fly from the old wounds. This they continued all the long two hundred yards to the cross, and back to the church. Then they would go again over the same course, staggering under a burden almost, if not quite, more than the heart could bear without breaking. The sight was too sad to make us wish to see it all, but we came away deeply impressed by the fact that among the ignorant and despised there are many who—however, mistakenly—willingly, gladly, because they think that Christ approves it, go through—even in some cases to death—what we should not dare to face.

THE new French Minister to China does not bring with him a reputation of the most helpful kind. The Paris correspondent of *The Times* speaks thus of him:—"Evidently those who send M. Constans to Peking suppose that the Chinese are still barbarians, for whom the West is a region entirely unknown. I believe that they are wrong; that the Chinese Government

knows M. Constans quite as well as people here do, and that if it accept him, it will do so with that silent disdain of the men of the extreme East, among whom Europeans are looked down upon as inferior creatures. I have no desire, for the first time in my life, to be personal, but the stupefaction and incredulity with which the appointment has been received by the Republican newspapers of nearly all shades are a proof how it has surprised all France. M. Constans was in the first Freycinet Cabinet, and was Gambetta's tool in ousting M. de Freycinet on the Monastic question—then at its climax. What M. de Freycinet said six years ago of the colleague who had betrayed him, and who he now sends to Peking, is best left in the background; but this is another instance of the abandonment of the Government to personal considerations. M. de Freycinet sends to Peking the man whose subterranean working he dreads, and whose former blows he recollects. Yet nobody knows better than himself, from his own experience and from his observations of others, how difficult it is to learn diplomacy, at once a science, a tradition, and an instinct. The Paul Bert experiment in Tong-King, does not recommend a second essay at Peking."

It was a happy chance that made an artist of M. Remenyi's force the means of introducing the beauties of the Western violin to His Majesty the Mikado. The concert alluded to in a previous issue—the first concert ever given by foreign musicians at the Imperial Palace, and in the Emperor's presence—came off Tuesday at 3 o'clock. Through the sympathetic exertions of Count Zalusky, the Austro-Hungarian Minister, on one side, and the kindly interest of His Excellency Count Ito, on the other, M. Remenyi enjoyed an honour which had not previously fallen to the lot of any Western musician. We hope hereafter to give a detailed account of the affair, and we accordingly confine ourselves here to stating that it was thoroughly successful. The Emperor and also the Empress were visibly impressed by the magic of M. Remenyi's bow, and more than once graciously expressed through Count Ito their pleasure. M. Remenyi played, with great effect, a national Japanese hymn of his own composition; not, however, before the Emperor, with that courtly courtesy which the Japanese know so well how to practise, had intimated his desire to hear first the national hymn of Hungary. The great violinist was admirably accompanied by M. Sawlet, who also earned well merited applause in a pianoforte solo. After the concert, M. Remenyi was presented with a very handsome lacquer box as a token of the Imperial satisfaction. A more suitable gift could not have been bestowed, for M. Remenyi is an ardent and appreciative admirer of art in every form.

MR. REMENYI'S farewell concert on Wednesday will leave pleasant memories with those who have attended and admired the performances of this undeniably great artist. The programme was varied so far that two lady amateurs and Mr. G. Sawlet appeared to assist the maestro in his last concert, one lady singing Mendelssohn's song "Suleika" and the other Braga's "Angel's Serenade," both accompanied by M. Sawlet, while the latter piece was enriched by a violin obligato played by Remenyi himself. In the second part the duet "Kreutzer Sonata" (andante and finale) of Beethoven played before

A FELLOW-PASSENGER of Maxwell the murderer, when the latter, flying from justice, embarked at San Francisco in the *City of Sydney*, sends the following to the *Pall Mall Budget*:—"The murderer Maxwell took a ticket for San Francisco, whence he sailed for Auckland in the *City of Sydney* on the 12th of April. I was a passenger on board the same vessel, and made the acquaintance of Maxwell very quickly. Of course no one on board had at the time heard of the murder. Maxwell introduced himself as a French officer of the Guard, and called himself D'Arguer. He gave us vivid accounts of his adventures during the Franco-Prussian war, and especially at the battle of Gravelotte, where he said he had been wounded. As a companion he was extremely interesting, and was always the centre of a group of passengers, ready to discuss every topic from theology to war. In manner he was very much of a Frenchman—bright and quick. He seemed to possess considerable mechanical ability, and had in his pockets all kinds of implements. Socially, he spoke more of England than of France, and often referred to excursions he had made on the coast of North Wales and to interviews he had had with Sir Watkin Williams Wynn and other local personages. He kept up his assumed character as a Frenchman all through, and always spoke in broken English even when in the middle of a heated argument. As Bret Harte says, 'his views of heaven were very free,' and gave much offence to a lot of Baptists and Presbyterians from Canada. Two members of the Salvation Army on board attacked him with tracts, and he replied by offering them some of Voltaire's works."

The statistics of Russian railways offer a good illustration of man's faith in this developer of prosperity. Of all the lines constructed throughout the empire, only 27 per cent. are self-supporting. The rest could not exist without State aid. Compared with other countries, passenger traffic is still very small. The best return is on the Petersburg-Moscow line, which carries 1,503 persons annually per verst. On the lines which receive State aid, the working expenses amount to 63 per cent. of the receipts, whereas the average figure on private lines elsewhere is only 47 per cent. Indeed it is generally known that the people interested in these lines find their account in keeping up the working expenses and giving themselves no trouble about the debt to the State. The capital expended on railroad construction in Russia is eighteen hundred millions of dollars (approximately), of which sixteen hundred are guaranteed by the State. Unfavourable as these figures seem, there can be no doubt that the railways are gradually developing the resources of the empire, and that their burden to the Treasury is yearly diminishing.

THE *Pall Mall Budget* is a remarkably shrewd political prophet. We have had many examples of its perspicacity but none more signal than its predictions about the elections just concluded. For, in the first place, it foretold a defeat for the Gladstonians, and in the second place it foretold a victory for the Conservatives. The two things are by no means synonymous. The Conservatives might not have gained a single seat beyond the two hundred and fifty-two which they held in the last Parliament, and yet Mr. Gladstone's cause might have been utterly lost. Many,

indeed, supposed that the contest would chiefly lie, not between Tories and Liberals, but between Gladstonians and Whigs. The *Pall Mall Budget* knew better. It announced in the most emphatic terms, "he who is against Mr. Gladstone is for Lord Salisbury \* \* \* Mr. Chamberlain is against Mr. Gladstone, therefore Mr. Chamberlain is for Lord Salisbury. All the Paper Unionists are for Lord Salisbury. They will put him in power; they will have to keep him there." These words were penned, June 16th, and on July 30th Lord Salisbury's Cabinet was an accomplished fact.

Removes of aggressive activity on Russia's part in Korea are again rife. The correspondent of the *Nichi Nichi Shinbun* refers to them in detail and with apparent confidence as to their truth. In February or March last, he writes, the Russian Representative in Seoul applied to the Korean Government for a lease of certain land in Kankyo, to be used as a Russian naval depot. Confronted by this inconvenient request, the Korean Government took refuge in silence. By and by—and this brings us to a recent date—the Russian Minister, becoming impatient, demanded an answer within a fixed period, and is said to have preferred the demand in such a manner as to leave no doubt that he expected a favourable response, and that, in the event of his expectation being deceived, the Russian flag should be hoisted in the desired position without further ado. Of course the exact details of the negotiation and the precise spot coveted are diplomatic secrets, but the *Nichi Nichi's* correspondent conjectures that Peking in Kankyo is the place in question, inasmuch as a Russian war vessel paid a visit there twice during June, and on the second occasion took careful soundings of the harbour. Nay, more, the Russian commander is said to have entered into communication with the Governor of the district, and held language pointing to the opening of the port in the near future. But whether these particulars be altogether correct or not, there is no doubt that the mild of Korean officialdom is greatly perturbed with regard to the affair, more especially as things assumed a very practical complexion, the 15th of July, when twelve Russian ships of war were reported to have entered Gensan harbour.

It is noteworthy that despite the very guarded language of the *Nichi Nichi Shinbun's* correspondent, and despite his avowed inability to guarantee the accuracy of his details, he gives a verbatim report—rumoured, of course; everything is "rumoured"—of the conversation which took place between the Russian Commander and the Governor of Kankyo. Translated, the dialogue reads thus:—Governor—"To what country does your vessel belong, and for what purpose has she come here?" Commander—"She is a Russian ship of war. I presume you have already heard of her recent entry into the port of Shimo (新浦)?" Gov.—"Shimo is near enough to be seen from here. What business has necessitated your second visit to this coast?" Com.—"On the occasion of my first visit I failed to procure an interview with you, so I have come again, this time bringing an interpreter." Gov.—"Is there a commander in the ship?" Com.—"I am the commander." Gov.—"How many men can your ship carry?" Com.—"Two hundred. How far is Seoul from

here? Will our coming be reported there?" Gov.—"The road is very mountainous and circuitous. The report of your coming will be forwarded, in the first place, to the Local Government and thence transmitted to the capital. Have you a permit from the Central Government?" Com.—"A permit was obtained, but it has been sent to the chief of the Local Government." Gov.—"Since your ship came, your people have been taking sounding in the port. With what object do they do so? Is such a course sanctioned in your permit?" Com.—"England and my country have been at war several times, and it is apprehended that a naval contest may be engaged in by them in the future. It is therefore necessary for us to be acquainted beforehand with the nature of the coast. We desire to have this port thrown open to us. What do you think of such a measure?" Gov.—"The opening of a port is a serious matter. I cannot act without instructions from my Government." Com.—"Your countrymen constantly visit our territories and are permitted to settle there without opposition. Why do your authorities impose restraints upon us when we wish to do the same here?" Gov.—"The laws of Korea are very strict in that regard. I cannot discuss the point with you."

TRIAL by jury, that beautiful relic of barbarism, makes daily parade of its excellencies. Its latest performance in this line was in the Criminal Court at Chicago, when eight ringleaders of the bomb-throwing anarchists were arraigned. The Court proceeded to empanel a jury, but as each man came up, some objection presented itself. One was a coloured person; another was suspected of socialistic tendencies, and a third was supposed to be prejudiced. This last difficulty was of perpetual recurrence. For every one had read the newspapers; every one was acquainted with the harrowing details of the savage assault on the police, and every one heartily sympathised with the conspicuous gallantry of the constables. How could unprejudiced jurors be found under these circumstances? Not so much as one man was discovered during the first two days, and it was expected that a fortnight would have to be devoted to the task of procuring twelve impartial citizens. The more illiterate and the less enquiring a man is, the better juror does he make. In the old feudal days, when might openly held the place of right, men naturally preferred the opinion of twelve of their own peers to the prejudice of an interested judge. Will any lover of the "palladium" tell us how a jury promotes the interests of justice to-day. Is it by substituting the passions, prejudices, and inexperience of the populace for the calmness, impartiality, and trained acumen of highly educated judges?

M. LESPICULT has propounded the theory that the broad, dark bands seen upon the surface of the planet Mars are not seas, as has hitherto been supposed, but forests. Some scientists have considered these bands to be canals, but it is difficult to think that the inhabitants of Mars can have dug canals more than a thousand miles long and fifty miles wide. Equally difficult is it, say others, to imagine that seas could have outlines so perfectly regular as those of the bands. The people of Mars have to endure terrible variations of temperature. Their planet gets twenty-six million miles nearer to the sun in summer than in winter. What this means

will be understood when we remember that the greatest difference between the earth's winter and summer distances is three million miles. Even in the dog days, however, it must be horribly cold on Mars, for the planet is then 126 millions of miles distant from the sun. The idea of M. Lespaul is that the inhabitants in past generations cut down all the trees for fuel, and that the provident Government has undertaken the replanting of the planet on a colossal scale, not only to obtain the means of lighting fires, but also and chiefly to maintain the rainfall. How little we know about the companions of our earth! Mars never passes closer to this globe than thirty-five millions of miles. Fancy trying to detect the difference between seas, forests, and canals at that distance!

FROM the 61st annual report of the Scottish Union and National Insurance Company, we learn that the total amount of the funds, 31st December, 1885, was £3,284,297, the gross income in 1885 being £741,400; new life assurance proposals for 1885 numbered 1,232, for £674,975; new policies issued numbered 1,065 for £549,751; claims on death and maturity of policies amounted to £211,701; the fire premium income of 1885 was £208,232; and the whole fire losses and expenses were £185,759. The year's balance of fire profits, together with interest upon the shareholders' funds, amounted to £44,017; out of which a dividend of 14 per cent, was declared, the balance being carried to the reserve. The net fire reserve, after providing for the dividend, was £180,883, and the whole funds at the credit of the shareholders, £503,014. The life assurance funds at the credit of the life policy-holders amounted to £2,742,660. The report referred to the additional powers obtained from parliament under the Company's Amendment Act, which has just been passed; to the sound character of the investments; and to the large bonus (£2 percent. per annum) appropriated to the policy-holders last year. The report also showed that the life funds, which had increased by £480,000 since last valuation in 1880, and by £906,000 since 1876, amounted in 1884 to £2,590,011; and that the immediate value of the whole liabilities was £2,289,099; leaving a surplus or profit on life business of £300,311.

THE death of Mr. Lee, of Messrs. Walsh Hall and Company, ought to have considerable significance for those who hold that the pestilence now raging in Japan cannot be true Asiatic cholera, since, if it were, foreigners would not enjoy such remarkable immunity. The cases of the two engineers of the Japan Mail Steamship Company, supplemented by that of Mr. Lee, show that, whatever name be given to the disease, it is at all events as swiftly fatal as the worst type of cholera. Mr. Lee complained of nausea at 5 o'clock in the evening, and at day-break he was cremated. He was unfortunate in this—that the early symptoms of his disease were not sufficiently acute to inspire alarm. When he first felt ill, he sought medical advice, and received some medicine which was evidently administered without any suspicion of the real nature of his attack. His condition then went home, and it was not until some hours later that Dr. Van der Heyden was summoned to see him for the first time. The patient was then beyond the reach of medical skill. Dr. Van der Heyden at once pronounced

his case hopeless. It is said that Mr. Lee was very fond of Japanese diet, and this may possibly have predisposed him to the epidemic; he had also been notably rash in consuming quantities of unripe fruit. His body was cremated with the consent of his friends.

THE *Hongkong Telegraph* of the 2nd instant says:—Telegraphic information was received in the Colony yesterday of the total loss of the German steamship *Prinz Albrecht* in the Mediterranean Sea. The *Prinz Albrecht* was out here last year as one of the Union Line, consigned to Messrs. Russell & Co., but as that firm have received no advices concerning the last voyage of the steamer it is believed that she was bound for Vladivostok when the casualty occurred. The *Prinz Albrecht* was commanded by Captain Eckert, and probably left Hamburg early in July.

We recently noticed some farwell presentations to Mr. Alexander, for many years Professor of Civil Engineering in the Kôbu-dai-gakko, made him by his colleagues and pupils. On Thursday morning he received parting gifts from the President of the Imperial University, and in the evening was entertained at dinner in Ueno by the Vice-Minister of Education, and by the Director of the Engineering College of the Imperial University. Mr. Alexander will, we hope, bear with him happy memories of his stay in the East.

When it had become manifest that the expulsion of the French Princes could by no means be avoided, the Princes themselves and their friends ceased to preserve a silence that had been mainly inspired by the fear of furnishing weapons to men who would only too eagerly avail themselves of any false step taken by the members of houses formerly reigning in France. The more certain it became that the decree of expulsion would be pronounced against them, the less reason there existed on the part of the Princes to continue silent on a question affecting them so closely. Consequently, the Republic and its partisans have had to hear a great deal of truth, interesting, perhaps, but certainly exasperating. Prince Jerome Napoleon, the present head of the Bonaparte family, wrote a letter addressed to the Deputies in Paris which did not serve to increase their reputation as statesmen. He commented severely on the sudden discovery made by them that he was a Pretender, and expressed his surprise that the marriage of the daughter of the Comte de Paris should have been able to transform him so rapidly from an unoffending citizen of the Republic into a rebel dangerous to the State. He stated that he would cheerfully condemn himself to all the bitter sufferings of exile, if thereby he could but aid his country or unite his fellow-citizens. The danger to the Republic, however, does not, according to him, lie in the fact that a few princes yet breathe their native air, but has to be sought in the errors of legislation and in the desire of certain parties to profit by them. The constitution of the Republic has by a reactionary Chamber been so changed as to be a suitable foundation for royalism. When the country had heartily embraced Republican principles and when Republican Deputies held unswerving fast by them, it is not to be wondered at that they should have introduced an honest Republican constitution, preferring to use the one then in existence for purposes of Jacobin oppression. "During fifteen years," he adds, "you

have declaimed much, over-thrown many ministries, and lavishly distributed offices, purifying the administration without ever resting, but by what social reforms have you even justified your power? You have not been able either to respect or to abolish the concordat; you have not been able either to remain free traders or to become protectionists; you have shown no talent either to reform or to alleviate taxation; you have failed either to allay international enmity or to secure alliances. On distant coasts you have thrown away our money and our blood; you have shaken the existing order of things without being able to create a new state of affairs rightly demanded by the democracy of to-day. Everywhere we hear the cries of suffering material interests and of threatened religious and philosophical convictions. Can our exile better the constitution or make you wiser? No; the injustice done to us will only increase your embarrassments. Man may be able to prevent the beginning of a matter, but he cannot, when a matter is once fairly started, avert its consequences. One exile will produce another and make it necessary. You announce that you aim but at the person of the Princes, and forthwith the confiscation of their property is demanded. Soon there will be a clamour for the banishment of their adherents. After the so-called enemies of the Republic have been exiled, there will be measures against the lukewarm friends of the present form of Government, and by an inevitable and resistless process you will arrive at the law of suspects, at terrorism, and civil war. One hope remains and cheers me. The people are here, the great and good people of France, whose hearts and common-sense cannot permanently be led astray. The people will not hesitate to recognize their true friends. To-day you are tolerated; to-morrow, unless you reform your ways, you will be sent away and the right will have been vindicated." Of the same prince it is related that, when informed that expulsion had become inevitable and would receive the sanction of the Senate, he merely replied: "I shall soon return to save those who have prosecuted me from being guillotined by their friends of to-day." The attitude of the monarchical parties has become more determinedly hostile than before, and the real or pretended fear of a Socialistic Republic and a Jacobin reign of terror may influence many quiet and peace-loving *bourgeois* to vote for Monarchical rather than moderate Republican candidates. Rumours, such as were recently circulated in Paris—that the commander-in-chief of the troops in Algiers and Tunis is planning a *coup d'état* and is aspiring to the rôle of General Monk—cause additional disquiet, and increase the uncertainty as to the future. As in all European States, there is also in France much that is unsatisfactory. The unfortunate political constellation in the Chambers which gives the smallest party, the Radicals, the balance of power; the unsettled relations between Church and State; the preaching by the Republican party of free trade at Bordeaux and Lyons and of protection at Rouen and in Northern France; the isolation of France in Europe and her diplomatic and military reverses in Egypt and Tonquin; the unsettled state of army organization, and the heavy taxation resting upon the peasants, together with the general depression have caused many conversions to monarchical principles and have led many to think that any

Original from

by M. Remenyi and Mr. Luckstone, was cordially applauded, as indeed all the pieces were. At the close M. Remenyi gave his beautiful introduction and improvisation on the "Carnival of Venice" after which he played, in answer to an enthusiastic recall, "Rule Britannia."

It has probably occurred to most people that the whistle of the wandering shampooer is not all that could be desired in the matter of music. An amusing incident occurred during the same evening's concert. M. Remenyi, in the middle of one of his most touching passages, was suddenly startled out of all equanimity by one of these instruments. He stopped, closed his eyes in despair, then turned an angry look in the direction whence the strident shriek came, and could only take up his theme after the offending *amma* had passed out of hearing.

The *Nichi Nichi Shinbun*, writing on Imperial Ordinance LXI., imposing customs duties upon *saké* manufactured in Korea and imported into Japan, says:—Not long ago a Japanese, after consultation with his friends at Fusan, in Korea, and obtaining the coöperation of certain Koreans, commenced the manufacture in Korea of *saké*. The import into this country of the liquor so manufactured is reported to have been rapidly increasing. Some time ago foreigners attempted to start distilleries in Tōkyō and Niigata, but by diplomatic interference they were promptly stopped. On the present occasion the Government, acting within their powers, have very justly put a duty on the imported article in order to prevent dishonest distillers, whether Japanese or foreigners, from taking advantage of the home manufacturers and merchants. We trust that in future the Government will be equally prompt in protecting home interests from similar dishonest attempts.

The frenzied abuse which betrays a rotten cause is familiar enough at this end of the world. We know what is meant by the diurnal invective of men in desperate circumstances, whose only hope is to convert their pen into such an instrument of slander and scandal that the price of its silence may save them from insolvency. But we could scarcely have believed that the hottest wrath of party strife could wring from a journal like the *St. James's Budget* such an extravagant and demented attack as the following:—

Having well-nigh done all that he can do, or will be permitted to do, for the ruin of the country, Mr. Gladstone is now employed in destroying the last remnants of his own character. There were millions of men in England who believed him both wise and noble; of these, few remain who think him wise, and at this rate none will be permitted to believe much longer that he is at any rate a high-minded man. Years and years ago we found out that he was neither one nor the other; and ever since he has lived for little else than to prove the justice of an opinion originally based upon the discovery of those fatal faults, intense egotism and an utter want of veracity.

But though the real man became clear enough to any discerning eye long ago, yet, had it been his good fortune to die only four, or five, or six years since, not only would the country have been spared injuries irreparable and many a disgrace, but he would have been living to-day in the minds of most of his fellow-countrymen as one of the wisest and noblest of Englishmen. A very blessed ignorance it would have been for us; while for him, if like other men in his position he thinks more of his place in history than of a few years of life, it would have been a gain inestimable. As it is, he has lived long enough to give the world such proofs of political ineptitude as have convinced thousands of the most unwilling, thousands of the dullest minds; and having done that, it is his punishment

to spend the rest of his days in revealing how poor, how false, how truly ignoble is his character as a man.

Not that when he was made to be his country's scourge was any cloak or concealment thrown over his true character. The man who wants veracity, the man in whom equivocation is so natural, so constant, and so active a quality that it is never absent from any word that he says or any thing that he does, warns the world against himself as clearly as if "Trust me not" had been written on his forehead at his birth. Had we lived in a land where and at a time when another sort of theology prevailed than that which forbids us to think such things, we might fancy our god laughing at the delusion that gave greatness or goodness to a character which had been not only sent as a scourge, but marked for what it was by the plainest signs. None of these signs were regarded till all the mischief he could do had been accomplished; but it is something that he is being discovered at last. From what we must call crimes—such as the deliberate abandonment of the Tokagarrison to famine and massacre—he now descends to the smallest tricks of the election-booth; and we fancy the time is not far off when those who cling to him, or rather those who still cling to their delusions about him after the manner of the Tichborneites, will take another tone about him. They will still say that he was wise, and very good; that he was that he was so up to about the year 1885; but that time, age, and many a year of hard fighting have made another man of him. Impossible to believe in his wisdom any longer—even that he was ever the great statesman he was so long reputed to be. Events would have dispelled that illusion, even without such demonstrations as his late "statesmanship" have afforded. But a man may be noble and high-minded without being great; and all title to true greatness being destroyed, it is still possible to think of Mr. Gladstone as a naturally lofty character—in a decadence to be pitied rather than blamed. Let him, then, leave to his old and much-troubled admirers the comfort of thinking that. But this he will not do if he follows his present courses. Some of those about him are rejoicing over the ingenuities with which those courses are pursued. They chuckle over the alertness, the promptitude, the willingness, the resource he is now displaying; they are not his friends, or they are very blind ones. The more he is believed to know what he is about, the more is he in danger of losing the last remnants of respect amongst men whose delusions are not altogether discreditable to them.

According to official investigations published in the *Nichi Nichi Shinbun*, the following shows the extent to which the time at various places in the empire differs from Tōkyō time:—

LOCALITIES.	H. M. S.	DIFFERENCE.
Tōkyō	Noon	—
Niigata	11:57:09	2.51
Kyōto	11:44:02	15.58
Nagoya	11:43:28	11.32
Osaka	11:43:04	16.56
Hyōgo	11:41:44	18.16
Hiroshima	11:39:47	29.13
Kumamoto	11:23:47	36.13
Nagasaki	11:20:27	39.33
Naha (Okinawa)	11:11:40	48.20
Sapporo	0:06:25	6.25
Sendai	0:01:28	4.28
Hakodate	0:03:53	3.53

PERHAPS the *London and China Express* may be interested to know that in Japanese "Miya" means "Prince," and that to speak of "Prince Fushimi no Miya" is mere tautology. One would imagine that such a simple fact might have become known ere this.

THE Korean refugee Kim-yo-Kun who, it will be remembered, had been granted liberty by the Government to proceed to America within a certain time, or else be ordered to be sent to the Bonin Islands, having failed again to depart on

the expiry of the prescribed time, was sent on board the Nippon Yusen Kaisha sailing ship *Hidesato Maru* on Saturday afternoon. The vessel proceeded to Shinagawa the same day, and left for the Islands on Monday morning.

THE following subscriptions to the fund for relieving the families of sanitary officials, received at the Kanagawa Kencho up to yesterday evening, are acknowledged with many thanks:—

Already acknowledged	VEN:
Mr. K. C.	1,279
Messrs. C. P. Low & Co.	5
Mr. Kawai Tanneshichi	55
Messrs. Bavier & Co.	134
Messrs. Smith, Baker & Co.	35
Total	1,373

We are informed that in view of the introduction of the cholera epidemic in this settlement, the Governor of the Prefecture has established a Branch Sanitary Office in the compound of the Settlement Police Station. This we need scarcely say would much facilitate the work so that the necessary staff of officers could be sent to the house of a patient immediately on receipt of a report, to carry out the necessary measures.

M. REMENYI spent Wednesday the 4th instant at Tomioka where he was the guest of Mr. M. Kirkwood. During the evening H.E. Count Ito, who is staying at Tomioka, paid a visit to the great violinist, and listened with evident enjoyment and appreciation to several pieces. The whole party returned to Yokohama the following morning in Count Ito's steam launch.

THE *Nichi Nichi Shinbun* states that, at a meeting of sanitary officials held at the Home Office the 5th instant, it was decided to declare the capital an infected locality, and to report accordingly to the Minister for Home Affairs, who will in all probability issue a notification on the subject immediately.

AN American named Bob Coe (Coe), residing at the "Old Brown Jug" No. 81, was attacked by cholera early on Sunday morning. Drs. Eldridge and Rokkaku were summoned, and the patient was removed to the hospital at Nakamura, where he died at about 11 o'clock on Monday morning. The body was cremated and everything about the place thoroughly disinfected.

THE cholera returns for Yokohama on Saturday were:—New cases, 85; deaths, 33. Sunday, new cases, 59, deaths, 49. Monday, new cases, 53; deaths, 47. Tuesday, new cases, 39; deaths, 30. Wednesday, new cases, 45; deaths, 30. Thursday, new cases, 50; deaths, 33. Friday, new cases, 29; deaths, 16. Total, cases, 360; deaths, 238.

DR. D. BRAUNS, once a professor in the old Tōkyō Daigaku, and still an occasional contributor to the Transactions of the Asiatic Society of Japan, has lately been elected Professor of Geology in the University of Halle, where he has for some years been a "Privat-docent."

THE British barque *Guiana*, which put into St. John, N.B., for repairs while on a voyage from Hyōgo to New York, was surveyed June 7th and very considerable repairs recommended before she could continue her voyage.

We note that the monthly price list of Messrs. Maruya for July announces the publication shortly of a third edition of Dr. J. C. Hepburn's Dictionary.

UNIVERSITY OF ILLINOIS AT  
URBANA-CHAMPAIGN

*THE CONSULAR TRADE REPORT  
FOR HYOGO AND OSAKA.*

TO his Trade Report for 1884, Mr. TROUP, at the expense of labour which may be estimated from the result, appended a lengthy table showing the annual amounts of agricultural, mining, fishery, and other products, as well as of certain manufactures in eighteen prefectures about the Inland Sea. One hundred and eighty articles were enumerated, beginning with arrow-root and ending with willow baskets, and the dimensions of the table were such that its insertion in any ordinary publication became a printer's problem of no trifling magnitude. A departure so novel and so startling appears to have been altogether too much for the equanimity of the Foreign Office officials. To prevent any further impulses of zeal, they issued instructions limiting not only the number and the nature of the tables henceforth to accompany Consular Trade Reports, but also the dimensions of the Reports themselves. These instructions Mr. RUSSELL ROBERTSON, in his Kanagawa Trade Report, seems to have quietly, and in our opinion properly, ignored. But Mr. TROUP has evidently felt the chilling effects of such a pointed repetition of TALLEYRAND'S maxim. He has drawn in his horns, so to speak. His Report for 1885 is a succinct and comprehensive document within certain lines, but it is essentially the Report of an official who has learned by experience that to travel beyond the well-worn groove of traditional duty is to encounter censure not applause. We should have liked, for example, to hear how things have fared with the Osaka cotton spinning mill which Mr. TROUP described in his Report for 1884. We had hoped, too, that the excursion he took last year into the domain of purely Japanese commerce would have been followed up this year by fresh and perhaps more inviting labours. There is so much of interest and importance in the regions where Mr. TROUP'S Consulate is situated. There is the question of the Inland Sea carrying trade, the head-quarters of which may be said to be at Osaka. There are the industries and condition of Osaka itself. There is the Lake Biwa canal, about the purposes and progress of which the public has heard nothing authentic. There is the matter of freights and communications generally. There are the exhibitions in Osaka and Kyôto. There is the story of Osaka in connection with the floods and their consequences both as regards the soil and its tillers. There is the history of the damage done in Osaka and the steps taken to repair it. There is the state of the Osaka money market; the development of the system of credit; the re-

cord of the clearing-house and the general condition of commerce in that great city. There are the industries of Kyôto; the modifications they have undergone; the new departures that have been taken. There is the immense and vital question of the fall in prices, wages, agricultural profits, and the value of fixed property owing to currency contraction. These and a hundred other matters, all essential to a thorough understanding of the state of the country and the people, cry out in vain for investigation and record. But the official strait waistcoat is not to be unlaced. There must be no originality; no inspiration; above all, no zeal. The jaded intellect of Downing-street declines to be fatigued by exhibitions of Consular energy. The dimensions of Blue books are henceforth to be as the Median laws, and HER MAJESTY'S printers must not be perplexed by unaccustomed copy. We are not without the bump of veneration. We can respect and even admire conservatism. But we find it strange that while Lord ROSEBURY sits in his office penning despatches intended to stimulate the interest and efforts of HER MAJESTY'S Diplomatic and Consular officers on behalf of trade, the staid routine of his own Department should protect itself against radical shocks by issuing instructions of a diametrically opposite tendency. Does it ever occur to the authorities in Downing-street that the British merchant does not want to be officially informed how many bales of grey shirtings were imported or how many piculs of tea exported at a particular settlement in China or Japan during a certain year? All this information he possesses at least six months before it finds its way to Downing-street. If such statistics are needed for national purposes, they could be amply furnished in a summary of very small dimensions. But the British merchant does want to hear something about the state of affairs, commercial and agricultural, in the interior of China and Japan; about the tendencies of the people's tastes, the growth of their industries, the circumstances of their lives. At present Consuls waste their time working in a field which is already perfectly familiar to the merchant, instead of taking excursions into regions which are comparatively inaccessible to him, but which he would gladly explore if he had the leisure and the means. It seems to us that if, instead of calling on each Consulate for a report in stereotyped form, of limited dimensions and of invariable purport, the Consuls were invited to undertake investigations into subjects specially accessible to them and bearing directly or indirectly, upon commerce, industry, and agriculture, not only would really useful work be done and the interests of trade materially furthered, but we should avoid the silly spectacle of a number of highly trained, able officials compelled to follow a routine which reduces the value of their talents and attainments to a minimum.

As for the figures contained in Mr. TROUP'S Report, except where he states them in dollars, they are virtually useless. In converting silver into gold, he has taken the same rate—3s. 6d. per dollar—for 1884 and 1885; in other words, he has employed almost the minimum rate for 1884 and the maximum rate for 1885, so that his sterling amounts vary greatly from the truth. It will please the good folks at the Treasury to learn that the dollar was worth 3s. 6d. last year, since the fraud perpetrated by them upon HER MAJESTY'S officials in the East is thus reduced to two pennies in each dollar. But without doing any greater violence to the truth, they might have arranged matters more comfortably for their conscience by ordering the adoption of their own fictitious rates throughout. The resulting figures would not have been more valueless than the sterling sums in Mr. TROUP'S Report.

At Kobe, as at Yokohama, an increase in the bulk of the trade is recorded. It is a small increase—only \$419,429—and it stands entirely to the credit of exports. In fact, whereas exports increased by \$727,808, imports diminished by \$278,379. Cottons and woollens suffered most; sugar and kerosene, on the contrary, show an improvement. It is interesting to note how steadily the yarns of Bombay are ousting those of England. During 1885, the import of the former increased by 1,764,300 lbs., while that of the latter fell off by 1,859,500 lbs. This has long been foreseen and excites no surprise. What we have to note is Mr. TROUP'S shrewd observation that the movement has been helped by the appreciation of gold. The importer pays for his Bombay Yarns in silver. He therefore gets them cheaper—because of the relatively greater purchasing power of silver in a silver-using country—and he knows also the exact price for which he can sell them. But he pays for English Yarns in gold, which, to begin with, is worth more silver in England than in India at the time the yarns are purchased, and which, by its constant appreciation, is worth considerably more silver at the time the yarns are sold in Japan than it was when they were purchased in Manchester. We trust that the Yokohama Chamber of Commerce will collect a few of these pregnant facts as instanced in the trade of this country, and transmit them to the Bimetallic League, or to the great meeting of British Chambers of Commerce shortly to be held for the purpose of considering the silver problem.

# THE TÔKYÔ CHAMBER OF COMMERCE AND CUSTOMS DUTIES.

THE vernacular press recently published a copy of a reply said to have been made by the Tôkyô Chamber of Commerce to a question addressed to it by the Honorable Sir FRANCIS PLUNKETT. Sir FRANCIS is Chairman of the Tariff Committee in the Treaty Revision Conference, and an enquiry made by him, in that capacity, to the Tôkyô Chamber would necessarily be in the name of the whole foreign corps diplomatique. We welcome this new departure. That it should be a "new" departure seems strange enough, when the age of our intercourse with Japan is considered. Hitherto, however, the custom on the part of foreigners has been to avoid any reference to Japanese opinion in matters relating to commerce—a custom as inexplicable as it was discourteous. The views of such a body as the Tôkyô Chamber are well worthy of consideration, especially where the point at issue has at least as much concern for Japanese as for foreigners. There can be no doubt, we imagine, that the Tariff Committee acted wisely in placing itself in communication with the Chamber, and that the line thus indicated may be followed with advantage hereafter.

The particular question under discussion was the method of levying *ad valorem* duties. Should they be levied on invoiced values, or should market values be taken as the basis of calculation? The Tôkyô Chamber decides unequivocally in favour of the latter plan. The reasons of the decision are stated with thorough frankness. If merchants be left to fix by their own invoices the dutiable value of their goods—says the Chamber in effect—dishonesty is the inevitable result: the Customs are defrauded and public morality suffers. Now this is not a very savoury decision. It lays a rather sweeping charge at the door of commercial probity. Nevertheless, few, we imagine, will venture to deny that it is a true decision. A case very much in point comes to our memory. Early in 1882, negotiations between France and England had reached a stage which indicated agreement with regard to certain modifications of the tariff. The main feature of those modifications was a change from *ad valorem* to specific duties, and the spirit of the change was nominally liberal. The framers of the new tariff claimed that in no instance would their specific duties exceed the *ad valorem* rate previously charged, and that in several instances the importer would benefit. Now, how did French merchants behave under these circumstances? Did they postpone the business of importing until they could profit by the improved tariff? Not a bit of it. On the contrary, they used the utmost despatch to lay in stocks of imports before the new tariff should come into operation. During the first quarters of previous years, their imports of English goods had

averaged less than 80 millions of francs. During the first quarter of 1882, they imported 98 millions' worth. In fact, they increased their usual purchases by 25 per cent., thus taking the risk of disturbing the English market, of glutting the French market, and of consigning capital to temporary idleness. No one could suppose that the arithmetic of M. LÉON SAY and his colleagues was defective, and that, while promising a reduction of duties, they were erroneously contriving an increase. The alternative and inevitable inference was that the amount of the nominal duties leviable under an *ad valorem* tariff seemed of less consequence to merchants than the facility of evasion which such a fiscal system affords, and that French importers, seeing themselves about to be deprived of that facility, made haste to profit by the interval remaining to them. Speaking plainly, specific duties are designed to prevent fraud quite as much as to lighten the labour of the Customs officials. From a purely economical point of view no one advocates such a fashion of import. More especially, no one advocates it in these times when the tendency of prices is perpetually downwards. With every abasement of values, specific duties became more onerous. They can never be of constant weight. To levy them intelligently, it would be necessary to provide for their periodical revision, and we should then have a system which would create an ever recurring series of maxima and minima in the charges levied upon a country's foreign trade. Evidently such a system is opposed to all sound economic principles. With regard to *ad valorem* duties, on the other hand, no theoretical objection exists. They vary exactly as the value of the goods upon which they are levied. But they are open to the practical objection of injuring commercial morality. They offer a premium to fraud and misrepresentation. The Tôkyô Chamber of Commerce proposes to meet this difficulty by appointing a committee of merchants to fix duties on the basis of average market values during the preceding twelve months. To duties thus determined the Chamber naively applies the name of "*ad valorem*." But, in point of fact, the system suggested by the Chamber is a system of specific duties subject to revision every twelve months. The fundamental difference between an *ad valorem* duty and a specific duty is that the latter is constant, whereas the former varies with the market value of the goods. Abolish this difference in practice, and the terms become synonyms. By the Chamber's method the difference is wholly abolished. It is a foolish contradiction to speak of *ad valorem* duties fixed once annually and invariable throughout the ensuing twelve months. The essential feature of an *ad valorem* duty—the one feature which recommends it economically—is that such a form of impost adjusts itself exactly to every change in the market

value of a staple, and bears, consequently, an invariable ratio to that value. A duty fixed in January, for example, and levied unalterably until the following January, is a specific duty, pure and simple. It remains unchanged from New Year's day to New Year's day instead of from the ratification of a treaty to its revision. And it is subject to the grave, the fatal, objection mentioned above; namely, that it exposes commerce to a series of fluctuating imposts and corresponding disturbances. There is no element of stability. The Tôkyô Chamber of Commerce does not appear to have given much serious thought to this question. Had the members looked into the matter more closely, they would surely have endorsed the decision indicated by theory and practice alike in the West; namely, that the best possible form of impost is an *ad valorem* duty safe-guarded by checks, of which the principal is the Customs' right to fix the dutiable value of goods, and to take them over at that value should the importer decline to pay the revised duty. We do not expect that Japan will devise a way of evading difficulties which have baffled all economists in the West.

## THE DEPARTURE OF KIM-YO-KUN.

THE Korean refugee KIM-YO-KUN has at last been sent away from Yokohama. He had done his utmost to make mischief, and on the whole he may congratulate himself that the Government of Japan did not adopt a less sympathetic course towards him. His programme apparently was to procure postponement after postponement of the date fixed for his departure, and in the interim to render himself so obnoxious that the Japanese would be glad to get rid of him on any terms. The United States of America were the place of sojourn he particularly affected. But he desired to go there as a gentleman at large, with the means of living an irresponsible, leisurely life. At the very outset he had an opportunity of settling in San Francisco. A missionary society offered to receive and support him for a term of years, taking their chance of converting him. But KIM professed to think that to accept this proposal would have placed him under an obligation to become a Christian. So he declined, though it was fully explained to him that to purchase a proselyte was the very last thing desired by the missionaries. He had then to choose between two courses: either to find his way to America or Europe on his own account, or to submit to be sent wherever the Japanese Authorities might deem advisable. But he did not wish to choose. He preferred to have the choice made for him. Accordingly, he petitioned for an extension of the time within which he had been ordered to set out. His request was granted, and he then addressed himself to the press, obviously seeking to create an exaggerated notion of

the value to be put on his silence. It is not at all impossible that had he maintained a more discreet demeanour at first, official means might have been found to provide him with funds for his journey and subsequent maintenance. But his indiscretions—not to use a stronger term—effectually prevented anything of the sort. After various delays it became necessary to enlist the aid of the police. KIM was carried to an unoccupied residence of Mr. MITSUI, on Noge Hill, Kanagawa. There he continued his old devices, until the authorities, wearied out, adopted a firmer tone. He was informed, on the 1st instant, that if he desired to go to America, every facility should be offered; that the Government were even not unwilling to provide a passage for himself as well as for his four companions, and that certain Japanese merchants were endeavouring to collect funds sufficient to defray his travelling expenses as well as to support him for a considerable time beyond the water. But it was absolutely necessary, he was warned, that he should leave Yokohama by the next steamer to San Francisco. That steamer was advertised to sail on the 3rd. She did not leave till the following day, and KIM was not in her. In consequence of this fourth failure on his part to comply with the directions of the authorities, an order was issued by the Minister of State for Home Affairs, the 5th instant, to the effect that KIM must be removed to the Bonin Islands without further delay. The Korean did not approve of this destination. He seemed to himself to be another NAPOLEON. Indeed, his historical researches indicated the great Corsican's exile to St. Helena as the only precedent for the treatment he, KIM, was now to receive. Under the influence of this belief, and by the foolish advice of some Yokohama foreign friends, he addressed to all the Foreign Representatives a protest against the Government's action and an appeal for protection. He might as well have written to the POPE or to the QUEEN of Madagascar. The 6th instant came. KIM was informed that he should be conducted to a steamer at 4 o'clock a.m. the following morning. This same evening his friends, both Japanese and Korean, petitioned for a further postponement, on the plea that the collection of a sum sufficient to send him to America was now assured, and under the engagement that they would be responsible for his departure by the next American mail. The Government, we believe, were not unwilling to grant this petition, but their experience of Mr. KIM's ways was such that they required a written guarantee as to the certainty of his departure, and as to the collection of a sufficient sum to pay his debts in Japan as well as the expenses of his voyage; and they also required that his passage should be engaged forthwith and the ticket lodged with the Kanagawa Prefecture. Until 1

p.m. of the 7th instant was the interval allowed for the acceptance or rejection of these conditions. But KIM was resolved to make things as difficult as possible. A Japanese gentleman, well known in Yokohama as the president of a large firm engaged in the export trade, actually collected a sufficient sum and brought it to the refugee before the expiration of the appointed period. KIM, however, declined to accept the money, and intimated his preference to undergo whatever treatment the Government might determine. Accordingly, at 5 o'clock a.m., some officials of the Prefectural Office, accompanied by an Inspector of Police and several constables, proceeded to conduct him on board ship. The purport of the order for his removal, and the fact of his failure either to depart or to comply with the conditions under which an extension of time might have been accorded, were fully explained to him. The police were then about to execute the order when four Koreans, who were present in the capacity of KIM's friends, interfered and attempted forcibly to prevent his removal. The police ordered these combatant folks to leave the room, but they persisted in their foolish course until finally it became necessary to place them under restraint during KIM's journey to the ship. He proceeded in a carriage to Benten, and thence in a steam launch of the Prefectural Office to the *Hidesato Maru*, which was lying in the harbour. KIM's four companions were subsequently allowed, at their own request, to follow him to the ship, and one of them elected to share his voyage. The same night the *Hidesato Maru* weighed anchor and proceeded to Shinagawa, whence she sailed for the Bonins the following day. It is to be presumed that Mr. KIM will now cease, for some time at all events, to be an international nuisance.

#### MR. BLAINE'S STATISTICS.

IF it be any object with politicians—as we presume it is—to keep themselves prominently before the public, Mr. BLAINE's speech on Irish affairs has been very serviceable to him. It sowed the seeds of endless talk and controversy; gave his friends an opportunity to eulogise him, and enabled his enemies to assail him on new ground. But it owed much, perhaps the whole, of its success to accident. We doubt if the oration would have received the smallest attention at the hands of the public, had not the stenographer put into Mr. BLAINE's mouth abuse of Lord SALISBURY which naturally roused the anger of English journalists. Mr. BLAINE declares that he did not use the abusive epithets attributed to him, and his denial, of course, settles the matter so far as the epithets are concerned. The speech, however, was fairly introduced to the world's notice by its originally reported intemperance, and one turns to it with curiosity to see what it

really contains. In point of fact it has only one bit of meat, and that is statistical. Ireland, we are told, is not as large as the State of Maine. Yet she produces more than half the total quantity of potatoes grown in the United States; sends three quarters of a million cattle and as many sheep every year to England; grows eighty-two million bushels of oats, barley and wheat; pays England sixty-five million dollars of annual rent, and is taxed to the extent of one hundred and fifteen million dollars annually. Judged by the quantity and value of her productions, she ought to be wealthy, but in point of fact she is miserably poor, and Mr. BLAINE declares that excessive rent and taxation are the causes of her poverty. He does not seem to have studied the question very closely. The minimum total saleable value of Irish farm produce is £39,233,798—we take the returns of 1885—and the proportion of this paid to landowners is at most £9,000,000 per annum, or less than one-fourth. But in England and Wales, the landowners' proportion of the gross produce is more than one-third. Therefore, in point of rent, the Irish farmer is far better off than his English or Welsh contemporary. With regard to taxation, the case is still more striking. Let us compare Ireland with Scotland. The actual contribution of each unit of the Scotch population to the Imperial Treasury is 36s. 5d. The actual contribution of each unit of the Irish population is 11s. 5d. If, however, ample allowance be made for the greater wealth of Scotland, it will be found that every Scotchman ought to pay  $1\frac{1}{2}$  times as much as every Irishman. In reality he pays  $2\frac{1}{2}$  times as much. Thus, whether as to rent or as to taxation, the Irish are circumstanced much more favourably than the other inhabitants of the United Kingdom. Mr. BLAINE's figures are singularly misleading. It is inconceivable that a man of his experience can ignore the danger of stating one set of totals and drawing comparative inferences from them without any examination of the other set of figures with which they are compared. The most careful investigations have demonstrated that, whereas in England and Wales the burdens of all sorts incident upon agricultural land (other than rent) amount to nearly 15 per cent. of the gross value of the produce, those burdens in the case of Ireland only amount to a little more than 7 per cent.; and that, while rent in England and Wales averages between thirty and forty per cent. of the gross value of produce, it averages, in Ireland, barely 25 per cent. It is true that Ireland sends annually to Great Britain nine millions sterling worth of stock, meat, butter, poultry, and eggs; nearly one million worth of fish, and six millions worth of manufactures. It is also true that the Irish people complain of being poor. Their sympathisers—of whom Mr. BLAINE is one—are pleased to refer this discrepancy between their

agricultural efforts and their impecuniosity to English misrule. But the figures we have quoted show that the Irish people are circumstanced more favourably than the inhabitants of any other part of the United Kingdom. What more can England be expected to do for them? "Let them manage their own affairs," say Mr. BLAINE and his fellow-thinkers. And what then? Supposing that they were allowed to manage their own affairs, how would they proceed to better their condition? Their total payments on account of rent are nine millions sterling, being proportionately a considerably smaller sum than Englishmen pay. Would they reduce this total at the expense of the landlords? The average rent paid by Irish tenants at present is less than 11s. per acre. How much margin is there for reduction here? Would they cut down their taxes? They are already taxed much more lightly than the other inhabitants of the United Kingdom, and they can only retrench in this direction at the expense of governmental efficiency. The truth is that with Home Rule their public expenses would be largely increased. It has been shown that, unless wholly unjust discrimination be exercised in favour of Ireland, her contributions to the Imperial exchequer when she enjoys local autonomy ought to be 6½ millions sterling. At present they are barely 4 millions. Further, she would be involved in considerable outlay in connection with her separate legislature, and her local authorities would be unable to raise money on terms nearly so favourable as those they obtain at present. Finally, if she reduces rents, she also reduces an important item of taxable revenue. How, then, would Home Rule improve her financial condition? Mr. BLAINE is said by his friends to be a shrewd, square-headed politician. We cannot help thinking that to maintain his reputation for these qualities in the face of his recent utterances involves a hypothesis not over favourable to his political morality.

#### SAMOA.

SOME particulars of events in Samoa are published in our last American exchanges. They doubtless require to be discounted in deference to their source—a very singleminded American settler—but the main outlines of the story cannot be much astray. The beginning of the recent troubles is ascribed to an American sailor who landed in Samoa many years ago, having deserted from a whaling vessel. This man claimed to have acquired by purchase the land which was the seat of the Samoan Government. MALIETOA, the King, repudiated the claim on the ground that no one but himself had any legal title to the land, and the United States supported his objection. But the American was not to be baffled. By and by he sold the land to a large German firm, this time alleging

that he had bought it from the KING. The latter had now to deal with the German Consul, who, so the story runs, compelled him to give up the land and move his residence elsewhere. It is stated that the project secretly contemplated was to hoist the standard of a rebel and rival ruler, TAMESESE, before MALIETOA could re-establish his Court in another part of the islands. But MALIETOA was too wide-awake, and the rebel chief had to retire ultimately to another place, where he formed a camp with 1,500 men. Thus there were two nominal Sovereigns in the field; a legitimate King, recognised by America and England, and a pretender secretly supported by Germany. The next episode was a complication between MALIETOA and the Germans. The former had signed a convention agreeing to establish a mixed Court. But as he failed to fulfil his engagement, a party of German man-of-war's men landed and pulled down the Samoan flag. By and by the German Admiral arrived with three ships. MALIETOA, being still obdurate about the mixed court business, had not yet been allowed to re-hoist his colours, and consequently received no manner of recognition from the Admiral. This was a grave insult, for MALIETOA deserved more courteous treatment. It is true that he wears no trousers, but he sometimes boasts a shirt and is never without a breech-cloth. What made matters worse was that the Admiral proceeded to the camp of the rebel TAMESESE, and held with him a conclave, at which the pretender's claims were indirectly but pretty plainly recognised. Meanwhile MALIETOA was not idle. The following letter was addressed by him to the United States Consul:—

Government House, Apia, May 13, 1886.  
To the Hon. BERTHOLD GREENEBAUM, United States Consul:—

As the Kingdom of Samoa has applied to the United States of America for assistance and protection, and as it is said that some of the Samoan people, now unhappily in rebellion against my authority, are fearful that the guns of America and English men-of-war will be turned against them.

We desire you to issue a proclamation to allay such fears, and to bid all people in Samoa to be quiet and orderly, and to go to their own villages and there live in a peaceful and ordinary manner.

MALIETOA, King of Samoa.  
SELU, Secretary of State.

By way of response to this request, the U.S. Consul issued a proclamation:—

In obedience to the request of His Majesty King Malietoa, I, the undersigned, Berthold Greenebaum, United States Consul in the Kingdom of Samoa, in the name of the United States of America and by virtue of the command of King Malietoa, above set out, do hereby order all people within this Kingdom to live peaceably and quietly, and also order all persons who may have assembled for the purpose of opposing the government of King Malietoa forthwith to disperse to their several homes and there dwell peacefully.

And I hereby state that no English or American war ship will be requested by me, acting as and for the United States of America and His Majesty King Malietoa, to fire upon or otherwise molest any of the subjects of this or any other country, unless for the preservation of life and property or the punishment of crime.

The United States of America desire that happiness, peace, and prosperity may be enjoyed by Samoa, and trust that the difficulties hitherto

retarding the progress of these islands will soon be overcome, and that by reviving commerce and with an established government the great natural resources of this kingdom may be peaceably developed, so that the welfare both of individuals and the community may be secured.

BERTHOLD GREENEBAUM,  
United States Consul.

Apia, Samoa, May 14, 1886.

Simultaneously with the issue of this philanthropic document, the Samoan flag was hoisted with the United States' ensign over it on the same halliards. The German fleet now took its departure, and the German Consul issued a manifesto on his own account. It ran thus:—

#### NOTICE TO ALL MEN.

It is well known by all Samoa that negotiations are at present being carried on between the three great Powers, with a view to bringing about that which will conduce to the prosperity of Samoa. The negotiations are not yet complete. For this cause German ships of war have left Samoa without inquiring into the transgressions of treaties and other violations of law recently committed by Malietoa. But these have been made known to the government of Germany, in consequence of which the German flag has been kept flying at Moule-Nouhou Point. On this account nothing done by Malietoa during recent days is of any value whatever. It is quite impossible that protection can be extended over the government of Samoa by the American Consul before such instructions have been received from his own government. Hence the hoisting of the American flag over the flag of the government in Apia is of no value whatever. I emphatically protest against that act, and I exhort all Samoa to place no reliance upon it. It is of no value whatever, for they are committing acts which will cause serious trouble, since Samoa alone will be held responsible for the consequences of such acts.

DR. STEUBEL, German Consul-General.

Apia, May 21, 1886.

Relieved of the presence of the German ships, MALIETOA now conceived the bold idea of trying conclusions with the rebels. He collected two thousand braves and surrounded the camp of TAMESESE. Civil war, however, was not desired by either Germans, Americans or English, first, of course, because the interests of humanity forbade bloodshed, and secondly, because the battle ground was occupied by foreign planters who had much respect for their property. In view of these considerations, the British Consul proposed that his colleagues and he should relieve MALIETOA of his functions; but such a course would have disturbed the American protectorate. Out of the Consular disagreement there was finally evolved a joint proclamation very welcome to MALIETOA:—

"We, the consuls of Germany, Great Britain, and the United States, give notice that we and our governments do not and never have in any way recognized Tamesese as King of Samoa, and order all Samoans to return to their homes and remain quiet and peaceful.

"And we further demand the continued enforcement of the convention, especially with regard to the neutral territory of Apia.

"Dr. Stenbel, Imperial German Consul-General.  
"Wilfred Powell, H.B.M. Consul.

"B. Greenebaum, United States Consul.

"Apia, May 27th, 1886."

The breech-clothed monarch would not consent, however, to disband his forces: they occupied a position of too much vantage. Accordingly, he was invited to meet the Consuls and the commanders of H.M. steamer *Diamond* and the U.S. steamer *Mohican*. Once more the British Consul proposed the assumption of the Government by the Consuls, and once more the American representative refused his as-

sent. The decision finally reached was that MALIEOTA should be officially addressed by the German Consul in a communication recognising him as KING of Samoa, and that TAMESESE should be required to surrender his fort and disperse his forces. Should the rebels fail to comply with these conditions by June 2nd, MALIEOTA was to be allowed to proceed to hostilities. Such is the story, with regard to which the obvious comment is that, if the Germans ever had any intention of supporting the rebel chief, they abandoned the programme in a manner strangely inconsistent with their accustomed firmness. It will be found, we suspect, that historical accuracy is not the most prominent feature of the narrative.

#### BRITISH CONSULAR TRADE REPORT FOR HYÔGO AND OZAKA FOR 1885.

BRITISH CONSULATE, HYÔGO,  
MAY 25TH, 1886.

SIR,—I have the honour to report on the Trade and Navigation of this Consular District for the year 1885, and to enclose you the following Returns on this subject:—

- 1.—Return of principal Articles of Export from Hyôgo and Ozaka during the year 1885.
- 2.—Return of principal Articles of Import into Hyôgo and Ozaka during the year 1885.
- 3.—Table showing the total value of Articles exported from Hyôgo and imported into Hyôgo, to and from certain Foreign Ports during the years 1885 and 1884.
- 4.—Return of Shipping at the Port of Hyôgo (Kobe) in the year 1885.

The returns of Imports and Exports are based on the revised Customs Returns; and in Converting the currency in which the values of the Imports are expressed in the Customs returns into Sterling, in the annexed Tables, the rate of \$4.88 to the £1 sterling has been adhered to throughout,—that being the value which the Customs here adopt as the equivalent of the £1 sterling. In the Export Return, and in all other calculations in this report, the dollar or *yen* has been taken as equal to 3/6. In both of the returns the rule has been followed of relegating to the head of sundries all articles of which the total import or export, at the two ports together, does not amount in value to \$50,000. The returns of shipping are based on figures obtained from the various Foreign Consulates, and, for Japanese shipping, from the Customs' records.

#### TRADE AND COMMERCE.

The value of the Import and Export Trade for the year amounted to £3,200,713 Sterling, or \$16,797,803, being an increase of £70,322 or \$449,429. The gross import was £1,788,341, or \$8,727,108, as against \$9,005,487 in 1884; and the gross Export amounted to £1,412,372 Sterling, or \$8,070,695, as against \$7,342,887 in 1884. The value of articles re-exported and imports duty repaid amounted to \$201,961, or £41,385, leaving a nett import of £1,746,956; the value of articles re-imported and exports duty repaid amounted to \$11,603 or £2,031, leaving a nett export of £1,410,341. Treasure was imported to the value of \$5,849,452, or £1,198,658, and exported to the value of \$1,227,027 or £214,730 sterling.

Of the gross foreign trade of the two ports

only £410,518 value fell last year to Ozaka, namely £234,906 value of imports, principally sugar, cotton, and other miscellaneous articles, and £175,612 value of exports, principally copper, tobacco, vegetable wax, dried cuttle-fish, *kanten*, and mushrooms. The rest of the trade was done at Kobé (Hyôgo).

#### IMPORTS.

The decrease in value in the year's importation generally, as compared with the previous year's import, is distributed over the headings of woollens, kerosene, and miscellaneous Western. Under the headings of cottons, metals, sugar, and miscellaneous Eastern there is an increased importation. The value of deliveries is, however, a better criterion of the state of the import trade; and some estimates on this subject, which I have obtained from the published statistics of the local Chamber of Commerce, and elsewhere, show a decrease under the headings of cottons and woollens, and an increase under the headings of sugar and kerosene. The Chamber of Commerce statistics show deliveries of cottons to the value of \$3,058,300 (say £535,203) last year, as against \$3,074,700 value in 1884; and of woollens to the value of \$1,272,600 (say £222,705) as against \$1,406,300.

I note some of the more important variations which have taken place in this trade last year. Bombay yarns appear to be supplanting English made yarns in the consumption of the district. Deliveries of English yarns have decreased from 4,198,300 lbs. in 1884 to 2,338,800 lbs. in 1885; while deliveries of Bombays have on the contrary, increased from 6,792,400 lbs. in the former year to 8,557,200 lbs. last year. This can probably be accounted for partly by the improved spinnings coming forward from Bombay taking the place of some of the English yarns, which are more expensive. Bombay yarns having to be paid for in silver, while English spinnings have to be paid for in gold, the former have doubtless received an impetus from the relative decline in the value of silver. It is also stated that the softer spun Bombays are coming more into favour with the Japanese consumer than the harder spun English Yarns.

Deliveries of Gray Shirtings have increased by 77,000 pieces over those for the previous year, the total for last year being reckoned at 232,312 pieces. I am unable to account for this unless it implies a transfer to the above extent of the direct trade in this article from Yokohama to this port. White Shirtings, Cotton Velvets, and some other articles also show an improvement; Victoria lawns and some other English Cottons under the head of fancy articles have experienced depression.

The demand for most kinds of Woollen articles fell off to some extent last year. Under the heading of Italian Cloth, however, there has been an increase in deliveries which nearly counterbalances the falling off in other English Woollens.

In the early part of the year metals generally were dull, but from March began to exhibit a firmer tendency which continued, with the exception of some falling off in November, till the close of the year. In December a large business was recorded, with prices unaltered, except in pig iron, which experienced a decline. Under iron, nails continue to occupy an important position. These are of Belgian, and other Continental manufacture. In the importation

of other iron machinery and plant on Japanese Government orders, a transfer of business has of late taken place from British to German firms, and probably, along with this, a transfer to some extent from articles of British to articles of Continental origin. In connexion with this, there has been also a similar transfer of private business in these articles.

I am hardly in a position to form a reliable estimate of the deliveries in metals as distinguished from importation under this head.

There has been an increased demand for kerosene oil in this district. Deliveries during last year are estimated at 1,004,048 cases of ten gallons each, as against 866,700 cases in 1884. The estimated value of deliveries in 1885 was \$1,700,000. "Atlantic" is still the favourite brand; and prices for it have varied from \$1.72 per case in January to \$1.63 in April, and \$1.92½ in November. Stock on the 31st December was estimated at 178,500 cases.

#### EXPORTS.

The increase in exports, in 1885, is distributed over the headings of tea and copper, and among the following articles which are reckoned in the annexed table of exports under the heading of miscellaneous, namely:—Antimony, bamboo-ware, bronze-ware, fans, hides, *kanten* (*colle vegetale*), lacquer-ware, matches, mushrooms, porcelain and earthenware, rags, seaweed, soap, tobacco, vegetable wax. The following articles of export, on the other hand, show a decrease:—under the general headings, dried fish, coal, silk, and rice; under the headings of miscellaneous, camphor, screens (an increase in quantity with a decrease in value); while rapeseed and sulphuric acid have fallen so far as not to come within the limit of separate notice.

It may be remarked here that the fall in the relative value of silver has, generally, had a stimulating effect on exports; as it has had the opposite effect on certain classes of imports.

I append a few notes on some of the more important articles of export separately.

The returns show an export of 16,538,858 lbs. of tea in 1885 as against 14,376,400 lbs. in 1884, being an increase of 2,162,458 lbs. The declared value of the year's export is \$2,510,869 (£439,402) as against \$2,153,495 in 1884. The average price paid here for tea last year, according to an estimate with which I have been favoured, was \$19.65 per picul,—being lower than in any previous year. For several years past there has been a continued tendency in the market towards lower priced teas. Throughout last year common and medium grades have commanded full prices, the demand in the United States and Canada running on those kinds. Fine and choice teas have been selling cheaper than in any previous year, prices in the American market ruling very low for those grades. The natural effect of the above tendency is that a more favourable result is obtained by giving attention to the preparation of common teas, and there is not much inducement for the producer to attempt to improve the quality of the produce. The following is an estimate, from which the above average price is obtained, of the settlements of different priced teas on this market during 1885:—

PRICES PAID.	PICULS. (of 133 lbs.)
\$ 5 to 11.50 .....	11,728
12 to 16.50 .....	21,859
17 to 21.50 .....	48,456
22 to 25.50 .....	31,659
26 to 29.50 .....	13,883
30 to 39.50 .....	4,209
40 and upwards .....	88
Total .....	131,882

The discrepancy between the total weight, as here stated in piculs, and that of the export given above, is accounted for by the loss of weight in firing,—the estimate being made on the teas as bought, before firing.

Of the tea exported 9,108,857 lbs. were invoiced to places in the United States, and 7,004,639 lbs. to Canada. Of that invoiced to Canada, however, probably about one half is sold in the United States.

Copper shows a somewhat larger export than in previous years.

The export of Rice amounted to 12,645 tons in 1885, as against 33,426 tons in 1884. The great falling off in this staple export last year was owing to the poor crop in 1884. High prices ruled, precluding the possibility of export. The crop of 1885 is of excellent quality, and the quantity, notwithstanding the floods which occurred in this and other parts of the country in the early summer, rather above the average than otherwise.

The export of Antimony shows an increase of 1,266 tons.

Camphor has fallen off in quantity from 4,387,866 lbs. in 1884 to 3,123,477 lbs. in 1885. Prices in 1884 were low, and probably did not pay dealers; hence little came on the market in the early part of last year. In July prices reached \$17 per picul, and continued advancing until they reached \$20½ in December; but these high rates were slowly responded to by buyers.

Lucifer Matches, which in 1881 and 1882 were exported to a considerable amount, fell off, owing to the very inferior quality of the article manufactured, to an insignificant amount the following year, and disappeared altogether from the export list in 1884. Last year this export has revived, and reached again the considerable figure of 178,616 gross. The article is destined chiefly for the Chinese market.

Washing soap, which is also destined for the same market, has been a growing export for the past two years.

Tobacco in leaf reached the figure of 1,722,130 lbs. as against 604,533 lbs. the previous year. The large shipments last year were entirely of the season 1884-5, that is from the crop of 1883, then coming on the market. Owing to these large shipments, and the short and indifferent crop of 1884, the export for the season 1885-6 has been very limited, and higher prices have been ruling in the home trade here. What now remains on the market is to a large extent unsuitable for export. The crop of 1885 has been much under that of ordinary years—one approximate estimate brings it to 50 per cent. less.

Vegetable wax reaches twice the export of 1884.

The multifarious trade in such articles as bronze-ware, bamboo-ware, fans, screens, lacquer-ware, porcelain and earthenware, &c., varies constantly in the specific style of articles exported, but generally exhibits a tendency to grow. A new article of miscellaneous export has lately been in some request, the fibrous part of the "snake gourd," called by the Japanese "hechima," and in commerce "luffra." Ordinarily exported to Europe for use as a bath rubber, it has, I believe, come now to be used as padding in the manufacture of sola hats. It is used by the Chinese as padding for the soles of shoes.

#### RATES OF EXCHANGE.

Bank rates on London opened in 1885 at 3/6½ per dollar, on demand, and 3/7½ at four months' sight. The rate then fell away more or less rapidly, until at the close of the year it reached 3/4 on demand, and 3/4½ at four months. The average bank rate for the year was 3/5½ on demand and 3/6½ at four months.

Japanese paper, from the month of January until the middle of April, fluctuated considerably, ranging between 130 and 110 *sen* per \$100. From the middle of April it steadily rose until, in the end of May, it reached par. In September, October, and November it was at a fractional discount, but never of more than one per cent., and reached and remained again at par in December.

I have been favoured, as in previous years, by the Commissioner of the Imperial Mint in Osaka, with a return of the bullion imported into the Mint and coins struck during last year. The amount of bullion imported was as follows:—

Gold.....	51,573.56	Troy oz.
Silver.....	6,501,297.28	Troy oz.
Copper.....	23,743.295	Troy oz.

The coins struck were as follows:—

	Yen.	value.
Gold 5 <i>yen</i> pieces.....	1,004.055	value.
Silver 1 <i>yen</i> pieces.....	4,297.479	value.
Silver 50 <i>sen</i> pieces.....	205.062	value.
Silver 20 <i>sen</i> pieces.....	841.565	value.
Silver 10 <i>sen</i> pieces.....	976,821.40	value.
Total value of Silver coins.....	6,320,927.40	value.
Copper 1 <i>sen</i> pieces.....	468,463.52	value.
Copper ½ <i>sen</i> pieces.....	155,831.20	value.
Total value of Copper coins.....	624,294.72	value.
Total value of coins struck.....	7,949,277.12	value.

This shows an importation into the Mint of 22,503.28 oz. more of gold, and 2,893,020.32 oz. more of silver in 1885 than in 1884, while there were struck, of gold coins, to the value of *yen* 434,640 more, of silver coins, to the value of *yen* 2,721,015.40 more, and of copper coins to the value of *yen* 362,955.05 less last year than in 1884.

The quantity of gold and silver refined at the Mint last year was as follows:—

Pure gold.....	50,978.95	oz.
Pure silver.....	985,574.53	oz.

The chemical works, which have for some years been carried on in connexion with the Mint, were, in the month of May last year, leased to a private Company.

#### SHIPPING.

The total number of British vessels entering the Port of Hyogo in 1885 was 151 vessels, of 224,069 tons, as against 139 vessels, of 200,529 tons in 1884, being an increase of 12 vessels and 23,540 tons. Of the British vessels which entered last year, 52 vessels, of 81,412 tons, were steamers of the P. & O. S. N. Company, 83 vessels of 124,595 tons, were other steamers and 16 vessels of 18,062 tons were sailing vessels.

The entries of French shipping in 1885 were 19 vessels of 21,256 tons, as against four vessels of 3,805 tons in 1884, being an increase of 15 vessels and 17,451 tons. All these were steamers of the Messageries Maritimes Company, and the increase last year is owing to the fact of this Port having become a Port of call of the Company's mail line,—an arrangement which, besides affording another means of regular through transport between this Port and Europe, by the usual intermediate Ports, also adds materially to the convenience of the mercantile community here in the matter of the despatch and still more of the receipt of the mails. The Messageries steamers now come here direct from Hongkong, proceed on to Yokohama; and, on the return voyage, proceed direct from here to Hongkong.

The entries of German shipping last year have risen to 32 vessels of 33,342 tons, being and an increase of 7 vessels and 11,368 tons over the entries in 1884.

The entries of United States Shipping have decreased from 11 vessels of 16,118 tons in 1884 to 8 vessels of 10,085 tons last year.

The total entries of the Port under the British and other flags, except Japanese, have been 213 vessels of 290,858 tons last year, as against 189 vessels of 248,460 tons in 1884, being an increase of 24 vessels and 42,398 tons.

None but Japanese vessels have entered the Port of Osaka last year.

The bulk of the British steamers visiting this Port belong to lines trading, by intermediate Japanese and other Ports and the usual canal route, to and from the United Kingdom. Nine British steamers arrived direct from Hongkong, with general cargoes, and one sailing vessel direct from Hull with railway iron. Ten British steamers cleared direct for Hongkong, all with general cargo; one steamer and one sailing vessel direct for Rangoon, one sailing vessel direct for Singapore, one for Burrard's Inlet, and one for Vancouver Island, all in ballast. Of the other British sailing vessels visiting the Port, eight came from Philadelphia direct with Kerosene, and three vessels from New York came on to this Port, from Yokohama, with part cargo of Kerosene; one vessel came from Formosa with sugar; two from other Chinese Ports, one in ballast and one with general cargo, and one from Yokohama in ballast. Of the British steamers trading otherwise than to British Ports 16 proceeded, via intermediate ports, to New York, with tea and general cargo, and one to Saigon. Of the British sailing vessels trading to other than British ports, one went on to a Japanese port with part cargo; three cleared for Chinese ports with wheat and general cargoes; two for United States' Atlantic ports with rags; one for Oregon and three for the Philippine Islands in ballast.

Of the French and German shipping, eight vessels came direct from and seven vessels went direct to Hongkong. The return of Japanese Shipping entering at the Treaty Port of Hyogo shows little variation in the total from that of 1884. The number of sailing vessels has materially increased, but that of steamers decreased. The total number of ships entered is less, but the tonnage, on the other hand, is greater.

The steam communication under the Japanese flag between the port of Hyogo and Foreign Countries last year consisted of the line of steamers now belonging to the Nippon Yusen Kaisha, running weekly once each way, between Yokohama and Shanghai, calling at this port, Shimonoseki and Nagasaki, of which line the entries each way amounted to 57,000 tons, and of vessels trading to Korean ports. Of the latter 12 sailing vessels, of 1,134 tons entered, and 9 sailing vessels, of 937 tons cleared; 17 steamers of 3,476 tons entered and 15 steamers of 3,282 tons cleared, besides 5 steamers entered and two cleared under Government charter as transports.

The rest of the Shipping under the Japanese flag was engaged in the coast trade only.

Freights to London by P. & O. and M. M. steamers have, from the month of April to the end of the year generally stood at 50/-55/- per ton measurement. The minimum by P. & O. steamers was 30/- in January; maximum 65/- in June. By other steamers the minimum has been 27/- in January, the maximum 52/- in June. Per ton dead weight, the lowest freight to London by P. & O. has been 17/6. To Australia, by steamer, freights have ranged from 42/6 in January to 32/6 in December per ton measurement. To New York by sailing vessel, from 30/- to 25/-.

Freights for tea to the United States, Atlantic Cities, and Canada were, at the commencement of the season in April at 5 cents gold per lb., from May to August at 3 cents, and from then to the end of the year at 2½ cents., by sailing vessel and Northern Pacific Railway to the same destinations, 2 cents gold, in May and June; by steamer to San Francisco from April to September, 2 cents gold per lb., and during the rest of the year \$12 per ton measurement. By steamers via Suez Canal, from April to August rates ranged from 50/- to 80/- per ton. During

the rest of the year freights to New York by Suez Canal steamers, for tea and general cargo, were from 45 to 30.

The New Pier noticed in last year's trade report as having been opened in November, 1884, is now regularly used by the steamers of the P. & O. and M. M. Companies, but rarely by other steamers. The Pier rates are now collected upon the quantity of cargo delivered and received,—instead of, as formerly, upon the vessels' length,—as follows:—

Under and up to 500 tons, 10 cents per ton, with five cents added for each ton over the first 500 tons; but the lowest limit of charge for any vessel to be 825.

The new Patent Slip at this Port, described in last year's Trade Report, was officially opened in September last, and has been in use ever since.

#### POPULATION.

I am indebted to the Authorities of the Hyōgo Prefecture and of the Prefecture of the city of Ozaka for the following statistics of the population. In the month of January of this year there were, in Kobe, that is to the east line of the Minato-gawa, 14,711 houses, and a population of 33,643 persons, of whom 16,320 were males and 17,323 females. In Hyōgo, that is to the west of the line of the Minato-gawa, there were 9,557 houses and a population of 27,720 persons, of whom 13,661 were males and 14,059 females. In the country districts of the Prefecture, including the small towns, there were 295,665 houses, and a population of 1,405,323 persons of whom 716,443 were males and 688,880 females. This gives a total town population, in Kobe and Hyōgo together, of 61,363 persons, and, in the country districts of 1,405,323, or 1,466,686 persons in the whole Prefecture.

In the city of Ozaka there were, in the month of January of this year, 95,325 houses with 308,742 inhabitants; and in the country districts and towns, 278,611 houses and 1,325,487 inhabitants. This gives a total of 1,634,229 persons in the Ozaka Prefecture.

The above figures show an increase in the population in the towns of Kobe and Hyōgo, taken together, of 6,942 persons during the two years 1884 and 1885; and an increase during the same period of 8,080 persons in the population of the city of Ozaka. The total of the Prefecture of Ozaka had increased, during these two years, by 32,825 persons. After the floods which occurred in Kobe and Hyōgo together, in the early part of last summer, some efflux of population took place from the city districts; but the above figures would show that such partial decrease of the city population was not sufficient to interfere with the general rule of increase during the last two years.

Little variation has occurred last year in the numbers of the European and American residents. The total of such, resident in the district on the 31st December last, amounted to 484, of whom the British numbered 250. On the same date there were established at the two Ports 53 European and American mercantile firms, of which 26 were British. The Chinese population in the two places together, has risen during 1885 from 625 to 688 persons; 59 Chinese firms exist at the two ports.

#### INDUSTRIES.

A somewhat important enterprise of a new nature has been brought into operation at Hyōgo last year in the shape of a rice-cleaning mill. The mill has been fitted up by a British firm at this Port, and is furnished with the most improved machinery for the cleaning of rice. The uncleaned rice is brought to the mill by sea. The principal supply comes from the provinces around Kyōto and the Southern provinces, including those lying along the shores of the Inland Sea,—the districts where most of the best rice of Japan is grown. The mill is at present capable of turning out 30 tons of cleaned rice per day; and the rice so turned out is a fine, pearly, clear article. It is exported to Australia, to London, and has even found a market in the United States. It is known in

England as "table rice," and has been very favourably received in Australia.

The lucifer matches referred to under exports are manufactured here, and soap at this Port, and at Ozaka. A spurious imitation of Pears' soap was made in some quantity at Ozaka and sold in the shops both at Ozaka and here under counterfeit labels. On representation being made to the Government authorities at Ozaka and Hyōgo this imitation was suppressed, and the counterfeit labels destroyed.

#### RAILWAYS.

I subjoin a statement showing the amount of the passenger and goods traffic on the Kobe, Kyōto and Ōtsu section of the Government railways, together with the receipts on this traffic for the year 1885:—

Number of passengers .....	1,080,306
Receipts for passengers .....	£ 77,040
Passengers' luggage, parcels, &c. lbs. ....	1,571,540
Receipts for passengers' luggage parcels, &c. ....	£ 4,386
Total receipts for passengers and parcels .....	£ 82,026
Merchandise .....	462,278,192
Receipts for Merchandise .....	£ 27,041
Gross receipts .....	£ 109,067

The number of passengers carried shows a decrease from 2,334,386 in 1884 to 1,630,306 last year, with a corresponding decrease in the receipts. This doubtless must be accounted for to a considerable extent on the same principle on which the decrease which appeared in a similar return last year was explained,—namely, the less easy circumstances of the population generally, and the disposition to economize induced thereby; but the decrease has been accentuated by the prevalence of epidemics, the consequent prohibition or abandonment of religious and other popular gatherings, and the existence of measures of quarantine. The merchandise carried last year was somewhat greater in quantity than in the previous year, but the receipts on merchandise show a decrease of £1,212. This decrease is to be accounted for in the same way as a similar decrease in these receipts was explained last year,—namely as the result of the public taking advantage of the whole-wagon rates of freight, and the operations of carrying companies. The total decrease on the receipts of this section of the railways last year, as compared with 1884, amounts to £26,873 sterling.

With the exception of the small railway, or more properly steam tramway, extending from Ozaka in a southerly direction towards the town of Sakai, no railway works have been undertaken last year on this side of the Biwa Lake. The short line referred to, which is a private undertaking, and is not intended to be connected with the Government Railway system, was noticed by me in last year's report, and has been completed as far as the Yamatogawa, a distance of about seven miles from its starting point at Ozaka. This section was opened for passenger and parcels traffic in the end of December last year, and twenty-five trains per day run over the line each way. I understand that it is contemplation to take this line over the Yamatogawa.

On the eastern side of the Biwa Lake some progress has been made in the matter of railway construction. In last trade report I noticed that the Nakasendo line, which is intended ultimately to form the railway connexion through to Tōkyō, was open on this side as far as Ogaki, and that a further section of nine miles, towards Gifu, was in course of construction. The works on this section are all in hand, but it is impossible to say when they may be completed, as there is heavy bridge-work still to be overcome here. As to the main route of the Nakasendo railway, from this end, beyond Gifu, nothing appears as yet to have been determined; but an important branch line has been undertaken, and considerable progress made with it. For some years a certain traffic has existed from small ports on the eastern branch of the Owari Gulf to Tōkyō and Yokohama; and in order to connect some point affording a good harbour, on that branch of the gulf, with the large and

important city of Nagoya, it was determined early last year to lay down a line of railway between Nagoya and a point a few miles below the small town of Handa, to which the name of Taketoyo has been given. This spot was simply a sand patch, having, as its qualification for a Port, deep water opposite; and the railway works have been rapidly pushed forward, through an almost level country, between there and Nagoya. This section of railway was opened to traffic on the 1st March last. The bridges on it are, as yet, only of a temporary nature; and although some traffic already passes over the line, it has been mainly used, hitherto, as a means of carrying material inland for other works. When the present bridges on this section are replaced by permanent structures, the section will then rank with the other lines. Between Nagoya and Gifu, also, operations are being rapidly pushed forward with the view of completing the connexion through to the part of the main line which is at present in operation. On this section, between Nagoya and Gifu, however, there intervenes the wide and rapid Kiso-gawa, the bridging of which will be a work of some magnitude. When these works are completed, there will be through railway communication from the port of Tsuruga on the west coast to that of Taketoyo on the Owari gulf. The project of connecting the east and west coasts by means of a branch line to Yokkaichi would appear thus to have been superseded by this branch by Nagoya and Taketoyo. As to the main line of the Nakasendo going eastwards it would not appear to be determined where this and the Nagoya-Gifu section will form their connexion. It is not improbable that the main line may start on its eastward course from Nagoya itself.

I have the honour to be,

Sir,

Your most obedient, humble Servant,

JAMES TROUP.

The Hon. Sir FRANCIS PLUNKETT, K.C.M.G., &c., &c., &c.,

H.B.M.'s Envoy Extraordinary and Minister Plenipotentiary, Tōkyō.

#### A.—RETURN OF THE EXPORT TRADE OF THE PORTS OF HYŌGO AND OZAKA DURING THE YEAR 1885.

## LOCAL GOVERNMENT REGULATIONS.

(Translated from the *Nichi Nichi Shinbun*.)

We touch only upon those points in the regulations which require explanation.

Art. III. reads:—"The Governor shall, by virtue of his functional powers or by virtue of powers specially delegated to him, issue, within the limits of statutes and instructions, City or Prefectural Ordinances, either for the whole territory under his control or for a part of it, relating to administrative and police business." From this article it appears that Governors have power to issue City or Prefectural Ordinances relating to executive and police business. Formerly they had no such power, beyond the insignificant function of enacting certain regulations as to contraventions applicable to the territory under their control, as mentioned in Art. 430 of the Criminal Code. But in that case the scope of their powers was narrowly circumscribed, the punishment attending violation of those regulations being limited to detention of from 1 to 10 days and a fine of from 5 *sen* to 1 *yen* 95 *sen*. Moreover, as the nature of such offences was distinguished from all other kinds of offences by well defined characteristics, it was not possible to make use of the regulations with any show of legal consistency in connection with the issue of instructions relating to administrative affairs. Thus, although Governors had formerly more or less power to issue instructions in the territory under them, relating to administrative and police business, still as no power was given to them to enforce obedience to such instructions by the provision of suitable penalties, the system was incomplete. But by the new regulations Governors are explicitly authorized to issue instructions, within the territory under their control, relating to administrative and police business; so that hereafter they will be able to enact City or Prefectural Ordinances by virtue of their functional powers or of powers specially delegated to them and within the bounds of statutes and instructions. In some cases it may be necessary to issue a City or Prefectural Ordinance to a particular district or urban division or even to villages, for there are often considerable differences in manners and customs, and in degrees of prosperity in various parts of territory under the same local Government. It is for this reason, we presume, that in the article under review it is plainly stated that City or Prefectural Ordinances may be issued "either for the whole territory under his (the Governor's) control or for a part of it." It may be, though that is not certain, that until a special enactment is made, Governors have power to enforce their ordinances by means of punishment, as in the case of certain contraventions, within the limits of a detention of 1 to 10 days and a fine of 5 *sen* to 1 *yen* 95 *sen*. From Art. V.—which provides that "when a City or Prefectural Ordinance is deemed by the Minister of State for Home Affairs, or by any other competent Minister, to be prejudicial to the public interest, or contrary to an existing law or regulation, or to overstep the limits of the legal power of the official issuing it, such Ordinance may be ordered to be suspended or rescinded," it is plainly to be seen that City or Prefectural ordinances have to be subjected to the control of higher powers and it is also plain that in issuing ordinances, Governors have to report them to the Minister of State for Home Affairs or to any other competent Minister.

Art. XIII. runs:—"The Governor shall have power, according to requirements, and within the estimated amounts of salaries, to appoint an engineer in conformity to the Regulations as to the Official Rank and Salaries of Engineers (*Gijutsu-kan Koutō Hōkyō Rei*), subject to the approval of the Minister of State for Home Affairs. Should such appointment require to be made in connection with any work the cost of which is to be defrayed from the local taxes, the engineer may be hired as an employé, after the sanction of the Minister of State for Home Affairs has been obtained." Necessarily, in connection with Local Governments, engineers will be more frequently required than any other specialists. The provision for the hiring of an engineer as an employé in case his salary is to be paid from the local taxes is a necessary arrangement, for, as the amount of the local taxes depends upon the vote of local assemblies, and is thus very precarious, it would be impossible to conform to the Regulations as to the Official Rank and Salaries of Engineers, and it is accordingly important to facilitate the process of hiring or dismissing engineers.

Art. XXIV.—"In order to distribute the business of the City or Prefectural Government among the different officials, Divisions No. I. and No. II., each subdivided into Sections, according to the

convenience of the Division, shall be established under the Directorship of the secretaries:—

## DIVISION NO. I.

1. "Affairs connected with the Local Assembly, the committee dealing with engineering works (hydraulic, etc.), and the town and district committee.
2. "Affairs connected with local taxes, town and district rates, and the Agricultural Distress Relief Fund.
3. "Affairs connected with foreigners.
4. "Affairs connected with correspondence, and the keeping of official seals and City or Prefectural seals.
5. "Affairs connected with agriculture, manufactures, and commerce.
6. "Affairs not falling within the sphere of other Divisions.

## DIVISION NO. II.

1. "Affairs connected with engineering works.
2. "Military affairs.
3. "Affairs connected with education.
4. "Affairs connected with prisons.
5. "Affairs connected with sanitation.
6. "Affairs connected with accounts and public bonds."

Some writers are of opinion that the duties enumerated under division No. I relate to the policy, and those under division No. II., to the executive business of the local Government. But to us, such a distinction does not seem to be necessary. We are disposed to think that the various subjects were grouped into the two Divisions, on the basis of their relation to one another, for the duties assigned to Division No. I. are not all connected with policy, nor are those assigned to Division No. II. all connected with executive business alone. Each Division is under the superintendence of a secretary, and the latter is to be held responsible for the management of affairs in the Division under him. Governors have no power to alter the list of subjects assigned to each Division, but as it is within their functional power to establish sections in each Division according to the convenience of the case, it depends largely upon them whether or not each organ of their Governments shall move with promptitude and smoothness.

Besides these two Divisions, there will be in each local Government a Division of Taxation, "which shall have control over all the business connected with the assessment and collection of taxes, and the expenses of such collection," and a Division of Police, which shall have control over higher police business in the territory of the local Government and all other affairs connected with the policing in the same territory. There are thus in all four divisions. The affairs of each local Government being distributed among those four Divisions (Art. XXVI. also providing that "in the case of temporary business," "the Governor shall have power to determine where and by whom it will be dealt with, according to the convenience of the case"), and all being under the supervision of the Governor, it may be expected that hereafter there will be less obstruction in the management of local affairs than has hitherto been experienced.

In police matters, the point requiring our attention before all others, is the provision that the Governor shall "superintend the administrative and police business of the territory over which his jurisdiction extends," from which it follows that he is the supreme police authority of the locality, and that the Chief Police Inspector is an official whose duty it is to superintend police business, under the direction and the control of the Governor. Formerly, the relations between the Governor and the Chief Police Inspector were upon the whole the same. But it was formerly enacted that, in connection with state policing, the Chief Police Inspector might directly receive orders from the Minister of State for Home Affairs, or forward directly reports to him, and it sometimes happened that police business seemed to be in some sense independent of the cognizance of the Governor. It is true that great secrecy is often required in State policing, but there is no reason why matters which the Chief Police Inspector is allowed to know, should be withheld from the knowledge of the Governor. Secondly, it has been established by the new regulations that the Governor shall have supervision over the police business in the territory under his control, the Chief Police Inspector being subjected to his direction and control. (The provision in Art. XXXIV., that "when correspondence between one local government and another is necessary in connection with a police matter, it should pass through the Governor," but that "in cases when promptitude is required, such correspondence may be addressed directly to the Chief Police Inspector, or to the chief police official of the locality in which the action is to take place,"—being based on grounds of expediency does not interfere with the statement we have just made.)

By "higher police business" in the first clause as to the duties of the Chief Police Inspector, we understand State policing. The third clause—"the direction of all police officials under him, and control of the whole force in case of emergency"—defines the business of the Police Head-quarters, so that it ought to be read in connection with Art. XXX., which states that "in each City and Prefectural Government there shall be established Police Head-quarters." The duty mentioned in the fourth clause—"the distribution of the required police officials to all Police Offices and Branch Police Offices in the district"—corresponds with the provisions of Art. XXXI., which say that "in each urban or rural division of a City or Prefecture, there shall be established a Police Office," and that of Art. IX., which states that "the Governor shall determine the distribution, separation, and amalgamation of branch offices in each urban and rural division." As to the establishment of a police office in each urban or rural division, it seems to be apprehended in some quarters that there will be an increase of police offices, according to the new regulations; but there is no denying that as a matter of convenience each urban or rural division should be provided with a police office. Besides, if Chief Police Inspectors take pains to economize it will not be necessary to look for any considerable increase in the police expenditure.

Police Offices in urban and rural divisions will be under the directorship of a Police Inspector, and Branch Police Offices under the charge either of a Police Inspector or a Police Sergeant according to the convenience of the case. Police Officers and Branch Police Offices "shall have control over the higher administrative and judicial policing of the district under their charge, and shall superintend the carrying out of statutes and instructions." The business under their supervision is divided into eight clauses, of which the 1st clause (trades and religion), the 2nd (public morals), the 3rd (public roads), the 4th (public safety) and the 5th (sanitation), relate to executive policing. The 6th and 7th clauses relate to judicial policing, while the last clause is connected with political affairs. According to the Organization of the Metropolitan Police, the five clauses relating to executive policing are comprised in Bureau No. I.; the two clauses relating to judicial policing, in Bureau No. II.; and the last clauses in Bureau No. III. In local governments, also, these different matters will be managed in the corresponding Sections of the Police Head-quarters.

Art. XXXII.—"Each police official shall discharge his duty, by virtue of functional powers, or by the orders of his superiors, or at the request of the director of the division of police, the chief tax collector, the chief of the town or district office, the headman or other executive official, or, in matters connected with judicial policing, by the order of the public prosecutor." From this article we gather that police officials have the duty of not only obeying the orders of their superiors, but also of acceding to the request of an executive official in matters connected with executive policy. In European countries, the mayor of a town and district headmen are police authorities, and can transact in person the police business of the locality. But in this country no such system holds, and requests must be made to police officials. Formerly there was no explicit provision defining the relation of police officials and executive officials; and the result was a mistaken notion on the part of the latter, that they had no right to make such a request, while the former had an equally erroneous idea that they had no obligation to accede to it; and this led in many instances to great confusion. But it has been enacted, in addition to the above mentioned provision, that "in any and every case, when an executive or judicial official submits a request on his own responsibility, police officials will be obliged to comply with such request." Police officials will have to carry out any request made by an executive or judicial official on his own responsibility (Art. XXXIII.). It appears, however, that such request must not be beyond the scope allowed by the eight clauses already alluded to, as relating to executive judicial, and political policing.

"The chief of the town or district office" (one in each or several rural divisions, and one in each urban division) "shall carry out statutes and instructions in the district under him, and superintend the executive business of the district, according to the direction and control of the Governor." In executive affairs, he "shall have control over headmen under him"; while "in the case of district affairs, he shall superintend them." From these provisions it is evident that in executive affairs, the headman is an official under the "control" of the chief of the town or district office, and that in district affairs he has to act in the capacity of trustee of the district under

Original from

the "supervision" of the latter. In the regulations under review, it is stated that the clerks of town or district officials shall be of or under 3rd class, *hannin* rank, and that they "shall engage in general business, according to the orders of the Chief of such office." But on these points no statement is made as to the headman, from which it appears that the spirit of district government is largely sanctioned in these regulations.

In insular localities, "there shall be appointed a Director of Islands who shall have power to manage the executive affairs of the locality; and in the case of matters for which the power is delegated to him by the Governor, he shall have authority to act according to the requirements of the case." He shall be of or under 3rd class, *sotun* rank, that is, higher than the chiefs of town or district offices. In the Prefectures of Nagasaki and Kagoshima (and in other Prefectures hereafter to be determined), there are islands considerably isolated from the rest of the Prefectures, with incomplete means of communication. In such localities, it would be inconvenient to administer the public business, unless the Director of Islands have certain discretionary power. The responsibility of that official being great, his official status must accordingly be high. Besides these matters, there may be various other things of more or less importance, but we believe we have touched upon enough points to enable our readers to understand the general object of the Local Government Regulations.

### LETTER FROM SAN FRANCISCO.

(FROM OUR OWN CORRESPONDENT.)

San Francisco, July 10th.

The new schedule of the sailings of steamers to Japan and China has made its appearance, and the public learns therefrom that there will be a service every ten days from now till New Year, the O. & O. ships alternating with the P. M. ships, but the former only carrying a mail. When Congress adjourns, the Pacific Mail people may relax their high-toned rigidity, and come to terms with the Post Office Department. On Monday, day after to-morrow, the new Pacific Mail steamer *Starbuck*, which sailed from Yokohama on June 25th, will be due here. She is a small craft, only 1,400 tons burthen, and is intended to run on the Panama line, so as to relieve the *City of New York* which will resume her place on the China line sailing hence for Asia on July 20th. Thus far nothing further has been heard of the proposed new Canadian line from Port Moody. It is, however, so indispensable an adjunct to the Canadian Pacific Railway that you may feel quite assured of its coming to the front again before long. The proposed lines between Mexico and China appear to have been abandoned. A riot took place at Mazatlan on the recent landing of a shipload of coolies; there, as elsewhere, the labouring class object to foreign competition and are prepared to do battle for the protection of home industry against foreign pauper labour. At Mazatlan and Guaymas, this noble principle of modern political economy is carried to such an extent that the labourers will not permit the use of drays which would interfere with the monopoly of native porters.

During the past ten days there has been a dearth of news in this country. The most engrossing topic of conversation has been the defeat of Gladstone in the British elections. A good deal of provincialism still lurks in the American mind; politicians deem it due to the public to treat England as a foreign, and generally a hostile country; but away down at the bottom of the American heart there is a good deal of Englishism still left. Thoughtful Americans, looking at the Home Rule question from an American standpoint, have sympathized with Gladstone, and they regard his defeat by the coalition of Tories, Whigs, and Radicals much as they regard the defeat of Morrison's Tariff Bill in this country by a coalition of Republicans and Renegade Democrats—one of those accidents which set back, without permanently defeating a necessary reform.

There are indications of a possible revival of the old anti-foreign party in American politics. Jealousy of foreigners has always prevailed among all peoples; in this country, it has generally been suppressed by reason of the crying necessity for labour. During the period 1840-1860, many states of the union supplemented gaps of free land by the U.S. Government to foreign settlers by a gift of the electoral franchise after one year's residence; so generously have European immigrants been treated that the Irishman had some ground for his boast that in this country an Irishman was as good as any other man "and a little better too." But the Irish have not accepted as a rule of conduct the

generous principle by which they were such large gainers. They no sooner gained a foothold than they began to protest against the admission of other foreigners. In the East, they have petitioned congress against the admission of Hungarians, Italians, and Poles; on this coast they insist on the exclusion of Chinamen. Having got into a good thing they want it all for themselves.

Their policy has not worked precisely as they expected. It has led, certainly, to the spread of anti-foreign prejudice. But the foreigners against whom Americans are most disposed to protest are not Hungarians and Italians or Chinamen, but Irishmen. A feeling is growing up, all over the country, that good as Irishmen may be, it is possible to have too much of a good thing; that it is tiresome to have to keep watch over dynamiters who are forever endangering our friendly relations with Great Britain; that the establishment of Irish dominion in the great cities invariably leads to corruption—the New York aldermen who sold their votes, and one of whom is now in a state prison, were mostly Irishmen or the sons of Irishmen; that the outrages on Chinamen on this coast, which have disgraced the country, were the work of Irishmen; that the Irish priesthood are the inveterate foes of our common school system; that by voting in a body, without regard to party lines, and in obedience to leaders of their own, who may be cojoned or bought, as was the case in 1884, the Irish tend to defeat the working of American institutions; and that the time has come to see if some remedy cannot be applied to the growing evil. All the points in the case were forcibly put in a 4th of July oration by Mr. Pixley in this city, and Mr. Wigginton, ex-member of Congress, calls for the revival of the know-nothing party. In parts of the East, the feeling is even stronger than it is here. In Chicago, the Irish are nearly as numerous as the Americans, and the Germans are nearly as numerous as Irish and Americans together.

The news from Washington is barren of interest. Good progress is being made with the appropriation bills, and the President diverts his leisure by vetoing pension bills. It has been the practice for years, when the Pension Bureau ruled against an applicant for a pension, to get a private bill through Congress; no one dared to oppose such bills; and in this way a number of persons were wrongfully registered on the pension list. Mr. Cleveland is putting a stop to the practice, at the cost of considerable labour. He writes all his vetoes himself. He has been known to write a score of them, each from three to ten pages of folio in length, in a single day. The amount annually spent by this country in pensions is about \$70,000,000.

A break up of the Cabinet is regarded as not improbable. Attorney-General Garland was so badly smothered in the Pan Telephone investigation that he would like to go. The Secretary of the Interior, Lamar, is a lazy man, and is quite out of place in a Department which requires continuous unremitting labour. The Secretary of the Treasury is disabled by illness. Mr. Bayard is the worst failure as a Secretary of State that the country ever had. His policy has brought ridicule on the nation. His appointments, with few exceptions, have been execrable. Next, since the days of Franklin Pierce, has the country been served by so imbecile and worthless a set of foreign consuls. Private letters from all parts of the world describe the American Consular service as being the laughing stock of foreigners. Yet the Democratic party is full of men of ability, who are prepared to serve their country at the usual market price.

Preparations are being made for the mid-summer conventions. Pennsylvania has acted already. General Beaver has again been nominated by the Republicans in obedience to the demands of D. A. Cameron, and the dictates of their "working boss," Matthew Quay. As Pennsylvania gave Blaine-Somerset majority in 1884, Beaver will probably escape the fate which he met when he was nominated in 1882. Pennsylvania still belongs to the Camerons. Old Simon, in his 87th year, is still the most sagacious political leader in the Keystone State. His half century of political experience enables him to mould conventions like wax; he has done so much good in his life and is so popular that he can make his son U.S. Senator and his benchman Governor without protest from any quarter. The Republican newspapers inform their readers that their party will probably carry the fall elections and will so regain control of the House of Representatives. Persons who endeavor not to be misled by party predilections see little ground for sharing this view. Mr. Cleveland has made an excellent President, and his party has committed no flagrant errors; while on the other hand, each successive utterance of Mr. Blaine, and each successive howl from his organ, the *New York Tribune*, tends to intensify public distrust of the Republican party.

### THE CHOLERA.

#### NOTIFICATION No. 9 OF THE METROPOLITAN POLICE.

It is hereby notified that in cases where the following provisions are obtainable, and where there is no danger of the disease germs being dispersed, cholera patients may be treated at their homes.

1. A room separated from the apartments of the rest of the family.
2. A water closet to be used by the patient alone.
3. Special nurses.
4. Special furniture and utensils.
5. A competent physician.

WATANUKI YOSHINAO,

Assistant Chief of the Metropolitan Police.

August 12th, 1886.

#### NOTES FROM JAPANESE PAPERS.

H.I.H. Prince Komatsu-Akihito, Commander-in-Chief of the Imperial Bodyguard, has been ordered to Europe for one year, his mission being the inspection of the military systems of Western countries.

Admiral Enomoto arrived at Hakodate the 12th instant at 5 a.m., and left for Otazu the same day.

The election of president, vice-president, committees, and other officials in connection with the local assembly of Nagasaki Prefecture will take place at a special meeting to be held the 17th instant.

Colonel Mitsuma Masashiro, President of the Gendarmerie Staff, Tōkyō, left the 11th instant for Yumoto springs at Nikko, whither he has been ordered on account of ill health. During the absence from Tōkyō of Colonel Mitsuma he will be represented by the Vice-President of the Gendarmerie Staff.—*Official Gazette*.

Farmers in Toyama Prefecture to the number of over seventy have applied to the prefectural authorities for permission to emigrate to Hawaii at their own expense.

Several officials of the Veterinary Office in the Agricultural and Commercial Department are occupied in the compilation of regulations as to cattle plague.

The War Office has now fixed the standard height of cavalry horses at from 4 feet 6½ inches to 4 feet 8 inches.

Fire broke out in the settlement at Kobe at day-break on the morning of the 12th instant. The tea godown (Messrs. Colgate, Baker & Co's) at No. 49 was destroyed, together with 15,000 lbs. of tea.

An American resident in Yokohama has contracted with a Tōkyō gardener for the purchase of 5,000 maple trees of different kinds with the view of exporting them to America where they are much in demand for ornamental gardening.—*Fuji Shimpō*.

The Governor and officials of Osaka Prefecture, and other gentlemen in the neighbourhood, are arranging for the establishment of a Club.

The price of ice has increased considerably in Yokohama during the last few days.

The *Hiei Kan* left Tsushima for Jinsen, the 12th instant at 6 a.m.—*Mainichi Shimbun*.

The present buildings of the Department of Communications being too small for the requirements of the department, the *Somai Kyoku* (General Bureau) will be transferred to other premises which it is proposed to construct in the compound.

It is in contemplation to amend the regulations as to the Military College at an early date.

Mr. Hara Rekuro, President of the Specie Bank, was thrown out of his carriage the 10th instant, at Kitagawa, while on his way to Hommoku. Mr. Hara fell in the puddle held beside the road and was only slightly injured. The horse, which he had purchased in England, was being driven out for the first time.

Dr. Higuchi, a naval surgeon, has volunteered to assist Dr. Saneyoshi, inspector of cholera hospitals in Tōkyō, who is at present extremely busy.

The students of the Imperial University have been informed by an intimation from the President, Mr. Watanabe, that in future they will be allowed to bathe only at the Nikazumi Swimming Establishment at Ryōgoku. A teacher of swimming must be present on all occasions when students enter the water.—*Nichi Nichi Shimbun*.

## PRESENTATIONS TO PROFESSOR ALEXANDER.

The Professors, past and present, of the former Imperial Engineering College, now the Engineering School of the Imperial University, assembled, Saturday at noon, to bid farewell to Professor T. Alexander, who is about to leave Japan. It had been decided to present to Mr. Alexander a handsome pair of bronze vases, inlaid with silver, and bearing an inscription to the effect that they were offered by his colleagues of the College.

The presentation took place at Mr. Alexander's house. Captain BRINKLEY, who acted as spokesman, said:—

COLLEAGUE AND FRIEND.—This occasion inspires you, past and present colleagues, with sincere regret. We feel that in you we lose one whose attainments did honour to the name of our country in Japan; whose services the cause of education in this Empire can ill spare, and whose kindly fellowship we shall miss constantly in the future. You are already familiar with these leave-takings. It has been our common lot on too many occasions to say good-bye to colleagues who like yourself had won applause and affection. We need not, therefore, dwell upon our feelings to-day. No one is more capable of appreciating them than yourself. Neither need we promise that you shall live in our memory. For, whatever be the constancy of our friendship, the high gifts which you possess and which you know so well how to use in the cause of Science, will assuredly keep your name before us as they will keep it before the world. Only for the sake of sometimes recalling the friends and fellow-workers whom you leave behind you in Japan do we beg you to accept this souvenir, and with it our most earnest wishes for your prosperity and happiness.

Accompanying the vases was the following address:—

[COPY.] Imperial College of Engineering, Tokyo, Japan, July 25th, 1886.

DEAR ALEXANDER,—We, the undersigned, your past and present colleagues desire to express our regret at your departure from among us. We request your acceptance of the accompanying gift as a slight mark of our esteem and regard. Wishing you every success in your future career, we remain, dear Alexander, your affectionate friends,

[Signatures.]

Professor ALEXANDER replied:—

GENTLEMEN, my friends and colleagues,—I beg to thank you for your handsome present, especially for the accompanying expression of your good-will and esteem. Believe me that it is with a similar feeling of regret I leave you. The only real occasion for our regret, however, is that the noble institution, the Kōbu-dai gakkō, with which we were all so long connected, now no longer exists. I do not wish to disparage the Engineering School of the new University, which may yet gain its laurels. I shall always remember your kindness and forbearance while we were associated in the work of professional education. Though far away from Japan, I shall never cease to remember my friends in that country, and shall bear home with me the report of your untiring efforts to promote the highest welfare of Japan. May those efforts be

more and more crowned with success. I again thank you for affording me this last opportunity of looking into your faces, and conclude by wishing you all health and happiness.

Luncheon was then served in the house of Dr. DIVERS, F.R.S., who proposed Professor Alexander's health in the following terms:—

In such a small circle of Mr. Alexander's friends, who know him so well, it seems unnecessary to make a speech at any length in proposing his health. Captain Brinkley has spoken in appropriate terms of his attainments, and I will only add to what has been so well said, by expressing my deep conviction that the Government has never lost a foreign servant whose services are more needed in the country at present, than those of Mr. Alexander. He has indeed shown himself unusually well fitted to train young men into competent engineers. In saying of his social virtues, set off as they are by his amiable vices, that he is always most kind to others, to himself alone unkind, I am sure you will all agree with me. Many are the Japanese, who I hope will keep his memory green among them, who owe very much indeed to him of the knowledge—of the practically effective knowledge—of engineering they possess—knowledge which he has never spared himself to give to them; while not a few also have been indebted to him for pecuniary assistance during the prosecution of their studies. Of all things in which the people of this country have so largely succeeded, there are none, I consider, except political government, with which they may be more content than with their progress in engineering works; and of those works it would be hard to find many in which Mr. Alexander's pupils of the former Engineering College have not taken an important part. We wish you, Mr. Alexander, a pleasant journey and a happy return to your friends at home, soon again to be followed by a joyful outgiving to a new appointment worthy of your acceptance."

Professor ALEXANDER responded as follows:—

GENTLEMEN,—I rise to return thanks for the kind way in which you have drunk my health. Allow me to recall the many happy social gatherings we have had to sweeten our lives here in Japan. Many of these were upon the occasion of the departure of some of our dear friends for home, or, to be fashionably German, into the *ewigkeit*. You know how you were wont on such festive occasions to encourage me to sing the praises of Auld Scotland where, Green grow the Rushes O!—where the hills are very high and very long. How distance must have lent enchantment to my view! Now that I am about to return there I must just let my consolation be the grand compensation that the songs offer for these drawbacks. At your next meeting I shall have become historical, and afford you a pleasant subject for conversation. Lightly you'll talk of the Scotchman that's gone, and o'er cigar ashes upbraid him. And if you are not very long about having your next meeting I shall be far away on the billow. Wherever I am, however, I shall not forget you, or cease to hope that new triumphs may crown your scientific labours and new fields offer for your research.

On the afternoon of Sunday, a deputation representing the graduates of the Kōbu-dai gakkō called at Mr. Alexander's house and presented him with a handsome set of four pieces of Japanese

bronze work, when the following letter signed by about forty of the graduates was read.

T. ALEXANDER, Esq.

DEAR SIR,—It is now many long years since we first had the pleasure of seeing you in the Kobu-dai-gakko, in which we were educated, and whose memory will ever be sweet to us. As your stay in Japan is fast coming to an end, and you are leaving us behind, we cannot but express our indebtedness to you during your connection with that college and offer you our hearty wishes.

We hope you will accept the accompanying set of Japanese bronze work and carry it home as a token of remembrance to you.

With an earnest hope for your pleasant voyage and future well-being

We are, yours faithfully, [Signatures.]

Mr. ALEXANDER replied:—

MY DEAR FRIENDS AND PUPILS,—Accept my thanks for your kind gift and the expression of your regard for me. For a number of years, quite a large fraction of your lives, we have been associated with you in the closest relationship. With what diligence and patience have you studied under me! I have endeavoured, with all my skill as a teacher, to fill your minds with the fundamental bases of scientific engineering, as I learned them from the late Dr. Rankine and from Sir Wm. Thomson personally, and from the writings of those and other such eminent authorities. At the same time, I have spared no pains to thoroughly teach you the office routine and field work practised by first-rate firms of Scotch engineers. In this I know I have succeeded, as I hold in my hands surveys, designs, and graphic constructions done by yourselves in the most perfect and finished manner, commanding the admiration of all to whom they are shown. I have ever guarded against your studying too hard. I congratulate you on the splendid training in English literature and in all the sciences allied to your profession, which you have received from my distinguished colleagues, the Professors of the Kobu-dai-gakko, and on the facilities which were afforded you, through the liberality of the late Department of Public Works, to visit, practically study, and even to take some part in the various public works being executed throughout the whole empire. I can assure those of you who may think of going abroad, as some have already done, that your skill as technical draughtsmen alone, may secure you employment sufficiently remunerative to pay your expenses till such time as your higher abilities are recognised. Those of you who have now been in practice for some years have my warmest admiration for the skilful and business-like way in which you have done your work; and that your services are appreciated is shown by the circumstance that they are in demand by every department of the Government and by the various local boards. Though I have never understood the language nor indeed the customs of your country, this I know: that the youths of this country placed under me to study have won my affection by their gentle ways, modest demeanour, and cheerful, hopeful disposition, and I believe it is reciprocated: that as I have understood you, so also you have understood me. I am proud of you all, and hope to live to be still prouder of you. I wish you every success. Persevere; for whosoever may be ignorant of your abilities, or whatsoever neglect may reward your merits, I shall ever honour both, and offer you my approbation for every difficulty overcome—every effort you may yet make. There is besides the approbation to be won of your own selves, and you already form no inconsiderable body of educated engineers. I bid you all an affectionate farewell.

## CORRESPONDENCE.

### MR. BLAINE'S STATISTICS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the leading article which appears in the *Japan Mail* of this morning, occurs the following passage:—"It is true that Ireland sends annually to Great Britain nine millions sterling worth of stock, meat, butter, poultry, and eggs; nearly one million worth of fish, and six millions worth of manufactures. It is also true that the Irish people complain of being poor."

Will you kindly inform me if you mean to convey that the above is exacted in the form of tribute, and that the Irish people get nothing back for it, and are consequently poor?

Yours respectfully,

HOME RULE.

Yokohama, August 6th, 1886.

P.S.—It occurs to me that perhaps *sends* has been printed in error for *sells*.—H.K.

We used "*sends*" in the sense of "*exports*."—*En. J.M.*

## KIM-YO-KUN AND THE MISSIONARIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I see it stated in your issue of yesterday that a missionary society offered to support Kim-yo-kun for a term of years, with the expectation of making him a convert. I am in a position to know such is not the case. The refugees now in America have been aided by some charitable Christian people, but not by any missionary society. If Kim-yo-kun had gone to America it would have been the same with him. He would have been dependent upon the charity of benevolent individuals, and whether they would have given him the same aid as the others would have been determined by the circumstances.

If any statement to the contrary of this has been published in America it was incorrect.

Sincerely yours,

Yokohama, August 11th, 1886.

[We have it on good authority that such an offer was made.—*En. J.M.*]

## TRANSLATIONS FROM NALIVE JOURNALS.

### THE REPORT ON THE SALE OF THE NAVAL LOAN BONDS.

(Translated from the *Nichi Nichi Shinbun*.)

According to the detailed account of the sale of the Naval Loan Bonds, reported to the Minister President of State by the Minister of State for Finance, the total amount applied for reached as high as yen 16,642,300, which exceeds the face value of the bonds issued, by yen 11,642,300. Applications at and above the premium of yen 3.06 have been accepted, the actual amount received being yen 5,187,834.236, and the average premium being thus yen 3.756. When the sale of the first portion of the Navy Bonds was announced, it was feared that, although the state of the money market was favourable for the floating of the loan, the issue of these bonds at the face value of yen 100 at 5 per cent. annual interest would not attract many applications at a premium, and that the total amount applied for would not much exceed the amount to be issued. But the actual result took the public by surprise; applications poured in from every quarter until the amount rose to more than three times the required sum. Of those applications which were accepted, the highest price is yen 110, and the lowest yen 103.06. Some days ago, it was rumoured that most of the applications had been made at prices ranging between yen 106 and 110, but this has proved incorrect, the amount applied for at those prices being extremely small. Applications the amount of which exceeds yen 100,000 were made at these premiums:—yen 5.30 (yen 100,000), yen 5.20 (yen 131,000), yen 5 (yen 233,300), yen 4.80 (yen 160,700), yen 4.70 (yen 120,000), yen 4.60 (yen 104,000), yen 4.50 (yen 105,000), yen 4.20 (yen 177,000), yen 4.10 (yen 161,600), yen 3.58 (yen 129,400), yen 3.50 (yen 235,000), yen 3.25 (yen 220,000), yen 3.15 (yen 142,000), yen 3.11 (yen 178,200), and yen 3.10 (yen 193,100). Of the applications that have not been accepted, the largest amounts were applied for at the following premiums:—yen 3.200 (5,607,000), yen 2.100 (yen 2,747,700), yen 1.000 (yen 2,284,600); while the amount of applications at par was yen 670,000. From these figures it will be seen that by far the greatest amount was applied for at prices ranging between yen 102 and 103.

The total amount applied for, yen 16,642,300, is classified as follows:—yen 547,600, applied for by Government offices (19 applications); yen 9,186,000, by banks and companies (304 applications); yen 3,000, by a hospital; yen 400, by a temple; yen 6,005,300 by private individuals, (1,350 applications). The amount accepted is distributed as follows:—yen 202,000 to Government offices (8 applications); yen 2,079,100 to banks (46 applications); yen 2,118,900 to private individuals (280 applications). It will be seen from these figures that private individuals applied at higher prices than either banks or companies, and Government offices still higher than private individuals. On the part of banks and companies it was probably thought inexpedient, in view of the prospective profitable use of their money when trade activity is revived, to bid high prices for bonds issued at 100 yen face value and 5 per cent. annual interest. Private individuals, on the other hand, considered it wiser to buy their bonds than to deposit their money in banks at low interest; while in the case of Government offices, it was probably the consideration that the rate of

interest is not likely to rise, although it may become lower, that counselled the purchase of the Navy Bonds at high prices.

As the amounts of the applications received in the various localities indicate, in a manner, the financial condition of each locality, we here enumerate the following:—Tokyo, yen 6,880,000; Osaka, yen 1,920,000; Nagoya, yen 680,000; Kobe, yen 610,000; Yokohama, yen 500,000; Kagoshima, yen 510,000; Matsue, yen 410,000; Tsu, yen 340,000; Kyoto, yen 320,000; Okayama, yen 260,000; Sakai, yen 240,000; Gifu, yen 240,000; Yokkaichi, yen 220,000; Shizuoka, yen 200,000; Fukui, yen 190,000; Fukuoka, yen 180,000; Wakayama, yen 170,000; Saga, yen 160,000; Nagasaki, yen 150,000; Kochi, yen 140,000; Tokushima, yen 130,000; Tohoku, yen 130,000; Hikone, Aomori, Kumamoto, and Matsuyama, each yen 120,000; Chiba, yen 110,000; Sendai, and Otsu, each yen 100,000; Maebashi, yen 100,000; Toyama, yen 70,000; Oita, Utsunomiya, and Kanazawa, each yen 60,000; Nagano and Mito, each yen 50,000. In all other localities from which applications were received, the amount fell below the last mentioned sum. Allowance has to be made for the shortness of the period of application; for the difference of opinion on the part of the inhabitants of different localities as to the relative advisability of depositing money in savings banks and investing it in bonds, and the convenience of communication with agencies in each locality. We cannot, therefore, consider the above mentioned figures as indicating the true financial condition of each locality; but we may safely regard them as a help to understand the approximate relative wealth and prosperity of different places. Viewing the matter in the light of the sale of the bonds, the result obtained leaves nothing to be desired, but we also maintain that this good result has been chiefly brought about by the depression of trade and the consequent inactivity in the money market.

(Translated from the *Hechi Shinbun*.)

To what point do the capitalists of this country mean to carry their ignorant timidity? While there are enough undertakings promising profit, they lack the courage to make a fresh departure, and content themselves with securing the trifling interest allowed on public loan bonds. Their behaviour is ill-timed in the face of their high pretensions to commercial wisdom and their laudable aspirations to compete with foreign merchants. We sincerely congratulate the Government on the good result attending the issue of the Naval Bonds, but when we remember that it has been obtained chiefly on account of the depression of trade and the excessive timidity of capitalists, we can not help regretting it for the sake of the country. From the report of the Minister of State for Finance, we see that the amount applied for reached more than three times the required sum, yen 5,000,000. Were the interest of the bonds in question sufficiently high, and were the wealth of the country on the same level with that of European and American countries, there would be no cause of surprise in capitalists making such an extraordinary rush for the recently issued bonds. But, considering the actual rate of interest and the real wealth of the country, the result of the present issue must be looked upon as a phenomenal occurrence in our financial world. The highest bidding is quoted at yen 110; the next yen 108.50, and the next, yen 107.513; while the applications above a premium of yen 3.06 amounted in face value to yen 5,000,000, securing an extra receipt of yen 187,834. Rejected applications amount to about yen 11,000,000, even taking no account of the amount applied for at par. Will the depression of trade last for ever? Certainly not. Already it seems that the day is not far distant when activity will be manifested in our money market. For some time people were able, with economical management, to get along tolerably well, without buying new goods; but gradually the stock of materials, bought in 1880-81, when they had money, has been exhausted, and at present they have no more reserve stores to fall back upon. It being thus plain that the demand for merchandise will increase in no distant future, it is surely time now to invest money in industrial enterprises, and as surely is it folly to buy bonds which will sooner or later fall in price. Do our capitalists imagine that the Naval Bonds will long continue to keep the price of 103 to 110 yen, at rate of 5 per cent. annual interest?

## TIME TABLES AND STEAMERS.

## YOKOHAMA-TOKYO RAILWAY.

TRAINS LEAVE YOKOHAMA Station at 6.35, 8.00, 8.50, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

TRAINS LEAVE TOKYO (Shimbashi) at 6.35, 8.00, 9.15, 9.45, and 11.00 a.m.; and 12.15, 1.30, 2.45, 4.00, 4.50, 6.00, 7.15, 8.30, 9.45, and 11.00 p.m.

FARES—First Single, yen 1.00; Second do., yen 60; First Return, yen 1.50; Second do., yen 90.

Those marked with (\*) run through without stopping at Tsurumi, Kawasaki and Onori Stations. Those marked (†) are the same as above with the exception of stopping at Kawasaki Station.

## TOKYO-MAYEBASHI RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 5.25 and 9.25 a.m. and 12.25 and 4.50 p.m.; and MAYEBASHI at 5.25 a.m. and 12.25 and 4.50 p.m.

FARES—First-class (Separate Compartment), yen 1.80; Second-class, yen 2.28; Third-class, yen 1.14.

## TAKASAKI-YOKOKAWA RAILWAY.

TRAINS LEAVE TAKASAKI at 6.50 and 9.55 a.m., and 1.00 and 4.10 p.m.; and YOKOKAWA at 8.25 and 11.30 a.m., and 2.40 and 5.45 p.m.

## TOKYO-UTSUNOMIYA RAILWAY.

TRAINS LEAVE TOKYO (Uyeno) at 9.25 a.m. and 4.50 p.m.; and UTSUNOMIYA at 9.30 and 4.55 p.m.

FARES—First-class, yen 3.50; Second-class, yen 2.10; Third-class, yen 1.05.

## SHIMBASHI, SHINAGAWA, AND AKAHANE JUNCTION.

TRAINS LEAVE SHINAGAWA at 8.49 and 11.49 a.m., and 2.44 and 6.29 p.m.; and AKAHANE at 9.55 a.m., and 12.50, 4.05, and 8.35 p.m.

FARES—First-class, yen 70; Second-class, yen 46; Third-class, yen 23.

## KOBE-OTSU RAILWAY.

TRAINS LEAVE KOBE (up) at 5.55, 7.55, 9.55, and 11.55 a.m.; and 1.55, 3.55, 5.55, 7.55, and 9.55 p.m.

TRAINS LEAVE OSAKA (up) at 4.45, 7.6, 9.6, and 11.6 a.m.; and 1.6, 3.6, 5.6, 7.6, and 9.6 p.m.

TRAINS LEAVE KYOTO (up) at 6.46, 8.46, and 10.46 a.m.; and 12.46, 2.46, 4.46, 6.46, and 8.46 p.m.

## OCEAN AND COASTING STEAMERS.

Steamships are regularly despatched from the Port of Yokohama for the following destinations:—

For Europe—The P. & O. Company's steamer sails fortnightly on Saturday, via Inland Sea Ports, making connection with the English mail at Hongkong, for Marseilles and Plymouth. The Messageries Maritimes Co.'s steamer sails fortnightly on Sunday, carries the French mail, and makes connection at Hongkong with the mail-boat for Marseilles.

For SAN FRANCISCO—The steamers of the O. & O. Co. and the P. M. Co. sail hence, approximately, every 10 days.

For CHINA—The steamers of the Nippon Yusen Kaisha sail weekly (Wednesday) for Shanghai, calling at Kobe and Nagasaki. Steamers of this Company also run to Korea and Vladivostok, at intervals, their sailing notices appearing in the local papers.

## YOKOSUKA STEAMERS.

STEAMERS LEAVE the English Hatoba daily at 8.30 a.m., and 12.00 p.m., and 4.15 p.m.; and leave Yokosuka at 6.30 and 11.00 a.m., and 4.00 p.m.—Fare, 20 sen.

*Teheran*, British steamer, 1,684, F. H. Seymour, 14th August.—Hongkong via Kobe and Nagasaki, Mails and General.—P. & O. S. N. Co.

## PASSENGERS.

## ARRIVED.

Per British steamer *Teheran*, from Hongkong, via Nagasaki and Kobe:—Dr. C. A. Arnold, Captain and Mrs. Bunbury, Miss K. Sada, Austrian Ladies' Band Troupe, Mrs. Cheng Shee, Dr. Perse, Deputy-Inspector-General Fisher, R.N., Messrs. C. H. Wan, J. Burke, D. MacPherson, J. Thomson, M. Brown, L. Ah Kun, C. A. Tomes, Hornumjee Pestonjee, Ah Chien, and H. Kusakabe in cabin.

Per Japanese steamer *Omi Maru*, from Kobe:—Messrs. L. L. Delcamp, O. Braws, Omema, and Oh Setite in cabin; 9 Japanese in second class; and 59 Japanese in steerage.

Per American steamer *City of New York*, from San Francisco:—Mrs. Naylor, Mr. and Mrs. Richard, Rev. Father Mugabore, Mrs. Knox, Miss Knox, Mr. Richard Meir, and Miss R. W. Simons in cabin; and 4 Japanese in steerage. For Hongkong: Mr. Sin Jun Gong in cabin; and 4 Japanese in steerage.

Per Japanese steamer *Yokohama Maru*, from Shanghai and ports:—Mrs. Kawahara, Messrs. Ed. d'Almeida, C. M. Alsogoff, E. L. Griffen, E. Byrne, K. Chang, Ono, Minohara, Honda, and Shunokobe in cabin; and Mrs. Kusunoki and two children, Miss Kusunoki, Messrs. Cheashi, Kashiwagi, and two Japanese in second class; and 2 Europeans, 2 Malays, 1 Chinese, and 86 Japanese in steerage. For London: Mrs. Geo. B. Glover in cabin. For Liverpool: Mr. A. P. Happer in cabin.

Per Japanese steamer *Satsuma Maru*, from Hakodate:—10 Japanese in cabin; and 30 Japanese in steerage.

Per Japanese steamer *Yamashiro Maru*, from Kobe:—Mr. and Mrs. Hutchison, Mr. McCallum, and 8 Japanese in cabin; 10 Japanese in second class; and 102 Japanese in steerage.

Per French steamer *Volga*, from Hongkong via Kobe:—Messrs. M. Kong, Rigoshi, Le Roy, Girard, Pannetier, Kojima, and 2 steerage passengers.

## DEPARTED.

Per French steamer *Menzaleh*, for Hongkong via Kobe:—Messrs. E. Ishida, K. Nagura, K. Taniguchi, Vignolle, Cuthbert, T. Fukutomi, T. Yamamoto, A. Kum, and A. Ying in cabin.

Per Japanese steamer *Takasago Maru*, for Hakodate via Oghibama:—H.E. Admiral Enomoto, Messrs. S. Kurihara, S. Izawa, and Taylor in cabin; Messrs. T. Kitamura, M. Nishimura, S. Nishimura, K. Nakano, K. Otsuka, N. Fukao, R. Ishii, and S. Shimizu in second class; and 63 Japanese in steerage.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Mr. Mayeda, Mrs. Mayeda, Messrs. T. Iriya, C. Braiss, E. Hagens, N. A. Sohwin, J. Dreyke, M. Higo, Nagasaki, Ishiguro, F. Kondo, and Uyeno in cabin; and 1 Chinese and 69 Japanese in steerage.

Per Japanese steamer *Wakamatsu Maru*, for Kobe:—Mr. and Mrs. Hopper, Miss L. Marchetti, Messrs. E. Remenyi, I. Luckstone, J. J. Foster, Hellyer, Pearson, and S. Sakaki in cabin; Messrs. J. Noda, Y. Tamura, and M. Matsumoto in second class; and 42 Japanese in steerage.

## CARGOES.

Per French steamer *Menzaleh*, for Hongkong via Kobe:—Silk for France, 99 bales; for England, 5 bales; total, 95 bales.

Per British steamer *Teheran*, from Hongkong, via Nagasaki and Kobe:—Sugar 5,089 bags, Merchandise 4,291 packages.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Treasure, \$38,000.00.

Per American steamer *City of New York*, from San Francisco:—Freight, 68 tons; for Shanghai, 70 tons; for Hongkong, 800 tons; Specie for Hyogo, \$100,000; for Hongkong and East Indies, \$384,180.

## REPORTS.

The Japanese steamer *Omi Maru*, Captain Swain, from Kobe, reports light winds, fine weather, and smooth sea throughout the passage.

The Japanese steamer *Nigata Maru*, Captain Drummond, from Kobe, reports fine weather throughout the passage.

The American steamer *City of New York*, Captain R. R. Seale, from San Francisco, reports fine weather.

The Japanese steamer *Yamashiro Maru*, Captain Mahlmann, from Kobe, reports fine weather throughout the passage.

## LATEST COMMERCIAL.

## IMPORTS.

The Market during the past week has become decidedly quieter; dealers have been less eager to operate, and clearances have fallen off considerably, but the "Bon" festival gets the credit of checking business pending its duration, and dealers seem pretty cheerful as to future prospects when the autumn trade sets in.

**YARN.**—Sales for the week amount to 700 bales English spinings, for which slightly higher prices have again been paid, and 450 bales Bombays at about former rates; the Market closes weaker.

**COTTON PIECE GOODS** account for a very small list of sales, consisting of 250 pieces T. Cloths, 600 pieces Indigo Shirtings, 200 pieces Twills, and 100 pieces Cotton Sateens.

**WOOLLENS** have also had but a limited amount of attention, sales being restricted to 1,000 pieces Italian Cloth, 100 pieces Silk Satins, and 100 pairs Blankets.

## COTTON YARNS.

	PER POUND.
Nos. 16/24, Ordinary	\$26.00 to 27.75

Mousseline de Laine—Vuzen, 24 yards, 31 inches	0.30 to 0.40
Cloths—Pilots, 54 @ 56 inches	0.35 to 0.41
Cloths—Presidents, 54 @ 56 inches	0.40 to 0.50
Cloths—Union, 54 @ 56 inches	0.30 to 0.55
Blankets—Scarlet and Green, 6 to 4 lb, per lb	0.34 to 0.42

## METALS.

The position is unchanged since last week, the general features being much the same. Pig Iron dull and neglected. Manufactured Iron flat, with but little doing. Wire Nails, favourite assortments enquired for both "spot" and "to arrive." Tin Plates wanted at quotations.

	PER POUND.
Flat Bars, 4 inch	\$2.50 to 2.60
Flat Bars, 1 inch	2.60 to 2.75
Round and square up to 2 inch	2.50 to 2.70
Nailrod, assorted	2.40 to 2.50
Nailrod, small size	Nom. 2.60 to 2.70
Wire Nails, assorted	4.25 to 5.50
Tin Plates, per box	5.00 to 5.50
Pig Iron, No. 3	1.15 to 1.17 1/2

## KEROSENE.

Still no business, the views of sellers and buyers

being too divergent. We leave quotations unchanged but quite nominal; at present holders demand \$1.80 for "Devoe," while the highest bid hitherto has been \$1.72 1/2. Perhaps they may meet at some intermediate figure when the market opens again. Stocks ample and further arrivals will soon be in sight.

## PER CASE.

Devoe	Nom. \$1.70 to 1.72 1/2
Comet	Nom. 1.65 to 1.67 1/2
Stella	Nom. 1.60 to 1.62 1/2

## SUGAR.

Sugar is still difficult to move, and the small sales effected make but little impression on the large stock on hand.

## PER PICUL.

White, No. 1	\$7.25 to 7.30
White, No. 2	5.90 to 5.95
White, No. 3	5.60 to 5.75
White, No. 4	4.90 to 5.00
White, No. 5	4.10 to 4.15
Brown Formosa	4.50 to 4.60

## EXPORTS.

## RAW SILK.

Our last issue was of the 6th instant, since then we have had a few quiet days and a few brisk ones, resulting in Settlements for the week of 255 piculs, divided thus:—*Hanks* 10 piculs, *Filatures* and *Reels* 245 piculs. In addition to these figures the Doshinsha exported 14 bales to Lyons per steamer *Menzaleh*.

Sellers have made good their boast and have compelled buyers to pay their figures as the departure of the American mail draws nigh. Even during that portion of the week when there was no business doing they stood manfully to their guns; but now that buying has recommenced there is no holding them, and in many cases they ask nearly \$100 per picul advance on the prices current at the beginning of July. It remains to be seen whether foreign Markets can follow our strong lead or no, meantime the buying is but partial, some old and experienced shippers holding entirely aloof at present rates.

Supplies come in more freely, and the Stock has increased 800 piculs since this day week. The inland Markets are pushed up still higher with every fresh sale here, and it is difficult to know what the end will be. Holders assert that they are sure of their position and seem to care little or nothing for the advances which come to hand as to the prices current with consumers abroad.

There has only been one shipping opportunity during the interval, the French mail steamer of the 8th instant. This vessel, the *Menzaleh*, carried 5 bales for London and 90 bales for Lyons, of which latter quantity 14 bales were on Japanese account. Total shipments to date are thus 1,233 piculs against 1,018 piculs last year, and 1,829 piculs at same date in 1884.

*Hanks*.—The only purchase noted is a parcel of *Chichibu* at \$505; but all kinds in this department are now held for extreme rates. Sellers talk of \$620 for Medium *Shinshu*, and \$570 for good *Hachoji*. We put all quotations purely nominal—until business of some importance takes place.

*Filatures*.—Strong demand at a marked advance since the morning of the 10th instant, some few buyers striding in. Fine-size Silks from *Kofu* have brought as high as \$720, with ordinary good in full size at \$685. In *Shinshu* kinds of chop quality suitable for America, we notice *Kaimaisha*, *Kairoska*, *Meijusha* at \$720, *Yajima* \$715, *Tokosha* \$702 1/2 with medium grades at \$690. For *Gakosha*, 1st choice, \$780 is asked; *Hakunaru* wants \$750, and so on in proportion. Nothing decent can apparently now be thought of at less than \$700, and we imagine that shippers of a month ago, must wish that they had retained their goods here to profit by the rise, instead of trusting them to the glorious uncertainty of Markets on the home side.

*Re-reels.*—Not so much done in these; the best marks are held for fabulous prices, \$710 being talked of for Shinshu re-reels, *Helmet chop*. Best Joshi kinds are also practically held off sale for the present by reason of holders believing in a further steady advance. Among the sales of the week are *Tengishu*, *Ichimurase*, *Sei-hiro-gumi*, and *Buyosha* at \$655, with *Sei-shu-sha* at \$635. It is doubtful, however, if anything like these figures would be accepted now.

In other sorts no business whatever, although arrivals are commencing from Oshu province.

Export from 1st July	1,600	1,300	2,700
Stock, 13th August	4,200	4,100	2,450
Available supplies to date	5,800	5,400	5,150

## WASTE SILK.

A decided improvement in this market, and the large business of 750 piculs has been done during the week. Settlements are divided thus:—*Pierced Cocoons* 220 piculs, *Noshi* 330 piculs, *Kibiso* 200 piculs. No settlements for Direct export, although it is reported that natives are buying on speculative account.

As in the Raw market, so here, dealers ask a fresh advance after every sale made, and some holders quietly sit by and will not offer their goods at any price. The *Cocoons* noted in the settlements are not yet weighed; in fact the price is not yet fixed; the goods have gone into godown for drying and preparation, but the figure depends on subsequent sales. Arrivals are coming in freely and the stock is increased to 4,000 piculs in spite of the large transactions noted above.

The M. M. steamship *Mensaleh* (8th instant) carried away 58 bales, all entered as going to (or through) Marseilles. Present export is, therefore, 589 piculs, as against 580 piculs last year and 339 piculs to same date in 1884.

*Pierced Cocoons.*—The 220 piculs in the list are said to have been taken into godown at a price to be hereafter fixed when other buyers operate, but in no case to be less than \$120 per picul. Stock on hand 950 piculs.

*Noshi.*—Sales comprise among other things *Tomiyoka fil.* at \$185 against \$130, same time last year. The greater part of the settlements, however, are ordinary *Joshi* at \$115 against \$75 last year. (Exchange now 3/1 against 3/7 1/2 last August).

*Kibiso.*—Chief business has been in *Joshi* at from \$57 1/2 to \$72 1/2 with a little *Bushu* at \$47 1/2. One parcel *Filature* (discolored) at \$148.

Taysam Kinds	190	Sundries	100	
Total piculs	4,200	Total piculs	4,000	

\* \* \* Raw Stock—1,300 piculs Old, 2,900 piculs New.  
Waste Stock—800 piculs Old, 3,200 piculs New.

## TEA.

About 5,095 piculs of leaf have been settled for the past seven days at prices, ranging from 12 to 36 dollars per picul. Prices are now a shade firmer, but with no quotable change. Receipts from the producing districts have been scarcely equal to the demand, and the stock to-day shows a decrease of about 2,000 piculs. About 500 piculs of Tea was destroyed in a Kobe tea-firing godown which was burnt down on the morning of the 12th inst. The usual Tea shipments (from this port only) are as follows:—45,812 lb. for New York and 178,255 lb. for Canada, totaling 224,067 lbs., per steamship *Yorkshire*, which sailed on the 30th July. The bark *Zoroya* which left on the 31st ultimo, took 27,878 lbs. for New York, 22,091 lbs. for Chicago, 1,625 lbs. for Saint Paul, and 107,055 lbs. for Canada, making a total of 219,549 lbs. The Pacific Mail steamship *City of Sydney* took 507,419 lbs. from this port on the 4th instant, as follows: 118,388 lbs. for New York, 3,600 lbs. for Boston, 76,733 lbs. for Chicago, 293,986 lbs. for San Francisco, 2,640 lbs. Portland (Oregon), and 12,072 lbs. for Canada. The Suez Canal steamer *Strathleven* took on the 6th instant 194,418 lbs. for New York and 150,229 lbs. for Canada, making a total of 344,647 lbs.

## NOW READY,

In 3 Parts, Demy 16mo, limp,

A ROMANIZED JAPANESE READER; consisting of JAPANESE ANECDOTES, MAXIMS, &c., in easy Written Style, with an ENGLISH TRANSLATION and NOTES. By BASIL HALL CHAMBERLAIN, Professor of Japanese and Philology in the Imperial University of Tokyo; author of "A Simplified Grammar of the Japanese Language," &c., &c.

PART I.—JAPANESE TEXT.

PART II.—ENGLISH TRANSLATION.

PART III.—NOTES.

PRICE, \$2.50.

The *Hioyo News* thus refers to the work:—

We have to acknowledge the receipt of "A Romanized Japanese Reader," consisting of Japanese anecdotes, maxims, conversations, &c., by Mr. B. H. Chamberlain, the author of the Grammar of the Japanese Language which was published a few months ago. The Reader is in three parts of convenient size, well bound, and the typography reflects much credit upon the Japan Mail office, where the work was printed. Part I. contains the Japanese text of the anecdotes, &c.; Part II. an English translation, and Part III. is devoted to copious notes intended to give information concerning the persons and places mentioned in the Reader, to explain allusions, and in certain cases to bring out the literal meaning in a clearer manner than was possible in the translation. Mr. Chamberlain is such an acknowledged authority upon everything connected with the Japanese language, and has always been so thoroughly painstaking and conscientious in the preparation of his various publications, that students may well accept with confidence his latest work. In conjunction with the "Simplified Grammar" the "Reader" ought to prove of great benefit to all persons engaged in studying the language of Japan, and indeed to any foreign resident who wishes to speak correctly when venturing upon the vernacular.

London: TRÜBNER & Co. YOKOHAMA: KELLY & WALSH, Limited.

Yokohama, June 4th, 1886.

## NOW READY,

Demy 16 mo., limp,

"SOME JAPANESE VERBS," being a short but valuable Treatise on the use of JAPANESE VERBS OF SAYING, SPEAKING, TELLING, &c., with their related NOUNS.

PRICE FIFTY CENTS.

To be obtained at the Office of the *Japan Mail*, or of KELLY & WALSH, Limited.

Yokohama, July 30th, 1886.

## NOW READY,

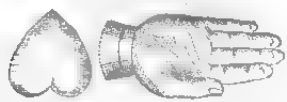

PRICE ONE DOLLAR,

A PAMPHLET containing the recent Correspondence published in the "JAPAN MAIL" on the relative merits of English and American Railway Bridges, entitled "AMERICAN VERSUS ENGLISH BRIDGE DESIGNING."

To be obtained at the Office of the "Japan Mail."

Yokohama, April 7th, 1886.

**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,  
in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patients, which satisfies them of their value."

**SIMPLE, SAFE, AND CERTAIN!**  
**HOLLOWAY'S OINTMENT**

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,  
in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"  
Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1885.

"FAISCE QUE DOIST ADVIENNE QUE POURRA!"

### NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 21ST, 1886.

### BIRTH.

At Surugadai, Tōkyō on the 14th instant, the wife of A. F. MAGNAN, of a son.

### SUMMARY OF NEWS.

THE cholera hospital at Shiba has ceased receiving patients.

PRINCE KOMATSU left Tōkyō for Tomioka, the 15th instant.

CHOLERA continues to attack about 150 persons daily in Tōkyō.

A NEW journal, the *Naniwa Shimbun*, was started in Osaka, the 10th inst.

MR. SHIODA, Japanese Minister at Peking, is said to be slightly indisposed.

MR. KAWAMI, private secretary to the Minister President of State, has gone to Tomioka.

MR. ARISHIMA, Superintendent of the Yokohama Customs, went to Kazusa, the 14th instant.

THE Engineering Bureau of the Home Department has applied for the services of a Dutch engineer.

JUDGE KOGURE, president of the Sado Shishin Saibansho, left the capital for Sado the 15th instant.

LIEUTENANT-GENERAL MIURA, commanding the Kumamoto Garrison, has sent in his resignation to the War Office.

THE export of screens from Kobe during the latter half of 1885, amounted to 36,036, which were valued at yen 130,875.23.

A NAVAL shipbuilding class will be established at Yokosuka next year in buildings to be specially erected on reclaimed land in the vicinity of the

dockyard. About 50 students are expected to attend the course of instruction during the first session.

THE Vice-Minister of State for the Navy is at his country-residence at Takata, Tōkyō, whither he has removed his family.

It is announced that in future shares of the Nippon Yusen Kaisha will be received as securities by the Nippon Ginko.

LIEUT.-GENERAL VISCOUNT MIYOSHI, lately appointed to the command of the Tōkyō Garrison, arrived in the capital, Thursday.

A BRANCH office of the Nagasaki Custom-house will, it is said, be established at Nafa, Okinawa Prefecture, next month.

THE weather broke on Wednesday night, and the long continued heat was replaced by cool showers and northerly breezes.

A SERIOUS fracas has occurred at Nagasaki between the police and several hundred liberty men from the Chinese squadron.

ARRANGEMENTS are in contemplation with the object of largely extending the work of the Tōkyō Dendrological School at Komaba.

A CONFERENCE of City and Prefectural Governors will take place in Tōkyō about the middle of October for the discussion of official business.

It is proposed to introduce the study of English into the curriculum of the Meiji Law School, which will shortly be removed to new buildings at Surugadai.

THE description of faience known as Awata ware seems to be coming into favour, the export from Osaka last month amounting in value to yen 7,000.

THE students at the Imperial University are making arrangements to hold the autumn boat races on the Sumida river about the end of September.

THE Education Department has instituted an examination of many old documents relating to the condition of education during the Tokugawa régime.

DR. SANEYOSHI, chief inspector of the Tōkyō cholera hospitals, is engaged in compiling a set of sanitary regulations on the model of English enactments.

ONE hundred and seventy-seven applications have been made for permission to take part in the forthcoming autumn examinations for legal practitioners in Tōkyō.

THE Minister President of State has presented to the Imperial Household Department a roll of *kakemono* given to him by Li Hung-chang, and said to be very rare and valuable.

On the 17th instant the ceremony of presenting colours to the 17th, 19th, 21st, 22nd, 23rd, and 24th regiments of infantry took place at the

Imperial Palace. Their Excellencies Counts Ito, Yamada, Oyama, and several military officials attended the ceremony.

THE Vice-Minister of State for Agriculture and Commerce has consented to accept the office of president of the Society of Oriental Painters, vacant by the resignation of Mr. Nomura.

It is stated that Major-General Shigeno will receive the appointment of Commander of the Kumamoto Garrison, vacant by the retirement of Lieut.-General Viscount Miura.

THE appointments of Mr. Ozaki as Chief Judge of the *Daishin-in*, and of Mr. Nishi Shigenori to the office of President of the Court of Appeal, are confirmed.

LAMP chimneys manufactured at the Kihara Glass Works, in Osaka, are in such good demand in China that the proprietors intend to open an agency in Shanghai.

VICE-ADMIRAL VISCOUNT NAKAMURA KURANOSUKE, Port Admiral at Yokosuka, is at present at Hakone. During his absence he will be represented by Rear-Admiral Arichi.

MR. NOMURA, Vice-Minister of State for the Communications Department, left the capital the 17th instant to inspect the Yokohama Lighthouse Department and other establishments.

MESSERS. SHIBATA ROKUSHU, Shibata Masakichi and Mori propose to establish a Shipping Company at Kobe with a capital of yen 800,000, having the object of opening trade with Yokohama.

THE Vice-Minister of the War Department, accompanied by several military officers, visited the powder factory at Itabashi, and afterwards inspected the arsenal at Koishi-kawa, the 13th instant.

COUNTS INOUE and YAMAGATA landed at the port of Yoichi, the 12th instant, and inspected the reclaimed lands in the vicinity. They spent the night at Onyoro, and left for Sapporo the afternoon of the 13th instant.

A HORSE tramway will be constructed between Tōkyō and Hachioji as soon as the necessary official permission shall have been obtained. The capital of the undertaking is set down at yen 300,000.

THE convicts in the Kushiro Prison in Hokkaido will henceforward be employed in agricultural work, and a telephone line is to be erected between the prison and the sulphur beds at Iwazan.

MR. HATOYAMA (representing the Foreign Office), and other officials from the Departments of Justice and of Home Affairs, will proceed shortly to Nagasaki to investigate the circumstances of the recent disturbance there.

MR. HASELWOOD, of the Hongkong and Shanghai Banking Corporation, who is leaving Kobe for India, was the recipient, the 13th inst., of a very original *kakemono*, which was presented by

Mr. Troup, H.B.M. Consul, and signed by the entire community.

THE Nippon Yusen Kaisha propose to remove, about the 20th of next month, to the old buildings of the Kyôdo Unyu Kaisha at Yokohama, where the main office will be located. The Tôkyô office will be used as a branch.

A NUMBER of residents of Hakodate, who propose to establish a Commercial School, have applied for the assistance of teachers of the Tôkyô Commercial School in the framing of rules and regulations.

A BRANCH dispensary of the Nihonbashi District Office was opened, the 16th instant, at No. 14 Kakigaracho Nichome, Tôkyô, for the treatment of all kinds of diseases. Medicine will be given gratis to poor people.

A COMPETITIVE exhibition of glass, matches, and toys for export, dried seaweed, soap, merino, umbrellas, fans, refined wax, &c., will be opened the 1st of November in the enclosure of the Osaka Museum. All exhibits must be manufactured by exhibitors.

THE Marusan Ginko has applied for bankruptcy in consequence of having been defeated in an action brought against it by Mr. Yoshida Gitarô a depositor. The Court of First Instance at Osaka decided that, as the liability of the shareholders was unlimited, they must be held responsible for the repayment of deposits. The bank appealed on the 13th inst. against this judgment, but without avail.

THE Osaka Garrison has usually furnished six or seven hundred patients to the sick list every spring and summer suffering from *kakke*, but up to the present no men have gone off duty with this complaint. This unwonted exemption is attributed to the substitution of wheat for rice in their rations, and to the introduction of the gymnasium.

As an instance of the effect of cholera upon trade, it is stated that the daily arrival and departure of passengers by steamer from Kawaguchi dwindled to forty during the worst period of cholera at Osaka and Kobe, but now that the epidemic shows signs of abatement traffic has assumed its normal condition, and upwards of six hundred arrivals and departures take place daily.

IMPORTS are again dull, the "Bon" festival and the heavy transactions of the past month having had the effect of stopping purchases to a great extent, and sales and clearances have both been on a small scale. The Yarn market closes quiet, and prices have been barely maintained for the 850 bales disposed of. Very little has been done in Cotton Piece-goods or Woollens generally, though special articles have received some attention. A better feeling in the Metal trade is reported, and buyers are becoming aware that they must bid higher if they mean business, but actual transactions have been light, except in Tin Plates, purchases of which have considerably reduced stocks, and prices are firm. There has been little done in Kerosene, the difference of opinion between buyers and sellers being 10 cents, and neither appear likely to give way. Nothing to report in Sugar. The Silk Market has been excited, and considerable business has been done, but buying has not been general, many shippers being afraid to operate in the present un-

satisfactory condition of the Yokohama Market. In Waste Silk there has been rather less done, but, doubtless dealings have been somewhat of a speculative character as in the Silk trade itself. The traffic in Tea continues large; prices have been raised a dollar for all grades now on the market, and stocks are considerably reduced, the finer sorts being nearly exhausted. Exchange has again weakened—say one per cent.

#### NOTES.

THE affray between the police and Chinese liberty men at Nagasaki appears to have originated as troubles with the police generally do originate. A number of Chinamen came ashore, the 13th instant, and behaved in a disorderly manner, using violence towards people in the streets. The police interfered, but did not carry their interference to the length of making arrests. Some force, however, seems to have been used. The Chinese showed a strong disposition to carry things with a high hand, but, seeing probably that the odds against them were too heavy, they finally dispersed. It is evident that they then laid a deliberate plot to retaliate upon the police. By the evening of the 15th their dispositions were made. At about eight o'clock a constable of the Umegasaki Station was on his beat at Hirobaba, when a Chinaman approached from behind, snatched the constable's cap and threw it on the ground. The policeman turned round and attempted to seize his aggressor, but found himself surrounded in a moment by the latter's comrades. These had evidently been lying in wait. They hastened from all directions and threw themselves upon the unfortunate constable, who defended himself as best he could. Soon several policemen ran to his assistance from the Umegasaki Station. They appear to have endeavoured chiefly to extricate the constable from the mob of his assailants, but, so far from succeeding, they themselves became the objects of a violent assault and were finally driven to fight for their lives. News of the fracas quickly reached the central station, whence a considerable force of constables was immediately dispatched to the scene of the disturbance. But the Chinese had anticipated this. The police had only proceeded as far as Funa-daiku-machi and Motokago-machi when they were confronted by a body of Chinamen who had been lying in wait for them. Very soon a fierce fight was waging, in two places, nor was it till eleven o'clock—three hours after the commencement of the disturbance—that the police succeeded in restoring order. It was then found that on the Chinese side four had been killed and thirty-one wounded—six of the latter seriously—while among the Japanese one man was dead, five badly wounded and fifteen hurt. We have every reason to believe that this account is accurate. As to the original encounter—on the 13th—between the Chinese and the constables, no information is at hand. But as no arrests seem to have been made, it is evident that the affair cannot have been very serious. However this may be, the subsequent conduct of the Chinese was wholly inexcusable. They organized a regular attack upon the police, and had they succeeded in overcoming the latter, Nagasaki would have been at their mercy. This is a danger to which all the settlements are more or less exposed. A sufficiently strong party of man-of-war's men might land at any moment, and run a-muck before the police could possibly muster

in numbers large enough to overcome them. The same peril, of course, threatens any sea-port. But fortunately there are few sailors so undisciplined as the Chinese. We trust that the sanguinary violence of the ruffians who deliberately disturbed the peace of Nagasaki and plotted to slaughter the police will be severely punished. Thirty-six of them have already had a salutary lesson, but we do not doubt that both the Chinese and Japanese authorities will appreciate the necessity of inflicting prohibitive penalties for an outrage which might have ended very differently, and which, if repeated, may lead to most deplorable results.

THE *Hochi Shimbun* publishes the following telegrams from Nagasaki in reference to the affray between Chinese sailors and the police:—  
"Nagasaki, August 15th, 10. a.m. Last night a number of men landed from the Chinese squadron and immediately began fighting with the police with the result that about a hundred persons were killed and wounded on both sides."  
"August 14th, 6.20 p.m. Men from the Chinese fleet have landed and attacked the police stations, and killed and wounded about 18 constables."  
"August 15th 2.40 p.m. There were more killed and wounded among the Chinese sailors than in the police force." The *Hochi* adds that several telegrams were received at the Home Office on the evening of the 15th from the Nagasaki Prefectural Government conveying news of the disturbance. The vice-Minister of State for Home Affairs proceeded to the Cabinet Office early on the 16th, and it is rumoured that a meeting of the Cabinet has taken place on the subject. Several telegrams have been sent from the Nagasaki prefectural authorities to the Foreign Office—presumably referring to the same matter. A private telegram received in Tôkyô states that Mr. Kusaka has written to Admiral Tei-jo-sho, commanding the Chinese Squadron, for an explanation.

A more accurate, and in some respects a graver, account of the Nagasaki affair than any hitherto published appears in the *Fiji Shimpô*. With regard to the origin of the disturbance, the *Fiji* confirms our previous news that it occurred two days before the serious encounter; namely, on the 13th. That night, four or five Chinese man-of-war's men become intoxicated at a restaurant called Roku-yu-tei, in Yori-ai-chô, and began to behave in a most violent manner. The police, having been summoned, proceeded to arrest the offenders, but met with determined resistance at the hands of a number of the rioters' comrades, who had assembled from neighbouring houses. The struggle lasted some time, but the constables, being reinforced, succeeded finally in carrying off the culprits, not, however, without receiving several wounds and inflicting some injury on one of their assailants. Shortly afterwards, the Chinese, to the number of about 200, repaired to the police-station with the intention of rescuing the prisoners, but finding the gates shut and guarded by a strong force of police, they withdrew without seriously attempting to accomplish their purpose. During the next day they appear to have laid plans of retaliation, for, on the 15th, they came ashore in groups of twenty or thirty, until fully three hundred had landed. At first a large number assembled in a restaurant at Horobaba-chô, and commenced proceedings by assaulting a policeman on his beat. The fact was quickly reported

at the neighbouring station. A body of constables immediately hastened to Hirobaba-chô, where they were fiercely attacked by the Chinese with Japanese swords and other murderous weapons. One of the policemen was immediately cut down, and a violent struggle ensued. Meanwhile another group of Chinese, numbering about eighty, advanced towards the police-stations at Umegasaki and Hamano-chô, assaulting citizens as they passed. The plan of the Chinese apparently was that one party, by creating a disturbance in the street, should entice the police out of the stations, while another proceeded to rescue the prisoners. The police seem to have behaved with great resolution. To oppose the rescuing party they constructed a breast-work of *jirikishisa*. The inhabitants also closed their houses and assisted the police, at first by throwing tiles from the roofs upon the Chinese, but afterwards by taking an active part in the affray. Indeed the account reads as though the resolute and courageous conduct of the citizens contributed materially to rout the Chinese. Routed they were, eventually, but not until their list of casualties included one officer and three seamen killed, and more than fifty wounded. On the Japanese side, two constables were killed, three sergeants, sixteen constables and ten civilians wounded. These numbers are larger than these previously reported. The important point, however, is that there were officers among the Chinese rioters. So, at least, it would seem from the *Fiji Shimpô's* report. Should this be confirmed, the affair will assume a complexion of much greater gravity than it before presented.

The *Hôchi Shimbun* writes in a somewhat alarmist strain about the Nagasaki affair. The *Hôchi* thinks that China's experiences in her struggle with France have inspired her with confidence, and speaks of rumours recently circulated to the effect that the Government at Peking was about to re-open the Riukiu complication in a decisive manner. These rumours the Tôkyô journal dismisses as unworthy of notice, but remarks, at the same time, that they must have found some credence with the public, inasmuch as the recent entry of a Chinese squadron into Nagasaki harbour, closely followed by English and Russian ships of war, gave rise to all sorts of extravagant conjectures. Chinese men-of-war had visited Japanese ports previously, but never in such numbers, and the *Hôchi* evidently inclines to the popular opinion that the demonstration at Nagasaki is not without a definite purpose. "Admiral Tei Jo-sho," our contemporary continues "appears to be under the direct orders of Li Chung-tang, and the Chinese Representative in Tôkyô is said to have received instructions to coöperate with the Admiral. A rumour, quite groundless, has it that Chinese ships have already arrived at Riukiu and landed troops there, and another rumour maintains that the squadron now in Nagasaki is *en route* for Riukiu." The *Hôchi* declines to regard the latter rumour as groundless, and counsels the Government to show a bold front. It is evident, according to our contemporary's view, that the fracas at Nagasaki was deliberately planned by the Chinese. The simultaneous assaults upon the police establish that fact. There ought, however, to be no difficulty in fixing the blame, and should it be proved, as seems probable, that the Chinese were in fault, vigorous and undeviating

measures should be taken to bring the offenders to justice. The slightest symptom of wavering will be misconstrued, and may cause serious mischief. The *Hôchi* concludes a strong article by advising the authorities to abstain, on this occasion, from any interference with the press. When trouble occurred some years ago between Chinese residents of Nagasaki and the police, the former took advantage of the constrained silence of the vernacular press to ventilate most misleading rumours. Therefore the *Hôchi* strongly deprecates any enforcement of silence which would leave the field to the Chinese, and encourage the arrogant sentiments they recently began to harbour.

From official telegrams received on Thursday in Tôkyô, it seems that the casualties in the Nagasaki disturbance may have been exaggerated. The numbers are now stated thus:—Loss on the Chinese side, 4 killed, 6 severely wounded, and 9 slightly hurt. Loss on the Japanese side, 1 policeman killed, 1 severely wounded, and 18 hurt. A later telegram, however, says that, in addition to the above, 15 or 16 Chinese are lying wounded at the Chinese Consulate, and that there were several casualties among civilians. Of those wounded, 1 Chinaman and 1 constable subsequently died in hospital.

The Chinaman, *more suo*, opened the ball by falling, one hundred *en masse*, on a solitary policeman and slaughtering him off-hand. It was at Funadaiku-machi that the Japanese residents turned out to help the police. A body of constables, hastening to assist their comrades in Umegasaki-cho, was there assailed by an overwhelming force of Chinese, and had begun to fare badly when the people, coming to the rescue, killed and wounded several of the Chinese. It is asserted that the movements of the latter were directed by officers, of whom one was killed, and that their numbers amounted to about 500, including some Chinese residents who joined in the fray.

The comments of the Japanese press are sensible and moderate. We confess that had such an affair occurred in an English port, we could scarcely have commanded patience to discuss it quietly. The *Nichi Nichi Shimbun*, after deprecating the notion that any suspicion attaches to the entry of four Chinese men-of-war into a Japanese port, and noting that rumours about Chinese action in Riukiu had created a disposition on the part of the Japanese to treat such a strange affair as that in Nagasaki with some precipitancy, goes on to say that disturbances caused by liberty-men are of common occurrence, but that an assault so well planned as that of the 15th, and so destructive of human life, is unprecedented. The *Nichi Nichi* refuses to think, however, that the fracas can have had any inspiration from above, and expresses a conviction that the ordinary processes of law will suffice to deal with all the issues. Primarily the riot is doubtless attributable to want of discipline in the Chinese Navy, but something of it is also to be traced to the feelings with which the lower classes of the two nations regard each other. The Chinese have been largely strengthened in their usual self-conceit by the course of recent events, and the Japanese are more than ever disposed to despise the timid and bigoted conservatism of their neighbours. On the side of the upper classes, a

friendly and mutually appreciative intercourse is carried on, but the masses of the two nations view each other with anything but good will. The *Nichi Nichi Shimbun* concludes by urging the vital importance of educating the lower orders to a more liberal and sympathetic attitude.

The *Fiji Shimpô* was at first inclined to attach little importance to the affair, but now confesses that detailed intelligence gives the thing an ugly and disquieting complexion. The whole facts are not yet before the public, but enough is known to remove all doubt as to the culpability of the Chinese. It is abundantly evident that they deliberately planned to violate the laws of the land and disturb the public peace. There seems, too, reason to suspect that the sailors acted with the knowledge of their officers. The Admiral must have been informed of the men's behaviour on the 13th, and, under the circumstances, the landing of 300 sailors on the 15th should never have been permitted. If it be true, moreover, that the rioters were led by officers, the connivance of those in command can scarcely be gainsaid, while the fact that a whole day elapsed before the assault took place, shows that it was fully premeditated. "This," says the *Fiji Shimpô*, "is the first instance in naval history of a deliberately planned assault upon a country's police by the officers and men of a friendly neighbour's war vessels." The whole force of police in Nagasaki Prefecture only amounts to some 450 men, so that the portion stationed in the town of Nagasaki cannot exceed 200. Had it not been for the brave interference of the Nagasaki citizens, the city would have been at the mercy of the Chinese sailors. The *Fiji* hopes, in the name of the nation, that the Government will promptly open vigorous negotiations and obtain full satisfaction. It is stated that Admiral Tei intends to visit other Japanese ports. Adequate assurances should be obtained from him that no such tragedy shall be repeated on Japanese soil.

The *Hôchi Shimbun* observes that, in the history of this empire's foreign intercourse, a Japanese port has now for the first time been disgraced by such outrageous conduct on the part of foreign sailors. Had the Chinese commanders known their duty, they would never have allowed their men to land in such numbers two days after a disturbance of which they must have been fully cognisant. Did they allow them to land, they should have adopted due precautions for their control. Either the commanders connived at what was going forward, or they were guilty of gross and culpable negligence. It is reported that an officer was among the Chinese killed. When officers take active part in such an affair, can it be reasonably supposed that the commanders were not privy to it? And if such a supposition be entertained, what shall be said of the discipline of the Chinese Navy? It is now beyond all doubt on which side the fault lies. The *Hôchi* directs the Government's attention to the value of firmness and resolution in such circumstances.

We (*Japan Mail*) find a difficulty in conceiving this affair. Imagine a disturbance occurring on Monday—let us say—between English sailors and Japanese police in Yokohama. Then imagine an English Admiral letting 300 of his men land the following Wednesday.

Further, imagine 200 English residents joining these men, slaughtering a policeman off-hand, and proceeding to a concerted and murderous assault upon every constable or body of constables they could find in the Settlement. It is impossible, we say, to conceive any such savagery on the part of Englishmen. Naval squadrons of all nations have frequented Japanese ports for years, but nothing bearing the slightest resemblance to such a wild and bloodthirsty outrage has ever been recorded. There is another "first" about the matter. We are right, we think, in saying that a Chinese naval squadron of such dimensions never before entered a foreign port. This is the way they celebrate their first naval promenade. And their countrymen, peaceable residents of Nagasaki, enjoying Japan's hospitality, promptly second the brutal attack, and try to batter out the brains of every Japanese policeman they can find. Truly the whole thing reads like a chapter from the annals of some uttermost barbarians. At the same time, it is not an occasion for the Japanese to lose their sang-froid. They know well that the Chinese Government will never seek to condone such an outrage, and that there will be no difficulty in obtaining a due measure of redress. As for Admiral Tei and his undisciplined roughs, really they had better go home and learn how to behave themselves. They are obviously unfit to be trusted abroad, and especially unfit to visit a country where every stranger is treated as a friend.

THE *Jiji Shimpō* publishes intelligence which, if correct, throws an unpleasant light upon the Nagasaki disturbance. It is that after the affray between the Chinese and the police on the 13th instant, a suggestion was made by the Japanese authorities to the Chinese Admiral that the landing of any considerable number of sailors should be prohibited for a time. No attention was paid to this suggestion. Three hundred men were permitted to go ashore the next day but one, and the results are before us. The *Jiji* adds that the men were allowed to land in accordance with the recommendation of an English physician attached to the Chinese squadron. It is stated that the sailors were not supposed to be in possession of any weapons when they landed, but that they were certainly provided with arms when fighting. The story is that they had previously purchased swords from a curio-dealer, and deposited them in the house of a Chinaman until the time of the outrage. Many Chinese residents are said to have assisted the sailors with bamboo spears and Japanese swords. A telegram to the *Hōchi Shimbun*, dated August 19th, says that the resentment among the Japanese has subsided, but that the Chinese are still eager to retaliate.

THE *Nichi Nichi Shimbun*, speaking with what authority we know not, advocates an Imperial visit to the country districts. Tōkyō, our contemporary remarks, has now become an infected place. After remaining a long time beyond the circle of the cholera epidemic, it may be said to have become the very centre of that circle. From one to two hundred cases are daily reported, and the disease, so far from showing any disposition to abate, tends rather to increase. The heat, too, is altogether unusual. With the exception of very partial thunder-showers, no rain has fallen for weeks. The wells in several districts are dry, and in all respects the capital offers no inducements as a place of residence. In point of fact it is deserted. Noblemen,

officials, and private gentlemen have made their way to the mountains or the sea. Only the Emperor remains. The *Nichi Nichi Shimbun* does not suppose that there need be any apprehension of the cholera finding its way directly into the Imperial Palace, though the place is neither very healthily situated nor free from the dangers of defective sewage. But of indirect infection there is constant fear. Why should not His Majesty consult his own safety and allay the public anxiety by removing temporarily to a healthier district? Moreover, the signs of tradal revival which were apparent in the spring have disappeared under the pressure of the cholera epidemic. The Emperor, by visiting some of the country districts, might replace them in the route to prosperity. Indeed, quite apart from the question of cholera, the *Nichi Nichi Shimbun* thinks that the condition of the country calls for some much step.

Most people, we imagine, will be inclined to agree with our Tōkyō contemporary. Except from an economical point of view, we never could understand His Majesty's unwavering attachment to the capital. Other Sovereigns are not so constant to one place of residence. Neither the Queen of England nor the Emperor of Germany passes the midsummer months in the capital, though both London and Berlin are much more tolerable than Tōkyō in the dog-days. The health of the Mikado is an object of deep solicitude to his subjects. Even thrones are not beyond the reach of unwholesome influences. If there were in Tōkyō any signs of such a panic as that which overtook the inhabitants of certain European cities during the recent cholera epidemic, there might be some reason for His Majesty's residence, if not for the return of the Ministers of State. But Tōkyō is perfectly calm. The people need nothing to reassure them. Two or three hundred cases daily among a population of nearly a million will never produce anything like the alarm that would be caused did the cholera find its way into the Palace.

MESSRS. MARUYA and Company announce the speedy publication of a third edition of Dr. Hepburn's Japanese-English and English-Japanese Dictionary. Of the nature of the improvements and additions which may be expected in this edition, the preface by Dr. Hepburn himself contains, we can be quite sure, the most modest and the truest account. Here is what the Doctor says:—"During the fourteen years which have elapsed since the publication of the last edition of the Dictionary, the author has kept it constantly before him, correcting the errors, improving and enlarging the definitions, adding new words and illustrations, according as his time and other important engagements allowed him. But owing to the amazing changes and rapid advancement of this nation in every department, he has found it difficult to keep pace with the corresponding advance of the language in the copious addition of new words. He has done his best, however, to seize these words: examine, classify, and define them. Many, no doubt, have escaped his notice; still, there is an addition of more than ten thousand words to this edition..... He has also inserted all the archaic and now obsolete terms found in the *Kojiki*, *Manyōshū*, and ancient *Monogatari*..... The English and Japanese part has also been corrected and considerably enlarged and improved." This an-

nouncement ought to be welcomed by every student of Japanese. The dictionary of Dr. Hepburn, our first guide to a knowledge of the language of Japan, still holds its place as the most trustworthy and serviceable book of its kind. For colloquial purposes, and for those who require to convert English into Japanese only, the work of Messrs. Satow and Ishibashi stands on a higher plane. But, taken all round, Dr. Hepburn's dictionary has no equal, and we may presume that the fourth edition will comprise all the information contained in its predecessors or contemporaries. To subscribers who send in their names before the end of September, Messrs. Maruya offer the book at the exceedingly moderate price of 5½ yen. Subsequently it will cost 7½.

Apropos of this, we observe that Messrs. Maruya announce their purchase of the copyright of Hepburn's Dictionary, and that a correspondent of the *Japan Gazette* expresses very strong doubts as to the existence of any copyright laws in Japan. This is an amusing example of the extraordinary ignorance which prevails among foreigners with regard to Japanese affairs. The *Gazette's* correspondent evidently has not been at the pains to make any enquiries. He has a general idea that Japan is not sufficiently civilized to possess copyright laws, and so he airily concludes that the leading publishers in the Empire, in conjunction with Dr. Hepburn, have printed and circulated an announcement which, in point of fact, amounts to a fiction. It may interest this gentleman, and others of his stamp, to know that Japan has copyright laws, as complete and binding as our own. A foreigner, of course, not being under Japanese jurisdiction, cannot avail himself directly of these laws. He must obtain their protection through a Japanese. We are not at the moment in a position to give the exact date when the laws were promulgated; but this we know—that thirteen years ago, we ourselves copyrighted a book by a process analogous to that which Dr. Hepburn has now employed. Probably the next information the public will receive from some spy theorist is that there are no patent laws in Japan.

THE second annual report of the directors of the New Oriental Bank Corporation gives a satisfactory result of the operations of the bank during the year to 31st March last. After payment of working expenses, interest, income-tax, rebate, exchange on foreign assets, and making full provision for bad and doubtful debts, the nett profit (including £652 7s. 10d. brought forward) amounts to £34,013 1s. A second (interim) dividend of 5s. per share for the half-year ended 30th September, 1885, was paid in January last, and the board recommended a further dividend of 5s. per share, also free of income tax, payable on 16th July, 1886, making a total distribution of 5 per cent. per annum on the paid-up capital. The board also recommended that all dividends payable at the branches be paid free of local income-tax. As an indication of the steady increase in the business of the bank the following figures were given, showing the amount of the banking assets at stated periods:—30th Sept., 1884, £102,000; 31st October, 1884, £742,000; 30th November, 1884, £1,086,000; 31st December, 1884, £1,480,000; 31st January, 1885, £1,796,000; 28th February, 1885, £1,992,000; 31st March, 1885, £2,383,000; 30th June, 1885, £3,226,000; 30th Sept., 1885, £3,846,000; 31st Dec., 1885, £4,553,000; 31st March, 1886, £4,963,000.

THE elections that recently took place in four provinces of Belgium show that a strong anti-Liberal current has set in. It is probable that the new parliament will count but 40 Liberals against 138 Clericals. Never before were the Liberals so few in number; and never had the Government in power so large a majority at its disposition. The vexed question of protection and free trade also played a considerable rôle in the agitation that preceded the election, and many rural voters were gained over by promises of high duties on imported corn and cattle. The Liberal party, with but few exceptions, adhered to the principles of free trade, but the Clericals were greatly divided on that question, and hence their candidates were comparatively free in defining their attitude on economical problems. The present Prime Minister, Mr. Bernaert, is a free trader, while the Minister for Foreign Affairs, Prince De Chimay, is a pronounced protectionist. The chief drawback to a Liberal success, however, has to be sought in the desire of the electors to condemn the recent labour agitation, which in its effects severely injured the farmer as well as the manufacturer. The Liberals stand much nearer to the Radical elements in Belgian society than the Clericals; and hence in his extreme desire to repudiate Sociatistic tendencies, the generally sober and deliberate Belgian voter preferred for the time being the Clerical to the Liberal candidate. The courts of justice passed judgment upon the labour agitators with due severity, and there was a general desire that all unlawful agitation among the working classes should be promptly repressed in the future. Hence it was thought best by many to strengthen the hands of the present Government in order to enable it to deal vigorously with every manifestation of a rebellious spirit among the masses.

GERMANY is beginning to look after her fishing interests in the North Sea. The Government asks the Federal Council and the Reichstag to vote about £5,000 for the promotion of the fishing interests; that is, for bounties to be given to shipbuilders, for loans to be advanced for the acquisition of good vessels, for the erection of ice houses, for the support of Fishermen's Associations in their efforts to purchase steamers, for harbour improvements, storm signals, etc., etc. The memorial accompanying the request shows how backward Germany yet is in this line of activity. Of 4,000 millions of herrings annually caught, only 30 million are taken by German fishermen and carried into German harbours, while Scotland alone with its 7,000 herring vessels, can boast of an annual catch of 1,000 millions. The salted fish consumed in Germany are almost exclusively imported from abroad, and the consumption of fresh fish per head of the population only averages between 2 and 3 pounds, while in London a demand of nearly 60 pounds per head has to be satisfied. The ground on which the Government believes itself justified in appealing in this matter to the whole nation rather than to the States of the Confederation bordering on the ocean, is the economical and military importance of the question. Good recruits will thus be furnished to the German navy, and another means will be found to combat the tendency among German seamen to join English merchantmen in preference to their own, owing to the better wages given by the former. The difficulty of mobilizing the navy, when so many former sailors are

serving with foreign masters, is immense; but by widening the sphere of activity near the coast and by encouraging the increase of a large fishing population, this difficulty can in part be obviated. Such is the purpose of the bill. Small as the appropriation may seem, it may, if judiciously applied, in a large measure answer the purpose to which it is to be devoted.

According to statistics prepared by the Chamber of Commerce at Fusan, Korea, the following figures show the Import and Export trade for the first half of the present year, as compared with the same period of 1885 :-

IMPORTS.	
First half of 1885	YEN. 155,291.82
First half of 1886	285,714.78
Increase	130,416.96
EXPORTS.	
First half of 1885	148,949.41.3
First half of 1886	354,562.80
Increase	205,613.38.1
TOTAL IMPORTS AND EXPORTS.	
First half of 1885	304,241.23.3
First half of 1886	640,282.58
Increase in 1886	333,871.34.7

—*Mainichi Shimbun.*

THE movement in favour of foreign dress for ladies seems to be assuming larger dimensions. At a recent Court ceremony the Empress wore European costume, and it is stated on good authority that Her Majesty has given an order for dresses amounting in value to one hundred thousand dollars to a milliner of Paris. Of course if this fashion is to be endorsed in such high places, its prevalence is secured. We regret it greatly. In respect of appearance and utility the dress of European ladies has nothing to recommend it. It is extravagant, clumsy, and inartistic. But the question is not one of either utility or appearance. Motives much deeper underlie the movement. The ladies of Japan are resolved not to be left behind in the race of progress. They are resolved to win for themselves a social and domestic place not inferior, if possible, to that occupied by their sisters in the West, and they will never be induced to forego any assistance that may be derivable from external accessories. Their husbands and brothers wear foreign costume, and any one of the stern sex who adheres to the *haori* and the *hakama* is tacitly regarded as belonging to the old, unenlightened generation. Of course the ladies will not be left out in the cold. The same considerations which have reconciled them to the ugly, awkward, and immoral dances of Europe will reconcile them to costly, cumbersome and uncivilized costumes. The thing is inevitable. Its motives lie too deep to be reached by economical or æsthetic considerations.

HUMILITY is charming, especially the humility of the *Pall Mall Gazette*. That estimable journal now compares itself to an ass. True, it is a historical ass, but none the less a donkey for all that. "The humble remonstrance," writes the sensational sheet, "of Balaam's ass reverts irresistibly to the mind as we read Mr. Gladstone's remark at Edinburgh that 'the *Pall Mall Gazette* abuses ten times and censures ten times for once that it supports us.' 'And the ass said unto Balaam, Am I not thine ass upon which thou hast ridden ever since I was thine unto this day, was I ever wont to do so unto thee?' As a matter of fact—and our file is on record to prove it—the *Pall Mall Gazette* alone

of London newspapers has given Mr. Gladstone from the very first an energetic, a consistent, and an unwavering support for that which Mr. Gladstone now declares is 'all we want and all we ask.' It was only when Mr. Gladstone persisted in a course which we saw would lead inevitably to the destruction of his bill that we withstood him to the face, and this is our reward. Our prototype three thousand years ago, by crushing Balaam's foot against the wall was able to save the headstrong old prophet from destruction. It is possible that we may yet save our Grand Old Balaam from the discomfiture which would have overwhelmed him had he persisted in pressing those proposals which we told him from the first were impossible. We print the rest of the narrative, in the hope that it may prove prophetic of what will happen:— Then the Lord opened the eyes of Balaam, and he saw the angel of the Lord standing in the way, and his sword drawn in his hand: and he bowed down his head and fell flat on his face. And the angel of the Lord said unto him, Wherefore hast thou smitten thine ass these three times? Behold, I went out to withstand thee, because thy way is perverse before me. And the ass saw me, and turned from me these three times: unless she had turned from me, surely now also I had slain thee and saved her alive. And Balaam said unto the angel of the Lord: I have sinned; for I knew not that Thou stoodest in the way against me: now therefore, if it displease Thee, I will get me back again. There is evidently hope for Balaam yet."

THE German Colonisation Society for Eastern Africa has issued invitations for a congress to be held at Berlin in the interest of the development of the colonies recently acquired by the Empire. All who desire to promote the colonial interests of the country are invited to meet at Berlin, the 13th of September, when a general society is to be formed for the purpose of advancing German interests beyond the seas. As subjects for discussion and consequent action the following have been enumerated:— 1. How can the German colonial movement be led onward to practical results? 2. How can the recently acquired colonial possessions be made truly productive? 3. The German Emigration question. 4. The means of increasing the export trade of the Empire. 5. German Mission Establishments in trans-marine countries. 6. The preservation and continuance of the German language and character in lands beyond the sea. 7. The strengthening of the ties connecting Germans abroad and Germans at home. The invitation to this congress is signed by members of the two principal German societies, besides a large number of men prominent in business and society. The idea of the movement is to gather together and to unite the hitherto separated organizations, and to direct their strength to some common and important object. The first and most prominent organization was the society for German colonization; but when a not inconsiderable number of its members had begun to take practical interest in Eastern Africa by purchasing lands in Usagara, it was found desirable to secure for them greater freedom of movement, and hence the German East African Company was formed in February last year. The aim of both organizations, however, was to be the further establishment of national colonies, the practical, especially financial, support of the

colonies already acquired, and—last not least—the directing of German emigrants into regions suitable for agricultural pursuits. This movement gained a great accession of strength by the union effected with the West German Society for colonization and export; and in January last a special commission of delegates presided over by Prince Hohenlohe-Langenburg was held. During its deliberations the idea of a General Colonial Congress at Berlin was conceived and decided upon, the details and preliminaries being referred to special committees. The invitation to the congress dwells with sufficient emphasis on the fact that the objects of the movement are not political, and that the Government, after having by its diplomatic action secured the necessary basis for colonial efforts, had nothing further to do but to protect its subjects in the exercise of their lawful rights and in the possession of their lives and property abroad. The time has now come when the people by individual efforts have to continue the work so auspiciously begun by the government; the tasks to be undertaken have ceased to be such as fall within the official sphere; and in the general commercial and industrial work and its good or indifferent results will now be seen how much of moral force and initiative power there is in the nation.

MR. GLADSTONE, when at Edinburgh, was guilty of a piece of rashness which nearly cost him dear. Coming home from dinner at Beeslack, a place about 8 miles from Edinburgh, his fancy suggested a solitary ramble. He descended from his carriage, and directing the vehicle to proceed, set himself to walk the two-and-a-half miles which remained of his journey. He had scarcely covered a mile when the people recognised him, and in a moment a vast crowd of wild enthusiasts had assembled. A morally and physically tired old gentleman of seventy-six is unpleasantly circumstanced in a mob of two thousand people whose affection is of the roughly demonstrative nature. Mr. Gladstone had to take refuge in a tram-car, which carried him home at the head of a shouting, seething crowd. He reached his hotel completely worn out. "The spectacle," writes the *Pall Mall Budget*, "of the stately figure of the Prime Minister in evening dress, seated utterly exhausted upon the stairs of the hotel, with his head buried in his hands, while outside the vast crowd still shouted for a speech from the balcony, and the group of family and friends round him, who experienced the greatest possible anxiety for fear he had really been seriously injured, must have been more dramatic than any scene even in Mr. Gladstone's dramatic career."

If it be true, as the telegraph asserts, that the Irish Nationalists regard the Government's Irish policy as a declaration of war, and intimate that the "truce" is now ended, the Irish question may perhaps find a solution quicker than we expect. By the so-called "truce" we understand a compact said to exist between the Fenians and Parnellites, according to the terms of which the former agreed to abstain from deeds of violence for one year, and the latter pledged themselves to secure Home Rule within that time. If now this compact is definitely dissolved, and Ireland becomes once more the scene of brutal outrages, what will be the issue? Why this, in the first place—that all doubt will be removed as to the relations existing between the Parnellites

and the ruffians variously designated Fenians, Moonlighters, Whiteboys, and what not. If the Parnellites do not openly sever connection with these fanatics, but simply stand aside and watch their murderous proceedings, then the cause of Irish Nationalism will be finally discredited, and we shall be greatly surprised if England keeps her temper much longer. Great Britain has now given an emphatic reply to the question of Home Rule or no Home Rule, and has commissioned Lord Salisbury to translate her reply into practical politics. If the Irish Nationalists have not sufficient wit to take such a broad hint, so much the worse for them. But so much the better, perhaps, for the United Kingdom. Visionary schemes of legislation will be thrust aside, and the path will be free for the exercise of measures which lawful and civilized Government has always employed in the presence of anarchy and rebellion.

HOME RULE first saw the light as the conception of the very men who now, as Protestant Loyalists, most bitterly denounce it. That is a fact too easily lost sight of. The whole question is merely one of method. The principle of Home Rule was accepted long ago by Irish Loyalists and will, we doubt not, be accepted by them again. The following account of the first promulgation of Home Rule, which we extract from the *Pall Mall Budget*, will surprise many people:—

It is now sixteen years since "Home Rule" was first promulgated at a meeting of prominent Irishmen held in Dublin, May 19, 1870, when the following resolution was unanimously adopted:—"That it is the opinion of this meeting that the true remedy for the evils of Ireland is the establishment of an Irish Parliament with full control over our domestic affairs." This was the birth of the Irish Home Rule movement, and it is remarkable to find that this meeting was composed of a large majority of "Protestants." There were about sixty gentlemen assembled, and not more than twenty Roman Catholics among them. It will surprise people now to find the following representative names in the list of those present at this meeting:—

Sir John Barrington, D.L., Protestant Conservative.	Dr. Maunsell ( <i>Evening Mail</i> , Tory).
E. H. Kinahan, ex-High Sheriff, Conservative.	The Ven. Archdeacon Gould, D.D., Protestant Ep.
J. V. Mackey, Orangeman.	William Shaw, M.P., Munster Bank, Protestant.
Sir William Wilde, 1st, Con. Rev. Joseph Galbraith, Trinity College, Protestant Conservative.	Capt. E. R. King-Harman, Protestant Conservative.
R. W. Boyle, banker, College Green, Conservative.	Hon. L. H. King-Harman, Protestant Conservative.
W. W. Harris, J.L., ex-Sheriff co. Antrim, Protestant Conservative.	George F. Shaw, F.T.C.D., Protestant Conservative.
Major Knox ( <i>Dish Times</i> ), Protestant Conservative.	Alfred Webb, "Friend," H. H. Stewart, M.D., Protestant Conservative.
	W. L. Erson, J.P., Orangeman.

These gentlemen, and those who acted with them, stated:—"We wish to be frank and clear; we will have no part in disloyal plans; we will have no separation from England. But we feel that the scheme of one Parliament for all purposes, Imperial and local, has been a failure, that the attempt to force consolidation on the Irish people, to destroy their national individuality, has been simply disastrous. However attractive in theory for the Imperial statesman, that project has utterly broken down in fact and reality. It has cost us perpetual insecurity, recurrent insurrection. It may suit English politicians to cling to the experiment still, and pursue it through another fifty years, always 'just going to succeed this time,' but for us Irish Protestants whose lot is cast in this country, and whose all in the world is within these seas, it is time to think whether we cannot take into our own hands the solution of the problem. We want peace, we want security, we want loyalty to the Throne, we want connection with England, but we will no longer have our domestic affairs committed to a London Parliament. The aspiration for national autonomy is one which has sound reason and justice as well as historical right behind it."

CONSUL CRAWFORD, reporting upon the trade of Portugal, makes the following general remarks, which have an interesting bearing on Lord Rosebery's recent despatch to H.B.M.'s Representatives and Consuls abroad:—"I do not think Her Majesty's legations and embassies (in Europe, or America at least) could intervene in the obtaining of contracts or concessions, as it has been proposed they should,

with any advantage to the individual or the nation. Gentlemen who, as agents for firms at home, go abroad in pursuit of Government or municipal contracts and concessions, and who fail to obtain them, are apt to ascribe their non-success to any cause but the true one. It is my own experience of these 'ambassadors of commerce' that, when they have good work and material to sell at lower terms than their rivals, they invariably sell them. When things are fairly even between them and their competitors, it is quite conceivable that superior manners, tact, address, linguistic skill, and intelligence would win the day. Our people at home no doubt find it no easy matter to get themselves worthily represented in all these respects, but they can hardly ask that their diplomatic work should be done for them by their country's diplomats. Anyone who knows what that work is, knows that it could not be thoroughly done without some injury to the prestige of the envoy, and to that of the country he serves. There are perhaps other ways in which Her Majesty's representatives abroad—I refer to those only in my own service—could do good work in the promotion of British trade. At the end of an exceptionally lengthy report I can do no more than merely indicate one or two of such ways. 1. The Consul might assume the part of a general prosecutor on behalf of British merchants in those very frequent cases of infringement of trade marks, where the merchant himself has too small an interest in the matter to take proceedings, or where the piracy is not of a particular mark (a case in which a remedy is provided by Portuguese law). The illegal appropriation of our trade marks is often the first step of rival traders. 2. The Consul might, from time to time, or annually if need be, and in co-operation with British Chambers of Commerce, or with private manufacturers and merchants at home, establish small exhibitions of British goods. The object would be not any popular show or display, but an authoritative demonstration to buyers and distributors generally of the character of genuine British goods, with the view of educating them to be on their guard against cheap and bad imitations thereof."

THE Carnarvon-Parnell incident supplies sufficient grounds for disagreeable recriminations. That the late Lord-Lieutenant had an interview with the Uncrowned King last autumn, and that their conversation was about Home Rule, is admitted by both sides. But Parnell says that the interview was not of his seeking, and that he distinctly understood Lord Carnarvon's words to be an intimation on the part of the Conservative Cabinet that they were ready to consider and introduce a measure of Home Rule. Hence the action taken by the Parnellites in supporting Tory candidates at the polls. Lord Carnarvon, on the other hand, declares that the interview was sought by Parnell, and that he, Carnarvon, spoke in his own name only and did not subsequently consult any of his colleagues or inform them of what had occurred. This version is partly corroborated by Sir Michael Hicks-Beach and Lord Salisbury, both of whom deny emphatically that their Cabinet had any cognisance of the interview or any legislative intention such as that described by Parnell. The public has to choose, then, between two conclusions—either that Lord Carnarvon blundered in his language or that Mr. Parnell blundered in interpreting it. In order to help the

choice, Justin McCarthy gives his version of the affair:—

I wish to tell my story, for the interview was arranged through me.

About the end of last June or the beginning of July, the Conservatives having just come into power, a Conservative who is now but was not then in the House of Commons, a friend of Lord Carnarvon, was anxious to be put in communication with Parnell, and asked me would I come and see Carnarvon in the first instance. I did so, as I thought it wise and statesmanlike of Carnarvon, as the new Lord-Lieutenant of Ireland, to break away from the stupid old track of his predecessors and take counsel with the Irish leaders. I had a long conversation with Carnarvon, and was much struck with the boldness and wisdom of his views.

He asked me to explain to him my views and the views of Mr. Parnell as to the nature of Home Rule. I did so, dwelling especially on the fact that no system of mere local boards would ever satisfy the Irish people, and it would be only a waste of time to trouble himself about any such scheme. When I had explained all this fully he said that, speaking for himself, he would be prepared to go as far toward Home Rule as Parnell or myself.

He gave me to understand there were difficulties in the way of some of his colleagues, who were not yet educated up to the mark, but I certainly understood from him that an endeavour would be made to complete their education. We had a long talk on various Irish questions, and I promised to ask Parnell to arrange for an interview with Carnarvon. I saw Parnell and told him my story. The whole thing was entirely new to him, but after a short consideration he determined that he would see Carnarvon. I wrote to Carnarvon, and Carnarvon replied, suggesting the time and place of an interview. The place suggested was the house of the friend I have mentioned, in one of the great fashionable West End squares. Parnell demurred, and said that if there was any talk to be made about all this hereafter he could not consent to have any appearance of mystery or secrecy about it, and if he was to meet Carnarvon he would go openly to Carnarvon's own house.

To this Carnarvon at once agreed, and the interview took place in one of Carnarvon's town houses at the West End. I was not present at the interview, and only know what happened there from what Parnell told me, which he has now told the public. But everyone knows what a cool head and clear memory he has, and the world will take his word.

My story is important chiefly because it gives the fullest and flattest contradiction to the statement which I regret to think Carnarvon has made, that Parnell sought the interview. Parnell did not seek it. He never knew anything about it until I told him of Carnarvon's desire. I did not seek it for him; I was sought out, and the proposal was entirely unexpected by me. There was nothing in the whole transaction that would not redound to Carnarvon's credit as a statesman and man of ideas—except for the curious attempt to back out.

Now the truth is that when the elections came on and did not give the Tories a majority, even with our help, the Conservative government were afraid to take the jump. Carnarvon, I believe, did his very best, and failing, resigned his office. I met him in December, after the elections, at a small dinner party in the house of a friend—not the friend who arranged the former interview—and we had some frank and friendly conversation. He gave me to understand that nothing was to be hoped for just then from his party. He certainly did not say one word to me which implied that through the whole transaction he had been acting merely for himself alone.

The whole tenor of what he said seemed to imply quite the contrary, and in what I said to him I took this as a matter of course. I have not the slightest doubt in my mind that up to the late elections the leaders of the Conservative government were taking into consideration the wisdom of preparing a Home Rule measure; that it was done under the inspiration of Carnarvon; that he was strongly supported by Lord Randolph Churchill and Lord Ashbourne, then the Irish Lord Chancellor, and that Lord Salisbury was beginning to see his way to it when the elections knocked all their calculations to pieces.

If he could have said to their party, "We can give Ireland Home Rule and keep office ourselves," then the education of the party would have been easily accomplished. But to say, "We can prepare a Home Rule scheme, but we are not strong enough to carry it and keep in office," is quite a different thing. So they had to baulk the jump, and they think the best thing they can do now is to say they never intended to make it.

In this version Mr. Gladstone seems to have

placed confidence. A week after the publication of the above story, Justin McCarthy wrote again as follows:—

Mr. Gladstone is making strong use of Mr. Parnell's statement about Lord Carnarvon. Did Carnarvon or did he not tell Lord Salisbury of the interview? Mr. Gladstone asks, and, he declares, will repeat the question until he gets an answer. Did Lord Carnarvon tell Lord Salisbury early last August that he had had an interview with Mr. Parnell at his (Carnarvon's) own instance, and that he told Mr. Parnell he was in favour of a Home Rule measure which would go far to satisfy the nation of the Irish people? If Lord Salisbury knew of all this and yet did not repudiate Carnarvon, but allowed Parnell and the Irish party to go to the general elections with the belief that in supporting the Tories they were supporting men pledged to some measure of Home Rule, with what face can Salisbury now denounce the English Home Ruler as disruptionists and revolutionaries?

Of course Lord Carnarvon did tell Lord Salisbury at the time, as Mr. Gladstone points out. That was manifest. The duty of a man in Lord Carnarvon's official position was not to keep such a thing secret from his chief, and every one knows Lord Carnarvon to be incapable of any piece of treachery or unjustifiable concealment. As a matter of fact Lord Carnarvon did tell Lord Salisbury at the time, and as a matter of fact the leaders of the late Tory government did at one time last year think seriously about introducing a measure of Home Rule for Ireland. Of course the whole administration were not taken into their confidence on such a subject, and of course it never came in any formal way before the Cabinet. That is not the way in which things are done in English governments.

It is scarcely possible to believe that this is all moonshine. But it is possible to believe that, whatever may be the views of the Conservatives with regard to Home Rule, they are resolved not to make any concessions to Ireland until they are strong enough to be guided solely by their own judgment.

MR. S. SMITH, during a recent debate in the House of Commons, observed that, besides paralysing trade generally, the appreciation of gold offers a barrier to the development of railway enterprise in the East. Oriental nations cannot afford to contract debts in a medium the silver-value of which is constantly increasing. On the other hand, English capitalists will have nothing to do with silver loans. Thus the East is practically excluded from the money-markets of the West, and railway construction, which, as a factor of trade, is so anxiously awaited, cannot be undertaken. This is all very true. The demonetization of silver opposes a powerful barrier to the development of railway enterprise in the Orient. But in this same demonetization of silver bold financiers may find an unique opportunity to obtain Western capital on easy terms. Consider the case of a nation which borrows dollars at 2s. 10d. and pays them back at 4s. On every million sterling borrowed and repaid at these rates there would be a gain of over two millions of dollars to the silver-using nation. In other words, for every seven millions of dollars received by the borrower, he would only have to pay back five millions. The country which has the wit and the courage to avail itself of such a splendid chance, will be able to build a considerable network of railways without any cost to itself.

CERTAINLY when the throne and sceptre of sovereignty are handed over to Demos, there is no reason why he should not have favourites just as Kings in former day had favourites. Nor is there any reason why these favourites should not be as mischievous as Gaveston or Villiers. Thus much granted, the *St. James's Budget* proceeds to demonstrate that the present favourite of the British Demos is, "not a splendid and

accomplished youth, redeeming his vices by brightness and bravery, but a very virtuous old man, wearing indeed an almost supernatural air of political probity, but resembling a Gaveston and a Villiers in his extraordinary powers of flattery, and equally determined to rise at the expense of his master." According to this most unprejudiced and patriotic journal, Mr. Gladstone has strictly pursued the policy which might be expected of the favourite of Demos. He has degraded the Cabinet by subserving it to his powerful will; he has degraded the House of Commons by asking it to read a Bill a second time without considering its details, and he has degraded Demos himself by sending that Sovereign's delegates about their business because they would not agree to the favourite's proposals. These are pretty conceits. One marvels that even the most inveterate Tories do not tire of the yappings and snarlings of the *St. James's* and the *Saturday*. To these otherwise brilliant journals Mr. Gladstone is a red rag. He excites in them the blind wrath with which that gaudy article is supposed to inspire the bovine intellect.

WHAT a very great pity it is that Liberal Statesmen cannot refrain from bunkum. Perhaps the thing is inevitable. Demos, being both ignorant and vulgar, can only be moved by vulgar and ignorant devices. Yet the staunchest Liberal must often be shocked when he observes his political leaders dealing in treacle of the most palpably unrefined character. Observe Mr. John Morley, for example, solemnly protesting against the notion that the Irish peasant is of an idle disposition. "Idle," cries the late Chief Secretary, "when the Irish peasants and generations of Irish peasants have reclaimed the land, the harsh, thankless land of the bog and the mountain side, have reclaimed that land knowing that the fruit of their labour would be confiscated in the shape of rent." Irish peasants have never reclaimed either bogs or mountains with any such injustice in prospect, and every one who has lived among them knows that they are both idle and thriftless. Mr. Morley does not strike a happy attitude in this part of the performance.

MR. H. E. LITTLEJOHN undertakes to prove that the bimetalists—or, to be more accurate, the advocates of an alternate currency—are quite mistaken. To attain this end he travels a beaten route, but does so in a manner more open and undeviating than usual. He admits that "if the medium of the currency in Great Britain had been exclusively confined to gold and silver, the relation between these metals and the prices of commodities would be established, and their abundance or scarcity would be the principal factors in determining these prices." But he denies that it has been so confined. On the contrary, he asserts—what nobody denies—that a great part of the work of commerce is done by means of paper; and he further asserts—what nobody has ever denied—that such paper need not be wholly secured by gold. Mr. Littlejohn evidently fails to see that whatever force his argument has against bimetalism, it has also against his own position. What he maintains is that because the precious metals only perform a certain portion of the work of exchange, therefore the growing scarcity of one and the ostracism of the other are unimportant. But he admits that paper only performs a portion of the work of exchange. How then can the

use of paper wholly annul the effects of scarce gold and demonetized silver. The bimetalists have never queried the fact that paper largely reduces the work thrown upon gold and silver. They say exactly what Mr. Littlejohn says; namely, "if by law it were enacted that the whole paper currency be represented by gold alone, the scramble for gold would be so great as entirely to paralyse commerce, and the prices of commodities would be raised to a height" (Mr. Littlejohn means to say "would be depressed to a depth") "altogether disproportionate to their value." But the bimetalists say also—slightly varying Mr. Littlejohn's phraseology—"law has enacted that the work of exchange formerly performed by gold, silver, and paper should be performed by gold and silver alone, and the consequence has been a scramble for gold so great as to partially paralyse commerce and seriously depress prices." Mr. Littlejohn is in the pleasant position of being a thorough bimetalist without knowing it.

SHORTLY before the recent elections in England a most opportune speech of Sir Robert Peel was unearthed from parliamentary archives. The speech was delivered April 25th, 1834, and its object was to oppose the repeal of the Union. In it Sir Robert predicted that the repeal would surely be followed by a revolt of the North, and declared that an independent parliament in Ireland was radically inconsistent with any real connection with Great Britain. He openly announced his preference for Separation to rival legislatures. At the same time, he answered Mr. Sheil's confident prediction that the result of restoring the Irish parliament would be the establishment of complete cordiality between England and Ireland. "Sir Robert Peel," we quote from the *Spectator*—"replied by reminding him of his (Mr. Sheil's) own confident statements to a Committee of the House of Commons, in 1825, that Catholic Emancipation, if granted, would end the disloyalty of Ireland for ever. In 1825, Mr. Sheil had expressly asserted that if Catholic Emancipation were granted, the reasons for demanding the repeal of the Union would disappear, and that after that event Ireland would be quite content to plead her own cause in the House of Commons. What, asked Sir Robert Peel, had become of these assurances of Mr. Sheil's, now that, though Catholic Emancipation had been granted five years ago, Mr. Sheil appeared as the advocate for a repeal of the Union which he had then declared that Ireland would never ask for, if she did but obtain justice for the Catholics? In 1825, Mr. Sheil could not believe that if Catholic Emancipation were conceded, Repeal would ever be demanded. In 1834, after five years' experience of Catholic Emancipation, he clamoured for Repeal. So undoubtedly it will be with the Parnellites of 1891, if they get what they declare to be final in 1886.

*Apropos* of the continued rioting in Belfast additional interest attaches to the latest sensational discovery of the *Pall Mall Budget*; namely, the Orange Army of Ulster. Nearly six pages of the enterprising journal were recently devoted to publishing the details of this curious organization. The following is a *resumé* of the whole:—

The Orange army of Ulster comprises two army corps, described as the Army of Action and the Army of Reserve.

The Army of Action is taken from the unmarried Orangemen resident in Ulster mainly, and those who

have not families dependent on them, up to forty-five years of age.

The Army of Reserve is composed of others belonging to the Orange body up to fifty-five years of age.

The Army of Action is divided into four divisions, namely:—

First, or North-East Ulster. Third, or Mid Ulster.  
Second, or South-East Ulster. Fourth, or Southern.

Each division is subdivided into brigades.

#### BRIGADES.

FIRST DIVISION.	THIRD DIVISION.
First or Belfast.	First or Dungannon.
Second or Ballymena.	Second or Omagh.
Third or Lisburn.	Third or Fecundtown.
Fourth or Carrick.	Fourth or Coleraine.
Fifth or Ballymoney.	Fifth or Londonderry.
SECOND DIVISION.	FOURTH DIVISION.
First or The Lough.	First or Dublin.
Second or The Ards.	Second or Louiskillen.
Third or Ballynahinch.	Third or Bellurber.
Fourth or Loughran.	Fourth or South Kerry Cork.
Fifth or Monaghan.	Fifth or Wicklow.
Sixth or Loughree.	Sixth or King's County.

Brigades are formed of regiments taken from certain districts. Regiments are made up of sections. Each section represents two or more Orange lodges contiguous to each other, or in the same village, townland, or parish.

The whole is under command of the Grand Commander-in-Chief. Each army corps is commanded by a grand commander. Each division is under a provincial grand commander. Brigades are commanded by district grand commanders, regiments by commanders, and sections by deputy commanders. A standard accompanies each section. Cavalry troops are under the head of sections.

A vigilance committee, whose head-quarters is Belfast, is entrusted with the armament of the Army of Action. The vigilance committee directs provincial districts, and local committees. The provincial committees have centres at Lisburn, Lurgan, Coleraine, and Enniskillen. The centres of district and local committees correspond with head-quarters of regiments and sections.

The following are the totals enrolled:—

	ACTIVE.	RESERVE.	TOTAL, GRAND TOTAL.
Infantry	32,820	22,546	55,366
Cavalry	1,940	1,202	3,142
Artillery	2,530	2,006	4,536
Engineers	960	1,776	2,736
Rifles	550	421	971
	37,900	28,951	66,851
Unclassed 4th Brigade			7,561

THERE is some indignation in England on the score of American subscriptions to the Parnell Fund. The notion of the dismemberment of the Empire and all that has stirred Britons so deeply that they are disposed to adopt the motto of typical intolerance, "He that is not with me is against me." But the calmer section of their countrymen ask how this American behaviour compares with the conduct of certain Englishmen during the War of the Secession. British subscribers to the Confederate Loan and American subscribers to the Parnell Fund seem to belong to the same category. The former thought the Confederate States right in their effort to break loose from the Union; the latter entertain similar views with regard to the Parnellites. We all see now that the secession of the Southern States would have been a terrible blunder. Shall we not all be equally unanimous by and by about Irish secession? Curiously enough Mr. Gladstone is said to have been among the subscribers to the Confederate Loan. He was the only prominent English politician who favoured such an investment. "If, then, an ex-member of Parliament asks, "one English politician of the first rank, and one only, not only wished the Confederates well and thought them right, but gave them aid, are we going now to follow that one statesman blindfold—for we have no hint what Home Rule means, now that the Bills, as we are told, are dead—when he invites us to adopt the policy which he supported, but which failed absolutely, in 1865?"

Amid all this talk of the pecuniary support which the Irish agitators derive from America, people are beginning to wonder why the Irish do so little to support themselves. "The farmers," as the *Spectator* puts it, "acknowledge

that they have saved three millions a year by the Irish movement; the classes which vote have millions in the Savings Banks; a subscription of nine-pence a month from each Parnellite voter would provide £100,000 a year—more than is wanted—yet the whole burden is thrown upon the American Irish." If each of the five hundred thousand households that are supposed to support Mr. Parnell, subscribed a half-penny per week, the Home Rule Party would be independent. But that half-penny is not forthcoming. How firmly the hearts of the Irish must be set upon Home Rule when they grudge a penny a month to attain it!

To the mill of the American interviewer all is grist. He has established a species of pump at San Francisco. Every body coming from Japan is put under the receiver, and whatever information he possesses is exhausted for the benefit of the newspaper-reading public. Mr. Eastlake, junior, has just been undergoing this process. A reporter of the *San Francisco Chronicle* discovered in him a person "thoroughly acquainted with the manners and customs of the Japanese people and not less familiar with the country both in a political and physical sense." It is very remarkable how these encyclopedias of knowledge are developed in our midst without our knowing anything about them until they leave us. But then a prophet is never without honour save in his own country. Mr. Eastlake, under the pump, supplied a column of very close print and very intelligent, readable matter. On one question, however, he seems to have suffered his imagination to run riot. "Buddhism," he is reported to have said, "is still the predominating faith, but Christianity is rapidly establishing itself among the more intellectual classes, although many of the high officials express extreme bitterness to the doctrine and its introduction. This bitterness is so great that to profess Christianity means the loss of an official position." Mr. Eastlake, we venture to assert, never heard any "high Japanese officials expressing extreme bitterness to the doctrine and introduction" of Christianity. Neither does he know of any case where a profession of Christianity cost a man his official position. Why ventilate such fables, then? Must truth necessarily disappear under the pump of the interviewer?

A MORE merciless critic than Mr. Swinburne could scarcely be conceived. One imagines that a poet criticising poets ought to show some tenderness, if not from *esprit de corps*, at least from the less noble motive that hostility is apt to be mistaken for jealousy. But no considerations of this kind weigh with Mr. Swinburne. Here, for example, is what he writes of Byron:—"On taking up a fairly good version of 'Childe Harold's Pilgrimage' in French or Italian prose, a reader whose eyes and ears are not hopelessly sealed against all distinction of good from bad in rhythm or in style will infallibly be struck by the vast improvement which the text has undergone in the course of translation. The blundering, floundering, lumbering, and stumbling stanzas, transmuted into prose and transfigured into grammar, reveal the real and latent force of rhetorical energy that is in them: the gasping, ranting, wheezing, broken-winded verse has been transformed into really effective and fluent oratory. A ranter, of course, it is whose accents we hear in alternate moan and bellow

from the trampled platform of theatrical misanthropy: but he rants no longer out of tune: and we are able to discern in the thick and troubled stream of his natural eloquence whatever of real value may be swept along in company with much drifting rubbish. It is impossible to express how much 'Childe Harold' gains by being done out of wretchedly bad metre into decently good prose: the New Testament did not gain more by being translated out of canine Greek into divine English. Not that even under these improved conditions Byron's is comparable to the work of a first-rate orator or preacher; but one may perceive how men to whom English poetry was a strange tongue might mistake it for an impressive and effective example of English poetry."

A CORRESPONDENT thus describes a moonlight ascent of Asamayama:—"Our party consisted of three foreigners, two Japanese students, a servant, and two guides. We left Karuisawa in the afternoon and commenced the ascent from the eastern side about sunset. The day had been brilliantly clear and the night continued so. Some clouds which gathered about sunset—not encircling the summit, however, as we learned afterwards—cleared off before 9 o'clock. We reached the summit about an hour before midnight. The wind, blowing from the south, sent the vapour off to the north, so that we were spared a discomfort which tourists have often to encounter. We saw right to the bottom of the crater. It presented the appearance of a furnace filled with glowing coals. The sound of the roaring, hissing, and bubbling was loud and awful. The walls of the crater are of a light brown colour, and are composed of successive layers marked out with striking regularity like the seats in an amphitheatre. Allowing ten of these layers to each interval of twenty feet, the depth from the surface to the incandescent matter would appear to be 200 feet. Probably it would not take more than 7½ minutes' quick walking to make the circuit of the crater if the conditions were quite favourable. The Japanese calculation, which makes the periphery one *ri*, seems, therefore, five times too great. Three of our party stayed till sun-rise, keeping themselves warm by hallowing a warm lava bed. No one suffered in the least from sore feet or in any other way. We found the descent slightly dangerous, however, near Ko-Asama, where the path is very steep and scarcely marked at all. When we reached this point, the moon had sunk behind the cone and left us in darkness, so that without great care we might have performed the last stage of the descent much faster than we wished. The weather here (Karuisawa) has been very favourable for out-door exercise throughout the summer. There has not been more than half of a day's rain at one time."

A young lady of fifteen has beaten all competitors of the same sex at lawn tennis in England, and is expected, if she progresses as she is now progressing, to beat all players of both sexes by the time she is twenty. The fact of her present achievement is admirable enough, but we cannot see why it should be taken as the basis of the twenty-year-old prediction, unless, divided skirts shall have come into vogue before 1891. It is, however, worth noting that in 1424 the best player in France at the game of *paume*, which is the parent of fives, rackets, and tennis, was a girl called Margot. In those days *paume* was played with a hard ball and the players

wore padded gloves. Mademoiselle Margot not only disdained such adjuncts, but even struck the ball indifferently with the palm and back of her hand. Perhaps in the sequence of metempsychosis she has been born again in the person of the present tennis champion of fifteen.

WE have often called attention to the extraordinary virulence and injustice of the attacks made upon Mr. Gladstone by leading Conservative journals. The *St. James's Budget* takes the palm in this sort of savage vindictiveness, and is followed at no great distance by the *Saturday Review*. The former has now surpassed all its previous performances. It actually charges Mr. Gladstone, "as a Scotchman," with hating England and seeking to humiliate her. The thing is too incredible to be believed without seeing. Here, then, are the *ipsissima verba* of the *St. James's*:—

We have been obliged at various times to call attention to the language and conduct which Mr. Gladstone has lately permitted himself as a Scotchman speaking in Scotland. Deeply resentful of the decline of his popularity in England, he began some time ago to flatter his fellow-countrymen at the expense of the English—an inferior race, who are only to be kept upon the right path by the determination of their betters in the North. Since the last general election, in which the victory was not given to him but to Mr. Chamberlain, the Prime Minister's heart has yet more been turned against us. One of the strongest and most enduring characteristics of the right honourable gentleman is vindictiveness; and it is evident that indignation against what seems to him the audacious ingratitude of England has had much to do with his recent course of conduct. Hatred of this country and its people is the first and most powerful motive at work amongst the American-Irish; and it really seems as if Mr. Gladstone had caught the infection. He feels humiliated at the total change of sentiment in this country, which nothing but the defects of his own character and his complete failure as a statesman has occasioned. He resents this change as an outrage against himself; and, ferociously egotistical, implacably vindictive, he would like to humiliate England in turn. This deplorable temper came out strongly in his speech at Glasgow, where really his chief business seemed to be to make bad blood between two peoples which for generations have been as one. He would like to make another Ireland of Scotland, apparently; if his design had been to unite those two nations against us, to "teach us our place," to master and overbear this atrocious England which in past times has so deeply injured both, he could hardly have betrayed it more openly with anything like discretion. He may think this good "business," and success would be sweet to him no doubt; but herein also he will find himself mistaken. He will discover that it is hard to "enthus" the Scotch against their English brethren, but not so difficult to arouse indignation in England against these wretched attempts to gratify his own spite by setting the kindred nations by the ears. Moreover, he will probably learn that Englishmen are not yet disposed to resign the future of the empire either to Scotland, or to Ireland, or to both combined. We propose to have our full share in it as he will presently learn.

OUR Korean correspondent writes, under date August 4th:—"In my last brief note mention was made of the presence of cholera in Korea. For nearly a month now the mortality has been very great, though at this writing a very large decrease in the number of deaths is reported. From July the 15th to the 25th, 3,140 dead bodies were carried out of the gates of Seoul. During several days subsequent to the latter date, the death-rate reached almost 400. This within the walls only. The suburban population is about as large as that of the capital, so that in and around Seoul the highest daily death-rate must have been upwards of 800. Feeble steps were taken on the part of the Government to arrest the progress of the disease. At first a Royal edict called attention to a native prescription; this was followed, the next day, by an edict recommending the Government Hospital to the patients. But the death-rate increased and the King became alarmed. The government came to a standstill. The King sent for a large quantity of "foreign medicine" for himself and

Court. A few days ago an order was put up on all the city gates forbidding the importation of green fruit and vegetables. This order was enforced, and a marked decrease in the number of deaths is reported since then. The average Korean has little regard for the rules of health. One recently admitted that he had eaten a dozen green cucumbers. Sickness in such cases is readily accounted for. The Japanese Consul, Mr. Yuki, early took vigorous measures to prevent cholera spreading among his people, and he has succeeded admirably. I have not heard of any deaths among the Japanese. No deaths among the Americans and Europeans thus far."

FROM a recent exchange we take the following interesting account of Mr. Gould's menage in New York, and his manner of living generally:—

Mr. Gould's mansion in New York is a plain-looking double brown stone house, the interior of which is literally palatial. There are half a million dollars' worth of paintings on the walls and the furnishing and decorations are of the costliest description. The suite on the second floor, occupied by the heads of the family, consists of bed-room, boudoir, dressing-room, and bath-room, decorated chiefly in pale blue and silver. Across the hall Miss Nellie, the only daughter, has a similar suite in pink and white. On the third floor there is a study and a large nursery for the three small boys, Edward, Frank, and Harold, whose tutors are paid £400, £800, and £360 a year respectively. George Gould's apartments are on the same floor, while the servants occupy the floor above. The butler receives £200, butler's assistant £80, Mr. Gould's valet £120, head cook and assistant £300, and house-keeper £200 a year. Two handresses, two chambermaids, a parlour-maid, two waiting-maids, two lady's maids and two kitchen girls are paid from £3 to £4 each per month. Mrs. Gould spends two hours a day with her younger boys, and they read only what has been inspected by her. Since she joined the Forty-second-street Presbyterian Church several years ago, she has been liberal in religious benefactions. Miss Nellie, a graduate of Mme. Reed's famous school, is perfecting herself in music at a cost of £4 per lesson. She has an allowance of £1,000 a year for her wardrobe. The Gould stable, on Forty-fourth-street, is a handsome building of brick, with brown stone trimmings and plate-glass windows. Six horses are kept in it during the winter, and a closed carriage, a landau, and two coupes. The staff consists of a coachman, two footmen, two grooms, and two stablemen, and their wages range from £9 a month down. The expense of keeping up the stable is £1,200 a year.

Mr. Gould's country seat at Irvington was considered by its original owner, George Dawson Merritt, the most elegant, attractive, and thoroughly equipped summer residence in the country. Mr. Gould paid £40,000 for the property in 1880, and it is now worth £200,000 at a low estimate. The house is Gothic in style, and is 3,000 feet from the Hudson River, commanding a magnificent view. It has twenty rooms above the basement. On the second floor is a fine art gallery extending the entire depth of the house. Monogold, the steward at Irvington, has been in Mr. Gould's employ over twenty years, and receives a salary of £400. The lawn about the house is ninety-five acres in extent, and the macadamized road leading to the entrance is a quarter of a mile long. There are in the estate 510 acres, 200 of which are woodland. The live stock consists of twenty horses, as many cows, a drove of Southdown sheep, and a lot of blooded fowl. Eighteen men are on the place constantly, and in summer the number is nearly a hundred. The hot-houses and conservatory cover a space 900 ft. long and 450 ft. wide, and with their contents are valued at £50,000. At a fair estimate it costs Mr. Gould £67 a day to keep up his Irvington place. The taxes on it amount to £50 a month.

Mr. Gould paid £20,000 for his steam yacht *Atalanta*, and to run the same costs him £150 a month for wages, £40 a month for coal, repairs, &c., and £160 a month for general expenses when he is aboard with his family. Besides the fifteen sailors and five officers forming the crew, there are four cooks and a baker at £8 a month each, with two waiters, a valet, a lady's maid and a parlour-maid. There are separate dining saloons in the yacht for the family, the officers, and the servants and sailors. Breakfast is served from six to eleven, luncheon at two, tea and ices at four, and dinner at eight. George Gould's allowance before he attained the dignity of partnership with his father was £2,000 a year. His young brothers have £1 a week apiece for pocket money.

THE authorities of Tokyo have adopted the wise plan of publishing, in the *Official Gazette*, a statement of the conditions under which cholera patients may be treated at home, instead of

being removed to hospital. We observe that in the case of Tôkyô the conditions vary slightly from those prescribed in Yokohama, the chief difference being that in Tôkyô a separate room for the sick person is alone required, in point of space, whereas in Yokohama it is laid down that the house must have at least three rooms. We may be permitted to suggest that measures should be taken to familiarize the people with these rules. The lower orders do not see the *Official Gazette*, and it is most important to remove the impression under which they labour as to the imperative necessity of going to hospital.

THE Russian Custom House authorities seem to have devised a veritable heads-I-win-tails-you-lose method of collecting duties. Consul-General Perry, reporting from Odessa, states that "according to instruction from the Board of Trade, all grain-loaded vessels destined for ports outside the Straits of Gibraltar have to carry a certain proportion of their cargo in sacks for the greater safety of the ship, and until the middle of the past year masters of vessels arriving at Odessa had only to declare the approximate number of sacks they had on board for carrying grain. Since the introduction of the objectionable Custom-House duty referred to, on the arrival of a ship in port the number of sacks on board has to be at once declared, and if any are found over and above the quantity specified by the master, the surplus is confiscated, and a fine imposed on the ship; and if, on the other hand, the number of sacks does not reach the declared quantity, a fine is imposed for a wrong declaration having been made. As the majority of large steamers which visit the port of Odessa carry from 5,000 to 10,000 of these sacks, it is easy to make a mistake in counting them, especially as they are in constant use, and a certain proportion of them are either torn, lost, or in some other way disposed of during each voyage. The imposition of this duty seemed to me most arbitrary, as well as unjust, and I therefore represented the matter to Her Majesty's Ambassador at St. Petersburg. According to the statements of all persons engaged in commercial affairs here, the Custom-House authorities seem to avail themselves of every opportunity to place obstacles in the way of all foreign trade, and treat representations made to them with the utmost indifference. In short, the Russian Government appears desirous to drive all foreign import trade from its ports, and become entirely a self-supplying nation."

THE most truthful and dispassionate exponent of the political situation in England is, in our opinion, the London *Economist*. A staunch Liberal, that journal when it opposes Liberal measures, does so without prejudice or prevarication. Just before the recent elections, it submitted to the people of the United Kingdom a consideration which, we believe, has long been disintegrating the Liberal Party with much greater force than the question of Home Rule; namely, that if the country gave its mandate to Mr. Gladstone, it would be deliberately placing itself under the sway of an irresponsible dictator. Among the party leaders who remain constant to the old statesman there is not one sufficiently near his level to oppose him. He would hold them all in the hollow of his hand and mould them easily to his will. The majority in the Commons, returned by the voice of the people,

would be constrained to obey him, and the Lords could not oppose a scheme of Irish legislation which had already been endorsed by the nation. The Empire, at this momentous crisis, would lie at the feet of the man who had declared himself in favour of a colossal political experiment, and whose remaining tenure of life must be far too short to allow him to superintend and direct the progress of that experiment. From such a stupendous exercise of confidence the country could not choose but shrink. For Gladstone in conjunction with Hartington, with Goschen, with Argyll, with Selbourne, with James, with Chamberlain, and with Bright, the people would have voted gladly. But for Gladstone supreme and in opposition to all these, many of his old admirers dared not lift their voices.

\* \* \*

Another argument which the *Economist* has advanced with admirable clearness is the financial side of the Home Rule question. Put into a nut-shell, the calculations of our London contemporary show that, according to Mr. Gladstone's budget, Great Britain would have to pay Ireland about six millions annually in order to put the Parnellites into power. The figure is found thus:—In the first place, instead of making Ireland pay for her own police, Mr. Gladstone proposes that the Imperial Treasury should allow half-a-million yearly for their maintenance. In the second place, he assumes that Great Britain would continue to pay to Ireland £1,400,000 a year of duty on Irish spirits, &c., instead of bringing the spirits across the Channel in bond and paying the duty into the English Treasury. In the third place, he puts Ireland's yearly liability on account of the national debt at £1,466,000, whereas, at the very lowest calculation, it ought to be three millions. Finally, he charges Ireland only £1,666,000 on account of her English garrison and her contributions towards the Imperial naval and military expenditure, whereas she ought to pay over three millions. By these contrivances Mr. Gladstone's Irish Budget shows an excess of income over expenditure amounting to £400,000, instead of a deficit of 6½ millions. Add to all this the hundred, or hundred-and-fifty, millions required for the land purchase scheme, and one begins to understand the price which England is asked to pay in order that Ireland might enjoy the luxury of Home Rule.

THE following, says the *Mainichi Shimbun*, shows the extent to which the time of various capitals of foreign countries differs from the Tôkyô time:—

	TOÛKYÔ	DIFFERENCE
Tôkyô, Japan	Noon	—
Peking, China	10.26.56 a.m.	1.35.04
St. Petersburg, Russia	4.42.40 a.m.	7.17.20
London, England	3.20.40 a.m.	8.39.20
Paris, France	2.50.30 a.m.	9.09.40
Rome, Italy	3.32.56 a.m.	8.27.04
Berlin, Germany	3.58.32 a.m.	8.01.28
Hague, Holland	3.03.32 a.m.	8.59.28
Madrid, Spain	2.26.08 a.m.	9.33.52
Brussels, Belgium	2.58.24 a.m.	9.01.36
Washington, America	9.32.48 p.m.	9.32.48

THE following figures have been prepared as the result of official investigations, showing the total number of patients, as compared with the population, in Tôkyô, Osaka, Kobe, and Yokohama from the first appearance of cholera till the 12th instant:—

LOCALITIES	POPULATION	PATIENTS
Osaka (4 urban divisions and Nishinari-gori)	429,203	7,971
Yokohama	56,941	2,261
Kobe	57,723	1,470
Tôkyô (15 urban divisions)	729,801	2,047

In Osaka there was one patient to every 53

persons, and in Osaka garrison the rate was one patient to every 410 soldiers. The difference is attributed to the superior, sanitary measures enforced in the army.—*Mainichi Shimbun*.

MISS ANNA KINGSFORD, M.D., continues to throw cold water on M. Pasteur's inoculation for rabies. It will be remembered that twenty-six Russian peasants who had been bitten by a mad wolf, were sent from Smolensk to be treated by Pasteur. Out of this number eight had died before the end of June. "Surely," says Miss Kingsford, "the most sanguine fanaticism can scarcely exalt such statistics as these into an evidence of success."

THE government of the Philippines has issued a decree the purpose of which is to inaugurate a clean coinage, and abolish the circulation within its territories of that wretched instrument of commerce, the "chopped" dollar. To this end the Mint at Manila will turn out \$250,000 monthly in dollars and 50-cent. pieces, and after a sufficient quantity has been minted, Mexican, Spanish, and other dollars defaced with a "chop" will be received only as bullion, six months from the date of the decree being fixed as the time within which new dollars may be exchanged for old.

AS interesting experiment made the other day in Italy enables us to form some idea of the speed at which swallows fly. Two hen birds, taken from their broods at Pavia, were conveyed to Milan and there released at an hour previously agreed upon. In thirteen minutes both had reached their nests. To do this they must have travelled at the rate of eighty-seven miles and a half per hour.

THE cholera returns for Yokohama on Saturday were:—New cases, 43; death, 18. Sunday, new cases, 32; deaths, 24. Monday, new cases, 38; deaths, 26. Tuesday, new case, 27; deaths, 26. Wednesday, new cases, 21; deaths, 10. Thursday, new cases, 19; deaths, 19. Friday, new cases, 25; deaths, 26. Total, cases, 205; deaths, 144.

WE have been officially requested to state that the practice of dumping cholera excreta in the sea was discontinued some time ago. Apprehensions with reference to the survival of bacteria in the water of the sea, and their propagation by this means may, therefore, be dismissed.

THE tea-firing godown on lot 48, Kobe, belonging to Mr. Tijen, recently destroyed by fire, was insured for its full value in the Hongkong Fire Insurance Company, and Messrs. Colgate Baker and Co's loss, estimated at \$4,000, is covered by the New Zealand Insurance Company.

THE body of a Japanese male was washed up at the corner of the Hatoba by the flag-staff yesterday morning. It had apparently been in the water several days. No clue to its identity was found upon it.

AN attempt has been made to move the *Clarissa B. Carver* by haling, but without success. It has been decided to blow her up.

PRINCE NAPOLEON arrived in Tôkyô on Monday and took up his quarters at the Rokumeikan. He has since left for Kyôto.

THE British barquentine *Guam* has just passed into the possession of Japanese for \$9,000.
